It is no uncommon occurrence for trout that have been hooked, and are being played, to be seized and made away with by larger fish, but an experience that has fallen to the lot of a well-known angler when fishing the River Char, in Dorsetshire, is surely without a parallel. He had risen and hooked a trout, about ½lb. in weight, when a full-grown otter, which had just previously been disturbed from the near bank, swam out and went down stream, but returned and seized the trout just as it was on the point of being landed. The struggle between the otter and the angler for the possession of the fish was naturally short-lived, and resulted in the smashing of the cast and the triumph of the intervening poacher.—London Daily Telegraph.

Game Bag and Gun.

CHICAGO AND THE WEST.

Movements of Western Sportsmen.

CHICAGO, Ill., Sept. 7.—Dr. Amos W. Barber, of Cheyenne, Wyo., who was Governor of Wyoming at the time of the much-exploited cattle disturbances known as the Rustler war, was in the city this week outfitting for an extended mountain trip. He will start in from Red Lodge, Mont., work down to the south on the east side of the National Park, and cross over below the Park, coming out at Montpelier, Idaho. His companions will be Hon. Willis Van Devanter, Assistant Attorney-General of the United States; Hon. W. A. Richards, Commissioner-General of the United States Land Office, and perhaps other friends whose coming is less certain. Dr. Barber tells me that he has sent out guides over most of the country which he intends to traverse, and the guides report that there is plenty of game. One guide reports an abundance of elk and a few moose located. It is almost sure that the party will get all the game they want. As an instance of the popularity of the small-bore rifles for big game, I might state that all of this party will be armed with small bores, the Winchester .30-40 and the Savage being favorites. Dr. Barber thinks the party will probably meet with some bear, and he does not wish to take any chances, for he says that in his wanderings about in the Western country he has seen three men who had been badly mutilated in fights with grizzlies.

Dr. Charles Penrose, of Philadelphia, is out from a trip in the country east and southeast of the Yellowstone Park. He reports killing two elk, one moose and one big-horn, and eight bears. Three of the bears were trapped.

Among other callers at the FOREST AND STREAM office this week was Kid Gabriel, sometimes known as Jimmie Tough, a straight-up rider and pure cowpuncher, who hails at present from Malta, Mont. The Kid came in with some cattle, and will spend some time in the States, having a contract to break some horses down in Indiana. I need hardly state that we passed a very pleasant hour in talking over Western men and things. Oddly enough this cowpuncher is here almost at the same time with ex-Gov. Barber, of Wyoming, and both these men were in Wyoming during the Rustler war. Of course Gov. Barber was not supposed to be on either side in that war, but Kid Gabriel was on one side or the other, I forget just which!

Mr. W. B. Mershon, of Saginaw, Mich., passed through this city this week with his special car, bound for Arizona. He says it is business this time, and not sport; but it will be a cold day in Arizona if Mr. Mershon gets no fun out of the trip.

Mr. Charles Christador, of St. Paul, was in Chicago last Wednesday, attending a committee meeting of the Minnesota National Park and Forestry Association.

Mr. H. G. McCartney, of Kabekona Camp, Minnesota, returned to his residence in Chicago this week. Mr. McCartney reports heavy rain and high water and the fishing temporarily disfigured.

Mr. Rolla O. Heikes, of Dayton, O., one of the best wing shots the world ever saw, paid the FOREST AND STREAM office a call this week. Mr. Heikes found me out of the city, and leaves a note in which he says he supposes I am out fishing. Such was very far from the case. I was only out chicken shooting. I wonder if Mr. Heikes thinks I do nothing but go fishing?

Mr. H. K. Wilson, of Chicago, left this week for a sojourn at Crooked Lake, Wis., where he will fish for bass.

Mr. E. A. Featherstone, of Chicago, this week went to Squirrel Lake, near Minocqua, Wis., where he should meet good luck with the muscallunge at this season.

Capt. Maus, of the U. S. Army, with his friend Maj. Maitland Kirwin, stopped for a time in Chicago this week on their way to Laramie, Wyo.

Mr. A. B. Eaton, of Chicago, left this week for St. Marie and the Nepigon country.

Mr. J. E. Williamson, of Evansville, Ind., is in town this week and visiting the sporting goods houses.

Mr. C. F. Wilcox, of Chicago, was up on the Horicon Marsh on opening day and bagged twenty-five birds, the limit, with no difficulty. He says that ducks were fairly abundant, and that eight other shooters, mostly from Horicon and Milwaukee, also killed twenty-five birds apiece.

Mr. John Whiting, of this city, was up on Grass Lake, of the Fox Lake Chain, on the morning of opening day. He says that the marsh was full of shooters. Mr. Whiting succeeded in killing four ducks, and he was shot four times himself. One fellow shot him twice, and this made Mr. Whiting mad, so he left the marsh and came home. From all I can learn, a duck hunt on Fox Lake is beginning to resemble a deer hunt on Long Island.

One of the most remarkable records of which I have heard this fall was that made by Mr. J. D. Adams, at Woman Lake, Minn. Ducks are very abundant there this fall, and one day Mr. Adams fired 241 shots.. I should add that he killed one duck.

Speaking of the above reminds me of a similar incident which is historic in the annals of the Maksawba Club, of Indiana. Mr. Chamberlin, one of the club members, was out snipe shooting one day, and apparently having very good sport. Later in the day Mr. Roll Organ went out on the marsh, and chancing to see a snipe pitch close in front of him, started off to put it up. His attention was called by loud cries from one side, and he turned to see Mr. Chamberlin gesticulating at him. "You, Organ!" cried the latter, "leave that bird alone! Don't kill that snipe!" Naturally, being thus admonished, Mr. Organ put the bird up and killed it just for the fun of the thing. This act nearly broke his fellow shooter's heart. Mr. Chamberlin sat down, and putting his head between his hands sobbed bitterly. "That's the meanest thing a man ever did, Organ," said he. "I have been chasing that bird and shooting at him all the morning, and I was having such a good time. Now, you have killed him, and spooiled all my fun!"

Mr. William Werner, 'Possum Bill, was out chicken shooting this week near Clinton, Ill., and the three guns of the party bagged over forty birds. I am glad Mr. Werner had a good time, for no man enjoys a day afield more keenly.

From time to time I have spoken in these columns of the fact that prairie chickens are sometimes seen within the city limits of Chicago. On Wednesday of this week Mr. Ira Eberheart, of Chicago Lawn, killed five prairie chickens. These birds were shot within twelve and a half miles of the city hall. On Tuesday morning the same gentleman killed two prairie chickens within ten miles of the city hall, and actually within the city limits. There is a certain town called Paris, which is putting on some airs about holding an exposition next year, but I have money to wager that the chicken shooting near Paris will not compare with that near Chicago, which is something of a World's Fair town herself.

Rather a pleasant angling experience was that of Mr. Harry Hascall, of this city, who fished the Pere Marquette River of Michigan in company with John Waddell, of Grand Rapids, a couple of weeks ago. Mr. Waddell killed one rainbow trout of 4lbs., and Mr. Hascall one of 3½lbs., and they had ten other fish, ranging from 1½ to 2½lbs.

Messrs. W. C. Gillespie and T. N. Jackson, both of Chicago, are now absent at Kabekona camp, in Minnesota. They will meet high waters, but the fish are biting a little now.

Mr. Geo. W. Davey, of Englewood, Chicago, has to his credit the largest muscallonge reported from the Woman Lake Chain of Minnesota this season. This muscallonge weighed 38lbs., and was a beautiful fish. On the same day Mr. Davey took another muscallonge weighing 19lbs.. Both were caught in Little Boy Lake. In the past ten days at Kabekona Camp there have been six muscallonge taken, whose total weight was 150lbs.

Chickens.

Sept. 9.—Rather to the surprise of most folks, the prairie chicken season this year seems to be a pretty good one. I hear in general terms that Dakota is panning out especially well, the crop being better than for several years. There is necessarily more or less inaccuracy in all this, for if a man gets pretty good shooting at one point he is apt to think it is good all over the State, and vice versa, yet the general consensus seems that the prairie chickens are holding out better than was expected. In Minnesota I presume much the same situation obtains as in Dakota. There has been good shooting in some localities and others have been disappointing. At Redwood Falls, Minn., the report is that results were not satisfactory; yet I learn that one party of four killed sixty chickens on opening day; that others brought in three dozen to a dozen and a half, and that very few came in without some birds. It is stated that people at Redwood Falls think the birds have migrated over into Dakota. It is more likely that they have migrated to the happier hunting grounds.

I cannot discover that the chicken crop in Illinois has been seriously cut down, and indeed am rather disposed to believe that these birds are more than holding their own. The fact is that the whole prairie chicken situation has undergone a great change. There is no great tract of country in the West over all of which the shooter is sure to get fairly good sport. Here and there there are bits of country where the birds have been fully overlooked or fully protected, and wherever they have been left alone they have shown their ability to take care of themselves. There is one thing certain, the prairie chicken is more and more respected every year. In the old seasons of abundance it was not prized as it deserved, but nowadays you hear more and more talk of it as a factor in shooting plans, and a bag of these birds is spoken of with great pride. Elsewhere I have reverted to the fact that some Chicago men have been so lucky as to get shooting this week in upper Illinois. In this district—as indeed all over the West—the best sport was had on the first day of the season. On opening day the birds are not broken up in their habits, and are comparatively easy to find. After their first day of experience in sporting life they hide out and lie close, not moving very much until obliged to feed. I have often noticed this to be the fact with the ducks on Horicon Marsh, which hardly fly at all on the second day of the season.

Progress of the Minnesota Park Movement.

Sept. 7.—An important committee meeting was held at the library rooms of the C. A. A. last evening, that of the invitation committee of the Minnesota National Park and Forestry Association, there being a full representation of the different sections concerned. This action practically completes the preparations for the Congressional trip, sets the date and arranges the details, so that the news of the matter is now pending until it may be determined how many of the members of Congress will actually take part in the trip. The date of the Admiral Dewey reception exercises at New York city unfortunately clashes with that set for the start on this expedition, and it is possible that the time of the start may at a later hour be changed, so that the party may leave the first week in October instead of the last week of September. Following is a synopsis of the proceedings of last night:

The chairman, John S. Cooper, presided.

Remarks were made by Mr. Cooper, Mr. Henry S. Fitch, Mr. Charles Cristadoro, Mr. John Whitbeck, Mr. Theodore P. Shonts, Capt. J. B. Clow and Mr. H. G. McCartney, relative to the various resolutions and motions introduced and open for debate. The following resolutions were unanimously passed:

Resolved, That the representatives of the Government of Minnesota and other gentlemen to be invited to go as guests from that State upon the expedition to the headwaters of the Mississippi be selected by members of the committee on invitation from that State.

Resolved further, That the invitations to be given to gentlemen outside the State of Minnesota to go as guests upon the expedition shall include the President of the United States and his Cabinet, the Senate and Members of Congress elect of the United States, together with such members of the Associated Press and the newspaper press as can be accommodated on the expedition, and also such other gentlemen prominently interested in forestry and national parks, not to exceed five in number, who shall be selected by the chairman of the committee on expedition.

Resolved further, That a chairman for each of the following committees shall be appointed by the chairman of the committee on expedition; each chairman of the respective committees so appointed being authorized to appoint other members of the committee to act with himself, viz.: 1. A committee on transportation. 2. A committee on finance. 3. A committee on camps, boats and guides. 4. A committee on camping parties.

Resolved further, That the committee on camping parties shall have the exclusive charge, and it shall be its duty to select one gentleman of approved experience for each camping or exploring party, such gentleman to go on the expedition and to be in charge of the respective camping or exploring party in his care during the expedition.

Resolved further, That the chairman of the committee on expedition shall take charge of the commissary department required for the expedition, with power to add such members to the committee as he may desire.

The chairman thereupon appointed Theodore P. Shonts chairman of the committee on transportation; Charles Cristadoro, chairman of the committee on camps, boats and guides; Henry S. Fitch, chairman of the committee on camping parties. The chairman announced that he would appoint the chairman of the committee on finance later and notify this committee of such appointment.

The following gentlemen were selected by the chairman of the committee on expedition as members of the committee on invitation thereto, such selections unanimously approved, the names of the members being as follows: Thomas Lowry and Thomas H. Shevlin, of Minneapolis; Gilbert G. Hartley, of Duluth; Channing Seabury, of St. Paul; Christian C. Kohlsaat, W. C. Brown, Henry S. Fitch, Oliver W. Nixon, Paul Morton, Theodore P. Shonts, George E. Cole, John C. McNulta, Benjamin Thomas, and J. B. Clow, of Chicago.

The form of invitation already engraved, together with the other printed matter, including maps prepared to be sent to each invited guest, was duly approved by the committee.

The invitations, handsomely engrossed on heavy cardboards, read as follows: "The Minnesota National Park and Forestry Association requests the honor of your company upon an expedition from the cities of Chicago, St. Paul and Minenapolis to the headwaters of the Mississippi River in northern Minnesota, leaving the city of Chicago Sept. 28, and the cities of St. Paul and Minneapolis Sept. 29, and returning on or before Oct. 7, 1899."

The invitation will go out to-morrow, so that by next week there should be some idea as to the replies from the recipients. With these inclosures go also a tastefully printed folder descriptive of the purposes of the expedition and details governing the trip:

If you accept the invitation you will of course be our guest, and will need bring nothing more than for ordinary travel, except your rod and gun. Sleeping and dining cars will be provided, and can be used by all such guests during the entire expedition, who may not desire to camp out. All guests will be within reach of the telegraph, and can return by the regular trains at any time.

The guests upon their arrival in the wilderness to be visited will be divided into small camping parties, composed of such gentlemen as may be mutually agreeable, for exploration, fishing and hunting, each party to be under the care of a member of our organization, whose experience in the woods and on the waters will be an assurance of the pleasure, comfort and safety of the guests in his care.

Most of the region to be visited has been made accessible by rail only within the past year, and it is confidently believed that the gentlemen who form this expedition will have a most enjoyable outing.

A Compromise in Limits.

The Minnesota park project has been a chief topic of discussion all over Minnesota for the past two months, and public opinion has been much divided. Gradually there has arisen a feeling that it was unlikely a park so large as that originally suggested could be secured. Duluth and Grand Rapids were especially bitter against the first large draft of the plans. Moreover, there has come into play the conservative, common-sense side of the American citizen, and the safe, middle-ground position has grown in strength. Some of the leading men of Minnesota, among them Mr. Thomas Shevlin, one of the leading Western lumbermen, have thought that a smaller park could be put through, where a big one would fail and kill the whole enterprise. Not wishing to be stubborn or unyielding to the voice of public opinion from the region most interested, the members of the Association have conceded mile by mile of their coveted territory, until this past week they came out with a map, marked "Compromise Site for a National Park," which shows a region very much smaller than that first desired, and so modest in its demands that even Duluth and Grand Rapids are disarmed. Mr. Shevlin says that this region can absolutely be secured, and can be set apart by Congress without private opposition, and indeed this should go without saying, for every foot of the land thus marked belongs to the Indian reservations, four of which lie within the bounds—the Winnebigoshish, Cass Lake, Chippewa and Leech Lake reservations. This tract is irregular in its outline, and roughly speaking is about 40 by 32 miles in mean dimensions, giving an area of about one million acres, or in the neighborhood of 1,200 square miles, a reserve comparing very favorably in size with the Yellowstone National Park. These lines include some of the best of the upper Minnesota forest region, the Cass Lake country being considered about the cream of that region. There is some pine on this Indian land, and on this pine the lumbermen have set their eyes, but the Government can save this timber by setting it out of sale arbitrarily or giving the Indians an annuity which shall represent a fair interest on what they would receive were it sold under acts which now partially control it. Even this so-called compromise park will be a grand body of wilderness land, and it ought to be preserved forever, Indians and all, and that under the immediate supervision of the bluecoats of Uncle Sam. There is variety of scenery and diversity of topography sufficient to leave a record of what the Minnesota pine woods once were. Of the entire acreage about six or eight townships are covered by lakes or streams, and the sporting resources of the tract are as yet practically unimpaired. Should the Congressional trip be confined to this section alone there would be plenty to give the party the most delightful outing that even a Congressman ever had.

Itinerary.

At this writing the itinerary of the trip is not complete, as changes may necessarily come up at the eleventh hour. No less a person than Mr. Henry B. Fuller, the distinguished novelist, is writing the scenario of the trip for Col. Cooper. Mr. Chas. Cristadoro, of St. Paul, will arrange camp sites, and Mr. Henry Fitch, of Chicago, will have the pleasure of making up the several camping parties and putting them in charge of suitable persons experienced in outdoor life. It may be possible that only a few mem-

rs of the party will care to stay for an actual sporting ip, but any who wish to return earlier will be always ithin reach of the railway, and will be taken out at any ne they wish. Reports at this time are that there have en heavy rains in upper Minnesota, and the waters are gh, but it will be much later when the expedition reaches e woods, and by that time the conditions are likely to be proved, and the season should prove a very delightful e.

E. HOUGH.

80 CAXTON BUILDING, Chicago, Ill.

A Boer Hunter's Farm.

THE Boers are well known as expert hunters and wonrful shots. Their range of vision is extraordinary. We ote from the London Field the following account of a sit to a Boer hunter's farm, which has double interest cause it illustrates so well the fact that the experience South Africa parallels so closely that of North Amerin the destruction of the game species of animal life:

Hearing that the "Flatfontein" hunters had returned m their annual trip into the hunting veldt, I decided to lk over to their farm and see the young game which ey had captured. To those unacquainted with South rica I would say that the Boers hunt in winter (May to gust), as it is then dry and cool. No rain falling ring this season, it is consequently healthy; they get ck to their farms before the wet summer season begins. On the morning of my projected trip I rose early, and er a cup of coffee and a light repast started off across veldt in company with a Dutch-speaking friend. It s the South African spring; the vast plain, so lately dry d brown, was now covered with the young green grass; trees were sending forth their leaves, and their blooms ed the warm air with perfume. The insect world, nured by the hot sun, was full of life and activity, and ery here and there that intense whirring note was heard ich is given forth by that insect so familiar to dwellers this vast land, and which, although so piercing to the , seems to harmonize with the quivering air of the rican summer day.

After a long walk we reached the top of the gradually ing plain, and saw before us, in the distance, the white lls of the Boer's house, close to which ran the small eam dignified by the name of river—a little shallow ulet of water, seemingly engaged in the hard task of eading its way through the loose sand in the river bed, l forming here and there sma'l pools, drinking places of trusty trek ox.

But what are these—these brown-looking animals feedleisurely away to our right? I look at my companion, uahhas," says he, and slightly altering our course, we d on with quickened steps to pass close by them; as we nearer we can make out the stripes encircling their ndsome forms. There are twenty of them all told, m the handsome full-grown black and white stallion to yearling filly with her thick soft jacket tinged with wn. They look at us unconcernedly, moving a few es out of our way. Roaming at large on the plains did their forebears before them, the halter and "reim" h which each is fettered shows that they have accepted inevitable, and have come under the sway of the everroaching human, not, however, without a sharp uggle in some far-off bush veldt. As we jump the clear ter at its narrowest part, we note an unusual activity the six acres or so of cultivated ground, which is as ch of the thousand or two acres which he possesses as Boar thinks it necessary to cultivate.

This disturbance is caused by the unseemly invasion a small army of young locusts, not long hatched, and o seem bent on devouring the small patch of succulent en stuff, the year's handiwork of the industrious Boer. Mynheer has armed himself with a long pole with a g at the end, and, together with attendants similarly ned, is flapping the ground and diverting the stream of usts into the hard pathway along which they clank, for the world like a Liliputian regiment of cavalry.

After exchanging salutations with Mynheer by raisour hats, my friend discourses with him about the usts. Mynheer is grave; the locusts are one of the gues sent by the Almighty, it would be useless to atpt to destroy them—nay, it would be courting further aster to enter into competition with the All Powerful. ter expressing these views, and calling to the kaffirs flap their weapons vigorously, he turns, and walks with to his house.

As we pass along we come to a shed near which are lysix young eland calves, all bulls; these are all very ng animals, and in poor condition. One cannot gine their growing into the mighty animals the old d bulls are. They have traveled from afar, and keep been scarce on the road home; however, they will n pick up, and are, I believe, all already sold. A clatng of hoofs, and a young Boer rides by on a black ding. "Salted," says my friend, "and worth £60, for has galloped down much live game." But neither his m nor his paces fill the eye, and from the English point looks he appears decidedly dear at the price.

We now enter the abode of our host. This consists of a lding of mud walls, which look red and hard; the roof hatch; it is refreshingly cool inside, but rather embarrassing, as the room has an excessively large table, and crowded with Dutchmen, no less than seven men, and two stout ladies.

One has to struggle round the table, shaking hands with h person in the most phlegmatic and insipid manner, mbling over the legs of the others meanwhile. At gth I subside into an antique chair, and sit, hot and ward, while the company present sit and stare hard at despised "Roinek." Although I am of quite medium at home, I feel conscious that each Boer present—, and woman also—looks capable of overcoming two h as myself.

After a tedious half-hour, we sally forth again, and sing round the end of the house, come upon a small elope calf, lying resting on the ground, tethered to a ll outhouse. This, our host tells us, is a "Moff tebeeste" (Anglice, Lichtenstein hartebeeste), which es the place of the ordinary kind (Khama) in South Africa. This little fellow looks well, is suckled by a , and our host expects to get a good price for it. hered out on the veldt some distance from the house two outcasts, a pair of young spotted hyenas, comnly misnamed "wolves" by the colonists. These miserables, tied to pegs driven in the ground with short chains, have no protection from the hot sun, and lie panting, snarling, and parched. At our suggestion a screen is put up for them to keep off the sun.

We now bid adieu to our host, and walk on to the farm of another hunter, where we see two koodoos and three "kringhats" (water bucks), as well as some more elands and quahhas. I may mention here that these latter are a variety of the Burchell's zebra, all of which are always misnamed quah-ha by the Dutch, and quah-ka by the English. The true quagga is extinct.

On our way home again we pass close by some yearling swart vet pens (black, white belly, i. e., sable antelope). We linger and watch these animals, one of the handsomest species of the antelope tribe, and in my estimation the best flavored. I shall never forget the dinner I made off a young bull after a two months' diet of tinned meat and coarse bread; but enough! Let us return to the specimens before us. One little fellow comes up to the wire to inspect us, and as we push our hands through and stroke his horse-like quarters, lowers his head and capers around shaking his short horns wickedly, reminding one that in a couple of years he will be a gentleman best kept at a distance.

These live things, survivors of a rapidly decreasing race, are only here saved from their usual fate of being slaughtered and eaten on the veldt, from the fact that the Boers have discovered that they are much more valuable alive than dead, and are eagerly sought after by dealers for sale to European zoos. In setting out on their annual trips the Boers require, for the capture of these animals, some good horses which have had the sickness from which so few recover, and which are then termed "salted." Some milch cows for suckling very young animals are also desirable, and generally taken. When a herd of antelopes or zebras is sighted, some sharp work follows—hard gallops, perhaps, through thorns and bush, or over rocky ground, till the younger members of the herd are overtaken and run to a standstill, when they are secured with ropes or reims. After a struggle they become subdued; and I have seen young zebras caught in the morning walking loose in the evening among horses, donkeys and other zebras, and allowing one to come up and touch them. I often wonder why Englishmen in Africa did not buy up and save in their own native wilds these rare and grand animals before it became too late. They could have been bred to good profit, to say nothing of the benefit of saving them as ornaments for future generations. However, although some suppose us to be a nation of sportsmen, we have allowed this destruction to take place until all, or nearly all, are exterminated; a sorry record, indeed, of our boasted sporting instincts to be handed down to posterity.

And now a long trudge homeward. Why is it that one generally walks over these far-reaching plains in silence? Is it that the mind is dominated by this far unending land, this land which stretches away on every side with vague sameness, and over which one walks always straight ahead, so different from the ever-changing rambles in the lanes of the old country?

KAFFIRLAND.

Maine September Deer.

BOSTON, Sept. 9.—The boys are still making some very good scores on shore birds. L. W. DePass was down to his camp at Plum Island over Labor Day, and made a score of twenty-three beetleheads and chicken plover. He also secured fully half a hundred small birds. His partner in the camp, C. W. Hodgkins, came up from the same place Wednesday. He had made a score of ninety birds in his stay of a week. Both gunners say that "We struck it just right this time." L. J. DePass is turning out to be a gunner, like his father, L. W. DePass. Though only twelve years of age, his father has bought him a nice little .16-gauge, of which he is very proud. He has lately made a trip to Plum Island, and shot about fifty birds. He is a wing shot, taking two green heron when flying.

But not all of the best shooting is done with either rifle or shotgun. The camera is coming more and more into play in that direction. Mr. J. G. Menzier, of New York, a visitor to Maine woods and waters for many seasons, has recently visited Boston on his way from his summer outing of seven or eight weeks. He went up the West Branch of the Penobscot and down the St. John waters. With his guide he saw 1,000 deer, and then stopped counting them. He carried no more deadly weapon than a first rate camera. As trophies, he brings back twenty-six pictures of live moose, some of them truly startling. One old bull allowed them to photograph him two or three times at one sitting—one standing, doubtless—the focusing and drawing of the plate shield not alarming him. Mr. Menzier spends his winters in Florida, and has made some excellent pictures of that country. Fly-fishing is his pastime, and his friends call him an expert.

The new law permitting the shooting of one deer in September, by paying for a license to do so, is popular with the guests at the principal resorts in Maine, so far, but how the purchasers of these licenses will feel about it later remains to be told. At Moosehead about sixty licenses had been sold the first week of September; five or six of them to ladies. At the Rangeleys hardly as many were sold relatively, and at the Aroostook county resorts the hunters are evidently waiting for the full open season more generally. At Moosehead and the Rangeleys the deer have been coming in plentifully, but the number scarcely equaling the number of licenses. Here it is that the discontent will come in. Hunters and novices will not get the game they seek, in a great many cases, and strangers will leave Maine with no favorable impression of her game laws. I speak advisedly of this phase of the matter, for I have already seen two disgusted hunters who paid for licenses and were out the first day of September. Neither saw a deer, though one of them hunted two days and the other four. They say that the law is unfair, and that they will pay for no licenses again. Mr. Gillam, of Philadelphia, a good shot and determined hunter, was at the Rangeleys early in September. He took out a license and hired a guide. The guide took him on a seriously long tramp, but not a sight of a deer was caught. Mr. Gillam was disgusted. The guide explained that doubtless the recent rain had driven the deer away. Mr. Gillam gave up his license and started for home, not caring to hunt further. He describes the license as a queer document. It presumes to describe the holder, gives his age and a general description. The design is that no one else shall use it to hold a dead deer. It must be fast to the deer till every trace is consumed, if the holder of the carcass would be safe from arrest. But what becomes of the paper after one hunter or the first deer is done with it?

I came across a hunter Saturday just returned from Maine. He had been on a fishing trip, somewhat extended. He stayed over into September, and took out a license to kill a deer. After hunting three days, he gave up in discouragement and came home. His idea is that hunting opportunities in Maine are greatly exaggerated. A deer is seen, and a great account is made of it. The newspapers devoted to blowing get hold of it, and it takes only one edition to magnify the one deer into a dozen. He wants no more licenses to shoot in Maine; believes that hunters generally would be willing to pay for deer, if they could get them, but paying for game before it is taken he thinks is rather tough and slightly un-American. Still, the reports indicate that a good many deer are being taken in September. Returned hunters say that they are nearly all taken at the water, or in the edge of the fields, where they come out to feed. They also say that deer are being shot by farmers and others and held ready for sportsmen who come along with a license. This is particularly true near the location of camps where a deer or two is wanted. It is pretty well understood that the sportsman is not at all sure of getting his deer himself; that he has paid for his license, and after he has hunted for a few days, why, a few dollars are no object for the possession of a nice deer to be used in camp. The transaction takes place in the woods, and outsiders are none the wiser. The license held by the hunter covers the deer. I hear it directly from a gentleman who has hunted several days in Maine, since Sept. 1, that a local hunter—the gentleman thinks that he holds the license of a registered guide, but is not sure of this—has a resident's $4 license, ready to cover any deer that he may be caught in the possession of during September, but that he is approachable to any hunter who happens to want the deer he has already. This first one sold, he will immediately kill another, and so on. None of these deer are brought out of the woods. The hunter is guided to them. Such are the workings of the September license law, as given to me by those who have been there.

The open season on partridges in Maine begins Sept. 15, under the law passed last winter; five days sooner than under the old law. Several Boston gunners are getting ready for an early hunt in that State. They hear that prospects are the best for several years, the dry season having been favorable to the broods. The open season begins on the same day in Massachusetts.

SPECIAL.

Hunting and Fishing in Canada.

MR. JONCAS, the Provincial Superintendent of Fish and Game, has received reports from almost every part of the Province of Quebec, telling him that moose and red deer are much more numerous than ever, and that the indications are favorable for a very fruitful caribou hunting season. Moose have already been killed this season in Temiscouata county, and several caribou in the county of Charlevoix. The Department of Lands, Forests and Fisheries is energetically protecting its hunting territories from poachers, and some fifteen cases of prosecutions against alleged offenders, accused of killing large game out of season, are at present pending in different parts of the Province.

A large party of prominent American anglers is fishing on the territory of the Metabetchouan Club, and some fine specimens of 2lb. trout have already been taken there this month. Mr. Flagg, the well-known New York lawyer, and his wife, have had fine sport, and so have Judge Kellog, of Waterbury; Mr. S. A. Burns, President of the Fourth National Bank of Bridgeport; Mr. Benham and Mr. Stevens, of Bridgeport. They have recently been joined by Dr. Civilion Fownes and Dr. Porter, of Bridgeport; by Mr. Jos. Davis, consulting engineer of the Bell Telephone Company, and by Mr. George S. Green, brother of Frank Green, of Manila fame. Mr. Geo. E. Hart, of Waterbury, who is now on the Triton tract, spent some days last week on the Metabetchouan tract, and enjoyed some very fine sport.

Mr. Geo. Porter, son of Dr. Porter, of Bridgeport, with his wife and four-year-old son, enjoyed a novel experience the other day while on a canoeing and camping trip from Lake Edward to Lake Kiskisink. A large bear and two cubs swam across the Bostonnais River one evening right in front of their camp. Next day an enormous bear that the guides estimated would weigh at least 500lbs. came down to the river side and deliberately got into the water for a bathe within 50yds. of them. They had only a shotgun with them, with which they fired some slugs into the animal, when he ambled off into the woods, apparently none the worse for his experience.

Among the many parties of hunters who have just taken out licenses to shoot caribou in the Lake St. John district are Messrs. G. N. Brownley, of Morristown, N. Y.; C. Curtis, of Buffalo, N. Y., and F. S. Pruyn, of Albany, N. Y. The Messrs. McClintock, father and son, are hunting in the Lake St. John country with Prosper Cleary as chief guide. A party of six New Yorkers have taken out licenses to hunt in the Metapedia Valley, and another party now in the same district after moose and caribou consists of Col. A. C. Chase, Rev. N. R. Lock, S. C. Hayden and N. W. Chase, of Syracuse, N. Y. Messrs. C. C. Shoemaker and B. C. L. Griffiths, of Philadelphia, and J. D. Thees and Geo. H. Diehl, of New York, are after moose and deer in the Temiscouata district. Several American members of the newly formed Caughwagana Fish and Game Club will arrive on their limits early in October after moose and red deer. The season for hunting in Ottawa and Pontiac only opens on Oct. 1. The Caughwagana Club controls the hunting and fishing over 244 square miles of territory on either side of the Magnacipi River.

Mr. Hooper, of the Winchester Repeating Arms Company, is expected up here very shortly after big game, and will hunt in the Lake St. John country.

E. T. D. CHAMBERS.

QUEBEC, Sept. 9.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Quail and Yellowlegs.

Stockton, Md., Sept. 4.—Some time ago I was asked to report on the quail in New York and Maryland. My experience with New York quail is limited to one small covey of about six birds, the only birds I saw during a residence of five years in Dutchess county. I have no doubt there are plenty of birds there, but I never saw them, nor did I ever meet any one who could report more than three or four to his credit on the opening of the season. This was near Millbrook, from 1889 to 1894. Mr. Foster, of that place, a perfect gentleman and splendid shot, will, I know, be pleased to give all information.

Now, when you ask me about the eastern shore, I am right at home; here as a boy I shot my first quail, and as strength came to my arms, hundreds of canvasbacks answered to the crack of my old muzzleloader; then Town Point, at the mouth of the Elk and Bohemia rivers, was the finest point on the headwaters of the Chesapeake. Then came my long exile to Indiana, Iowa, Kansas, Arkansas, Kentucky, Virginia, Pennsylvania, New York and then back at last to the eastern shore. Here I hope to die in the finest country God ever gave to man, where you can live the cheapest, where every luxury surrounds you, where no one seems to work hard, and all are happy and contented. My garden furnishes me with everything that will grow north of the frost line. The rivers and bays produce fish, crabs, oysters, clams, shrimp, terrapin and snappers, all for the taking. With my dog and gun I add quail, jacksnipe and woodcock to my bill of fare. The coast and marshes give me thousands of beach birds. And to all this the bay adds geese, brant, redheads and bluebills. Where else can you accumulate such an array of luxuries and pleasures?

I do not think our quail have done as well as they did last year. I do not blame last February's storms for it, although no doubt many of the birds perished at that time. The heavy snow soon melted off, and gave the birds a chance to feed, while many were fed by farmers and others interested. I am also sorry to say that a number were killed in the snow by boys and others. I blame an unusual northeast storm last June for most of the trouble; this lasted almost a week, and was accompanied by heavy dashes of rain, in which many of the early hatch were drowned. I find plenty of small birds about, but can hear of few full-grown coveys. Our season is late here, opening on Nov. 10, so by that time I feel sure we will have plenty of birds in good condition.

This summer we have had an old-time yellowleg season. The heavy rains and high tides made the marshes just right, and when the birds struck here they stayed. We have averaged about a hundred birds a day, that being our limit; any more we could not use or give away. We have had days when it would have been easy to kill three or four hundred. Very little bunch shooting has been done, all preferring to improve their marksmanship on hard singles and doubles. Take it all in all, we have had a grand time, and there are thousands of birds yet trading over the ponds.

O. D. Foulks.

Virginia Quail.

Lumberton, Sussex County, Va., Sept. 4.—*Editor Forest and Stream:* Again I must crave space in your peerless sporting paper—the recognized organ of sportsmen in America and elsewhere—to answer numerous inquiries that have come to me as to the prospects for quail this season in Virginia.

The general impression seems to be that the blizzard of last February destroyed many birds. Such was the case in '95-6. But after most careful personal investigation and many consultations with the best sportsmen and guides in this part of Virginia, I can safely state that not one bird in a thousand perished in the blizzard in this section—except, of course, those trapped or shot by farmers' boys—in the snow. A very small per cent. Many fed the birds small grain, while the freeze lasted, but those who did not, assured me that the birds that were not fed came out in as good condition as those that were cared for. At all events, I have yet to find the man who picked up a dead bird in, or after, the snow.

The best proof of this fact lies in countless numbers of birds in the fields this season—which has been a favorable one for raising the young. "The oldest inhabitant" admits that he has not seen quail so plentiful since the golden days of his youth.

These observations do not apply to the mountainous northern and western parts of Virginia, where the snow was much deeper and was on the ground probably a week longer than down here, in our sheltered tide-water region, just between the warm brine and the sheltering shoulders of the mountains. This was the favorite hunting ground of the Nottoway Indians, from whom our long, devious river takes its name; perhaps because of the villages of that tribe dotted along its banks in the long ago, as implements of stone and pottery plainly tell. These villages were fed and clothed from the abundance of fish taken from the river, and the fur-bearing animals along its shores.

Trappers and hunters still take beaver, otter, coon, mink, gray fox, squirrel and muskrat, and many deer seek to elude the hounds in its waters. I recall as I write a pretty picture indelibly photographed upon the retina of my "mind's eye."

A noble buck, with the graceful branching horns of the Virginia deer, held high, swelling white throat, wide, quivering nostrils and big soft eyes, wild with terror, as he plunged into the swift dark stream—his last refuge—the hounds pressing close, bursting through the green branches and dropping into the water at his heels. He was wounded and labored heavily, and the dogs gained on him at every stroke, snatching at his flanks and then his throat. Finally, tossing his horns from side to side and spent with his efforts to free himself from his tormentors and the loss of blood, he began to drift down stream, when a hound gripped an ear on either side, and slowly and surely dragged the stately head with spurting nostrils under water.

Several dogs were badly cut in the struggle by the sharp hooks, but the victory was worth the battle wounds, and I can never forget the picture it made, set in its frame of deep green wood.

Not many years ago these deep forests had never echoed to the shriek of the locomotive, and when a pioneer lumber road—a narrow gauge branch of the Atlantic & Danville Railway—made its way through the "forests primeval" and startled the quiet homesteads, many of the oldest inhabitants had never seen an "engun," and walked miles to enjoy that long-denied pleasure.

Since then this road, which has recently come under the able management of the Southern Railroad Company, has brought many sportsmen to the haunts of the wild game, once so secure in their leafy fastnesses. Pope, Capron, Lawrenceville, Lumberton, Homeville and other stations along this line furnish fair accommodations and excellent quail and deer shooting, within easy walking distance, and guides and dogs are to be found of the best the country affords—"bred to the chase."

I "speak whereof I know," for I have had the opportunity here repeatedly of trying the old wager, "A partridge every day for thirty days," and let me add I never won it. Even the chosen people of old couldn't do it when quail rained from heaven. They sickened before the thirty days were over, so why should we degenerates try?

L. P. Blow.

The Capture of a King.

In the Valley of the Arkansas River in the bottoms until the lands were fenced and cleared for cultivation there was abundance of game. The timber was very heavy and the cane grew to a height of 20ft. and as thick as weeds in an abandoned field. It was next to impossible to kill deer in this wilderness, so when in the fall the deer in great numbers came out in the uplands to feed on the post oak acorns, those who love the splendid sport of deer hunting were in a seventh heaven of delight. One November it was my good fortune to be settled for the winter in a house overlooking the river bottom twenty miles east of the eastern border of the Indian Territory, and to have as companions three young men who, like myself, loved to follow the game abounding here.

Having five splendid hounds and the necessary guns and horses, and a colored man who was an A1 cook, we settled down for a winter of unalloyed happiness; and now, after the lapse of years filled with lights and shadows, with the work and the responsibilities which come to us all as the years go by, and time with noiseless tread steals away so much that it is sweet to keep, I wonder now why I did not appreciate even more than I did the happy days then spent in one of nature's favored spots.

We were hardly settled in our camp before we were told by a native that in the ridges a mile back of camp among the scrub oak, there was seen frequently a buck which for size outstripped anything ever known in that region. Upon investigation I found that this was true. Living near us and keeping "bachelors' hall" like ourselves, were two brothers, Joe and John Smith, who were ardent sportsmen, and who were eager to attempt the capture of this king among the deer. Getting all ready for our first hunt, we gathered at Smith's camp to spend the night, that with coming daylight the following morning we could make the drive. In order to reach the cover of the river bottoms the deer in leaving the hills were compelled to go about two miles east through an open timbered country and through a small farm, or else leave the hills and follow the foot of the river bluffs and pass around the north end of what is known as Grany Lake. In doing this they were bound to go through a pass which was only 100yds. wide. We decided before going to bed that Joe Smith should guard the pass, that John Smith and my brother John should take the stand at the farm and that I should "drive" the forest king from his cover.

The morning came cold and bright, there having been a freeze during the night. As soon as we could distinguish a light in the east we were astir; and mounted on a mule, which had probably done service in the War of 1812, judging by appearances; and surrounded by the hounds, wild with joy, I started northwest to where the haunts of the deer were; and the other boys made for the points agreed upon. I had gone half a mile from camp, when my two lead dogs left the path for a thicket and started a yearling deer; and reversing the usual course the deer crossed the path and ran south down an open ridge, giving an opportunity to see one of the prettiest short races I ever saw. Just as the deer and dogs disappeared over the hill that miniature cannon carried by Joe went off with a sound that fairly shook the hills around us; the roar of the chase suddenly ceased, and I heard that welcome sound, "Come on, I've got him." Giving the mule the spur, I rushed down at the rate of about three miles an hour and found that just as the deer had made a long leap to clear a slough Joe had shot and actually broken three of its legs. While we were getting him to the mule, about fifty mallard ducks came flying up the slough and we all took a pop at them, with the result that we added three ducks to our supply of meat. Hurriedly taking the game to my camp and giving Pete, the cook, orders as to how much we would want for dinner, I went to the place where I expected to find the big buck.

Just at the edge of the woods I saw a large deer track; and while examining it I noticed one of the hounds smelling around a large log. He raised his head and gave a long cry, which aroused all the others, and instantly they were running around, and very much to my surprise, from the top of a tree which had fallen the previous summer with the leaves on, bounded the much-talked-of buck. And truly, he was a magnificent creature. With flag erect and antlers thrown back, nostrils distended, he made direct for the cover of the river bottom. His starting was so unexpected and sudden that I failed to get a shot. The dogs were right on him, not 40yds. behind, and they were dogs—a ten-rail fence was nothing to them. When he reached the farm through which he intended to go, he leaped at the fence, but fell back, but managed to elude the grasp of his relentless pursuers, and making a detour of about a mile he struck out for the pass at the end of the lake. As soon as I saw where he was going, I stopped in the open and waited results.

I did not have long to wait. Nearer and nearer to the pass came the roar of the hounds, and although I was half a mile away my nerves were strung to the highest pitch and my heart beat like a triphammer. my suspense was short, for just as I mounted my r one after the other there came the reports of Joe's and all was still save a whoopee. "I've got him." he had. I hurried to the pass and found all the there. We had not been deceived in the size of the We put him on the mule and carried him to our ca and before we took out the entrails weighed him, an weighed 225lbs. and had eight prongs to each an Except for his great size there was nothing to disting him from any other deer. He was poor; if he had fat I am confident he would have weighed 250lbs.

Having accomplished our heart's desire for that we gathered around the dinner table, on which venison and duck, cornbread and hot biscuit, coffee wild honey. Thus ended our first day's hunt in forest of the Arkansas River valley, but not our las any means.

J. E. Loudo.

New York Ruffed Grouse.

Editor Forest and Stream:

Ruffed grouse or partridges, as they are more comm styled in this part of the country, are somewhat plentiful this season than they have been for a few past. This is especially true of the Adirondack re where the birds have prospered finely thus far. broods hatched last spring came out early, and the gr of the chicks was rapid and healthy. In the early da July young birds were seen which, although still their mother's care, were far enough advanced to fl into the spruce trees when disturbed, and their was noticeably strong. The mother bird manifeste some extent the nervous anxiety which she is wont to play when an intruder invades the immediate loc which she and her brood are occupying, but while made some effort to attract attention to herself away from her little ones, she kept at a respectful dist and pretty well under cover, as if satisfied that her springs were getting so big that perhaps it was not n sary for her to make as much fuss as she deemed esse a fortnight or so previous. Is it not wonderful wha stinct and what a reckless disregard of personal s the mother grouse displays when she deems her b in danger? Her sudden appearance almost under feet running in dishabille with ruffled plumage, spread tail and fluttering, outstretched wings, is culated to attract and retain the attention at least mentarily, and ordinarily before a person recovers the surprise her little chicks are safely hidden. C sionally the maternal anxiety is so great that the bird remain within a few feet of the intruder for two or minutes before taking wing or otherwise beating a ret

During all this time she keeps up a continual cluc or "mewing" sound, as Thoreau termed it, which is peculiar and difficult to describe. The noise is different from any other which one hears in the w and is of such a nature as not only to startle but th person. There is something more, too, in the soun hold one's attention than there would be in a repetition of ordinary clucking. There is not only sistence, but insistence. The sound seems to carry wi something in the nature of a command, or at least mand. If Mrs. Partridge could talk and should claim, "Look at me! Look at me instead of my chic she would not express herself any more clearly than does now by her actions and voice. The little ones a peeping sound when first alarmed, but this is stantly hushed when they find a place of concealment, the great disturbance created by the mother bird us has the effect of causing the cries of the chicks to unheeded. One young bird in a brood which was flu early in July flew some 60ft., when he first took wing, alighting on a dead limb, perhaps 20ft. from the gro stretched his neck and looked with great apparent wor ment at two men who came along. He was about the of a robin. After maintaining his position a minut two he took another flight into an evergreen thick hundred feet away.

Four years ago ruffed grouse were very numerous i Adirondacks, and in certain parts of Oneida county adjacent counties, but during that fall the birds mercilessly slaughtered by the pot-hunters. In this c ty alone thousands of partridges were killed for market, most of them during the latter part of the son, when the leaves were off from the trees. The ceeding year there were some birds, but by no mean many as the preceding season. In 1897 grouse were ceedingly scarce, and it was a rare thing to see a y bird. Local hunters explained this state of affair the theory that the scarcity was due to the conti rains and cold weather which we had in the spring early summer that year, and which it was believed vented the hatching and rearing of new broods. year the shooting was not very much better, alth there was occasionally a brood to be found.

In view of the scarcity of grouse during the past seasons, it is gratifying to hear reports coming various parts of central New York stating that they now quite plentiful, by no means as numerous as were four years ago, but nevertheless enough to wa the hunter in expecting a reasonable bag of birds as ward for a day spent in the woods. In certain loca the broods are said to be larger than usual, a fact w will naturally be welcome news to all who enjoy the of shooting. The birds are more mature than they us are at this time of the year.

Another thing which hunters are congratulating t selves over is the fact that there are some woodcock in the country. During the past few years wood shooting in this part of the State has deteriorated rapidly, and it began to be feared that these birds forsaken and forgotten their old haunts. The presen dications are that there will be fairly good sport fall in some portions of this and neighboring cou where there are good woodcock grounds.

The oldest, most experienced and most successful h ers usually know from observation something abou condition of things before the shooting season o They have favorite hunting grounds and occasionally ing the summer months make it a point to visit pieces of woodland, without a gun, of course, and se themselves whether they contain any game birds. T

rs of inspection are very helpful when the shooting son begins, as the hunter knows just where to go to ain the best results. The information they pick up these observation trips is ordinarily reserved exsively for their own benefit, unless, as is now and then case, an intimation of what they learned is given to or two bosom friends. It is altogether likely that ne of these hunters who have been looking over the ntry this summer knew that there were woodcock but, but people who have been too much engrossed with er matters to investigate for themselves might have ained in ignorance of the fact for some time longer d it not been for certain parties getting mixed in their es. On Aug. 16 a hunter appeared in the village of eida and offered several woodcock for sale. He said killed twenty-four of the birds the day previous. He s surprised to learn that the season for shooting woodk began on Sept. 1, instead of the middle of August, d there were many people who were surprised that so ny woodcock had been found in this part of the State. e State game officials have been notified. A few days the proprietors of a restaurant in this city had a string woodcock hanging out in front of their place of siness, but the birds quickly disappeared when the men re enlightened concerning the game laws.

W. E. Wolcott.

TICA, N. Y., Aug. 28.

Vermont Grouse and Woodcock.

NORTHAMPTON, Mass., Sept. 7.—I have heard frequent pressions among New England sportsmen that "game scarce" and "there are more hunters than birds." This ems to me due to too much of the "stay-at-home" habits. r the benefit of some of my fellow sportsmen who are d down by their business and professional duties in y life, I take pleasure in telling them of a beautiful odcock and partridge section of New England, which, if re generally known, would be more popular each fall n the trip South in winter for a few days' quail shoot-, and then, too, at so much more convenient a distance. e quaint little country town of Townshend, in the thern portion of the State of Vermont, on the V. C. R., is an ideal locality for the true sportsman who lues two or three days' nice shooting more than any er recreation of the calendar year. I have just enyed two days' shooting there, and aside from the undance of game, it is a most picturesque locality, with green mountains all about, secluding beautiful rugged lleys, the course of the West River in one and some untain stream rolling along another.

The coverts for both partridge and woodcock are ideal. rtridges are so well protected by the wooded mounns that they are inexterminable, and afford the sportsn abundant sport any September or October day he els inclined to tramp their favorite feeding grounds. e alder bottoms up and down the valleys are extensive d perfect woodcock ground. The birds are there, too, d if it were not for the excellent State game law prosions of Vermont, which limit the bag to five birds of ch variety to the gun daily, a good brush shot could bag ice the limit each day. Good woodcock shooting is d through September and during October and Novemr. Flight birds make very fast shooting.

As city sportsmen are frequently at a loss to know where go, let all who are interested to know of a spot where ey can count to a certainty on good woodcock and rtridge shooting make a memorandum of the name of vans Bros., at Townshend, Vt., who are both practical portsmen and having grown up with the country about em, know every alder bottom in their county, and by stinct seem to know just where to look for game at all mes of the day or season.

The shooting in September I have found to be good ough to suit any true sportsman, and if you can hold ur gun right on every bird located by the faithful gs, it is an easy matter to reach the limit of a day's g.

The Evans Bros. have a kennel of English setters, most good working and shooting dogs of the best modern rains, so that if a man hasn't a dog of his own to enjoy working, one can see many pictures of gamy points ith their well-handled setters.

I hope this letter will reach the eye of some sportsmen ho are longing for just this information, for there is better game section North or South for both woodck and partridge than is found in the vicinity of the leepy country town of Townshend, and when one knows st where you can for a certainty find both woodcock and artridge abundant, it is no common privilege to have ccess to it.

R. M. Palmer.

Bear Dogs.

PIERCE COUNTY, Wash., Sept. 1.—I have been hunting lack bear during the last eight years with dogs of all reeds. Some of the dogs were owned by myself, but most f them by other parties.

The dogs I now have for bear hunting are a cross-bred og, half foxhound and bull terrier. Full-blooded hounds o not make the best bear dogs. They can be trained to un bear and even snap at them, but as a general rule they ill do no more than bawl on the trail of bear. This will ever tree a bear, as bears only take to a tree when close ressed. When full-blooded hounds get a good cuffing rom a bear they seldom after that get close enough to get nother licking. The most essential requisite in a dog hat can tree a bear or put him at bay is a fast, vicious dog. t matters very little what breed dog he is. Of course, in reeding dogs to run game, we must get some "hunt" in hem, and there is nothing better to look to for this than he good, old, faithful foxhound. Bull terrier and foxound do not always make the best bear fighters. The cotch collie crossed with foxhound is about as good a ross as can be had for this purpose. They have endurnce, grit and are fast. In this timber country we have o have fast dogs for bear, as nothing but the fastest dog an stay close enough to a bear to worry him here, on ccount of so much fallen timber and underbrush.

A great many people think that a bear dog takes hold of bear and attempts to fight it. Any hunter, of course, nows better than this, as a bear can knock out a small ack of dogs in no time if they will only grapple with him a few minutes. The dog we aim to raise for bear is one that is quick and clever enough to snap at a bear and dodge his blow whenever he makes a sweep at him with his powerful forepaw. If a dog is struck by such a blow he is generally ripped open wherever the claws strike. I have a half-hound and bull terrier now that was unfortunate enough to get a gash a foot long in his side from a bear, and now he will not get close to them, but will run them. I do not think a dozen such dogs would tree a bear, unless it be a cub or an excessively fat bear, that could not travel long. Before this dog was whipped, he was as good as any of them. A friend of mine in Oregon has a cross between a greyhound and foxhound, and that dog is as good as anything I ever saw for working on bear.

A staghound ought to make a good bear dog, especially if crossed with a foxhound, but I cannot speak from experience with this dog. I would be pleased to hear what parties who have had experience with them can say in their favor as bear "treeing" dogs. The expression "treeing" when applied to bear, I use to denote either putting a bear up a tree, or holding him at bay. Some bears will not tree, but will stand off the dogs, moving on every now and then and fighting back. Sometimes a hunter can catch up and get a few telling shots at such a bear. I killed one here about a month ago ahead of the dogs, with a .25-35 Winchester smokeless rifle. It was an old bear, and weighed about 500lbs. I got him down with one shot in the region of the heart, and finished him by a shot in the back of the head, ranging forward. I generally hunt with the .30-30 Winchester, and find it a good hunting rifle for big game.

I am having great sport here after black bear. Run one or two every week. They are down from the snow-capped Cascade Mountains after the elder, huckle and other berries that ripen early in the foothills. The bears I have so far gotten this year all had exceptionally good fur for the season of the year, and of course I am having them tanned for trophies of the chase.

Ed. T. Fisk.

Not All of Hunting to Hunt.

In 1854 I, a beardless boy of twenty, with my young bride, came from Medina county, O., to Cass county, Mich., then a sparsely settled country. I bought eighty acres of heavily timbered land and built a log house; and we were soon settled down to housekeeping in regular pioneer style. We had a mud-and-stick chimney in one end of the house and a cooking stove in the other. I began a war against the sturdy forest trees surrounding our home. It was work in good earnest.

Although I was able to provide food and warmth we had no money with which to buy the dry goods demanded by an increasing family. There was no one in that vicinity who paid cash for work except Thomas Pound, who lived four miles from our home. He paid 50 cents a hundred for oak rails cut and split. It would be impossible for me to walk to and from his place and cut more than 100 rails a day; and I could not leave my timid wife alone at night. On the other hand, the agent at Three Rivers had offered to pay cash for deer at the rate of $10 for fawns, $12 for does, or $15 for a nice buck for shipment. It was now about Nov. 1, and I told my wife I believed I could provide three or four deer in less time than I could earn half the price of one by cutting rails. It was not necessary for me to say which employment I preferred. I had a good rifle, and was considered a "dead shot." She, like any other good woman, said she knew it was hard to split rails for 50 cents a hundred; but it would not take more than a week or two to provide immediate needs, and while rail-splitting was hard, it was also sure. But I argued that deer were plenty, and I believed I could kill a deer in less than a week. She replied that if I failed to kill the deer I would have to resort to rail-splitting at last. I agreed to it, and so the proposition stood, that if at the end of a week I had not killed a deer I was to split the rails. The hunt was to begin the next Monday morning. In the meantime I plied the axe vigorously preparing house wood to last during my hunt.

Four o'clock on the Monday morning found us up; and my wife prepared breakfast while I was casting bullets for my muzzleloading rifle. Fortune seemed to favor me, for about 4in. of snow had fallen during the night. Putting a lunch of johnnkcake and salt pork in my pocket, I shouldered my rifle and started as soon as the first beams of light shot over the tree tops, the wish of my wife for "good luck" sounding in my ears.

I had gone not more than 150 rods from the house when I saw a five-point buck coming bounding through the woods directly in front of me. He was coming toward me, and I stood with the blood tickling clear to my finger tips. When he was within 50yds. of me I called to him. At the sound of my voice he stopped, as if surprised to find any but himself out so early.

A quick sight along the rifle barrel, a sharp report, and the deer bounded into the air, turned half round and fell dead.

I was so elated that I started for home. As I came to the brow of a hill, and could plainly see the house through the leafless trees, there stood my wife in the doorway. She ran to meet me, and telling her of my marvelous luck I bade her return to the house and watch for my cousin Leonard, who was going that day to Three Rivers, while I would dress the deer and send it by him to the agent who wanted it.

Soon he drove up with his sleek ox team and gunboat. My wife hailed him. I had the deer ready soon, and my wife gave him a list of needed articles. I tried to continue the hunt so successfully begun, but before 3 o'clock I was at home and telling my wife for the fiftieth time how elated I had felt when I saw that deer coming toward me. Early evening brought my cousin Leonard with the goods sent for and $12 in cash. He said he had been glad to do the errand, and that agent Morse would be very glad of all the deer I could send him.

The happiness that came into our home with the ready money and the needed goods brought before my mind the words, "It is not all of hunting to hunt," and the story has since been told over and over to my bright-eyed children.

The following day I found a rain had made it impracticable to hunt, and contentedly split wood for use in the house until about 10 o'clock. Then I started again with the gun for a continuous hunt. After a tramp of a mile and a half I found a doe eating moss. My rifle brought her down, the ball going through the heart. I hung up the deer and had gone not more than half a mile when I saw across a ravine three deer on the sidehill. Aiming at the largest of the three, I fired, and almost instantly the deer started directly toward me, but before he got half the distance lay down and died. The other two came to within 10yds. of me before they espied me. Both escaped.

I returned home and continued the hunt on the morrow. By the end of the week I had killed five deer, one red fox and a wild turkey.

I think every one who reads this story of pioneer life will be willing to admit, considering the value of the venison, $15, besides our own meat, that it is not all of hunting to hunt.

Sullivan Cook.

Michigan.

That Adirondack "Kid."

Editor Forest and Stream:

The following self-explanatory letter came out of the woods of northern Herkimer county to-day, and it makes me want to take its back trail instanter:

"Oh, say! Whoop! You know what I mean. I fixed him, and remembered about what you said of counting so not to get too excited and shooting around corners and places. I got my first deer all right and hit him where it belonged, too, right beside the head, with my .38, and you know what a slick gun that is for accurate shooting and hitting where it holds, so I knowed I just aimed right and didn't do any hitting-the-water-glance-uppy business like your little doe. [I killed a deer once by hitting the water on the nigh side. The bullet glanced up through the knee, heart and out the back at the top of the shoulder.]

"My deer wan't much for size, and of course it's in the red, mighty pretty to look at and thick-skinned like summer deer always are.

"You know how it is up to Little Black Creek Lake. There's a big swamp, a floe, a lot of ridges and gullies, some of them pretty broad across the back and clear along the top and edge, with bushes at the head, and old choppings where the spruce stood.

"Well, the parson and I—he's the same one was in the boat with me and a porcupine last year when we shot a hole in the porky and the boat too, so it sunk—went to the Black Creek Lake and smiled on the woods so as to sort of charm the deer. We camped at the foot of the little lake. In the morning we looked all around and then we got up to the ash ridge, along one side of which I went and he loped along the other. I seen a flock of partridges, but I don't shoot them, and I see a porcupine, which I did shoot on general principles; a big, red squirrel polkaed on a hemlock tree and then a big flock of bluejays had tantrums just because I winks at the big one with a feather out of its tail. Every once in a while I'd see the parson sneaking through the woods like an elephant, and just as quietly as a red squirrel on dry leaves. It did seem foolish to still-hunt on dry leaves, but we done it, and there ain't anything goes in still-hunting half so much as trying. I remember one time how I got a big partridge 'cross the creek way out in the middle of the lot by just trying. I walked round and round him, stopping once in a while to stand on my head and to roll over, not looking that way at all.

"Well, the parson walks on, with me opposite him, getting further apart all the while, till I couldn't hear a thing of him. The ridge broadened out there a good deal with a level top pretty underbrushy. I sits down for a minute where I could see every which way, and tries my sights. Then I didn't move for two minutes. I see a little sapsucker on a tree going up and up just like a stripe on a barber's pole. Pretty soon it flew away, and there wasn't a sound nor nothing in sight nor hearing. The wind stopped blowing, so the leaves didn't rustle, and then a chick-a-dee-dee bird sounded just once 'way down in the swamp. I could feel the quiet settling down in big lumps on all sides.

"All of a sudden my back begins to crawl, just as though somebody was about to dig his thumb and fingers into your back bone. Something was looking at me sure, and I knew better than to jerk my head around then. A couple of minutes, or weeks, after I slides my nose around, and just as I expected, ten rods off, was a deer, in the red, looking over the ridge where the parson ought to be. I hauled up and drew large pictures in the air with the muzzle of my rifle. I put it down and tried to imagine it was a rabbit. No go. So I recollected your scheme of counting ten, and I said one, two very slow, then four, five, six mighty fast, for the deer begun to wiggle away. With that I chuckled and then hauled up and bang!

"The doe jumped and I let fly again, and the deer ran in a circle. I fired some more, and when I was through the beast laid dead at my feet. Whoop!

"Well, I dressed him, and I carried him to camp after the parson came up, and we danced (the parson gently like). We ate venison in all styles fit for woodsmen, and there you are. The hull story.

"There are lots of deer hereabouts and many bears, too. I've seen lots of tracks of both. The boys say there never was so much game around the clearings. Hope you get up this fall—we'll try our luck together, eh?" Well, rather!

The kid waited a long while to get his first deer, but now that he has the hang of it he very likely will do for them right along, especially as he is a first-rate small-game hunter, and one of the best shots at cans, bottles and other natural woods targets in Herkimer county.

New York City.

In the Chicken Country.

Webster, S. D., Sept. 3.—Chickens are not thick enough to bite you. Six and eight to a gun are the reports. But sportsmen are plenty. This little town has taken $150 in fees alone. Some towns have barred the tourist out altogether. Lots of ducks, sloughs full, and prospects fine. I have a notion about this chicken business, and am going to prove it this week.

Pink Edge.

The Man Target.

Malone, N. Y., Sept. 1.—*Editor Forest and Stream:* Following close upon the heels of the recent tragedy at Fulton Chain, an account of which was given in the columns of this paper, comes the report of another sad affair in this section that will in all probability have a fatal ending. The scene of the accident was at Trout Lake, near Parishville, and the victim was George Prentice, a well-known sportsman and hotel proprietor. Recently Prentice was fishing on East Brook, and on coming to a dam, started to carry his boat around it. While he was doing this, Lige Converse, who was on the lookout for bear, espied him in a stooping position and fired, under the impression that he was the animal he was seeking—with too good an aim, as the charge struck the unfortunate man in one of his knees, completely shattering the limb. As Prentice is a man of advanced age, his recovery is regarded as being very doubtful.

Forest and Stream's advice to be sure to know your game before you shoot should be posted in the hat or stuck on the gun stock of every man that goes into the woods for game. You may be prudent, you may think yourself discriminating enough to know your game, but in a moment of great excitement, when your nerves are at their greatest tension, a man to your distorted vision may seem a deer or bear, and then but a pressing of the trigger and you have a horrible memory to follow you through life. It takes but a moment to verify your eyesight, and although you fail to kill a deer on your outing this fall, you at least may know that you are not responsible through your carelessness for the death of one of your fellow men.

Kenewah.

Game in Ohio.

Cleveland, O., Aug. 25.—*Editor Forest and Stream:* I have been a reader of your valuable paper for the past ten years, and have always admired the stand you have taken regarding the slaughter and sale of game. My boyhood days were spent on a farm, and from the time I was able to carry an old army musket in quest of squirrels, rabbits and other small game, up to my first perusal of Forest and Stream, I did not know what a "game hog" was, neither had it ever occurred to me that the game might some day become exterminated; and but for the fact that I have read and re-read almost every issue since then, I might still be of the same opinion; but "being a man" I am able to change my mind (thanks to Forest and Stream), and can truthfully say that it has made a sportsman of me, as well as a number of my good friends.

I am a commercial traveler and cover most of the "Buckeye State," and from numerous inquiries I find that the fall shooting will be about up to the standard. Quail are quite plenty in spite of the severe winter, and I see several coveys of half-grown birds every week from the car window. Rabbits are also in great abundance, but squirrels as yet are quite scarce, except in the southern part of the State, where they seem to be quite plenty.

I went out with a friend last Saturday to try to bag a few, but had poor luck on account of it being so dry. We saw perhaps twenty, but it was very difficult to get within range of the little rascals.

Ohio sportsmen, why don't we hear from you often? Surely there are enough of you here. Wake up and let us hear from you through these columns.

Wah Wah.

Wisconsin Resident Licenses.

Mr. Fred Mather sends us a note of a recent decision by Attorney-General Hicks, given the State game warden, on the new State game hunting license law, in which he holds that residents of the State may hunt any kind of game in their open season except deer and aquatic fowl without a license. We assume that this means the hunting of game without the employment of dogs.

Sea and River Fishing.

On an Ohio Reservoir.

Editor Forest and Stream:

Members of our hunting club have frequently expressed regret that our wives were not in the party and sharing the venison steaks, broiled partridge, fish and other good things our camp year after year has afforded. But the distance of 500 to 600 miles, together with the lateness of the season, with its attending changeable and often disagreeable weather, has sufficed to keep our families at home. Three of us—N. H. Gable, J. E. Bishop and the writer—put our heads together and planned a trip to the Mercer County (Ohio) Reservoir last week, and our wives readily fell into the trap. They will probably never forget it. Little Miss Bishop, Masters Que Gable and Paul Cunningham went along, and of course don't know but that they had a grand time.

We loaded a 16 by 20ft. tent, camp stove and bedding into a sample wagon, and climbed in, while the three women and little girl took to the surry for conveyance. It is thirty miles from Portland to Montezuma on the south shore of the pond. We were there before noon. We drove on east by north from that town some three miles, then past a farmhouse and down through a timothy meadow to the lake. We put our horses in the farmer's barn, spread a lunch under the shade of a lonesome ash bush, and between eating and looking for Bishop, who had left us at Montezuma to fetch a boat, wore away about two hours of the hottest part of an extremely hot day. I became uneasy at Bishop's long absence, and leaving the party, skirted the lake about a mile, but returned without seeing him. There were a good many crane along the shore and on logs out in the pond, and I saw a few jacksnipe. I then explored the shore in the other direction about half a mile, and soon after my return from this trip Bishop appeared around a point a half-mile away. He had started in a large flat-bottom boat, and after pulling out from Montezuma nearly two miles, found the boat so undesirable for our purpose that he turned about and exchanged it for the best one he could get. The pull was a hard one, as the water was only deep enough for a mile or more to float the boat.

By this time the women were looking down their noses, and my wife whispered to me that it would never do to stay there. We held a council, and decided, though we were at the nearest point to the stump fishing, and there was no danger from timber, pending a possible storm, there was neither shore fishing nor shade, two very desirable features of a pleasant camp. So we hitched up, and while the others went back through the village and down the west side of the inlet a mile or so to a grove, I rowed the boat around and beat their time a few minutes. There was already one camp located at the edge of the grove nearest the lake, so we pitched our tent in a small, open space on top of the little hill the grove covered. This spot was about 100yds. from the water and 40yds. from a dweller, who was engaged partly in farming and partly in fishing. The ladies brightened up when they alighted in the shade and took a look at the clean little wood lot with its farms on three sides and the lake on the other, and I felt real good at the prospect for a pleasant and cheerful time. It was now near the middle of the afternoon, and by the time we had the camp in order and supper over, it was night. The children caught a few small cat and sunfish, but Bishop and I waited for morning, when we expected to get some bass. We had some frogs, which are prime bait at this season. We also had fat meat and flipjack for trolling. We had caught bass out of this water and hoped to bring in a good string, while our still-fisherman, Gable, was expected to take a great quantity of small fish. The evening was very warm, and the ladies and children were all pretty well fagged out with the long ride in the hot sun and dust, so we got them to bed pretty early, and arranged our bunks under the ropes at one side of the tent. We spread some old awning over the ropes, scraped a quantity of dry leaves together, covered them with straw and spread our bedding on this. This looked all right, and after some camp chat and plans for the best possible results the next day, we lay down; but we had not closed our eyes in sleep when rain began to patter on the covering overhead. At first we paid little heed, thinking it only a passing shower, and if we had held to this idea we would have weathered the night in tolerable comfort, but the drops began to fall thicker and faster, and voices from the tent advised us, so we raised the wall of the tent and moved our beds inside, occupying a part of the side nearest us that had been overstrewn with odds and ends unloaded from the wagon. Our tent is 16 by 20ft., with 5ft. wall and made from 10oz. double twist duck. By the time we were again settled the shower was past, and the only discomfort we had to endure was the heat and the songs of mosquitoes. It was too warm to keep the tent closed, and when a big mosquito snored in the vicinity of my off ear I would try to swat him, only to yank my elbow, which was already tired, and be compelled to listen to his aggravating squall as he renewed the attack.

We were not very much refreshed in the morning, and the ladies acted as though, if called on to express themselves, they might vote the whole thing a bore. After breakfast we took lunch and water for three, and rowed off among the stumps and logs past the Eagle's Nest, and on east until we came to a derrick platform some three miles from camp. Here we left Gable, who preferred to still-fish from something stationary. We had noticed that Gable showed some nervousness on the water, but we did not know until that evening that there was good cause for it. Gable was at the front in the late unpleasantness, and was shipwrecked on the Gulf of Mexico. For several days he drifted before the wind with no hope of rescue. He don't like deep or turbulent water, and prefers to fish from shore. He is a small limber-jointed man, and I have often seen him where the water was shallow near shore walk out on a log and bending one knee, sit down on one foot with the other stretched out on the log in front of him. There he would sit until he either caught a string or satisfied himself that there was nothing there to catch.

The Manhattan Oil Company has drilled a good many wells in the reservoir. A large per cent. of them have been abandoned, and the piling on which the derricks were built alone remains. In some places the entire platform is intact, while in others heavy plank are nailed or bolted to the piling. We had been told that bass were being caught around these piling, and that it was a tip-top place to catch catfish. Bishop and I tried frogs around the stumps and piling, but got no strike, and about noon pulled up to where we had left Gable. He had a few small fish. We lunched and smoked, and waited for the wind to subside.

This reservoir is supposed to be the largest artificial body of water in the world.

We tried it again after the wind quieted down, but got no bass, and taking Gable in the boat we pulled for camp. It was pretty hard facing the ladies without those nice bass we had dished up for supper in our minds. But we put on a bold front and sat down to refresh ourselves from the things we had brought from home.

The air was cooler that evening. We were tired, and the ladies and children had become more accustomed to the surroundings, so we got a good rest, and when morning dawned made ready to try for those bass. Gable concluded to fish near camp, and got a boat from a fisherman near by. Bishop and I filled a couple of glass fruit jars with lemonade, and a basket with lunch and rowed out beyond the Eagle's Nest (which is a small island that was originally covered with large timber, in which eagles nested) and put in the day stump fishing, but returned at night without a strike. We stayed until the following morning before breaking camp. We met several fishermen, and heard the same story from all, "Not biting to do any good." The fact is, they have been caught in nets and shipped to Chicago, Dayton and Cincinnati, until there are very few left. Of course, "the law" forbids this. Mrs. C. says she enjoyed it. I hope she did.

G. W. Cunningham.

P. S.—I forgot to state that on the third night at 11 P. M., while we were asleep with tent open for air, a wind storm struck us very suddenly and came near carrying our tent away. We had to get out of bed, tie the tent to trees, make stakes and stake the walls down, all without light, and in a gale that threatened to uproot all the trees in the wood lot. The whole camp was ready to cut and run for it, except my little boy; he slept on. No timber fell on us, and things quieted down in about an hour. It was only an incident of camping in the shade in hot weather.

Portland, Indiana.

Fishing Up and Down the Potomac

The Damnation of the Carp.

The writer has been retained by some friends of th condemned, not to defend, but to secure if he may a ne hearing for this ichthyological Dreyfus. The carp h been accused of, and denounced for, sins enough to co sign the whole brood to eternal perdition. Every ye from some quarter comes the cry of "Conspuez carp," ar a hysterical echo goes up, "A bas le carp." It is popul in some localities, but not here, where it is believed th nine-tenths of the testimony on which the carp has bee convicted has been forged.

He is said to be German; to dig up wild celery roo and thereby starve out the canvasbacks; to drive out th bass and other game fishes; to eat the spawn of bass ar other river breeding fishes; to excavate river beds ar ponds and make them uninhabitable for other fish; t live only on filth; to be without an element of gameness to consist principally of bones and to be unfit fo human food.

He is not German any more than American, but naturalized citizen of both countries, his ancestors beir supposed to have emigrated from India or China somewhere in the far East where civilization started, ar no other family of the flood has been so widely di tributed, or has proved itself equal to maintaining ex istence, even thriving, under such various environment as this much-abused water sheep.

If the survival of the fittest proves anything, establishes his character as a philosopher, and holds hi up, a shining example of the superiority of a nature th makes the best of its surroundings. He has fed an enriched communities and individuals who, with that ba ingratitude to which we are all prone, reward him with swift kick and an unkind word.

Fortunately this wordy abuse cannot accomplish h destruction. "All the king's horses and all the king men" cannot rid us now of this most valuable addition t our preserves, and he will continue to feed our people an our game fish so long as we have waters fit for fish t live in.

That with his soft nose, much like the tip of an ele phant's trunk, he can dig up strong roots, or witho artificial teeth chew them after they are up, is not be lieved by anybody in the East, but was for a time seriousl contended by some Californians because the celery bec went soon after the carp were introduced. The re reason of that disappearance is now known to have bee due to an arch enemy of the carp, and his reputatio has been cleared of that offense.

From the blood-curdling accounts of his havoc amon game fishes, one would be led to suppose he was veritable shark, or worse, a bluefish, that charged amon the schools of bass, biting and killing out of pure wanto ness, and when the river comes down blood-red we some times wonder if it is only iron or if it may not be th sanguinary results of another crusade of the carp amon the bass. With that delicate sucker mouth, soft as virgi rubber, pointing straight downward, and no horns c teeth, there seems but one way possible he might injur any other fish. Certainly not by ramming, for his bow i so round and soft his opponent would think he had col lided with a feather pillow. But there is a way, an since there is a way he must be guilty; he might hold pebble in his lips, as the aboriginal helved his stone axe and getting above a poor bass pound him to death with i

It is heart rending to think of what slaughter one Sam son of a carp might do among the Phillistian army of th bass if he adopted this method and the bass submitted t be caught and thumped.

However, the principal count in the indictment is th charge of eating bass spawn, and on this point it i denied:

1. That anybody ever saw a carp eat spawn.

2. That anybody ever saw anybody else who had seen carp eat spawn.

3. That any bass would let any carp get close enoug to see the spawn.

4. That a carp could eat bass spawn if he had an un disturbed opportunity.

5. That any bass spawn were ever found in any carp.

6. A general traverse that any carp ever ate any bas spawn.

The heretofore insurmountable difficulty in the effort to artificially propagate bass has been the impossibility o stripping the milt from the live male, but principally the peculiar viscid character of the spawn which sticks i so tightly to the first object touched that it cannot be re moved or handled. It does not float freely as do thos others which our breeders have so brilliantly manipulated

With the spawn stuck fast to the pebbles of the spawn ing bowl which the bass builds for his nest, a carp migh be turned loose in a ten-acre field of them, and if there were nothing else to eat, he would starve to death o develop a gizzard like the Gillaroo trout, because he would have to swallow the pebbles with the spawn.

But when above that spawn you set a rough rider like the black bass, spoiling for a fight, never asleep, never relaxing his vigilance, afraid of nothing but a man and no to be driven away even by him, there is no carp living ha a ghost of a show of dining on caviar de bass. A bass has been known to hover over a spawn bed in a pool, with in 2ft. of shore, and refusing to be dislodged by pebbles or sticks, has been sniggled three times off his post and returned to the water at points away from the bed, only to return to his sentry duty undaunted. Rather than move, they permit themselves to be picked up by the osprey. A pound bass with his caudal fin in splints may be backed to keep away or kill the biggest carp that swims.

No pretense is made of any better opportunities for observation here than elsewhere, or that other experiences and conditions may not vary with other observers and localities, but granting that much, it is demanded that the verdict of guilty be set aside so far as Potomac carp and Potomac bass spawn are concerned.

It is believed that carp would not eat bass spawn if they had the opportunity; we are assured that with the bass on guard there are not carp enough between the four seas to disturb his charge.

So positive are we of this, that a medal will be given to that individual who will prove that one carp has eaten

one egg of a bass while the parent bass lived. This offer is in good faith and not intended for a jest, and no conditions are attached save that reasonably convincing evidence shall be adduced that a carp robbed a nest while the bass was on guard, and proofs that will convince the Fish Commission will be considered ample without regard to our own prejudices or opinions. Hampered with these as we are, the charge that carp eat the bass spawn seems to us absolute and outrageous nonsense.

The Potomac River was overstocked with carp long before a few big-mouth bass and crappie were put in. Today every trubutary of the lower river is bountifully stocked with the bass that range to 7lbs. in weight.

The United States is stocked year by year with black bass and crappie from the Illinois and Mississippi River bottoms, where there are more of these fish than can be found anywhere else, and yet above 80 per cent. of the fish there are coarse fish, carp, buffalo, etc.

The Fish Commisisoners of Michigan, Illinois and other States have again and again denied the foolish story, but apparently to no purpose. The Fish Commission of Washington has no opinion on the subject if one goes by their reports since the carp were introduced. They indorsed the carp when they first took the responsibility of introducing it. They can well afford to enjoy the wonderful success of that experiment in silence, undisturbed by the carpers whose name the fish has made a byword. The principal of these are the anglers and the newspapers. The carp does not take a fly or live bait, and is therefore of not much use on the angler's holiday. The fisherman comes in with a light basket and somebody or something must be to blame instead of himself, and when other excuses are exhausted he falls back on the carp.

But it is time the Commission did the fish and itself justice.

Without the carp there would be no bass in the Potomac, or but one big one in each pool. They would be driven to eat each other.

The carp is nearly the only fish food they have in the summer.

When the small-mouth bass was first introduced into the river it was full of minnows. They exhausted these, and the stock declined. The carp came and the supply of bass increased.

For the last two months young carp of 4 or 5in. have been the only bait used for bass between here and Alexandria. These were found in an old canal pool where hundreds could be taken at a haul up to ½lb. Ten times more bass have been taken with these than with all baits in a like period in any previous season, because the bass are wonderfully increasing in this section. Near every large city, especially in the West, carp is the best fish the seiner gets. Even here the shad sold as low as eight cents apiece, while carp are always good for two cents a pound. Hundreds of thousands of pounds are sold in every city of the West, and nearly as many carp sold as all other fish together. There is no fish to-day of nearly the importance to the public of the United States, and certainly none to which the angler for game fishes owes a greater debt. Suppose he eats dirt. If you take him away that's all the bass would have to eat through the fishing season. As to the charge that he is bony, he is not worse than the shad, and it is not found an insuperable objection to the latter fish, for there are many people weak enough to contend he is delicious in spite of splinters.

That the carp is unfit for food hardly requires denial in the face of his position in the inland markets. As to whether he is good eating is a matter of cookery and taste. The writer never ate one nor saw one dressed by an artist. Neither does he eat canvasbacks (at $10 a pair) nor mushrooms that may be had for the picking, but he is as sure carp are good eating as that these others are delicacies to some palates. If you have any bass preserve, hasten to stock it with carp if you want more bass, bigger bass and better bass, and above all, do not let any one impose on you with the idea that the carp is useless, worthless or dangerous. There is no one fish we could not better afford to lose; none lost, we could not sooner and more easily replace. HENRY TALBOTT.

A Massachusetts Bass Pocket.

SOUTH PORTSMOUTH, R. I.—*Editor Forest and Stream:* Although I am more of a fisherman in salt water than in fresh, I often indulge in a trip for black bass; and am fortunate in being situated so I can enjoy this grand sport to my heart's content, as you will note by the following. I have recently become a member of the Newport Fish and Game Club, which controls all rights to the fishing in Lily Pond, situated back of Bailey Beach, which fronts a part of the celebrated Ocean Drive at Newport. The pond is heavily stocked with black bass, white perch, trout and landlocked salmon; and as no member is allowed to take home over five fish, and all small ones are returned to the water, the fishing improves yearly.

Then I am within two hours' ride by electrics of North and South Watuppa lakes. I think the length of the two is about seven miles, and they vary in width up to one mile, which is the extreme width. In depth they run from shoal water to 35ft. I think these ponds are as little known as any in the United States to the fishing public, but they are well known to local anglers, and unquestionably no better fishing is to be found in New England than at the ponds when the bass are in biting condition; and as a rule this seems to be daily, judging from the fishing had there by my son and myself during a week's stay. We left home Monday, Aug. 14, and reached the ponds to commence work at 1 o'clock the same day, returning Aug. 21. Our catch for the week was a total of 702 black bass, not counting yellow perch and white perch, of which we took a large number. I think I hear some reader saying "fish hog," and possibly I am. But I am not going to plead guilty, even after I tell my story, and here it is.

First, there was a record established for the ponds of a ten days' trip fishing there by two New York gentlemen. I plead guilty to going there with the expressed intention of breaking this record if possible. The record was 438 for ten days. Our catch up to Thursday night was 475, and total for the week, as stated, was 702 black bass. Now the question will no doubt be asked, What could possibly be done with this large number of fish? They were not sold, and all fish under 8in. are by the Massachusetts law required to be returned to the water, with which law we complied, and also returned many others. Fall River is a mill city, and of course there are many poor families who do not often enjoy the pleasure of a fresh fish dinner, or breakfast even, if they pay for it. The gentleman (and he is one) who furnishes bait and boats has an ice chest, and our catch daily was put in it, with the request that they be given to any one that needed a mess of fish. When we left there at 1 A. M. the 21st there were left about twenty fish; we brought some home, and have the pleasure of knowing that we contributed to the wants and pleasure of numerous families of the Mill City, as Fall River is often called. Now, brother fisherman, does this "let me out" on the charge of fish hog, or am I guilty?

Napoleon Fontaine, who has boats to let and bait for sale, is a "white man" in all respects, and will do all possible to point out the best fishing points and make one's stay pleasant. We were unfortunate as to securing extra large fish, but they are there, and plenty of them. Our largest black bass was of 2¼lbs.; we got many of 1 to 1¼lbs. weight. We tried about all baits with fair success, but found shrimp to be a good standby; shiners and dobsons also proved good. Good board can be had near the pond, and it is an ideal place for an outing. I am interested in no way in this matter, except to call the attention of brother anglers to good fishing, and to share a good thing with them. WM. M. HUGHES.

Off Cape Charles.

SOUTH BOSTON, Va.—*Editor Forest and Stream:* While many articles are published in your columns in regard to fishing and yachting, very few, if any, seem to reach you from this mecca of locations for yachting. Virginia, with its Chesapeake and broad expanse of sea shore, has few yachtsmen, nevertheless there are many who enjoy a very pleasant sail and more who enjoy fishing of which Northern fishermen never dreamed.

The Newport News Fishing Club consists of about twenty members, and it has been their custom for a number of years to celebrate the Fourth of July with a fishing cruise and to invite a few guests to enjoy the day with them. Sometimes they charter a schooner, but as a rule find it more convenient to go on a tug, and then they can tell just when they will return home in the evening. This year I had the pleasure of being a guest of the club, and one of a party of eighteen all told. At 7:30 A. M. lines were cast loose at the C. & O. dock, and the tug Hinton headed for Cape Charles. About five miles off the cape anchor was cast at about 9:30, and fishing began in earnest. The sea was rather rough, and for the sailors there were barrels of fun; but you can imagine how the staid landsman felt when our vessel rolled and pitched. Nevertheless it did not interfere with fishing, and by 11:30, when a halt was called to prepare dinner, at least 200 fine fish had been landed.

Soon after dinner a squall was seen coming across the bay, and the landsmen a-coming for the rail; but, alas! many never reached it. Our summer squalls never last long, and fishing was soon resumed. When the anchor was hauled aboard at 5 o'clock the party had over 500 fish to their credit, mostly croakers, with a good sprinkling of trout, spot and hogfish. Two sharks were caught; one a hammerhead, which is a very curious object, and the other a dogfish. Among the curiosities of the day was the catching by one fisherman of a croaker and a spot at the same time; none here have ever heard of such before. Mr. H. L. Edmunds made the record catch of the day, landing eighty-one. Many caught over twenty-five; the party would average over that number, though some were seasick and were not able to fish at all. I am a landsman pure and simple, and this was my first experience at open sea fishing; but give me my choice, I should spend all of my spare time boating and fishing. The man who has never tasted of the briny deep does not know what life has in it for him.

The club presented their commodore, Mr. C. B. West, with a handsome remembrance, showing their esteem. I shall tell you of some of the pleasures of sailing on Chesapeake Bay. H. P. W.

A Record Broken.

SHASTA MOUNTAINS, Colo.—*Editor Forest and Stream:* I inclose the following item, clipped from the San Francisco Sunday Chronicle: "The season's record for trout fishing at Lake Tahoe was broken last week by Henry Payot, of this city, and Mrs. Norman D. Rideout, of Marysville. Mr. Payot and Mrs. Rideout made a miraculous catch of fifty-nine trout, aggregating 90lbs. in weight, inside of four hours. The catch was made near the Rideouts' mountain home, Sunnyside, on the banks of Lake Tahoe, where Mr. and Mrs. Henry Payot have been spending a fortnight as the guests of the Marysville banker and his wife. Mr. Payot is an enthusiastic sportsman, and the catch was the talk of Lake Tahoe, where the fishing has been unusually good this summer, although nothing approaching the Payot catch had been previously made. All of Mr. Payot's friends have been feasting on trout since the great catch was made, as it is difficult to dispose of 90lbs. even of the finest fish in the world."

There is some hair-raising sportsmanship for you! This same paper gives much space to sportsmanship and achievements of the kind quoted above. It recently devoted the main part of one of its pages to and illustrated the article eulogizing the sport of slaughtering mourning doves at their watering places. As this has been an exceptionally dry year, and watering places were scarce and far apart, the ambushers shot many thousands of turtle doves, without much exertion. RANSACKER.

Bass in West Virginia.

ROMNEY, W. Va., Sept. 7.—*Editor Forest and Stream:* Living on the South Branch of the Potomac and an ardent lover of both fishing and hunting, I have often read notes in your paper about the South Branch, and I try to tell your many readers something of our fishing and hunting. As most people well know, this stream at one time was the best black bass stream of the United States, but owing to so many fishing in it, and the laws never being executed, it is not so fine as it once was. However, if the water is clear and in good condition it yet affords some fine fishing.

This present season has been unfortunate because the river has been very muddy most of the summer, but some good catches have been made. One of the most disgraceful scenes ever witnessed by a true sportsman was seen here this spring. It was sixty-three bass caught on a tie raft in muddy water by cross-tie men engaged in floating these rafts down the river. The bass would jump on the rafts, when the men would run each end in to the banks, and two of them weighed 5½lbs., and eight or nine weighed over 4lbs., and all were full of spawn. And here you see the reason for our fishing not being what it once was. These men were brought up before a magistrate, pleaded guilty and were fined $5 and costs, which, considering the enormity of the offense and the fact that they sold the fish for 10 cents per pound, was a very light sentence.

We are expecting to restock the stream this fall with 125,000 small black bass, and with a more strict enforcement of the law, hope to bring our river back to its former standing as the best black bass stream in the United States.

As to hunting this fall, we have no squirrels, but the prospects for deer, turkeys, partridges and pheasants were never better. Of all citizens of another State a license of $25 is required. This was meant to protect the game; but I think if we could control some of our own citizens who pot whole coveys of partridges in the snow and bait turkeys to a blind and kill as many as eight or ten at one shot and kill half-grown wild turkeys in August, we would need no license for a real sportsman who comes out to hunt for fun and not for market. J. B. B.

Parasites in Fish.

CANANDAIGUA, N. Y.—*Editor Forest and Stream:* I fish in a lake outlet and occasionally capture a bass or two, and I have frequently found imbedded in the flesh under the skin a little round, white substance; on removing this it would straighten out and appear to become a thing of life in the nature of a little white grub. I also find a great many little black specks both on the outside of the skin and in the flesh.

I have read an opinion of a physician in which it was stated that the food quality of the fish was improved by foreign matter of this kind. That relieved me so far that I can conscientiously feed them to the rest of my family, but I seem to require cumulative proof on this point.

The bass in our lake are fine and clean, and I never found any such thing in them, but I much prefer the stream fishing.

The still stretches in the outlet above the dams get full of weeds in summer.

I suppose it would not be wise to publish anything like this, as it might prejudice some people against bass, but I would very much like to know the cause of the appearance of such life in bass, and if you could find leisure some time to write me the cause and effect I would esteem it a great favor.

I would dislike to give up my fly-fishing in this stream, as it is the only one I can afford to fish in, but if the fish are not good to eat I am about ready to give it up, as I do not want to kill the fish and not use them, neither have I got to that gentle stage where I am willing to put them back. They come too slow and too high for that.

I have imagined that they were more infested in portions of the outlet that are muddy and weedy than where it is clear and rock bottom, but I am certain of nothing except their presence.

I have thought also that those that were not "grubby" fought much harder and longer than those that were. They are small-mouth bass.

BASS FISHERMAN.

GUELPH, Ont.—*Editor Forest and Stream:* The other day a friend of mine was trout fishing in one of the spring creeks in this vicinity, and among his catch was a trout about 10in. in length, having on it two lumps, one near the dorsel fin, the other just behind the gill. On examination the lumps were each found to contain a red, snake-like parasite, 3 or 4in. in length and probably 1-32in. in diameter. Are such parasites common in trout? They are the first noted in this locality. The water of the creek was pure, cold spring water. I have inclosed parasites for your inspection. W. H.

[Various parasites are known to infest the flesh and intestines of black bass and trout and game and food fish in general; but though not appetizing, they are considered harmless. Cook your fish thoroughly, make no deep scrutiny, give imagination no play, and enjoy the good things set before you.]

Leaping Bass and Pacific Salmon.

FAIRHAVEN, Wash., Aug. 31.—The New York press, including FOREST AND STREAM, seem to be considerably agitated about "the bass that jumped into the boat," an event reported from Oak Orchard Creek, N. Y., July 27 last. From the attention the incident has attracted it is evident that most people, and most anglers as well, are not well posted on the versatility of the black bass. I remember that it was a very common occurrence on the Niagara River above the Falls. At least half a dozen bass jumped into the boat while I was rowing along the shores of Grass and Connor's islands at various times in the seventies. One of them displayed such jumping ability as to throw himself fairly against my face. The act always occurred in shallow water, and it was always plainly to be seen that the bass jumped to escape the oars. The experience of Prof. Pound is entirely worthy of belief. It is not so rare nor remarkable as the catching of the Pacific salmon on the fly in the rivers of this coast. I have never been able to discover that they had an appetite for anything but to climb as far up the stream as the mountains will permit. In the salt waters of the Sound, the silver and steelhead salmon will take a spoon, and they afford grand sport where a rod is used. September and October are the months to catch them, and within eight miles of this city such sport may be had as to make it well worthy of a trip across the continent. COMOX.

"Go to school, sonny," said Uncle Eben, "an' git educated 'bout geography. It'll help you to un'stan' dat dis worl' would keep gwine round, even if you didn' happen to be on han' to push an' holler."—Washington Star.

Three Hours on Pewaukee Lake, Wisconsin.

"It is windy," said I, as we stood at Five Points, Waukesha, on Aug. 29. "Yes," breathlessly replied the Judge, as he recovered his hat. "Shall we go? Here, the shortest straw goes," so Judge King drew the shortest with a wink. Thus propitiating fate, we got on the electric car and threw out visions of the catch to the afternoon breeze.

It was good to see my portly and genial companion with his coat off, his hair flying, his kind eyes beaming contentment toward the hay fields and the cattle grazing peacefully.

"This will be the best day of all," he said, and such remarks, with a strong east wind, are always grateful, and when he called me from the contents of an azure-tinted envelope, "Here we are," I hurried expectantly with him down to the beach.

Here the boatman put off on us a water-logged craft as "the very lightest boat on the lake," but what cared fate for such a detail? We blistered our hands in turn in eager rowing to our particular ledge. A hasty anchor, and then the Judge began to count, "Four to nothing," and I began to make. Then it was a horse race for an hour, and I a neck in the lead. Then, varying awhile from the large bream or roach we had been catching, we began to land cat, and one bass, with much excitement, was hauled in. Here I stopped to see the sun set and the twilight edge into the rose tints and the distant sails begin to lift themselves on the horizon line and sway gently like enchanted wings—and the Judge counted on monotonously.

He was nearly up with me when I thought it a wise policy to drop the flag.

After convincing the Judge, between strikes, that we did not have sufficient bait to fish all night, we hauled up and pulled for the pier.

The car was waiting, and we went into Waukesha very joyously, the Judge smilingly repeating from time to time, "Forty-seven and 30lbs." Weighing them, however, amid a crowd of admiring spectators, we found that they turned the beam at only 25lbs. We hunted up all our friends, waked one or two people out of bed to make presents of fish, and the Judge wrote a very elaborate note to the Southern beauty at one of the hotels and sent up a full basket.

As I was preparing for bed, the Judge came tripping across the hall: "Just listen," he said, pointing to a room adjoining his; "that's the darndest snorer in Wisconsin."

EDGAR MAGNESS.

Salmon Fisheries in Norway.

CONSUL NELSON, of Bergen, sends a printed analysis of the report of the inspector of salmon fisheries in Norway, from which the following extracts are taken:

"As the result of a visit paid by Herr Landmark to the United States, a new departure was made in connection with the artificial hatching of salmon in Norway. Formerly the young fry were allowed to escape as soon as they began to require food, and, therefore, when in a very delicate and defenseless condition. They are now retained in captivity and fed four times a day, upon the raw liver of slaughtered animals, until the autumn, after the system which obtains in America. The results of the first year's experiment at the Government hatchery on the Drammen were satisfactory; on 280,000 ova treated, the loss was only 2 per cent., and in the middle of October about 211,000 fry were turned out; while the percentage of loss has been still further reduced of late years. A belief is prevalent among the coast fishermen that salmon and sea trout spawn successfully in salt water, and in this connection a series of experiments were conducted under proper supervision, from which it appeared that: (a) Roe taken from salmon captured in a river or from sea trout which have remained until the spawning time in sea water cannot be successfully developed in salt water; (b) salmon and sea trout roe impregnated in fresh water may be hatched out in brackish water containing a small percentage of salt, up to eight or nine per mille—that is to say, rather less than one-third of the salt contained in the sea water of the Norwegian coast."

San Fransico Fly-Casting Club.

SAN FRANCISCO, Aug. 27.—Following are the scores made at the twelfth medal contest to-day, at Stow Lake. There was a light wind, and the weather was cloudy:

A Name for the Brook Trout.

Editor Forest and Stream:

If the boys have all got through guessing and trying to find a name for our common brook trout to take the place of the objectionable "speckled beauty," let the "old men" be heard. Now this fish is not a trout, but is a char, pure, unmixed. So we will take for the first part of the new name the word char. And as pure-unmixed is mere—pronounced "mer" (see national pronouncing dictionary, pocket edition)—we will take this mer for the second syllable. This gives us "charmer," a most appropriate name for our beautiful char—pure and unmixed, a thoroughbred charmer. I caught a nice basket of "charmers" the other day, etc. STANSTEAD.

A Lexington (Ore.) lawyer spends his "vacation" catching coyotes, for whose scalps the county pays. He has earned $209.50 in this way lately. "This probably beats practicing law," says the Oregonian.

It's rather lucky girls are angels without wings. If they had wings they'd likely be killed to trim hats with.—Puck.

Fixtures.

BENCH SHOWS.

Sept. 12-15.—Milwaukee, Wis.—Milwaukee Kennel Club's fifth annual bench show. Edward Meisenheimer, Sec'y.
Sept. 19-21.—Rutland, Vt.—Vermont Kennel Club's inaugural show.
Oct. 2-6.—Dallas, Tex.—Texas Kennel Club's second annual bench show. Sydney Smith, Sec'y.
Oct. 3-6.—Danbury, Conn.—Danbury Agricultural Society's eighteenth annual show. G. M. Rundle, Sec'y.
Oct. 10-13.—Providence, R. I.—Rhode Island State Fair Association. E. M. Oldham, Supt.
Nov. 15-18.—Philadelphia, Pa.—The Philadelphia Dog Show Association's first annual bench show. Marcel A. Viti, Sec'y.
Nov. 29-Dec. 1.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Oct. 23.—National Beagle Club's tenth annual trials. G. Mifflin Wharton, Sec'y.
Oct. 25.—Hampton, Conn.—Connecticut field trials. John E. Bassett, Sec'y, New Haven.
Oct. 31.—Greene Co., Pa.—The Monongahela Valley Game and Fish Protective Association's fifth annual field trial. A. C. Peterson Sec'y.
Nov. 7.—Washington C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.
Nov. 8-9.—Lakeview, Mich.—Michigan Field Trials Association's second annual trials. E. Rice, Sec'y.
Nov. 12.—Bicknell Ind.—Independent Field Trial Club's first annual trials. George D. Maxfield, Sec'y.
Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.
Nov. 14-17.—Carmichaels, Pa.—Central Beagle Club's fourth annual trials. J. W. Simpson, Sec'y.
Nov. 17.—Newton, N. C.—Eastern Field Trial Club's twenty-first annual trials. Simon C. Bradley, Sec'y.
Nov. 21.—Lawrenceville, Ill.—Illinois Field Trial Association's inaugural trials. O. W. Ferguson, Sec'y.
Nov. 28.— ——, Mo.—Missouri Field Trial Association's third annual trials. L. S. Eddins, Sec'y.
Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Thos. Sturges, Sec'y.

1900.

Jan. 22.—West Point, Miss.—United States Field Trial Club's annual trials. W. B. Stafford, Sec'y.
Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

The Iowa State Trials.

EMMETSBURG, Ia., Sept. 7.—*Editor Forest and Stream:* The field trials which were concluded here to-day add another to the list of successful meetings in the West. The weather has been favorable, and men and dogs turned out at 4:30 in the morning ready for work. Everything moved smoothly, and if there had only been more birds the most critical of us could have found no fault with the meeting. The members of the club have entertained their guests handsomely, and the work of the meet passed off with satisfaction and good feeling throughout. The Derby had seventeen competitors, and there were twenty-seven to start in the All-Age Stake.

The game was not abundant. The supply has been materially affected by the wet weather of the spring, and there was scarcely enough to give material for all the heats. When flushed, as a rule, the chickens took to the corn, and then we had to hunt up another supply. Nothing but the early morning programme would have made the trials possible.

Three judges were provided because of the absence of Mr. Barker, who had been expected to officiate. Those chosen were Major J. M. Taylor, of Rutherford, N. J.; Dr. Hickerson, of Moberly, Mo., and Major Stuehmmer, of Emmetsburg, Ia. After Dr. Hickerson left us on Saturday, Mr. Jno. A. Gray, of Burlington, took his place. The field work of the meeting was excellent. The handlers were prompt in following instructions given them and their work was marked by restraint and quiet, which were much in contrast with the noisy handling we have seen at some other meetings. As for the dogs, they were notably well trained, and the winners in both stakes well deserved their awards. In merit the competitors will compare very favorably with those whose work I have followed in other trials.

The Derby.

Scarcity of birds made the trial short of the thoroughness and satisfactory, definite competition which all like to see, and which is so necessary to acceptable conclusions and decisions. There was a plucky lot of effort on the part of many of the competing dogs, notwithstanding the discouraging lack of success in finding, the meagerness of which is set forth in the description of the heats which follow. The work was not particularly notable for even commonplace good finish, the season for preparatory work being too short, and the birds too few for working opportunities. Seventeen qualified to start, about half of which were good material, and should be something above the ordinary with more age and work.

The weather was perfect, cooler than what had prevailed for some days, with clouds to break the sun's rays and a light rain betimes in the afternoon. The competition was run off so expeditiously that the Derby was ended about 4:30 o'clock.

The following was the order of running:

Mackley & Albaugh's l. and w. pointer dog Duly (Dick—Flora Temple), A. Albaugh, handler, with G. W. Kortright's l. and w. pointer bitch Queen Bee (pedigree not given), handled by owner.

Matt Kane's b., w. and t. English setter dog Rod K. (Rodfield—Louise), J. H. McPharlan, handler, with F. H. Perry's Irish setter dog Pat Grey (Don Pedro II.—Tiny Bess), Morris Riley, handler.

C. J. Pesch's b., w. and t. English setter bitch Pala Alto Dot (Bouser—Fly W.), owner, handler, with F. A. Warnke's b., w. and t. English setter dog Bismarck (Bouser—Fly W.), owner, handler.

E. H. Mathes' b. and w. English setter bitch Lottie Lorraine (Cincinnatus Pride—Brown's Queen Vic), owner, handler, with I. T. Carter's b., w. and t. English setter dog Oakley Hill (Rodfield—Louise), J. W. Carter, handler.

F. A. Warnke's b., w. and t. English setter bitch Queen W. H. (Bouser—Fly W.), owner, handler, with J. D. Henning's b. and w. pointer dog Queen's Dock (Dan of Kent—Queen of Lilitz), J. H. McPharlin, handler.

Hawkeye Kennels' l. and w. pointer dog Hawkeye M. (Brighton Joe—Jingo's Flora), M. Hamblin, handler, with E. D. Brown's b., w. and t. English setter bitch Vic's Vic (Cincinnatus Pride—Brown's Queen Vic), J. H. McPharlin, handler.

Mr. Canady's l. and w. pointer dog Two Spot (Jingo—Dot's Pearl), Wm. Elliot, handler, with E. D. Brown's b., w. and t. English setter bitch Brown's Flossie (Victor C.—Florence Mc), J. H. McPharlin, handler.

Hawkeye Kennels' b. and w. pointer dog Hawkeye Joe (Brighton Joe—Ightfield Chic), M. Hamblin, handler, with C. Towlerton's b., w. and t. English setter bitch Queen Lucifer (Prince Lucifer—Belle of Detroit), M. Jenswold, handler.

A. Williges' b. and w. English setter bitch Mollie (pedigree not given), J. H. McPharlin, handler.

First Round.

Duly—Queen Bee—They were started at 6:02 and were run thirty-three minutes. The pointer Duly was near a bird, which flushed wild ahead of him and passed near one which was flushed by his handler shortly afterward. Next he was out of sight for a moment beyond a rise of the prairie, and some birds were seen to fly. It was reported by a spectator who could see the work that Duly had pointed them before they flushed. Queen Bee was very ordinary in her grade of work, and as a matter of competition there was no merit in it. Duly lacked judgment in ranging, leaving much ground uncovered, as his casts were on straight lines, though he had good speed, worked to the gun and covered a good deal of ground. The work on game was limited to what has been mentioned.

Rod K.—Pat Grey—They were cast off at 6:38, and made a very poor showing. Some chickens were found under good conditions for work, but neither dog scored on them creditably. Pat was not working at all, while Rod was not doing much better—that is to say, he ran about faster, but without plan or purpose.

Palo Alto Dot and Bismarck were exceptionally favored with good opportunities, a number of birds in good positions presenting chances for points, but only flushes were made. Each ran about merrily within a limited area, but they were short of skill and knowledge, and therefore their performance was lacking in merit.

Lottie Lorraine and Oakley Hill were the first pair which showed any real ability. Lottie showed a disposition to unsteadiness to wing at times, though not so much as to be a distinct demerit. Each made a flush. Oakley wheeled to a point a moment after his flush, and the bird flushed wild. Next Oakley secured a point on a bird which Lottie was endeavoring to locate; catching sight of Oakley, she drew by him, refusing to back, and made a point close by him on the same bird. This was all the bird work which was done. Lottie was stylish when standing or when in motion. All in all, they made a very good showing.

Queen W. H. and Queen's Dock started merrily, the latter flushing twice and dropping to wing each time, then driving into the covey he flushed the rest, apparently unintentionally, though all the conditions of wind and location were in his favor. Toward the end of the heat, W. H. made a flush on a chicken, but she seemed to be using her nose trying to find, her effort being of work rather than of romping, so that on the score of diligence she was taken into the second series. Lottie had a pleasing, dashing style, but her work on game was very imperfect.

Hawkeye M. and Vic's Vic started next. Hawkeye was plainly not able to compete, and after a few minutes, and on request of his handler, the judges consented to his withdrawal. Vic continued alone to the end of the thirty minutes, showing good speed and range, though nothing was found.

Two Spot and Brown's Flossie made a good competition. The former was working on the trail of some birds skillfully, when they flushed wild. Flossie flushed a single, and Spot pointed the foot scent of the same bird. Both worked nicely to the gun, and had good speed and range.

Hawkeye Joe and Queen Lucifer were not successful in finding any birds, nor did they seem to care much for them, as they went aimlessly about, running in and out, and occupied their time limit without any useful result.

Mollie had a bye, but as she displayed no merit her handler asked to withdraw her, whereupon her trial ended, and the first round was ended near the noon hour.

Second Round.

The weather being so favorable, the judges decided to continue the running without any intermission for lunch in town, as was intended, and after the second series was made out the competition was resumed. Eight dogs were retained in this round, and they were run in the following order:

Oakley Hill and Duly were the first brace of the second round, and the scarcity of game made an imperfect trial. Duly loafed at times and worked at times, though his casts were taken with bad judgment, being in and out on straight lines. Hill finished the latter part of the heat in a good workmanlike manner as to range, style and seeking, though he began in rather an indifferent way.

Lottie Lorraine and Queen W. H. had the same luck as their predecessors in finding no game. Queen slowed up soon after starting, and made a very poor showing. Lottie, though she ranged fast and well, worked nicely to the gun. Her style was very lively and pleasing.

Vic's Vic and Two Spot were run an hour, their heat ending at 2:24. They were so even in ability that some work one way or the other was necessary to decide between them. It was necessary to put them down again later, as their heat had failed to produce the required data. In the later trial each made a flush. Two Spot next made a point. On some chickens which had been marked down, both roaded a long way and showed meritorious work, though they failed to locate. Their work on the whole was pleasing considering the extremely unfavorable conditions.

Brown's Flossie and Palo Alto Dot were run a half-hour without adding to their chances in the competition.

Third Round.

Four were kept in this series, out of which the winners were determined, as follows:

Oakley Hill and Two Spot suffered again from the scarcity of game, none being found, so that a decision was arrived at on general principles. Hill's seeking was well maintained throughout the discouraging proposition offered to him, and he stayed out at his work better than

did his competitor, and displayed a greater degree of intelligence than did Two Spot.

Vic's Vic and Lottie Lorraine concluded the third round with the usual result—no game found. General principles and what had happened in previous heats were necessarily accepted as data. There was but little difference in the performance of the two dogs. They were run about fifteen minutes.

Final.

Vic's Vic and Two Spot were put down to determine the matter of second and third place between them, and the heat ended in a quarter of an hour. No birds were found. Vic dallied on some foot scent and made a false point, and was not equal in pace and range to Two Spot.

The judges announced the winners as follows: First, Oakley Hill; second, Two Spot; third, Vic's Vic; fourth, Lottie Lorraine.

The All-Age Stake.

This stake was fairly well filled, having twenty-seven starters. The competition of it began on Friday morning, Sept. 1. Most of the dogs had very pretty names, and some had names which were long as well as pretty, but all had pedigrees which were very bulky. The day was notable for the effort of twenty-seven dogs in competition without a point to their credit. However, in this they all did not grade alike, for some were unfortunate in not finding birds, others seemed to be unfortunate in not being able to find any, while others again found them, but seemed to be better able to flush than to point. As a whole, the day was warm and a southeast wind prevailed, which no doubt was the cause of the poor work of the dogs, for it is rather more pleasing to lay the fault to the wind than to dogs or trainers. The wind was not particularly in the competition, but in a case of this kind the good of the public demands that the wind should bear the odium, particularly as it has no pedigree.

The following are the All-Age starters, with order of running:

Hawkeye Kennels' l. and w. pointer bitch Faustina (Ridgeview Faust—Peggie), M. Hamblin, handler, with W. H. Scott's l. and w. pointer dog Dot's Jingo (Jingo—Dot's Pearl), Wm. Elliot, handler.

C. A. Robinson's b., w. and t. English setter dog Sport's Gath (Marie's Sport—Mark's Fleet), A. Albaugh, handler, with G. W. Kortright's b. and w. pointer dog Tie's Duke (Tick Boy—Kent's Queen), Wm. Sanderson, handler.

James Ribley's lem. and w. pointer bitch Royal Chic (Jingo—Ightfield Dove), owner, handler, with C. J. Pesch's (agt.) b. and w. English setter dog Spark's Druid (Max Noble—Belle of Clairview), C. J. Pesch, handler.

Hawkeye Kennels' lem. and w. pointer bitch Lady Lea (Jingo—Ightfield Dove), M. Hamblin, handler, with J. W. Pederson's o. and w. English setter bitch Lady Fan of Zippo (Zippo II.—Lady of Gloss), owner, handler.

G. W. Kortright's b. and w. pointer bitch Tick's Dot (Tick's Boy—Kent's Queen), J. H. McPharlin, handler, with F. A. Warnke's b. b. English setter dog Mack (Samuel—Fly W.), C. A. Smith, handler.

L. Verveer's lem. and w. English setter dog Gay of Zippo (Zippo II.—Lady of Gloss), J. M. Hutchison, handler, with T. L. Wann's b. and w. English setter bitch Gretchen II. (Paul Gladstone II.—Gretchen), —. Alexander, handler.

P. McNally's o. and w. English setter dog Mark's (pedigree not given), owner, handler, with A. H. Nelson's b., w. and t. English setter bitch Sport's Destiny (Marie's Sport—Mark's Fleet), A. Albaugh, handler.

J. W. Blythe's b. and w. pointer dog Star Pointer (Hal Pointer—Parson's Trinket), Wm. Elliot, handler, with Hawkeye Kennels' l. and w. pointer bitch Ightfield Chic (Jingo—Ightfield Dove), Mr. Hutchinson, handler.

Dr. J. S. Henderson's b. and w. setter dog Sam Clark (Wahkonsa Jack—Wahkonsa Jill), J. M. Hutchison, handler, with Wm. Strathdee's b. b. English setter bitch Ruth T. Etol (Dave Earl—Brown's Queen Vic), —. Alexander, handler.

I. T. Carter's b., w. and t. English setter bitch Ten of Hearts (Zippo II.—Trilby), J. W. Carter, handler, with Samuel Maynes' b., w. and t. English setter dog Faust (Tory Gladstone—Wale's Bessie), Jas. Ribley, handler.

C. E. Still's b. and w. pointer dog Bill Still (Rant Ale—Nellie), owner, handler, with E. D. Brown's o. and w. English setter bitch Brown's Queen Vic (Antonio—Hunter's Nelly Bly), —. Riley, handler.

G. W. Kortright's b. and w. English setter bitch Queen (pedigree not given), Wm. Sanderson, handler, with M. Bruce's b. and w. English setter dog Fritz of Zippo (Zippo II.—Lady of Gloss), J. H. McPharlin, handler.

H. H. Jacobs' o. and w. English setter dog Dash (Pedigree unknown), owner, handler, with G. W. Kortright's b. and w. pointer bitch Tick's Pearl (Tick Boy—Kent's Queen), J. H. McPharlin, handler.

First Round.

Oakley Hill and Tick's Pearl were drawn to run first, but owing to the bad condition of one of Hill's eyes he was withdrawn, and it was decided that the bye dog, Dash, would run in his place. The latter, not being present, caused the postponement of the heat till later in the day. The next brace was then called, and started at 5:25.

Faustina and Dot's Jingo soon disappeared beyond a swell in the prairie, and a covey of chickens were seen to fly hurriedly from their vicinity. The judges could not see which dog was in fault, or whether both were equally guilty. Jingo scored a flush. Faustina led in the ranging for a while, Jingo following, but soon he began working independently.

Sport's Gath and Tick's Duke were distinctly opposite in all the details of their work, the latter being apathetic in the presence of game, displayed no nose on the numerous birds which were found, and was perfectly indifferent to them, capping the whole with slow speed and poor range. Gath on the other hand ranged wide and fast, and displayed good hunting abilities. He made a point on the foot scent of a bevy which had been flushed.

Royal Chick and Spark Druid were good rangers and had good speed, though the latter was the better of the two in these particulars. Their work was pleasing and very good, excepting that they were not tried on game, though Druid made a point on a turkey which Royal Chick scorned to back. One hour and eighteen minutes were devoted to them.

Lady Lea and Lady Fan of Zippo, while amply long on names, were somewhat short on performance, as after running about thirty minutes they could produce nothing better than a false point to the credit of each. As her name suggests high living, so was Lady Fan of Zippo troubled with much embonpoint, which unfitted her for the coarse effort necessary in hunting for chickens, so she limited her efforts within ladylike moderation as to range and speed. Lea worked pleasingly to the gun, covered a great deal of ground, is speedy and carries herself stylishly.

Tick's Dot and Mack were cast off at 9:30. Mack refused to leave his handler's heels, and after a short time the judges consented to his withdrawal. Dot continued alone to the end of the heat, slowing his pace toward the close. No birds were found.

Gay of Zippo and Gretchen II. began at 11:22. Gay opened his work with two flushes, one on a single bird, the other on the covey, Gretchen showing a disposition to chase. No more birds were found. Of the two, Gretchen was much the better in range, speed and judgment, she beating out a good area of ground and acting like a good hunting dog.

Marks and Sport's Destiny were cast off after lunch. The latter soon made two excusable flushes. Next Marks made a rigid false point, and sent on, he next roaded to a flush on a single bird.

Star Pointer and Ightfield Chic began at 3:23, and they worked diligently and well to the end of the heat, beating out a lot of ground and were plainly in hard luck in striking a section barren of chickens at the time. They worked industriously and made a good impression in their favor.

Sam Clark and Ruth T. Etol began their competition at 4:07, and at the end of their half-hour they had found no chickens, though Ruth made an excellent point on a flock of turkeys, which was equally well backed by Sam. Both made a good showing as to range, judgment and speed.

Ten of Hearts and Faust were of the conservative kind, livening up their walk with a trot betimes, but carefully avoiding a greater distance from their handlers than 25yds., preferring 10yds. as the most comfortable and acceptable. No merits nor demerits on game.

Bill Still and Brown's Queen Vic were particularly favored in good opportunities for point work under favorable conditions, but they both failed lamentably in execution, errors taking the place of what should have been finished good work. The cool and damp of evening had taken the place of the extreme heat of the midday time, and the range, speed and judgment in working out their ground promised well for the good performance of both dogs on game. Vic made the first error, a flush on a single bird; Bill made the second, a flush on a bevy of chickens, and next Vic, further on, flushed a bevy. The bevy flushes were errors without an excuse, for the hour, wind and other conditions were favorable for points.

Queen and Fritz of Zippo were cast off about 6:10. On the ground worked over in the morning, each made a flush. Fritz was the better ranger.

Dash and Tick's Pearl had the evening hour. Dash pointed on the trail of an old cock, and in trying to hit the trail right the bird flushed wild ahead. Pearl joined in the roading on the same bird. They were ordered up at 7:31. Their range and speed were ordinary.

Second Round.

Besides the eight dogs kept in the competition three more were reserved and ordered to be brought along for trial again in case the judges decided that they wished to give them further trial. There was no tarrying in the morning, the first brace being cast off at 5:52.

Gretchen II. and Sport's Destiny opened the second round, the latter exciting much hope by pointing, but it proved to be a lark. They were ordered up at 6:09. Destiny ranged well and worked with good judgment, excelling her competitor, which worked irregularly.

Ruth T. Etol and Tick's Dot began at 6:19. Dot pointed; Ruth passed and stole the point; nothing found, though birds were found a short distance further on, and Ruth scored a flush. Ruth ranged well and at good speed, far excelling her work in her previous heat.

Sam Clark and Lady Lea were turned out to work on the scattered birds, but aside from pointing on foot scent, nothing was done. They ran about forty minutes. Both were erratic workers.

Royal Chic and Sport's Gath had a heat which was short of a bird. Gath made a point which Chic refused to back; nothing to the point.

Spark Druid and Dot's Jingo began operations on a jackrabbit. Druid pointed it, and was steady to fur; Jingo started coursing, and gave a brief exhibition of a greyhound, turning the jack back near by Druid, who joined in for a few jumps. Both dogs made a fine display of range, speed and judgment.

Faustina and Dash made such a poor showing that they were ordered up in about fifteen minutes.

Star Pointer and Tick's Pearl fared in manner similar to Faustina and Dash.

Sport's Destiny and Ightfield Chic were given another trial, and both ran in much improved form. Chic came very near making two points, but the bird flew each time before she had quite settled to the point.

Lady Lea and Ruth T. Etol had the concluding heat of the trials. Ruth pointed and moved on; Lady made game at the same place and was steadying to a point when the bird flushed wild. This ended a trial which was remarkable for what was not done more than for what was done.

The party then went to lunch, after which the judges announced the winners as follows: First, Spark Druid; second, Dot's Jingo; third, Sport's Gath; divided fourth, Sport's Destiny and Ightfield Chic.

The Continental Field Trial Club announces in our advertising columns the conditions of its All-Age Stake and Free-for-All Sweepstake, of its fifth annual trials, to be run at Newton, N. C., Dec. 11. Entries to the All-Age Stake close Oct. 15. Entries to the Free-for-All close the night before the race. For entry blanks, rules, etc., apply to the Secretary, Mr. Theo. Sturges, 141 East Eighteenth street, New York.

West Canada Trials.

La Salle, Man., Sept. 6.—The West Canada Kennel Club's trials opened here under most favorable conditions, and those which were deserving of a larger attendance than appeared from the several States. If field trial promoters only knew the almost perfect conditions doubtless they would be tempted to select La Salle for future events. The birds were in great abundance, so that they furnished ample material for testing the work of the dogs and giving full play to each brace. No time was lost by want of material.

The affair was marked by good feeling and comradeship throughout. In some instances, indeed, it was difficult to tell who were the most pleased with the result, those who won or those who lost, who were free with their congratulations.

In the absence of the regularly appointed judge, President E. Hamber filled that role most successfully for the Derby, and Mr. D. E. Rose gave to the All-Age Stake the benefit of his full experience and knowledge in all that pertains to field trials and work on game.

Among those present were Messrs. E. Collier, T. N. Scott, H. G. Spurgeon, W. Pickering, A. S. Code, Pat Cooper and Messrs. Rawlston, White, Lemond, McArthur, Clarke and St. Clair. The award of the silver cup presented by Mr. Jno. Wooton, President of the Northwestern Club, to Mr. White's English setter, Manitoba Prairie, appeared well deserved. The All-Age collar and silver chain went to Mr. Code's Bang III. The weather was cool and invigorating, and the birds were active. The entries were:

All-Age Stake.

J. R. Waghorn's b. and w. pointer dog Go Bang, H. G. Spurgeon, handler, with Hamber and Code's b. and w. pointer dog MacHamber (Croxteth's Ned—Mamie), E. Hamber, handler.

C. W. Graham's b., w. and t. English setter dog Gladiator II. (Gladstone's Boy—Queen Novice), owner, handler, with A. Gale's l. and w. pointer dog Swift, owner, handler.

Hamber and Code's b. and w. pointer dog Bang III. (Rector—Dinah), E. Hamber, handler, with A. Gale's b. setter bitch Blackie, owner, handler.

J. Lemon's b. and w. pointer dog Sport (Buster—Belle), owner, handler, with A. Gale's l. and w. pointer dog Prince Ightfield (King—Frankie Paul), owner, handler.

The Derby.

The drawing was as follows; all were handled by owners:

E. H. White's b. and w. ticked English setter bitch Manitoba Prairie Bird (Brighton Monk—Manitoba Belle), with F. W. Scott's b. and w. pointer bitch Zulika (Sport—Tannie).

H. Cooper's l. and w. pointer bitch Modern Jess (——Lulu), with J. Lemon's b. and w. pointer dog Piccolo (Ned—Belle).

Fred McArthur's b. and w. setter bitch Nellie (Larry—Angela), with C. C. Bradley's l. and w. pointer bitch Princess Bonnie (Shot—Tannie).

A. Gale's l. and w. pointer dog Tobe.

The winners were, in the Derby: Mr. E. H. White's Prairie Bird, first; Mr. H. Cooper's Morden Jess, second; Mr. J. Lemon's Piccolo, third. In All-Age Stake: Messrs. Hamber and Code's Bang III. and MacHamber first and second; Mr. J. R. Wagham's Go Bang and Mr. M. J. Lemon's Sport, equal third.

Two-Stars.

[Details of the running will be given next week.]

United States Field Trial Derby.

Editor Forest and Stream:

The following dogs have been nominated in the United States Field Trial Club's Derby, to be run at West Point, Miss., in January, 1900. The entries number sixty-eight:

SETTERS.

Luna (Tony Boy—Christina)—Charlottesville Field Trial Kennels' b., w. and t. bitch.

Joe Cumming, Jr. (Joe Cumming—Laura)—W. W. Titus' b., w. and t. dog.

Forest Hall Chief (Vallit—Maid of the Morn)—E. McKenney's b. and w. dog.

Forest Hall Victor (Vallit—Maid of the Morn)—E. McKenney's b. and w. dog.

Don Noble (Don P.—Tessie)—J. R. Blake's l. and w. dog.

Baltullo (Count Gladstone IV.—Rod's Petrel)—F. M. Stephenson's b., w. and t. dog.

Harwick Boy (Harwick—Spot's Girl)—Dr. C. I. Shoop's b., w. and t. dog.

Harwick, Jr. (Harwick—Spot's Girl)—Dr. C. I. Shoop's b., w. and t. dog.

Harwick's Girl (Harwick—Spot's Girl—Dr. C. I. Shoop's b., w. and t. bitch.

Lady Harwick (Harwick—Miss Tony)—Dr. C. I. Shoop's b., w. and t. bitch.

Verona's School Boy (Iroquois Chief—Lady of Verona)—Verona Kennels' b., and w. dog.

Trixie (Kingston—Duke's Ruby)—C. D. Stuart's o. and w. bitch.

Bona (Tony Boy—Christina)—H. Ames' b., w. and t. bitch.

Hurstbourne Cricket (Tony Boy— Cynosure)—Norvin T. Harris' b., w. and t. bitch.

Minnie W. (Duke B.—Miss Bess)—D. Rose's (agt.) b., w. and t. bitch.

Pride (Cincinnatus Pride—Brown's Queen Vic)—Jas. McKay's b. and w. dog.

Rajah (Cincinnatus Pride—Antonia)—J. A. Wilson's b., w. and t. dog.

Honest Joe (Cincinnatus Pride—Antonia)—J. A. Wilson's b., w. and t. dog.

Dewey (Harwick—Queen Esther)—S. A. Smart's b., w. and t. dog.

Della's Sport (Marie's Sport—Della K.)—H. K. Devereux's b., w. and t. dog.

Buccaneer (Antonio—May Win)—H. Pape's o. and w. dog.

Kalmig Doll (Cincinnatus Pride—Maud III.)—R. Kelly's b. and w. bitch.

Tona (Tony's Ben—Nellie H. II.)—J. M. Morgan's b., w. and t. bitch.

Pontiac (Count Gladstone IV.—Hester Pryme)—Avent & Duryea's b., w. and t. dog.

Sioux (Count Gladstone IV.—Hester Pryme)—Avent & Duryea's b., w. and t. bitch.

Ute (Count Gladstone IV.—Hester Pryme)—Avent & Duryea's b., w. and t. bitch.

Caddo (Count Gladstone IV.—Hester Pryme)—Avent & Duryea's b., w. and t. bitch.

Apache (Count Gladstone IV.—Hester Pryme)—Avent & Duryea's b., w. and t. dog.

Traddles (Whyte B.—Dolly Varden)—H. S. Bevan's b., w. and t. dog.

Dolly Whyte (Whyte B.—Dolly Varden)—H. S. Bevan's l. and w. bitch.

Bob Acres (Tony's Gale—Minnie T.)—George Crocker's o. and w. dog.

Miss Meadows (Tony's Gale—Minnie T.)—George Crocker's b., w. and t. bitch.

Chadwick (Tony's Gale—Lightfoot)—George Crocker's b., w. and t. bitch.

Miss Bangle (Tony's Gale—Lightfoot)—George Crocker's b., w. and t. bitch.

Peg's Girl (Kelp—Scuffle)—R. B. Morgan's b., w. and t. bitch.

May Hempstead (Kelp—Baby L.)—R. B. Morgan's b., w. and t. bitch.

Lillian's Boy (Rodfield—Lillian Russell)—Jackson & Denmark Kennels' b., w. and t. dog.

Lillian's Girl (Rodfield—Lillian Russell)—Jackson & Denmark Kennels' l. and w. bitch.

Gailor (Eugene T.—Gloster's Girl)—P. Lorillard, Jr.'s, b., w. and t. dog.

Rancoca's Pet (Eugene T.—Gloster's Girl)—P. Lorillard, Jr.'s, b., w. and t. bitch.

Geneva (Tony's Boy—Lena Belle)—P. Lorillard, Jr.'s, b., w. and t. bitch.

Belle L. (Tony's Boy—Lena Belle)—P. Lorillard, Jr.'s, b., w. and t. bitch.

Miss Lee (Eugene T.—Trinkett)—P. Lorillard, Jr.'s, b., w. and t. bitch.

POINTERS.

Plain Sam's Son (Plain Sam—Dolly Dee II.)—Verona Kennels' l. and w. dog.

——— (Duke of Dexter—Lucy Knowlton)—A. Q. Pitcher's l. and w. bitch.

Miss Madge (Adam—Sing)—F. R. Huntingdon's b. and w. bitch.

Staccals (———————)—W. A. Subilia's l. and w. dog.

Rip Rap's Pride (Rip Rap—Telmo Croxteth)—F. Kruse's b. and w. dog.

——— (Young Rip Rap—Lady Margritte II.)—W. P. Stoddard's b. and w. bitch.

Drillmaster (Jingo—Dot's Pearl)—O. W. Ferguson's l. and w. dog.

Pearl's Boy (Jingo—Dot's Pearl)—J. B. Turner's l. and w. dog.

Sam's Luck (Plain Sam—Eve)—J. R. Daniels' b. and w. dog.

——— (———————)—Ned Fay's b. and w. dog.

Brann (Von Gull—Baby Ruth)—W. F. Rogers' l. and w. dog.

Keth's Flake (Young Rip Rap—Lady Margritte II.)—J. W. Keth's b. and w. bitch.

By Jingo (Jingo—Dot's Pearl)—J. S. Crane's l. and w. dog.

Dot's Daisy (Jingo—Dot's Pearl)—J. S. Crane's l. and w. bitch.

Good Enough (Rip Rap—Pearl's Dot)—Geo. E. Gray's b. and w. dog.

Dot's Rap (Rip Rap—Pearl's Dot)—Geo. E. Gray's l. and w. dog.

Rap's Dot (Rip Rap—Pearl's Dot)—Geo. E. Gray's l. and w. bitch.

Pearl's Rip Rap (Rip Rap—Pearl's Dot)—Geo. E. Gray's b. and w. bitch.

Young Hal (Hal Pointer—Dympnia)—Dr. C. I. Shoop's b. and w. bitch.

High Point (Young Rip Rap—Lady Margritte II.)—F. M. Stephenson's b. and w. dog.

Rip (Rip Rap———)—Geo. F. Nesbitt's l. and w. dog.

Mahdi (Tippoo—Queen Kent)—Charlottesville Field Trial Kennels' l. and w. dog.

Dervish (Tippoo—Queen Kent)—Charlottesville Field Trial Kennels' l. and w. dog.

Khartoum (Rip Rap—Toxic)—Charlottesville Field Trial Kennels' l. and w. dog.

Soudan (Rip Rap—Toxic)—Charlottesville Field Trial Kennels' b. and w. bitch.

Bedouin (Rip Rap—Queen III.)—Charlottesville Field Trial Kennels' b. and w. bitch.

W. B. Stafford, Sec'y.

Manitoba Field Trials.

The running of the Manitoba Field Trial Club's thirteenth annual at Morris last week was most successful throughout. The winners follow. Full details of the work will be given in our next issue: Derby: Messrs. Avent and Duryea's Sioux, first; same owners' Victor, second; Mr. D. E. Rose's Bona, third. All-Age Stake: Messrs. Hamber and Code's Bang III., first; Messrs. Avent and Duryea's Prime Minister, second; Del Monte Kennels' Minnie's Girl, third.

Yachting.

Fixtures.

SEPTEMBER.

14. Newport, ladies' cruise, Newport, Narragansett Bay.
16. American, fall regatta, Milton Point, Long Island Sound.
16. Philadelphia, cup, Philadelphia, Delaware River.
16. Corinthian, Phila., knockabout, Essington, Delaware River.
23. Corinthian, Phila., knockabout, Essington, Delaware River.
23. Riverside, fall regatta, Riverside, Long Island Sound.
24. Williamsburgh, annual fall regatta, Bowery Bay, L. I. Sound.
27. Taunton, ladies' day, Taunton, Mass.
30. Corinthian, knockabout, Essington, Delaware River.

OCTOBER.

3-5-7. New York, America Cup matches, Sandy Hook.

Columbia—Defender Trial Races.

NEWPORT.

Sept. 2, 4, 5.

There was a time in the history of the America Cup races when the trial races of the defending fleet were almost as exciting and interesting as the final contests of the national representatives; in fact, at times, as when Mischief, Gracie and Hildegarde sailed in the trial races of 1881, and again when Puritan and Priscilla were matched in 1885, the feeling between the adherents of the different American yachts has almost exceeded the interest in the international races which followed. This year, as in 1895, the trial races have been mere perfunctory affairs, useful in a way, but by no means exciting, as the result has been a foregone conclusion.

The trial race as a part of the international contests for the America Cup dates back to 1881. In the first match, in 1870, the entire fleet of the New York Y. C. was declared eligible to sail against the one English challenger in the single race allowed to her. In the following year four schooners, Columbia, Dauntless, Sappho and Palmer, were selected by the choice of the club to be in readiness, any one of the four to be selected on the morning of the race to meet the challenging yacht in each race of the series.

In 1876 but one yacht was chosen to defend the Cup, the schooner Madeline being selected on the basis of her public record as the fastest schooner in the New York Y. C. fleet.

When the sloop Atalanta challenged in 1881, the question of the fastest American yacht of her class was by no means an easy one, each of the existing yachts, Gracie, Mischief and Hildegarde, having many adherents, while the new sloop Pocahontas, especially built by the flag officers of the club to defend the Cup, was confidently expected to excel the older boats. Under such circumstances the first trial races were instituted, solely for the purpose of demonstrating the merits of the four yachts. The choice of the committee, now fully justified by subsequent events, was very severely criticised by many at the time, and gave great offense to the partisans of the other yachts.

When Genesta challenged in 1885, a trial race was a necessity, as two yachts had been built for the defense, while several of the older cutters and sloops were desirous of competing, though handicapped by their small size, being built to the 70ft. class. Except that the new iron sloop Mischief represented some important departures in model, ballasting and proportions and details of rig from the older sloops, the first trial race in 1881 was simply a local affair, limited to the sloops of the 70ft. class in the New York Y. C. fleet, all centerboard boats, of similar model and rig. In the trials of 1885, however, two new issues were presented, making the contest more exciting and far more valuable. In the first place, the question of local rivalry was involved, New York being pitted against Boston; and in the second place, the question of type came in for the first time, the New York boat, Priscilla, an enlarged Mischief, being distinctively a centerboard sloop, while the Boston boat, Puritan, was as distinctively a centerboard cutter, the first great step in that compromise of American and British ideas which has resulted in one common type, the modern semi-fin-keel cutter, on both sides of the Atlantic.

The following trials, in 1886, 1887 and 1893, in each case for the purpose of selecting the best yacht of a fleet, were marked by the rivalry between various designers; the rivalry of the East, represented by Boston and Bristol, against New York; and by important differences of type, the centerboard in various degrees of compromise, the keel type, and finally the fin and semi-fin types, being all represented.

These contests, hotly fought by all parties, with added labor and expense each year, proved to be most valuable in developing the speed of the competitors and in putting the chosen defender in the best possible form, both as to yacht and crew, for meeting the British challenger.

Since 1893 the development of the racing machine has reached such a point that building by individual yachtsmen has ceased, owing to the excessive cost and the uselessness of the yachts, and it has been simply a matter of one new syndicate boat each year for the defense. In the case of Defender in 1895, it was practically a certainty from the start that with her improved model and rig and the lighter construction obtained by the use of aluminum she would defeat her older sister, Vigilant; and the main end served by the trial races of the two was the improvement of Defender by actual racing against a yacht of her own class. In the present case the conditions have been the same; there was little question from the start that Mr. Herreshoff would be able to improve materially on Defender, and that the new boat would be finally selected in preference to the old one, as has been the case. The rebuilding of Defender, however, and the constant racing between her and the new Columbia has not only proved the superiority of the latter, but has been of inestimable value in developing by means of judicious experiments on sails, spars and all other details a higher speed than either could hope to attain without such trials. The earlier races between the two had made the selection of Columbia a certainty, so that the formal trial races, just sailed, are important only as they indicate a progressive improvement in her.

The series really included three races, sailed on Sept. 2, 4 and 5, though only the first two were considered official trials. For the first race, Mr. W. G. Brokaw, of the schooner Amorita, offered a handsome cup; for the second, Mr. H. B. Moore, of the steam yacht Marietta III., offered another cup, and the third race was sailed for a cup specially offered by Mr. William Goddard, of Providence, father of Mrs. C. Oliver Iselin. The races were under the management of the New York Y. C. regatta committee, Messrs. S. Nicholson Kane, Chester Griswold and Irving Grinnell, who followed on the first two days on the flagship Corsair III., and on the third day on Marietta III. For the first time in the history of the Cup the trial races were sailed off Newport, for the very good reasons that the course, which is in itself an excellent one, can be reached by a short sail from the harbor, avoiding the tow of twenty miles that is necessary at New York; and both yachts were at all times within easy reach of the Herreshoff shops, at Bristol, for changes and repairs.

In all the trial races up to 1895 the competing yachts have been measured according to the rule of the New York Y. C., and the measurements have been made public at the time of the first race at latest, the corrected times of the yachts being announced immediately after the finish. This year, for reasons of state, in all the races of Columbia and Defender the rule has been violated, the yachts have not been officially measured, and everything relating to their measurements has been carefully concealed. The allowances of Columbia to Defender in the races of the season, including the trial races themselves, are as yet unknown, and it is quite possible that the exact times of the two will never be officially known and recorded, as the measurements have altered from race to race with the many changes of spars. As it was necessary in these races to have some nominal basis on which to award the cups, the following table was accepted by both parties:

Time Consumed in Minutes.	Allowance in Min. & Sec.	Time Consumed in Minutes.	Allowance in Min. & Sec.
2 00 to 2 10	3 00	2 70 to 2 80	7 40
2 10 to 2 20	3 10	2 80 to 2 90	9 00
2 20 to 2 30	3 30	2 90 to 3 00	10 30
2 30 to 2 40	4 00	3 00 to 3 10	12 10
2 40 to 2 50	4 40	3 10 to 3 20	14 00
2 50 to 2 60	5 30	3 20 to 3 30	16 00
2 60 to 2 70	6 30		

These allowances are purely arbitrary, and have nothing to do with the measurement rule and allowance table of the New York Y. C., under which all of its races are supposed to be sailed.

In the races Columbia carried her steel mast, the broken portion having been replaced, with the topmast stepped in the masthead and housing within the mast. Both yachts had been put in perfect condition, Defender being hauled out at Bristol and painted on the bottom with the Herreshoff green paint. Capt. Barr and the Deer Isle crew were on board Columbia, while Capt. Rhodes and his Scandinavian crew sailed Defender. Mr. N. G. Herreshoff sailed on Columbia in the first race.

First Trial Race—Brokaw Cup.

WINDWARD AND LEEWARD COURSE.

Saturday, Sept. 2.

The start for all the races was the Brenton's Reef Lightship, the hour being 11 A. M., but on Saturday morning it rained quite hard, with an easterly wind, and Mr. Iselin was unwilling to wet Columbia's mainsail, so the start was postponed until 1 P. M. About noon the rain ceased and the sky cleared, and mainsails were set and then the jibs went up in stops, and the two started out of Newport Harbor in a light breeze, accompanied by Corsair III., Marietta III., Nourmahal, Sapphire III., Polyanthus, Eugenia, Aileen II. and Ballymena. The wind freshened as they worked out, and at the lightship it was blowing about ten miles per hour, from a little north of east. A course dead to windward would have taken the yachts too close to West Island, so the course east by south was given as the nearest possible. Both set club topsails and baby jib topsails. The flagship marked the north end of the line, with the Brenton's Reef Lightship on the south end. The starting signal was given at 1:35, Defender, after some lively dodging between the pair, luffing sharp around the lightship within 40s. of the gun, and so close as to leave no room for Columbia on her weather. Columbia crossed 17s. later, in a very poor position astern of Defender, both being on starboard tack. Columbia went on port tack as soon as she was well by the mark, but Defender was about as soon as she was, and still in a good berth. For the next five or six minutes Columbia was sailed hard to get through Defender's lee, gaining a little, then she came on starboard tack with the right of way. Defender tacked too, and again threw her back wind into Columbia's sails, the latter soon tacking again. Defender followed, and the same play was repeated. About 2 o'clock the jib topsail sheet on Columbia parted, and the sail was lowered for a short time. She was doing a little better all the while, and by slow degrees at last managed to get her wind clear and to leave Defender hand over hand, slowly but steadily. After going on port tack, close under the shore, at 2 o'clock, both made a long seaward leg of nearly 50m., with all the wind they wanted for their club topsails and scuppers boiling. Columbia tacked first for the mark, and had to light sheets, while Defender fetched easily after tacking a little further to leeward. The times showed a good gain for Columbia after a fair fight, in which she started at a disadvantage.

	Mark.	Elapsed.	Gain.	Lead.
Columbia	3 50 03	2 14 23	0 05 10	0 05 10
Defender	3 54 56	2 19 33	.. .. ..	.. .. ..

When they turned, the wind was not far enough aft for spinakers, and each set her balloon jib topsail; after about twenty minutes Columbia set her spinaker to starboard and within the next five minutes Defender broke out hers. The wind was light in spots as they ran home, and Defender possibly carried a little stronger breeze to the line. The final times were:

		Leg.		Course.	
	Finish.	Elapsed.	Gain.	Elapsed.	Lead.
Columbia	5 22 43	1 32 40	0 01 39	3 47 03	0 06 49
Defender	5 29 15	1 34 19	.. .. ..	3 53 52	.. .. ..

According to the official figures, Columbia won by 3m. 19s. corrected time; the elapsed time being 227m., for which the allowance in the above table is 3m. 30s.

Second Trial Race—Moore Cup.

TRIANGULAR COURSE.

Monday, Sept. 4.

Early on Monday morning the wind was N.W. and strong, but as it worked to the north it lightened, and though when the yachts got under way at 10 A. M. under lower sails it was a question which topsails they might need, it was soon evident that the big clubs were called for. The weather was fine and the day an ideal one for sailing. The triangular course was in order, and the flagship set the signals for the three legs, S.E.½E., W. by S.½S. and N. by E., the latter being to windward. The first leg was a reach on port tack, and the second called for the same trim of sheets on the other tack. When the preparatory signal was given at 11:15, both swung club topsails, with jib topsails in stops, and Defender had her balloon staysail set. This time Columbia was over in the lead, but 9s. after the gun, with Defender 13s.

astern in her wake, with jib topsails sheeted home and Columbia's balloon staysail set as well as Defender's. Each skipper was on his guard for a chance of luffing, but they straightened out on the true course to fight out the reach in straight footing. At the start the breeze was fresh and true, the yachts, served both alike, being heeled to the scuppers and moving very fast. As they worked out to sea the breeze became lighter and also headed until the ballooners were shifted for the working staysails. It was a steady gain for Columbia to the first mark, which they fetched after lighting sheets a little, the times being:

	Mark.	Elapsed.	Gain.	Lead.
Columbia	12 24 45	0 58 36	0 03 36	0 03 36
Defender	12 28 34	1 02 12	. .. ..	. .. ..

They jibed booms to port and headed under the same canvas for the second mark, near Block Island, Columbia still gaining. Defender covered the last part of the leg with her spinaker set to starboard. The times at the second mark were:

	Mark.	Elapsed.	Gain.	Lead.
Columbia	1 27 53	1 03 08	0 02 09	0 05 45
Defender	1 33 51	1 05 17	. .. ..	. .. ..

In the lighter wind of the second leg Columbia had made a smaller gain, in part due to the fluky wind.

The wind was now N.E. by N., and they set baby jib topsails, starting home on starboard tack, but so far apart as to make a stern chase for Defender. The wind was much lighter than at the start, and Columbia showed a good gain of 4m. 22s. in ten miles. The final times were:

		Leg.		Course.	
	Finish.	Elapsed.	Gain.	Elapsed.	Lead.
Columbia	2 43 33	1 15 40	0 04 22	3 17 24	0 10 07
Defender	2 53 53	1 20 02	. .. ..	3 27 31	. .. ..

The committee announced after the finish that no more trial races would be sailed; though, for reasons of state, the chosen defender will not be named until the week before the Cup races. A third cup having been offered, it was decided to sail for it on Tuesday, and to try a new mainsail of specially light cloth, just completed for Columbia; the third she has had.

Goddard Cup Race.

WINDWARD AND LEEWARD COURSE.

Tuesday, Sept. 5.

Tuesday was clear and pleasant, with a moderate S.W. breeze and smooth water. The committee went out on the steam yacht Marietta III. and decided on a course of ten miles to windward, S.W. by S. The committee boat lay N.W. of the lightship to make the line, and the two yachts worked about near her. When the gun was fired at 2:20, Defender was luffing under Marietta's counter with Columbia in her wake, but instead of crossing she ran along the line, tacked and went over near the lightship on port tack, within 41s. of the handicap gun, 2m. after the starting signal. Columbia followed the same course, but crossed some distance to leeward of Defender, and but 19s. ahead of the handicap gun. She found herself in a very poor position, and at once came about on starboard tack, Defender also tacking on her weather bow. With sheets hard down on each, Columbia started to reach through Defender's lee, and did so in a few minutes, going by the old boat and coming out clear on her lee bow. Defender went on port tack, for the Narragansett shore, and Columbia came about at once. With the wind heading a little, Defender was still in the lead, but Columbia footed by to windward at a steady pace. After a time Defender went on starboard tack, and when Columbia followed she was well to windward and in the lead. The breeze at the start was blowing about ten knots, but it was freshening all the time, and thus helping Defender. As they worked out to the mark, Columbia continued to gain, but not to the same extent as at the start. Near the middle of the leg Defender split her jib topsail and had to stow it, Columbia carrying hers for some five minutes longer, by which time it was not needed, as the two were well heeled under the freshening breeze. The weather mark was timed:

	Mark.	Elapsed.	Gain.	Lead.
Columbia	4 00 40	1 38 50	0 03 04	0 02 33
Defender	4 03 13	1 41 54	. .. ..	. .. ..

They set spinakers to port for the run in, and were timed at the line:

		Leg.		Course.	
	Finish.	Elapsed.	Gain.	Elapsed.	Lead.
Columbia	4 55 06	0 54 26	0 00 38	2 33 16	0 03 42
Defender	4 58 17	0 55 04	. .. ..	2 36 58	. .. ..

The presumption is that Columbia wins the Goddard cup, but no official announcement has been made of the corrected times.

The performance of Columbia in the three races showed an increase of stability under the steel mast, as compared with her original work with the wooden mast. As compared with Defender, she is relatively faster in light to moderate winds, the old boat showing better as the wind increases. On Wednesday Defender sailed from Newport for New Rochelle, and Columbia sailed up to Bristol, where men were set to work at once replacing the light wooden bulkheads recently removed. Stores were also shipped and new sails taken on board, while others were sent ashore; her topsides were also repainted white. She left Bristol in tow of her tender on Thursday, called at Newport, and continued to New Rochelle, arriving on Friday and mooring beside Defender in her regular berth.

Defender went to City Island to paint on Friday, and Columbia was under way to try new headsails on Saturday. On Monday both took refuge from the gale inside of City Island.

Point o' Woods Y. C.

POINT O' WOODS—LONG ISLAND SOUND.

Wednesday, Aug. 30.

The Point o' Woods Y. C. sailed a race on Aug. 30 in a strong S.W. wind. Winifred sprung her mast and Lapwing carried away the jaws of her gaff. The times were:

	Start.	Finish.	Corrected.
Idyl	2 18 50	4 45 25	2 26 55
Emilie B	2 18 30	Did not finish.	
Narayana	2 18 26	4 49 16	2 33 47
Lapwing	2 18 00	4 55 07	2 35 29
Sand Piper	2 19 00	5 33 37	2 55 04
Rover	2 18 50	5 36 10	3 07 04
Winifred	2 18 35	Disabled.	

Shamrock.

The arrival of Sir Thomas Lipton on the Cunarder Campania on Sept. 1 has given a new interest to everything conected with the coming match for the America Cup, as it has been followed by the trials of Shamrock under canvas in the waters in which the Cup courses will be laid. On her arrival at Quarantine at 7:30 P. M., the Campania was met by the steam yacht Erin, the tug Lawrence and various tugs, revenue cutters and other craft, all bearing people to meet the owner of Shamrock, and duly armed with special permits to board the steamer. Governor Roosevelt was represented by his military secretary, Col. George C. Treadwell, specially detailed to welcome Sir Thomas Lipton to New York. Mr. Edward A. Sumner, counsel for Sir Thomas in New York, presented to him an invitation from the officials in charge of the Dewey ceremonies for the steam yacht Erin to head the yacht division of the naval review, and also cards from fifty-six different clubs of New York, extending their courtesies during his stay. Sir Thomas was accompanied by Mr. Will Fife, Jr., designer of Shamrock; Mr. Thomas W. Ratsey, the famous sail maker, who has been here before with Thistle, Valkyrie II. and Valkyrie III.; Mr. J. C. Connell, of Glasgow, the well-known Scotch yachtsman, and Mr. Jesse Collings, M. P. After the steamer reached her pier the party proceeded to the Fifth Avenue Hotel, where they spent the night. Early on Saturday morning Sir Thomas, Mr. Fife and Mr. Ratsey visited the Lipton fleet anchored off Tompkinsville, and after inspecting Shamrock they took up their quarters on board of Erin. Sunday was spent on board, as quietly as circumstances permitted, steamers and yachts coming in numbers to inspect the challenger. Monday morning was clear, with a fresh breeze outside the Hook. Shamrock was towed out by tug James A. Lawrence, passing the point of the Hook at 10:20 A. M., Sir Thomas, with Messrs. Fife and Ratsey, following on Erin. When she was off the Scotland Lightship the mainsail was hoisted, with the headsails, and she stood off to the eastward with a breeze of about fifteen knots from north to northwest. As she returned, her working topsail was set, with a baby jib topsail. After the trial she was towed into the Horseshoe for the night, while Erin came on up to Staten Island.

On Tuesday the Lipton fleet was again under way early, Messrs. Fife, Ratsey and Connell being on board Shamrock. The wind was S.E., about an eighteen-knot breeze, with a sea. In the course of the day she made two runs between the Scotland and Sandy Hook lightships, a distance of four and one-eighth nautical miles, being timed by the press tug, which follows her every day. On the first trial under spinaker she took 19m. 10s., and on the second, with the wind before the beam, she took 19m. 40s.

Both of these trials were made under the sails used in the race with Britannia, and it was expected that larger ones would be bent for a trial on Wednesday, but the yacht lay at her moorings all day, her crew being busy in moving from the steamer Nonowantuck to the larger steamer Plymouth, recently chartered in Boston. On Thursday and Friday she was under way again, with club topsail set and in light winds. The impression thus far is that she is relatively faster in fresh breezes than in light to moderate weather, but this opinion amounts to very little, as she will carry a much larger sail spread in the Cup races. There is as much mystery as ever as to her more important dimensions, the numerous positive and exclusive statements as to her draft varying from 20 to 23ft. It is not known when she will be docked, nor whether she will be visible when in the dock, a vague report being current to the effect that she will be covered with canvas.

The yacht lay at anchor all day Sunday, and also rode out Monday's gale in the Horseshoe. Her 111ft. boom and big gaff were shipped on Monday, and she started under her large sails on Tuesday.

The Lipton fleet now numbers nine vessels—Shamrock, Erin, Plymouth, steamer; Nonowantuck, steamer; James A. Lawrence, tug; Adelaide, tug; two launches and a barge for the extra spars.

Sir Thomas Lipton has created a very favorable impression on all who have come in contact with him; he has been specially courteous to the newspaper men whose duties compel them to interview him and to watch the work of his yachts.

The Seawanhaka Corinthian International Cup.

The Sailing Committee of the Royal St. Lawrence Y. C. at a special meeting on Sept. 6 decided to accept the challenge of the White Bear Y. C., of Minneapolis, Minn., for 1900. The club had received but two challenges, from the White Bear Y. C. and the Bridgeport Y. C., of Bridgeport, Conn. The Rochester Y. C. had made inquiries as to the terms of the challenge, and it had been reported that Mr. Regis H. Post, owner of Constance, would challenge again, but there was nothing official at hand from either party, and the choice lay between the two clubs named above. As the relations of the White Bear and the Royal St. Lawrence Y. C. have been most cordial and this club had been passed over in the fall of 1898 in order to give the Seawanhaka C. Y. C. another chance for the cup, it was decided to accept the new challenge made by it on the day of the last race between Constance and Glencairn III. The committee decided that it was desirable that some steps should be taken to secure the construction of a better type of boat than that thus far developed by these races, the Royal St. Lawrence Y. C., as the holder, having certain powers in the matter of amending the conditions.

The America Cup Races.

The first race for the America Cup between Shamrock and Columbia will take place on Oct. 3, starting outside Sandy Hook, off the Port of New York, from either the Scotland or the Sandy Hook Lightship. The races will continue on Thursday, Saturday, and if necessary the same days in the following week, until one yacht has won three races. The course for the first race will be to windward or leeward, fifteen nautical miles and return; for the second race it will be a triangle with ten-mile sides, and so on in alternation. In case a race is unfinished, the next trial will be made over the same course, varied only to suit the direction of the wind.

The entire steamboat fleet of New York, with many vessels from Boston and other ports, and at least two ocean steamers from England, will be on hand to follow the races. The charges on the public steamers run from $3 per trip for the Iron Steamboat Company's craft, to $5 and $6 for the large Sound and sea-going steamers such as the City of Lowell, Grand Duchess, etc. Advertisements of the different steamers will be found in the daily New York papers. It will be necessary to start from the Battery or other New York piers by about 9 o'clock in order to get to the line in good season for the start off the lightship at 11 o'clock. The distance is twenty miles, and even in the broader channels open to the steamboats there is likely to be more or less crowding and possibly delay.

Rhode Island Y. C. Annual Regatta.

PAWTUXET—PROVIDENCE RIVER.

Thursday, Aug. 31.

The Rhode Island Y. C. sailed its thirteenth annual regatta on Aug. 31 with a good field of starters. The wind was fresh from the south, and the times were:

FIRST DIVISION.

Class 3—Sloops or Cutters—30 to 25ft.

	Start.	Elapsed.	Corrected.
Metacom, R. H. I. Goddard, Jr.	1 44 00	3 09 02	2 02 55
Nellie, John Oates	1 44 00	3 27 38	3 27 38

Class 6—Sloops or Cutters—18 to 15ft.

Opossum, J. L. Herreshoff	1 50 00	2 22 03	2 22 03
Columbia, Wood Bros.	1 50 00	2 31 43	2 31 08

Class 7—Sloops—15ft. and under.

Kid, W. H. Thurber	1 52 00	2 48 27	2 48 27
Rascal, H. E. Barlow	1 52 00	2 50 43	2 50 43
Earl, E. L. Fuller	1 52 00	2 55 13	2 55 13
Kitten, A. M. Potter	1 52 00	2 57 41	2 57 41

Class8—Special Class Fin-Keel Flush-Deck Sloops.

Breeze, W. G. Boelker, Jr.	1 54 00	2 41 11	2 41 11
Budget, Almy Bros.	1 54 00	Disqualified.	
Spree, Grant & Freed	1 54 00	Withdrew.	

THIRD DIVISION.

Class 2—25ft. Class Cats.

Curlew, A. F. Rich	2 06 00	3 16 10	3 16 10
Inez L., Whittaker	2 06 00	3 28 43	3 21 09
Yankee, G. Darling	2 06 00	3 29 32	3 21 29
Chick, B. Davis	2 06 00	3 32 33	3 26 27
Patience, Chas. Milwood	2 06 00	3 35 36	3 31 29
Phroso, Horace Peck	2 06 00	3 43 17	3 36 15

Class 3—21ft. Cats.

Marguerite, J. D. Peck	2 08 00	2 21 14	2 21 14
Colleen, M. Considine	2 08 00	2 26 04	2 25 08
Ida A., J. H. Foster	2 08 00	2 29 26	2 26 22
Mary L., Ed. Lyons	2 08 00	Withdrew.	

Class 4, 18ft. Cats.

Fedora, J. A. Hinckley	2 10 00	2 42 46	2 40 45
Dora, John Conroy	2 10 00	2 48 44	2 46 00
Skip, Thompson	2 10 00	2 52 11	2 52 11
Martha, F. J. Cole	2 10 00	Withdrew.	

Class 5—15ft. Cats.

Belle, A. Greene	2 12 00	3 13 34	3 13 34
Myrtle, H. Capron	2 12 00	3 19 09	3 17 30

Columbia turned the wrong mark, Budget started out of her class, and Colleen was protested for fouling.

Norwalk Y. C.

NORWALK—LONG ISLAND SOUND.

Monday, Sept. 4.

The Norwalk Y. C. sailed an open race on Labor Day in a fresh north wind, in which Marguerite lost her bowsprit and Little Joe her mast. The times were:

Sloops—Start, 1:05:00.

	Finish.	Corrected.
Emma L.	3 20 10	2 14 58
Adele	3 28 30	2 20 15
Defiant	3 29 10	2 24 10

Knocabouts—Start, 1:10:00.

Kestral	3 20 27	2 08 32
Walre	3 32 07	2 22 07
Marguerite	Disabled.	

Cabin Cats—Start, 1:20:00.

Kit	3 22 35	2 02 35
Dot	3 37 21	2 17 31
Ayli	3 56 00	2 31 20
Rajah	Disabled.	

SECOND DIVISION.

Knockabouts—Start, 1:15:00.

Dacoit	3 39 23	2 24 23
Jataska	3 41 05	2 26 05
Indianola	3 44 00	2 29 00
Kittiewink	3 45 16	2 30 16

Large Catboats—Start, 1:25:00.

Daphtne	3 06 34	1 21 34
Ethel N	3 04 55	1 42 02

Small Catboats—Start, 1:30:00.

Vision	3 29 17	1 55 27
Gladys May	3 30 46	1 59 33
Norma	3 30 45	1 59 51
What'tell	3 30 55	2 00 55

Cohasset Y. C.

COHASSET, MASS.

Monday, Sept. 4.

The Cohasset Y. C. sailed a race on Labor Day in a half-gale and a heavy sea for small craft, the times being:

Knockabouts—Start, 9:35.

	Finish
Delta, R. B. Williams	11 19 09
Remora, Tower & Crocker	11 21 35
Nerid, W. R. Sears	11 28 45
Baracuta, A. C. Burrage	11 29 30
Monsoon, F. H. Knowles	11 31 15

15ft. Class—Start, 9:30.

Swallow, John Richardson	10 32 00
Bee, F. W. Clark	10 36 00
Jap, Benj. Tower	10 40 00
Sea Gull, Fred Higginson	10 41 00

Fish Boats—Start, 9:40.

Manuel Salvador	10 35 00
Charles Anderson	10 35 30

Single Dories—Start, 10:02.

Thos. Mannix	10 14 45
Antone Figueredo	10 15 12
Patrick Hannahan	10 19 20
Irving Sylvester	10 26 30

Double Dories—Start, 10:45.

Grasse & Figueredo	11 06 00
Mannix & Golden	11 12 00
Hannahan & Doegue	11 19 00

The judges, William Edwards and D. N. Tower, awarded the prizes at the club house in the evening.

Beverly Y. C.

WING'S NECK—BUZZARD'S BAY.

THE Beverly Y. C. closed its racing with two events on Sept. 2 and one on Labor Day. In the morning of Saturday a race was sailed by the 15ft. one-design class, in Cataumet Harbor, the wind being light N.E. The times were:

Teazer, Hollis Burgess	0 59 15
Eaglet, R. W. Emmons, 2d	0 59 45
Go-Bye, C. H. Jones	1 01 00
Flickamaroo, J. Parkinson, Jr	1 01 23
Peacock, N. F. Emmons	1 02 20
Next, S. G. King	1 03 00
Uarda, R. L. Bacon	1 07 32

The boats were drawn by lot and not sailed by their owners. In the afternoon an open regatta was sailed off Wing's Neck, the times being:

25ft. Class.

	Elapsed.
Blazing Star, C. M. Baker	2 52 30
May Queen, D. L. Whittemore	2 56 08
Nokomis, Alfred Winsor	2 56 57
Ulula, W. Winship	2 57 12

21ft. Class.

Quakeress, W. F. Harrison	2 14 11
Kalama, David Rice	2 17 05
Cyrilla, R. W. Emmons, 2d	2 18 04
Edith, S. R. Dow	2 22 18
Amanita 2d, J. Crane, Jr	.. ..

Fourth Class Cats.

Heiress, G. G. Amory	1 36 47
Sally, W. S. Burgess	1 38 51
Maori, R. Bowler	1 42 50
Elsa, C. S. Sargent	1 43 46
Howard, Howard Miller	1 44 22
Hope, J. H. Ellis	1 47 06
Fin, H. Stockton, Jr	1 47 34

15ft. Class.

Uarda, J. Parkinson, Jr	1 38 57
Teazer, R. W. Emmons, Jr	1 40 03
Next, C. H. Jones	1 40 18
Flickamaroo, N. F. Emmons	1 40 45
Vim, F. W. Sargent	1 40 58
Peacock, R. Winsor	1 43 05
Go-Bye, S. G. King	Did not finish.

On Monday morning there was a fresh N.E. breeze for the open sweepstakes race. The 25ft. class sailed by agreement a special race to take the place of one previously sailed, but unsuccessful. The times were:

25ft. Class.

	Elapsed.
Blazing Star, C. M. Baker	2 28 20
May Queen, D. L. Whittemore	2 32 28
Ulula, W. H. Winship	2 32 43
Nokomis, A. Winsor	2 32 54

21ft. Class.

Kalama, David Rice	1 55 14
Quakeress, W. F. Harrison	1 56 45
Cyrilla, R. W. Emmons	1 57 20
Amanita, J. Crane, Jr	1 59 22
Edith, S. R. Dow	2 05 02

Second Class Sloops.

Thordis, T. B. Wales	1 51 48
Islander, Com. G. H. Richards	1 57 22

Fourth Class Cats.

Heiress, G. G. Amory	1 40 30
Sally, S. W. Burgess	1 45 04
Howard, H. O. Miller	1 46 13
Elsa, C. S. Sargent, Jr	1 48 37
Daisy, Howard Stockton	1 51 22
Fin, Howard Stockton, Jr	1 51 39
Hope, J. H. Ellis	1 55 20
Maori, R. B. Bowler, Jr	Disabled.

18ft. Class.

Esther, E. N. Farnsworth	1 44 51
Poltoos, Louis Bacon	1 47 03

15ft. Class.

Next, Paul Jones	1 41 53
Uarda, J. Parkinson, Jr	1 44 15
Peacock, R. Winsor	1 44 47
Vim, F. W. Sargent, Jr	1 44 50
Flickamaroo, N. F. Emmons	1 45 34

The pennant winners were: Blazing Star, Quarkeress, Howard, Esther Uarda.

Duxbury Y. C.

DUXBURY, MASS.

Monday, Sept. 4.

THE Duxbury Y. C. closed its racing season on Labor Day with a race in a reefing breeze from S.W., the times being:

Handicap Class.

	Elapsed.	Corrected.
Halcyon, S. C. Winsor	1 04 40	1 04 40

Patchogue Regatta.

PATCHOGUE—GREAT SQUTH BAY.

Saturday, Sept. 2.

AN open regatta was sailed off Patchogue on Sept. 2, the starters being yachts from the various clubs on the bay. The times were:

Class A—Sloops.

Klondike, W. J. Hill	2 03 51

Class B—Sloops.

Squaw, H. S. Jewell	2 04 05
Osawana, J. H. Covell	2 05 49
Helen, G. H. Miller	2 09 28

Class C.

Naomi, W. D. Murdock	1 27 52

Wellfleet Y. C. Open Regatta.

PROVINCETOWN—CAPE COD BAY.

Tuesday, Aug. 29.

THE Wellfleet Y. C. sailed an open regatta on Aug. 29 off Provincetown, the Massachusetts Y. R. A. fleet competing, with some local boats. Meemer had for a competitor an open fishing boat, so that she practically sailed alone. The wind was fresh from the east. The times were:

30ft. Class.

	Elapsed.
Meemer, R. C. Nickerson	1 20 40
Four Brothers	Not timed.

25ft. Class.

Hermes, A. W. Chesterton	2 04 52

Trilby	2 00 03
Dorothy	2 01 52

After tub races and other water sports a dinner was given in honor of the visitors.

Lynn Y. C. Open Regatta.

NAHANT—MASSACHUSETTS BAY.

Monday, Sept. 4.

THE principal event of Labor Day in the vicinity of Boston was the open Y. R. A. regatta of the Lynn Y. C., sailed off Nahant. Before the start the wind was strong from N.W., but it fell, and after a time came out of the east, finally shifting to S.E. These different changes helped some yachts and hurt others, and made the race unsatisfactory. Ashumet had no competitor, so sailed alone for a cash prize, but the race does not count for her for Association points. The times were:

30ft. Class.

	Elapsed.	Corrected.
Ashumet, W. F. Bache	2 09 42	. . . .

25ft. Class.

Hermes, A. W. Chesterton	2 15 28	. . . .

Jamaica Bay Y. C.

ROCKAWAY BEACH—JAMAICA BAY.

Saturday, Sept. 2.

THE Jamaica Bay Y. C. sailed the fifth and last of its races for the dory class on Sept. 2, the times being:

Start, 3:40.

	Finish.	Elapsed.
E., C. Hollis	4 51 40	1 11 40
O., F. S. Lafond	4 52 40	1 12 40
S., W. W. Scheffler	4 55 00	1 15 00
A., W. G. Gallagher	4 55 15	1 15 15
B., Dr. C. J. Pflug	Withdrew.	

The record for the series is as follows:

	Points.
O., F. S. Lafond	28
E., C. Hollis	8
B., Dr. C. J. Pflug	6
S., W. W. Scheffler	5
A., W. G. Gallagher	2
T., R. M. Kimball	1
D., B. F. Daly	0

Fleet Capt. Fred S. Lafond won the first prize, a silver wine cooler. C. Hollis won second prize, a silver inkstand. Dr. C. J. Pflug won third prize, an order for a yachting cap, with club emblem.

Monday, Sept. 4.

THE final regatta of the Jamaica Bay Y. C. on Labor Day was sailed in a strong north wind, which disabled several yachts and capsized the catboat Eunice, drowning one of her crew, a Norwegian named Edward Iversen. This fatal mishap spoiled what would otherwise have been a most enjoyable day, as the reception committee had made ample arrangements for the entertainment of the many members and guests, both during the races and in the evening. The times were:

Cabin Cats—Start, 2:20.

	Finish.	Elapsed.
Orca, F. S. Lafond	4 20 10	2 00 10
Dorothea, H. M. Christopher	Did not start.

Wyvern, W. C. Kimball	2 21 55	2 19 19
Defender, C. DeHart Brower	2 28 30	2 25 20

The sloop yacht Arrow, of Long Beach, L. I., was recently purchased by Walter C. Coffin, of New Rochelle, who started from Long Beach on Saturday, Sept. 9, for the latter place by way of Montauk Point, accompanied by Wm. A. Murray and Chas. Williamson. The yacht was becalmed all day Sunday outside Rockaway Inlet, heading east at night when a breeze sprung up. The wind freshened to a gale from S.E., and with no harbor near, the yacht was forced to anchor well off shore, near Quogue. Early on Monday morning she was sighted by the crew of the Quogue Life Saving Station, which put off, and after several very dangerous attempts reached the yacht and took off the three men, returning to shore in safety. Shortly after, the cables parted and the yacht was driven ashore and completely wrecked.

Seawanhaka—Philadelphia Interclub Match.

OYSTER BAY—LONG ISLAND SOUND.

THE Seawanhaka Corinthian Y. C. of Oyster Bay and the Corinthian Y. C. of Philadelphia sailed a match between the one-design knockabouts of the two clubs, similar to that of last year, beginning on Aug. 28. Each side entered four boats, the record being as follows:

Medford Boat Club.

THE Medford Boat Club celebrated Labor Day by a sailing race and other sports on Mystic Lake. The 15-footers sailed in a fresh north wind, two being disqualified, Coquette for fouling Eleanor, and Sally for fouling the judges' boat. The times were:

15ft. Class—Start, 2:19.

	1st Leg.	2d Leg.	3d Leg.
Eleanor	2 38 37	2 56 27	3 15 42
Princess	2 39 50	3 00 50	3 19 53
Goshawk	2 45 00	3 21 50	3 57 00
Sally	Disqualified.		
Coquette	2 38 00	2 56 17	Disqualified.

Paddling race, club fours—Won by the Tyogas, Capt. Morton M. Holbrook; Hoboes second, Capt. Howard R. Teel.

Swimming race—Won by Walter E. Chick, Percy W. Richardson second.

Tub race—Won by P. W. Richardson, Albert J. Parry second.

Hurry-scurry race—Won by C. A. Record, John Howard second.

Tilting tournament—Won by John Howard, P. W. Richardson second.

The judges were Philip J. Teel and Oscar Cunningham.

Larchmont Y. C. Fall Regatta.

LARCHMONT—LONG ISLAND SOUND.

Monday, Sept. 4.

THE Larchmont Y. C., in addition to its annual fall regatta on Labor Day, had scheduled an open regatta for schooner and other classes on Sept. 2, but the only yachts present were the catboats Grayling and Windora. They were sent over a course of five and one-half miles, in a light to moderate easterly wind, the times being:

Start, 12:25.

	Finish.	Corrected.
Windora	1 33 30	1 08 30
Grayling	1 42 20	1 16 18

The annual regatta on Monday was sailed in a strong north wind, the smaller yachts carrying two reefs, while Ludeah and Willada were dismasted. Kenwood and Cero fouled at the finish, and one of Kenwood's crew, Mr. Dodd, was stunned by the boom and knocked overboard, being rescued by two men in the markboat. Amorita was disqualified for rounding the wrong mark. Vigilant sailed with the 75ft. schooners. The times were:

75ft. Class—Schooners—Start, 11:35.

	Finish.	Elapsed.	Corrected.
Quissetta	3 56 40	4 21 19	3 53 19
Vigilant (cutter)	3 31 33	3 43 20	3 43 20
Amorita	Disqualified.

Eastern Y. C. Fall Regatta.

MARBLEHEAD—MASSACHUSETTS BAY.

Saturday, Sept. 9.

THE fall regatta of the Eastern Y. C. was sailed on Sept. 9 in a moderate N.E. wind, falling to light, with a lumpy sea. Constellation picked up the wrong buoy off Eastern Point and gave up. The old 5-tonner Shona was matched against a modern 30-footer, and won. The new Gardner fin-keel Goldenrod, an enlarged Cartoon, sailed her first race. The times were:

First Class—Schooners.

	Elapsed.	Corrected.

Halaia	3 25 11	3 21 40
Goldenrod	3 29 14	3 29 14
Cartoon	3 14 41	3 23 05

Seventh Class—Handicap—Sloops.

Shona	4 05 38	4 05 38
Zurich	4 38 00	4 36 19

Class prizes were given, and in addition Meemer wins the vice-commodore's cup.

Corinthian Y. C. of Marblehead.

THE race of the Corinthian Y. C. of Marblehead, postponed on Aug. 26, was sailed on Sept. 8 in a light S.W. wind, the times being:

Raceabouts.

	Elapsed.
Pirate, B. B. Crowninshield	1 46 38
Sintram, W. P. Fowle	1 48 28
Tunipoo, J. L. Breamer	1 51 14
Peep, W. B. Stearns	1 54 00
Persimmon, C. H. W. Foster	1 54 11
Lizanna, E. V. R. Thayer	1 54 30
Colleen, H. M. Sears	1 57 00

Knockabouts.

Spry, Cropley Bros.	1 53 00
Opitsah, S. W. Foster	1 57 58

Class C.

Sally IV., L. M. Percival	1 46 40
Mistrel, T. W. Little	1 50 20
Geisha, C. W. Jaynes	1 57 10

Class D.

Fifi, J. H. Jennings	2 22 30

Bunker Hill Y. C. Annual Regatta.

BOSTON—BOSTON HARBOR.

Monday, Sept. 4.

THE Bunker Hill Y. C. sailed its annual regatta on Labor Day, the times being:

First Class.

	Elapsed.	Corrected.
Elfreda, B. T. Hall	1 41 00	1 16 29
Bobby Shaftoe, J. T. Higgins	2 00 00	1 19 34

Third Class.

Sprite, P. J. Hinchey	1 08 30	0 49 30
Marion, Hinckley & Co.	1 11 00	0 51 29
Sea Fox, P. Aberle	1 12 30	0 52 30
Kenoza, J. Jacobs	1 16 00	0 53 41

The judges were Bert Green, J. Morris, Sig. Heintzelman.

Rifle Range and Gallery.

Zettler Rifle Club.

The twenty-fifth annual shooting tournament of the Zettler Rifle Club was held at Armbruster's Greenville Schuetzen Park and was one of the most successful rifle tournaments held this season.

Gus Zimmerman was defeated on all the targets. Louis Busse, of the Cottage Rifle Club, shot in excellent form and succeeded in making 3 straight bullseyes for a total of 75. This was the only clean score made during the festival. Summary:

Ring Target.				Ring Target.			
Louis Busse	75	71	70—216	William Hayes	71	71	69—211
M Dorrler	73	71	70—214	R Busse	71	70	70—211

Judges' Target.—John Facklam 51, Capt. Ehlen 42, A. Range 40.

Cincinnati Rifle Association.

THE following scores were made in competition with the Denver Rifle Club, on Aug. 20. Conditions, 200yds., strictly off-hand, at the standard target. Teams to consist of ten men each, 20 shots per man, but only eight men were on hand to shoot. We recommend that the eight highest men of the Denver Club be counted as the official team in this match. Weather conditions very warm and light wind:

M Gindele	9	7	7	7	10	10	10	10	10	7—87	
	8	9	10	8	10	8	9	8	9	9—88—175

Shell Mound.

SAN FRANCISCO, Cal., Aug. 28.—*Editor Forest and Stream:* Yesterday was bullseye day for most of the clubs at Shell Mound range.

The Golden Gate and Norddeutscher clubs shot medal scores. Scores of Golden Gate, 10 shots, 25-ring target, two scores allowed: Championship class—Dr. L. O. Rodgers 218, 219; F. E. Mason 213, 219; D. W. McLaughlin 200. First Class—C. M. Henderson 205, 197; F. W. Henderson 205, 197.

Norddeutscher, 20-shot scores: First class—Henry Stelling 411, Second Class—William C. Morken 376. Third class not filled. Fourth class—August Homann 346. Best first shot, August Homann, 23; best last shot, J. Gefken, 22.

Scores of the Schuetzen Verein: John Utschig 239, D. Salfield 296, F. Hensel 439, D. B. Faktor 537, F. Schuster 613, A. Lemaire 746, F. Koch 747, E. Goetze 766, A. Bertelsen 777, R. Stettin 833, Capt. Thode 898, Charles Thierbach 918, W. Goetze 967, R. Heins 1002, Zecher 1065, E. Stettin 1145, J. C. Waller 1152, L. Haake 1223, George Schultz 1288, H. Stelling 1378.

Scores of the Germania Club: Dr. L. O. Rodgers 241, E. Goetze 478, J. Utschig 507, A. Jungblut 641, W. Goetze 478, W. Garms 752, D. B. Faktor 774, L. Haake 792, H. Stelling 824, D. Salfield 841, F. Schuster 939.

ROEEL.

"Gentlemen of the jury," said an eloquent Q. C., "remember that my client is hard of hearing, and that, therefore, the voice of conscience appeals to him in vain!"—Tid-Bits.

Trapshooting.

Fixtures.

Sept. 15.—Hackensack River Bridge, Paterson Plank Road, Heflick's Hotel.—Shoot of the Hackensack River Gun Club. John L. Chartrand, Sec'y.
Sept. 15.—Burnside Crossing, Ill.—Medal contest on John Watson's grounds.
Sept. 15.—Newburgh, N. Y.—Glenwood Gun Club's tournament.
Sept. 16.—South Amboy, N. J.—Central New Jersey League contest, on grounds of the Columbia Gun Club.
Sept. 19-20.—Cherokee, Ia.—Cherokee Gun Club's third annual tournament. J. D. Anderson, Sec'y.
Sept. 19-21.—Hastings, Neb.—Amateur tournament of the Hastings Gun Club; $500 added; 2-cent targets. W. S. Duer, Manager.
Sept. 19-22.—Detroit, Mich.—John Parker's eighth international tournament; live birds and targets; $500 cash added.
Sept. 23.—Wissinoming, Pa.—Philadelphia Trapshooters' League.
Sept. 23.—Hartford, Conn.—All-day shoot of the Colt Gun Club. L. H. Bradley, Secy.
Sept. 23.—Ridgewood, N. J.—New Jersey championship, Harold Money, holder, against Chris Wright, challenger, at 2 o'clock, Ridgewood, N. J.
Sept. 23.—Sinking Spring, Pa.—Tournament of the Independent Gun Club.
Sept. 26-27.—Squaw Creek Park, between Niles and Girard, Trumbull County, O.—Tournament of the Rummell-Gaston Gun Club. Dr. James E. Gaston, Sec'y, Mineral Ridge, O.
Sept. 26-27.—Muncie, Ind.—Magic Gun Club's tournament.
Sept. 28-29.—Alton, Ill.—Third annual open tournament of the Piasa Gun Club. F. C. Riehl, Sec'y.
Oct. 2.—Wissinoming, Pa.—Philadelphia Trapshooters' League.
Oct. 3.—Kansas City, Mo.—J. A. R. Elliott, holder, against W. R. Crosby, challenger, for Review cup.
Oct. 4.—Kansas City, Mo.—J. A. R. Elliott, holder, against W. R. Crosby, challenger, for Republic cup.
Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.
Oct. 10-13.—Newark, N. J.—Smith Brothers' grounds. Live birds and targets.
Oct. 11-12.—Paris, Ky.—Hill Top Gun Club's two-day tournament. John L. Bosley, Sec'y.
Oct. 11-12.—Newark, N. J.—On Smith Brothers' grounds; two days' tournament of the New Jersey State League.
Oct. 13.—Batavia, N. Y.—E C cup target championship contest between Mr. W. R. Crosby, holder, and Mr. R. O. Heikes, challenger. Match begins at 3 o'clock.
Oct. 16-19.—Du Pont Park, St. Louis, Mo.—Fall tournament; three days at targets; one day at live birds; $300 to $500 added money. J. A. Corry, Manager.
Oct. 21.—Yardville, N. J.—Cast iron medal contest—J. A. R Elliott, holder, against C. Zwerlein, challenger.
Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $750 added. W. R. Elliston, Sec'y.
Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.
Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.
May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. E. S. Rice, Pres.
June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.
June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.
June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.
June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.
Sept. 21-22.—Tyrone, Pa.—Tyrone Gun Club's target tournament. D. D. Stine, Sec'y.
Sept. 27-28.—Oswego, N. Y.—First annual tournament of the Riverside Gun Club. Robert Oligshaut, Sec'y.

DRIVERS AND TWISTERS.

Dr. James E. Gaston, secretary of the Rummell-Gaston Gun Club, writes us as follows: "Through our efforts on behalf of participants at our tournament of live birds and bluerocks, Sept. 26 and 27, we have been able to make such arrangements with the Erie R. R. Company that parties from Chicago who will call on Mr. A. M. Warrell, G. P. and T. A. of that city; or Buffalo parties call on H. T. Jaeger, G. A. P. D. at Buffalo; or New York and Brooklyn shooters call on Mr. J. Buckley, New York; or Cleveland men call on R. H. Wallace, G. A. P. D., of that city, they will give satisfactory rates from these points to Niles, O., which is very close to our shooting park, and connected by electric railroad. Cars run from Niles to our grounds at Squam Creek Park every few minutes. We are surprised at the large number of shooters from all over the country who have notified us of their intention of attending our tournament. We are straining every effort to have things run smoothly and every person satisfied. We will have unlimited numbers of selected live birds. If parties often or more from other points in the country than those mentioned will promptly notify me I will be enabled to secure special rates for them. Paul North and the magautrap will in combination run the tournament in first class shape."

The trapshooting tournament held under the auspices of the Orange County Agricultural Society, on the Fair Grounds at Middletown, N. Y., Sept. 12 to 15, inclusive, is open to the world. The programme each day is alike—ten events, 10, 15 and 20 targets, with a total of 145 targets and a total entrance of $18. Targets 2 cents. Those who wish may shoot for targets only. Ship ammunition, etc., to Mr. J. B. Rogers, the manager, Fair Ground, Middletown, N. Y. Trolley runs to the grounds. Rose system will govern division of the moneys. Two sets of traps, Sergeant system. Shooting commences at 9 o'clock. The conditions for the Rogers trophy, emblematic of the championship of Orange county, are as follows: Each shooter must shoot at 100 targets, unknown angles. Entrace $5. The events will be called at 12 o'clock each day and will remain open until last squad is called to shoot. No one can enter but once. In case of a tie for first place contestants will divide first money and shoot 50 targets to decide who shall have cup. The cup becomes the personal property of the one winning it. The purse will be divided on the fourth day. Inter-State Association rules to govern.

Under date of Sept. 8 Mr. L. H. Schortemeier sends us the following: "I see that you have the dates Oct. 11 and 12 for the shoot of the New Jersey State shoot at Smith Brothers' grounds, Newark. Will you kindly add that on Tuesday, Oct. 10, a 100-target race will be shot on the same grounds, and on Friday, the 13th, a 25 or 50-bird contest will also take place. This will make the dates claimed Tuesday, Wednesday, Thursday and Friday, Oct. 10, 11, 12 and 13, at Smith Brothers' grounds, Foundry and Ferry streets, Newark, N. J.; first two days at targets and last two at live birds. Kindly mention that the traps are the old Carteret Lumbreyer-King automatic traps, and are fast. I will do my utmost to supply good birds. There will be two sets of traps on the target days. Sergeant system and a wagon to meet the boys at the Plank road, Newark trolley, Foundry and Ferry streets. Ask your readers to address communications to L. H. Schortemeier, manager, 201 Pearl street, New York."

Under date of Sept. 9 Mr. J. A. H. Dressel, secretary-treasurer of the Interstate Park Association, writes us as follows of the gratifying progress and prospects of the great shooting institution: "Matters on the Interstate Park grounds are progressing very favorably. Men are at work plowing, mowing and sowing, and within a week work will commence on the foundations. Subscriptions to bonds are coming in in such a satisfactory manner that there is no doubt as to the outcome, and the next Grand American Handicap will see the event take place on the finest grounds in the world, especially adapted for that purpose."

We learn with pleasure that the injury to Mr. E. Johnson's arm, while very serious, is not of such a character as to make amputation necessary. There further is a probability that he again will be able to use it, and that his skill at the traps will not be impaired by the regrettable accident.

May 7, 1900, is fixed upon for the next annual convention and tournament of the Illinois State Sportsmen's Association.

Under date of Sept. 9 Mr. Murl H. De Foe, Charlotte, Mich., writes us: "The Charlotte Gun Club is an organization composed of 100 charter members, and boasts of a team composed of as good shots as ever aimed over a trap. Regular tourneys are given every Tuesday afternoon. A State tournament will be given by the club in October, and all the crackerjacks have announced their intention of being present."

At Batavia, N. Y., commencing at 3 o'clock Oct. 13, the next contest for the E C cup, emblematic of the target championship, will take place between Mr. W. R. Crosby, the holder, and Mr. R. O. Heikes, the challenger. This will be a battle of the giants of the trapshooting world, both men being of the very first class of ability.

Mr. Irby Bennett, of the Winchester Repeating Arms Company, has journeyed thitherward from his Memphis home and tarried awhile in New York last Friday en route to New Haven. He is a greatly changed man, inasmuch as he appears smooth-shaven, which, however, rather adds to his usual debonair appearance.

The shooting at Brantford, Ont., was particularly good, the highest average for the two days being made by Mr. J. S. Fanning, of Gold Dust fame, who scored .951 per cent. on the total of the two days. He made one run of 76. Second high average was made by Mr. Kirkover, who broke .932 per cent. and made one run of 56 straight.

Mr. Leroy Woodard passed through New York last Saturday, returning from the Interstate shoot at Portsmouth, where he made a close struggle for high average; but nevertheless he has been wonderfully successful in capturing high averages this season, as the records will show.

In a contest at 50 live birds between Mr. A. C. Paterson and R. Dwyer, the former won by the score of 43 to 39. There was a 7 o'clock wind. This is the second defeat Mr. Paterson has administered to Mr. Dwyer, the first one being at Milwaukee, Wis., on Aug. 27.

Mr. R. O. Heikes arrived in New York on Saturday of last week, and will spend a few days in this neck of the woods. He is the personification of good health, and is one of the few shooters who is always in his usual good form.

On Friday of this week at 2 o'clock there will be a live-bird shoot of the Hackensack River Gun Club at H. Heflich's Hotel, Hackensack River Bridge, Paterson Plank Road. The secretary is Mr. John Chartrand.

Mr. J. J. U. M. C. Hallowell journeys westward this week to take part in Mr. John Parker's international tournament, and others which follow thereafter in the middle West.

The Hill Top Gun Club will hold a two-days' tournament, Oct. 11 and 12, near Paris, Ky. The star event of the competition will be the Hill Top handicap, at 25 live birds.

The first annual shoot of the Riverside Gun Club, Oswego, N. Y., will be held on Sept. 27 and 28. Mr. Robert Oliphant is the secretary.

The Tyrone Gun Club, Tyrone, Pa., has arranged for a target tournament on Sept. 21 and 22. Mr. D. D. Stine, Tyrone, is the secretary.

BERNARD WATERS.

WESTERN TRAPS.

Belle Meade Tournament.

CHICAGO, Ill., Sept. 7.—The tournaments of the famous Belle Meade Gun Club, of Nashville, Tenn., are landmarks on the trapshooting roadway, and are matters of interest North and South. The last word from this enterprising body of sportsmen states that they will raise their own ante, as it were, though I do not know what that means, and will add $750 instead of $500. The following details are added by the management:

Below will be found the official programme of the second annual shooting tournament of the Belle Meade Gun Club, to be held from Oct. 23 to 28, inclusive, at the club's shooting lodge on Belle Meade Farm, five miles west of Nashville. Every detail looking to the largest and most successful shooting event ever held in the South is being carefully attended to. Two sets of Fulford's latest patent automatic pull traps, with underground system of loading and retrieving, and three sets of target traps set in the Sergeant system have recently been put up, which guarantees that all events advertised will take place promptly.

Covered wagons will leave the Duncan Hotel at 8 o'clock for the shooting grounds, going along the route of the beautiful Harding pike, and returning to the hotel in the evening. A barbecue and everything a shooter may wish for will be given free of charge on the grounds each day, there will be nothing for sale, and every effort will be made to add to the comfort and pleasure of guests. The event will be in charge of Messrs. Jack Parker, of the Peters Cartridge Co., of Cincinnati, and W. R. Elliston, of Nashville, which is a guarantee of its success.

The first three days have a like programme, namely: Ten 10-target events and twenty at 20 targets; $2 entrance, $20 added in each event, five equal moneys, 20 per cent. each. Class shooting.

A handsome gold medal goes to the one making high average for the three days.

Fourth Day, Thursday, Oct. 26.—Event No. 1, miss and out at live birds, $3 entrance, including birds. Event No. 2, Court House and City Hall handicap, 25 birds, $15 entrance, high guns, not class shooting; division of money as follows: To first thirty guns there will be five moneys, divided as follows: 30 per cent to first, 25 to second, 20 to third, 15 to fourth and 10 to fifth. There will be four moneys to every ten guns over thirty. Money will be divided equally among these four.

Fifth Day, Friday, Oct. 27.—Event No. 1, miss and out, $3 entrance. Event No. 2, Gerst handicap, 25 birds, $15 entrance; same conditions and division of money as Court House handicap.

Sixth Day, Oct. 28.—Event No. 1, 5 birds, $5 entrance, high guns. Event No. 2, Second Annual Belle Meade handicap, 25 birds, $25 entrance; same conditions and division of money as in City Hall handicap. To this event there will be a handsome silver loving cup given to the winner. All entrance includes birds and targets. There will be a shooting handicap from 26 to 32yds. in all live bird matches."

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Eureka Gun Club.

Chicago, Sept. 9.—The most exciting event was the team shoot, both sides scoring 93. It was decided to let the captains shoot it off at 10 each. W. D. Stannard scored 10, Dr. Miller 9. Mr. Steck shot at a great pace to-day, averaging 96 per cent. on the day. The scores in the team shoot follow:

W. D. Stannard 17, Dr. Morton 14, Dr. Carson 14, F. P. Stannard, 18, J. L. Jones 15, Lovell 15; total 93.

Dr. Miller 19, Ed Steck 20, Adams 13, H. B. Morgan 16, Walters 10, Cornwell 15; total 93.

This was a perfect day for shooting—clear, with but little wind. In the trophy shoot Ed Steck won Class A with 25 straight, Dr. Miller won Class B, J. L. Jones won Class C with 21, Lovell Class D. In the Mussey cup shoot Dr. Miller won on 24 out of 25.

Garfield Gun Club.

Chicago, Sept. 9.—The appended scores were made on our grounds to-day. The temperature was very uncomfortable, and just a slight breeze made the day an ideal one for shooting.

A medal was won by Richards on a score of 22, but only after a shoot-off with R. Kuss.

Class B medal was won by Northcott also on a score of 22.

C medal was won by Brabrook on the good score of 20—a very creditable performance for a Class C shooter.

Quite a number of visitors were present, including about a dozen ladies. All seemed to enjoy themselves.

Trophy contest:

Pollard	1110100110011111001101101—16

Trap at Lyndhurst.

Lyndhurst, N. J., Sept. 9.—The long delayed match between Messrs. Moffett and Hopper, fixed to come off to-day, was of the things which are not, for business prevented Mr. Hopper from attending. It was to have been shot on Sept. 6, but Mr. Moffett was absent on that day. Considering that the match was alleged to be for $100 a side, there was a calm indifference to forfeits and $100 and such other small matters of detail as appertain generally to important matches. However, several sweepstakes were shot, as follows:

Events Nos. 1 and 2, each 7 birds, two moneys, 30yds.:

The Target Championship.

NEW YORK, Sept. 9.—*Editor Forest and Stream:* I have received notice from Mr. W. R. Crosby that he accepts Mr. Heikes' challenge for the E C cup, and names Batavia, N. Y., Oct. 13, and 3 P. M., as the place, date and time for holding the match.

EDWARD BANKS,
Sec'y American E. C. & Schultze Gunpowder Co.

Illinois State Sportsmen's Association.

CHICAGO, Sept. 8.—*Editor Forest and Stream:* Through the columns of your paper devoted to Trap Fixtures I desire to claim in behalf of the Illinois State Sportsmen's Association the week beginning May 7, 1900, for the annual convention and tournament.

E. S. RICE, President.

Interstate at Portsmouth.

PORTSMOUTH, Va.—There was not the attendance which was to be expected, though the number was not so low as to make the affair at all in the nature of a failure. The first day had an entry of thirty-eight shooters. Of these two were representatives of the Old North State—Mr. H. C. Bridges (Tarheel), of Tarboro, and Col. J. T. Anthony, of Charlotte. They took first and second place respectively in the day's events. Mr. Bridges made a total score of 141, and Col. Anthony 137 out of a possible 150 targets. Mr. B. Leroy Woodard, of Campello, Mass., with a total of 134, was third, while Mr. Hood Waters, of Baltimore, finished fourth with 133 targets to his credit.

Although the weather was uncomfortably warm good shooting was done. The intense heat doubtless interfered with the marksmen who participated, and also prevented many from entering who would otherwise have gone in. However, Manager Elmer E. Shaner, of the Association, said that the day compared favorably with any opening event of the season, and the members of the Portsmouth Gun Club, under whose auspices the tournament was given, are to be congratulated upon the success attained.

First Day, Wednesday, Sept. 6.

Among the contestants in to-day's events were shooters from New York, Baltimore, Richmond, Lynchburg, Westminster, Md., Tarboro and Charlotte, N. C., besides the local marksmen, who were out in force. There were some good scores made by others than those mentioned individually.

Mrs. Milt G. Lindsley (Wanda) must not be overlooked, however. She participated in several events in the morning, but was compelled to discontinue shooting on account of the heat. In the afternoon she resumed shooting, and made a very good average.

The equitable system, three moneys for 10 and four moneys for 15 target events, prevailed.

To-morrow the tournament will close with a live-bird shoot, open to all, given by the Portsmouth Gun Club. Following are the scores

Events:	1	2	3	4	5	6	7	8	9	10

Second Day, Thursday, Sept. 7.

The attendance was larger to-day, and the same interest was shown in all of the events. Tarheel failed to repeat his performance of yesterday, owing to the fact that he was suffering from a bad shoulder.

Dinner was again served the visitors by the Portsmouth Gun Club.

Wanda waited until the afternoon, when she again entertained the Portsmouth Gun Club and its guests with clever feats of marksmanship.

Trap Around Reading.

READING, Pa., Sept. 9.—The annual target shoot of the South End Gun Club, held to-day on the club grounds, was a success. The principal drawing card was the five-men team shoot for the championship of Berks and adjoining counties, and the South End Gun Club's sterling silver trophy. Six teams were represented in the shoot, Shuler team, of Pottstown, winning by 3 targets from Royersford by the score of 102 to 99.

Among the sportsmen present were Gilson, Irwin and Showalter, of Pottstown; Hallman, Dotterer, Stevens, Pechler, Hodge and Erb, of Phœnixville; Johnson, Schaffner, Price, Hagenboth and Buckwalter, of Royersford; Brey, of Zionville; Benner, Weand and Sheeler, of Boyertown; Heinly, Hunsicker, Spatz, Gundy and Young of Sinking Spring; Chas. Eshelman and Zigler, of Beckersville. The tournament was under the management of Arthur Fink, who deserves great credit for the manner in which the shoot was conducted, there being not a single delay to mar the pleasure of the shooters. Manager Fink was assisted by Capt. W. W. Essick, Frank Gerhard, Jack Shaater and Geo. Ritter.

The score of the trophy shoot was as follows:

Mt. Penn Gun Club, Reading.—Yeager 19, Rhoads 18, Dietrich 19, Ball 11, Shultz 18; total 86.

South End Gun Club, Reading.—Shaater 23, Essick 20, Matz 19, Eshelman 19, Yost 16; total 97.

Sinking Spring Gun Club.—Heinly 18, Hunsicker 17, Spatz 23, Gundy 15, Young 23; total 96.

Phœnixville Gun Club.—Dotterer 14, Stevens 23, Fechlert 15, Hallman 18, Hodge 16; total 97.

Shuler Gun Club, Pottstown.—Gilson 22, Benner 22, Brey 20, Sheeler 22, Showalter 16; total 102.

Royersford Gun Club.—Johnson 23, Hagenboth 23, Buckwalter 19, Miller 17, Price 17; total 99.

The conditions of the above team shoot were teams of 5 men each, each man to shoot at 25 targets.

Following are the scores of the other events:

West Chester, Pa., Sept. 9.—Ford won the challenge cup of the West Chester Gun Club for the fifth time this afternoon by defeating Hoopes in the shoot-off of a tie by the score of 8 to 6. In the general shoot each man broke 22. The score follows:

Challenge cup event, 25 targets: Ford 22, Hoopes 22, Gill 18, Mercer 15, Torpey 15, Hoar 15, Jackson 15, Howard 18, Henry 20, Peters 19, Davis 14, Ferguson 16.

Sinking Spring, Pa., Aug. 8.—At a meeting of the Independent Gun Club, of this place, held this evening, it was decided to hold the annual target tournament Saturday, Sept. 23, at Hainly's Hotel, Sinking Spring, where the club house and shooting grounds are located. Sweepstake events at 7, 10 and 15 targets, at reasonable entrance fees, will constitute the programme. Remember the date, Sept. 23.

DUSTER.

Brantford County Rod and Gun Club's Tournament.

BRANTFORD, Ont., Sept. 5.—There was a good attendance of shooters at the tournament of the Brantford County Rod and Gun Club, Brantford, Ont., Sept. 4 and 5, the competition being on targets. There were Messrs. E. Jarvis, H. C. Marlatt, Simcoe; Mr. H. Bangs, Drayton; Messrs. C. Quinn and E. Charles, Guelph; Mr. H. A. Horning, Waterford; Mr. J. Vanatter, St. George; Messrs. C. Summerhayes, A. B. Cutcliffe, W. Scott, C. Montgomery, T. Westbrooke and S. Smith, Brantford; Mr. G. W. Price, St. Williams; H. Kirkover, Fredonia, N. Y.; Messrs. E. C. Burkhardt, E. N. McCarney, C. S. Burkhardt and L. W. Bennett, Buffalo; Messrs. G. Robbins and G. Reid, Danville; Mr. J. S. Fanning, of Gold Dust Powder fame, Batavia, N. Y., and Mr. R. S. Cull, Waterloo.

Favorable conditions favored the tournament. The weather was perfect, the light and background good.

First Day, Monday, Sept. 4.

On the first day that sterling good shot and popular gentleman Mr. J. S. Fanning made a run of 74 straight, while Mr. Harry Kirkover, an amateur of the best class, made a run of 52. A magautrap threw the targets. American Association rules governed.

Events:	1	2	3	4	5	6	7	8	10	Shot at.	Broke.

Second Day, Tuesday, Sept. 5.

There was quite a lot of wind stirring, which made hard shooting to-day. Mr. C. Summerhayes won the gold medal for the best average for the two days, Fanning shooting for the price of targets only. His average, though, was high for the two days—.951; Kirkover a good second with .932. The scores:

Events:	1	2	3	4	5	6	7	Shot at.	Broke.

The Tyrone Gun Club Tournament.

ALTOONA, Pa., Sept. 9.—This club will hold a two-day target tournament on Thursday and Friday, Sept. 21 and 22. The advance sheets for the programme announce twelve events for each day—seven 10-target events, entrance $1.15 each; four 15-target events, entrance $1.75, and one 20-target event, $2.30, a total entrance of $17.25. The second day will be a repetition of the first. Purses will be divided according to the Jack Rabbit system, surplus, 40, 30, 20 and 10 per cent. Targets will be thrown from a magautrap at 1½ cents each, the price of the targets to be deducted from the purse. Black powder and 10-gauge guns will be barred. Shells of all kinds for sale on the grounds. Ammunition, etc., shipped to D. D. Stine, secretary, Tyrone, Pa., will be delivered to the grounds free. A purse of $15 will be given to the visiting shooter making the highest percentage on the whole programme for both days. Members of the Tyrone Gun Club are barred from contesting for the club purse. In addition to the regular purses and the club purses, twenty-four merchandise prizes, aggregating in value over $100, will be given to the shooters making the highest per cent. on the whole programme of each day's shoot, twelve prizes to be awarded each day. Experts and manufacturers' agents will be allowed to shoot for targets only, and will be barred from contesting for purses or prizes. The winner of the club prize will be barred from participating in the distribution of merchandise prizes.

The Tyrone Club is making an effort to have a first-class amateur shoot, and while none but amateurs will be allowed to contest for purses, experts and manufacturers' agents will be perfectly welcome to shoot for targets, and will be given an opportunity to show up their various productions to their best advantage.

There have been so many systems of dividing purses used during the past year without all around success that the management of this shoot has decided to adopt the Jack Rabbit, which seems to please amateurs and bring more new shooters to the front than any other that has been tried. The club will receive the support of a dozen nearby organizations, and any shooters from a distance who come will find lots of company. Programmes can be had by writing to the secretary.

The Tyrone boys are a jolly lot of fellows and will do everything in their power to make things pleasant for visitors.

G. G. ZETH.

Cincinnati Gun Club.

CINCINNATI, O., Sept. 7.—Herewith are scores of the eighth contest of the live-bird trophy; also some sweepstakes and the first monthly contest for the diamond target medal.

Although the day was fearfully hot, the birds were an exceptionally fine, strong lot—all selected dark birds. There are only two more contests for the cup, and the race is very close, there being seven men with a good chance. The four high men are only one bird apart. The medal (target) contest was only attended by three contestants; presumably the weather was too warm, the thermometer hovering between 100 and 102 in the shade.

The club is giving a tournament Oct. 31, Nov. 1, 2, and 3, two days live birds and two days targets, a notice of which will be sent out shortly.

Mosby-Graydon-Sullivan medal, 50 targets, handicap:

R. B. MULES.

Brockton Gun Club.

BROCKTON, Sept. 4.—Herewith are scores of our new event—the Brockton Gun Club handicap trophy. A perfect day and a fair attendance of shooters, while every shooter had friends looking on without number. There were hundreds. Tisdale started in with 10 straight; Barrett, 9; third event, Allen scored 10; fourth, Barrett, 9; fifth, Scott and Barrett, each 9; sixth, Stork and Scott, each 10; seventh, Barrett, 10; tenth, Taylor, 10.

Barrett and Scott each shot above his allowance and each scored 100; Taylor and Allen, each 94; Murdock and Donoghue, each 93.

In their effort to do well, most of the shooters fell far short of their usual average. In case of ties of three wins each the ties will be shot off. The next contest for this trophy will be Memorial day, 1900. Barrett, with 82 per cent. on the 100, was high gun. Our next and last regular shoot of the season will be Sept. 16. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Worthing	5	8	6	7	7	9	8	9	8	8	7	8	..	..	..

Grant	8	7	5	7	8	7	5	5	4	5	4	..	..	..	..

Medal contest: Barrett won first with 30.

Merchandise: First, Stork, 30; second, Worthing, Barrett and Allen, each 29; third, Carr and Taylor, each 27.

A. A. BARRETT, Sec'y.

Auburn Gun Club.

AUBURN, Me., Sept. 9.—Sixteen members turned out to our weekly shoot to-day. Although this is not as large an attendance as we have been having, a good time was enjoyed by all. The day was perfect and the shooters unusually good-natured. Things were made lively by the "crack squad," and everybody went home happy. Alden won the gold badge in the 25-target handicap race.

Herewith are the scores:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Targets:	10	25	15	10	25	10	Targets:	10	25	15	10	25	10

The Omaha Tournament.

OMAHA, Neb., Sept. 8.—The fourth annual tournament of the Du Pont Gun Club, which was held here the past three days, did not draw as large an attendance as one would expect from the very liberal programme that the club offered. Four hundred dollars added money, a very handsome cup, several nice merchandise prizes and 2-cent targets should have drawn sixty to seventy shooters; but on this occasion there was only a few more than half that number present, so that in this respect the shoot can hardly be classed a success.

The lack of attendance is principally due to the fact that many of the trapshooters were off prairie chicken shooting, and from very reliable reports I learn that these birds are quite plentiful this season; in fact, much better than for three or four seasons past. Mr. J. E. Brook, of Atkinson, Neb., told me that on the Monday previous to the shoot he and Mr. V. W. McDonald, also of his place, had bagged seventy-six birds, and that good chicken shooting was to be had in any part of his county, notwithstanding that the sooner had been killing chicken for a month or more past. In the face of such reports, it is quite probable that this in some measure is responsible for the light attendance at this shoot.

However, it must not be inferred that because the club lost some money on this tournament it will be embarrassed to any extent, or that it will go out of existence, for such would indeed be a mistaken idea. The club is one of the most flourishing of the entire West, having now somewhere in the neighborhood of $500 in the treasury, so that it will continue to do business at the old stand as heretofore, despite the loss of a few dollars on this tournament. Even at the present, they are contemplating holding a live-bird tournament in November, in connection with the intercity team race between Omaha and Kansas City.

This tournament was held on the Omaha Gun Club ground, which is a public shooting park and one well equipped for an event of this kind. This park is located just across the river from Omaha, on the Iowa side, and about seven minutes' ride on the electric line from the business portion of Omaha. The targets were thrown from expert traps, and these were arranged on the Sergeant system, two sets being used. In this manner the programme was rapidly disposed of, so that the shooting was virtually over by 4 o'clock each day. The management of the shoot was under the supervision of H. S. McDonald, president W. T. Brewer and W. D. Townsend. The cashier's office was presided over by W. D. Burgess. Mr. C. M. Lincoln, of the U. M. C. Co., who, in connection with Frank Parmelee, has charge of this company's exhibit at the exposition, was present during the entire shoot and did yeoman service in many capacities, thereby contributing not a little toward the success of the shoot.

Non-Resident Principals.

Notwithstanding that the entries did not run very high, there were quite a number of out-of-town shooters present at some time during the shoot, this being attested by the following list: Alf Hodgson, Hawthorn, Ia.; M. Diefenderfer, Wood River, Neb.; Gus Sievers and Wm. Herman, Grand Island, Neb.; R. R. Kimball, Fremont, Neb.; C. R. Andrews, Hillsdale, Ia.; E. E. Hairgrove, Sutton, Neb.; C. A. Thurston and E. M. Calef, Onawa, Ia.; Lee Bailey, Norfolk, Neb.; Wm. Mitchell, Perry, Ia.; D. B. Carlyle, Jefferson, Ia.; J. E. Brook, Atkinson, Neb.; W. E. Smith, Cook, Neb.; J. M. Higgins, Kingsley, Ia.; W. A. Leach, Fort Smith, Ark.; J. Terryberry, Louisville, Neb.; E. E. Aney, Springfield, Ia.; A. S. Edwards, Ed Wallace and P. Storey, Glenwood, Ia.; A. M. Bernhard, Hastings, Neb.; Fred Eckstenkamp, Arlington, Neb.; M. Matson, Persia, Ia.; Dr. J. B. Hungate, Weeping Water, Neb.; Dan Bray, Syracuse, Neb.; Frank Crabill, Missouri Valley, Ia.; J. F. Beard, Herman, Neb.; Chris. F. Drier, Portsmouth, Ia.; P. Simpson, St. Edwards, Neb.; J. P. Vanderberg, Denver, Col.; Geo. Peterson, Coon Rapids, Ia.; Dr. C. B. Clapp, Moberly, Mo.; J. J. Elliott, Onawa, Ia.; C. M. Otis, Tabor, Ia.; Geo. Rogers, Lincoln, Neb.

General Average.

As an inducement to have the contestant shoot through the entire three days' programme the club had hung up some very nice average prizes, nine for high and nine for low average. The high-average prizes consisted of cash, arranged on the following basis: $10, $10, $9, $8, $7, $6, $5, $5, and $5. First high average was won by Dan Bray, of Syracuse, Neb., who was the only shooter to make 90 per cent. for the three days. This entitled him to $10. Diefenderfer, of Wood River, Neb., and Grant, a local, tied for second, and as the class system prevailed they each got only $5, being compelled to divide second. This was obviously unjust, but only goes to demonstrate the inequity of the system. McDonald, another local man, got third, $9. R. R. Kimball, of Fremont, is fourth and got $8. Frank Crabill, of Missouri Valley, Ia., is fifth, and received $7. C. R. Andrews, of Hillsdale, Ia., got sixth, $6, while Brewer, of Omaha; Gus Sievers, of Grand Island, and Townsend, also a home man, who finished in the order, got $5 apiece.

In allotting the low-average prizes one begins at the bottom and works up. E. E. Aney, of Springfield, Ia., made the lowest average of the shoot. This entitled him to a Stevens rifle. J. Terryberry, of Louisville, Ia., is next lowest, and this won a Horton steel fishing rod. The other low-average winners—Leach, Brook, Smith, Loomis and Herman—each receive $5.

Thus it will be seen that every one who shot through received a prize to the value of $5 or more. In fact, there are two averages for which there are no claimants, as but seventeen shot through the programme, and two of these tied for one prize. It will be observed that Brook is credited with shooting at but 450 in place of 465. This came about by his losing the first target in the cup race, after which he withdrew, so that he virtually took part in every event. He claimed not to be aware that this was included in the average.

	1st day.	2d day.	3d day.	Shot at.	Broke.	Av.
Bray	137	154	128	465	419	.901

Terryberry	116	120	111	465	347	.746
Aney	114	133	96	465	343	.737

First Day, Tuesday, Sept. 5.

Mr. Alf Hodgson, of Hawthorn, Ia., was the chief factor in the tournament to-day, and engrossed the attention of every one present by his consistent and clever shooting, which will be seen by the appended table averaged an even 960 per cent. for the day, and in consequence he is easily in the van, while his five straight scores for the day are also the best in this respect. Grant, one of the local club members, was also in evidence, and ranks second with .940. This shooter has for a long time previous to the tournament been shooting very strong, and his showing to-day is only what was expected of him. Brewer, another home guard, showed good form, and is third in the bunch; his shooting too is high class. Fourth place is much disputed, for here we find Bray, Crabill, Diefenderfer and Sievers bunched together with the same total. Individually and collectively the shooting was very good, and the opportunity for great winnings was by no means good, while usually the money was pretty much cut up.

The conditions were favorable to good scores, as there was scarcely any wind, but again the shooters were somewhat handicapped by a torrid temperature, as the mercury was hobnobbing with the century mark. As a result the ice cream and mineral water man did a large and flourishing business.

The attendance was rather light, so that the programme was soon disposed of. The largest entry in any event was thirty-five, while the aggregate number engaged reached but one higher.

Two extras were shot after the conclusion of the programme; the first was at 20 targets, and in this Calef won first alone on the only straight score. The last was at 5 pairs; Townsend scooped first money in this on 9.

The programme consisted of ten 15-target events, with four moneys divided on the percentage system, 35, 30, 20 and 15 per cent.:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Targets:	15	15	15	15	15	15	15	15	15	15

Second Day, Wednesday, Sept. 6.

A few new shooters put in an appearance to-day, so that the aggregate attendance is a trifle larger than yesterday, but the increase is not very material. Dan Bray, of Syracuse, is high man with .933, and Peterson, of Coon Rapids, Ia., is second with .909. These are the only two who reached 90, but the conditions are in marked contrast from those of yesterday. The wind blew a fierce gale all day, and as the targets went out with this most of them went 90yds., and frequently they exceeded this, while during their flight they also cut up all scorts of queer antics, so that the scoring of them was frequently a matter of guesswork. Under such conditions consecutive scoring was almost impossible, but nevertheless Bray managed to bunch 40 straight in one group.

The programme to-day called for eleven events, each at 15 targets. One of these was a cup. On the programme this was No. 6, but in the table it is No. 11. Although the programme stated that all events were included in the general average, yet some were under the impression that this event was not included, and as there was nothing but the cup to be won in this event some withdrew after losing their first target, for this was virtually a miss-and-out race. Only two—McDonald and Smith—finished with straight scores, and in the shoot-off McDonald was only required to break his first target, as Smith started off with a miss.

Peterson was the most fortunate shooter, as he landed one first without a tie. This was in the third event and netted him $16.10. Top scores paid much better to-day, as it was quite a task to get them straight.

The weather was bright and clear, and the high wind tempered the heat somewhat.

An extra at 5 pairs was the concluding event of the day. This was well patronized, but all the money went to three men. Grant got first on 10, Kimball second on 9, and Beard third on 8.

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot at.	Broke.	Av.

Third Day, Thursday, Sept. 7.

The home contingent was in evidence to-day, as both first and second averages went to home men—Henry McDonald first with .906 and W. D. Townsend second with .900. These are the only two principals who made 90 per cent. Diefenderfer is just 1 break behind Townsend, and the same margin separaters Peterson from the former. These two occupy third and fourth positions respectively. The conditions were if anything a little harder than yesterday, as the shooters had all kinds of weather to contend with. Part of the time it was cloudy; then a few drenching showers fell, and finally this was succeeded by sunshine. There was also a marked change in the temperature. Coats, which had been divested on the previous day, were closely buttoned up, and even at this there was a decided chill in the air, for the wind, which now blew from the north, seemed to search out all the thin places in one's garments.

Straight scores paid well as a rule, it occurring on four different occasions that such a score netted the maker first without a divide.

The fortunate ones were Brook in No. 2, Diefenderfer in No. 3, Townsend in No. 4 and Crabill in No. 6. The opportunity was also presented in the last event, but no one was equal to it, so that the 14s cut up the first money in this event. The entries ran about twenty-five, so that the programme was soon disposed of, and the tournament was practically over by 3 o'clock:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Targets:	15	15	15	15	15	15	15	15	15	15			
McDonald	15	11	14	14	15	14	14	14	13	12	150	136	.906
Townsend	15	13	15	12	11	14	14	15	12	14	150	135	.900

Notes.

Mr. H. S. McDonald's win of the cup was a very popular one, as much of the energy and enterprise of this club is due to his executive ability. He shoots a Smith gun, Smokeless shells and Schultze powder.

Col. A. G. Courtney, of the Remington Arms Company, hustling representative and champion heavy-weight expert shot of the universe, set the boys quite a pace on the first day, as he scored 71 out of his first 75, getting four 14s and a 15 the first five times up.

Much praise is due Mr. Wm. Mitchell, of Perry, Ia., who unsolicited acted in the capacity of squad hustler—this too in an irreproachable and satisfactory manner, notwithstanding that he shot in nearly every event.

Mr. Dan Bray, winner of high average, is also live-bird champion of Nebraska, as he won the championship at Lincoln last May after a prolonged shoot-off. Bray shoots a Smith gun, Smokeless shells and Du Pont and Schultze powder.

The intercity team race betwen Omaha and Kansas City looks like an assured thing for the fall; at least so far as Omaha is concerned. Here they claim to be able to muster twelve men for a race of this nature.

Fred Quimby, of the American E. C. & Schultze Powder Company, shot in a few events just to show the boys that he was capable of breaking some targets himself. He would have done much better had he not permitted the targets to get nearly to the fence before shooting at them. Fred was evidently after showing off the killing power of Schultze—and he did it successfully.

The two Kimball brothers are tough shooting propositions. Grant finished third and R. R. fifth in the general averages. The latter, it will be remembered, won the interstate championship at St. Louis last May. On this occasion he shot out Gilbert, Budd, Porter and several other good ones.

Frank Parmelee did not take part in the shoot, as he had to be at the Exposition, looking after the U. M. C. Company exhibit. In conversation Frank said that he might put on a little war paint himself this fall and sally forth in quest of a few shooters' scalps.

Everything goes to indicate that the Hastings shoot will be one of the best held in this Western country for some time. Geo. Rogers, who is just back from Colorado, tells me that this State and Utah also will be represented at the shoot. Omaha expects to send two squads.

Geo. Rogers, of Lincoln, came over to take part in the shoot, but unfortunately he was taken sick and was unable to come to the grounds until the last day. When in good health George is somewhat of a factor himself in this shooting game.

The showing of Geo. Loomis at this shoot is something of a surprise. It has been a long time since his average has been so low. Somehow he could not catch his stride, and apparently was shooting in spasmodic time.

PAUL R. LITZKE.

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass., Sept. 8.—Labor Day (Sept. 4) has come and gone, and again marks the closing of the trapshooting season for the Fitchburg Rifle and Gun Club. The day was fine and clear, with just enough wind to make the targets somewhat erratic and make high scores very uncertain, though some very good ones were made during the day. There was much interest among the shooters as to who would get the best average for the day's work, and thus get the gun which was presented to the club by Leroy, the Du Pont powder representative and crack target breaker. To make the averages for the day's shooting close and give all as even a chance as possible, targets were given according to the average of the season's shooting. The number of birds given is indicated by the number against the names, the first three men starting scratch, and others without numbers are visitors.

At noon it looked as though J. Taylor would be the owner of the gun, as he was shooting much above his average, and had he stopped after shooting at 100 birds he would have had it solid, as his average at that time, with his 22 birds handicap, was 87; but in shooting at 120 he lowered his average to 82½, which proved to be just a grain too low, as the writer puled in with 82 2-3 for 225 shot at and captured the deadly weapon.

It has been a very successful season, with an increased interest over last year and a marked improvement in scores.

Now we are looking forward to the time when we can go afield with dog and gun and hear the flutter of the partridge or the twitter of the woodcock when they rise. The time is near and we will soon hear of large bags being brought in. Be careful and not count toes instead of bills. The scores:

M. A. CUTLER, Treas.

Arkansas and the South.

St. Louis Doings.

ST. LOUIS, Mo., Sept. 2.—The incentive for competition at Dupont Park to-day was the contest for the Jaccard cup, which brought out eight of the local contingent to strive for its possession. The winner proved to be H. C. Griesedick, who has cut such a wide swath among the local shooting element by capturing nearly everything that he has contested for. His win of to-day proved to be a double victory, as that tie between himself, Collins and Chase was also decided in this race, though unfortunately Chase, owing to illness, was unable to be present.

At present Griesedick holds both local live bird trophies, and henceforth they can only be wrested from him in individual contest, while should he successfully defend either of them once more he will become permanent possessor of them. At present he has two matches on, one with Jno. J. Sumpter for the Busch medal and one with Dr. J. W. Smith for the Jaccard cup. That with Sumpter was to have taken place to-day, but the principals finally agreed to a postponement of a week. This, as the conditions prescribe, will be a 25-bird affair, while the one with Dr. Smith will be a 100-bird race, though this will not be shot until the weather gets cooler. By defeating Conrades a week ago Griesedick scored his fifth win for the Busch medal, so it is only necessary for him to dispose of Sumpter to retire this medal. One singular thing about these contests is that no one has ever been able to win this medal but the present holder.

The birds in to-day's contest were a mixed, ordinary lot, while in addition to this the weather conditions were also against them. It was excessively hot and the breeze that was in evidence availed them but little, and the torrid heat robbed them of their snap and vigor. The score:

Griesedick, 31	1211112112112211212121212*1—24
Collins, 29	2221202121112112120111111—23
Dr. Smith, 30	11111101*2211222121112*222—22
Dr. Clark, 27	021211110*1212211211222222—22
Taylor, 29	222121222*1011212011211122—22
Denning, 28	1111121112212**212020211—21
Herold, 26	2120221101222*2101112*1220—19

St. Louis Tournament.

Mr. J. A. Corray, manager of Dupont Park, St. Louis, claims Oct. 16 to 19 as the dates for holding his fall tournament. Three days' targets and one day live birds. There will be from $300 to $500 added money at this shoot. This will give the Western shooters who are going to Belle Meade an opportunity to stop off and take in this shoot en route.

PAUL R. LITZKE.

Maine State Tournament.

To write up the Maine State tournament, giving simply the scores and a general mention of the whole affair, would convey to the reader but the faintest glimmer of what actually took place in the way of personal prowess and concentrated enthusiasm. As an illustration, there was Mr. R. Hunnewell, who won the first average and who never smiled (in his anxiety) for two days until he finished a winner. Since then his face is likened unto a luminous orb, and I doubt if artificial light will be found necessary at his home for months to come; and the musical cadences of his voice will be heard among the "men of Maine" for an extended period asking them to come right upto the soda water fountain and quaff to the dregs. So much for the winner. Mr. Barker, the secretary, simply smiles. His work is finished to a fine polish. His patience and persistent good nature carried every one right along.

Among the out-of-town and State shooters were the silent Griffetts, of Pascoag, R. I.; Ernest Chisholm, of Portland; Mr. O. R. Dickey, the shooter from Bosting; J. R. Hull, of Meriden, Conn.; J. J. Hallowell, of Bridgeport, Conn.; Leroy, from Campello, Mass.; Ben Norton, his smile and good nature, from New York; Harold Money, from Oakland, N. J., and your obedient servant, from Batavia, the seven last-mentioned being classed as experts and eligible to only a most pleasant meeting. And this is just as it should be at all tournaments.

About 1,800 targets were consumed in the two days, using one set of five expert and one magautrap, the latter being very popular.

A number of ladies were present, all of whom took the liveliest interest in the shooting, and this is another phase of these meetings as it should be. The presence of ladies controls, and there is a harmonious blending of the whole scene.

In closing, I beg to call attention to a salient feature of this Maine tournament, to wit.: The sapient caterer of the feast collected 50 cents per head from all before entering the banquet hall and thereby was enabled to balance his ledger account at the conclusion of the carnival.

Wednesday.

Wednesday's shooting progressed until dark, with all save one event of the first day's programme unfinished.

The weather and everything else was favorable to large scores. The sun, which had hidden itself behind the clouds in the early morning, came out bright and clear in season for the regular shooting events. Sixty entries in the first event. The scores:

Events:	1	2	3	4	5	6	7	8	9	10

DICK SWIVELLER.

ON LONG ISLAND.

Fulton Gun Club.

Brooklyn, L. I., Sept. 4.—The Labor Day shoot of the Fulton Gun Club was well attended, twenty-six shooters participating. The weather was charming. The place was all that could be desired in a shooting ground, and the background was clear sky. The programme was departed from. A good lunch was provided. The scores were low, as nearly all were not thoroughly schooled in the perfect form which comes from long experience, but the enjoyment was 100 per cent. The cup event brought out, with others, two strong shooters into direct competition—Messrs. Phister and Van Allen, both of whom scored the full 50, the former breaking 48 out of 50 and 2 more out of his handicap of 4, while Van Allen scored 49 and only needed 1 of his handicap of 2 to shoot at to make the full 50. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Van Allen, 1 .....1111111011001111101111110—20

The Sergeant system of trapping was used.

Brooklyn Gun Club.

Brooklyn, L. I., Sept. 9.—There was a good attendance of shooters and the competition was enlivened by some team matches. In the first, at 25 targets, Dudley and Gardiner scored 23 and 22 respectively, a total of 45, to Webber's 22 and Hopkins' 19, a total of 41. The return match resulted as follows: Dudley 22, Gardiner 23, total 45; Webber 21, Hopkins 23, total 44. In a three-men team match at 25 targets, the scores were: Dudley 24, Gardiner 22, Tuttle 23, total 69; Webber 24, Hopkins 20, Chambers 15, total 59.

The scores:

*15 single and 5 pairs.

Brooklyn Gun Club's Live-Bird Shoot.

Sept. 6.—The live-bird shoot of the Brooklyn Gun Club was very pleasant in every way, though the attendance was not up to what was expected, due, probably, to the short notice given to the shooters, for the invitations were sent out only two or three days before the event took place.

There were three events in the programme, but two extra events of 5 birds each were shot before the regular programme began, and an extra event at 5 birds, $5 entrance, one prize, a beautiful scarfpin—a horseshoe set with diamonds—was shot after the regular programme was finished. The latter was practically a miss-and-out, for all ties on five shot a miss-and-out for the scarfpin, the single prize of the event. This evoked the keenest interest, and terminated somewhat unexpectedly as to the winner, as there were several seasoned and tried match shooters who were looked upon as the source of the winner. In the tie were Messrs. Morfey, Bissett, Doty and Mr. S. M. Van Allen, of Jamaica, L. I., who forthwith proceeded to shoot off, miss-and-out. Morfey retired on his third bird, and Bissett on the fourth. This narrowed the competition to Messrs. Allen and Doty, and the great performance of the latter in his recent matches made him the favorite. But Van Allen held the confidence of his friends, who knew his skill best, and the result justified it, for Doty missed his 6th, which left Van Allen the winner, and hearty congratulations from all present were his. Mr. W. Hopkins was another of the shooting surprises of the day, for out of 32 birds which he shot at he missed but 2, and the exceedingly clever manner in which he shot marked him as a true shooter. Capt. Money arrived late, and by some misunderstanding his gun and shells had not arrived, so he shot strange guns and any load at hand, with the usual gameness for which he is noted; but the change to a misfit gun made its misfitness felt in the scores, though he shot well at that. The first three events are the extras. The next three are programme events. The scores:

	Extra No. 1.	Extra No. 2.
Morfey, 30	22220—4	20222—4
Woods, 30	2111*—4	0*211—3

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1899, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 23, 1899.

VOL. LIII.—No. 13. No. 346 BROADWAY, NEW YORK

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

The greatest conqueror in the world never had so many triumphal arches erected to him as our middle-sized brooks have. Landor.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1899.

WASHINGTON.

Laws 1899, p. 278.—Section 3 Every person who shall offer for sale, or market, or sell or barter any moose, elk, caribou, killed in this State, antelope, mountain sheep or goat, deer, or the hide or skin of any moose, elk, deer or caribou, or any grouse, pheasant, ptarmigan, partridge, sage hen, prairie chicken or quail, at any time of the year, shall be deemed guilty of a misdemeanor.

THE FOOLISH MOMENT.

IT is a peculiar phase of mental phenomena that men, under certain conditions of time, circumstances and opportunity, will do recklessly foolish things. They will, at such moments, elect to jeopardize life or limb—their own or that of their fellows—in an attempt to succeed in some venture, whether trifling or otherwise, though success may bring nothing material with it. This seems to be a trait common to all humanity. Men of all kinds and degrees, be they wise or simple, taught or untaught, high or low in social or business station, have their foolish moments when heedless recklessness takes the place of sober reason and common prudence.

When time, circumstances and opportunity combine to afford play to the reckless proclivities of the individual, there are few, indeed, whose mentality has been so highly developed and disciplined that they are guided by reason rather than by impulse.

Thus it comes that a man, perfectly trained and disciplined in his special vocation, may go weeks and months in conducting it without an error. Every detail has been carefully thought out in advance; every rule of action has been carefully elaborated, and every act is conducted on a logical process of reasoning. Nothing then is left to chance or to the emotional impulse of the individual.

No man in a responsible position in business would abandon the discipline and rules which wisdom and experience had proved sound, and in their stead act on emotional impulses.

Yet the methodical man of errorless proficiency in his regular business and social routine, habituated to act by rule and reason, may, in some other environment, develop a penchant for foolish moments filled with the taking of foolish chances. His surroundings are novel, the stimulus to action is different from that to which he is habituated, and he becomes largely a creature of impulse.

Thus it comes about that the man of sound judgment when sitting in his office, pen in hand, may be a creature of reckless conduct when in the woods, rifle in hand; or when astride a bicycle speeding along city street or country road; or when in a boat in dangerous waters.

The man, rifle in hand, in the woods has an exhilarating stimulus in his new environment and purpose, something which exalts him far above his everyday temperament, and he is keyed up to a point of action far above the normal.

However, the reckless acts of the foolish moments always have in them something of a competitive nature or struggle for the mastery. The novice who is a big-game hunter, who sees the bushes move and recklessly takes the chances that the concealed moving object is a deer and not a cow, or a horse, or a man, is a creature of impulse. He has not reasoned out all the associated possibilities of mistake and death incident to the situation. He has deer in his mind and deer in his purpose, and with the stimulus of the pursuit impelling him he follows the dictate of impulse and shoots.

From the point of view of the man who reasons out the matter in another environment, the act was criminally thoughtless, and inexcusable. Yet under the same circumstances, the critic himself might have done the same thing. Under certain other circumstances, which appealed to the critic's spirit of competition or sport, he then might have his own foolish moment in which reason was abandoned and impulse made him reckless.

However, there is no excuse whatever for a man, habituated to the use of hunting with firearms, who shoots at an object whose wherabout is indicated by moving bushes. Long habit should make his acts a matter of reason, not of impulse. The tyro may be excused in a degree for acts committed from the excitement and heat of the moment, but there is no excuse for him for his neglect of learning all the safeguards to be observed in the use of a deadly weapon before he takes it in hand for dealy uses.

The bicyclist displays the same reckless spirit in another form. He may be pedaling along serenely for hours, when a combination of circumstances impels him to reckless action and then he proceeds on impulse. He darts in and out between carriages, missing wheels and wagon tongues and horses' noses by a hair's breadth, with no greater object than to get ahead of them at all risks and with no material gain to himself after he has done so. And still he may go weeks before the foolish moment comes to take the reckless chances which, if successful, may have no importance whatever. The boatman shoots rapids in a desire to accomplish where others have failed, and on impulse may do desperate deeds in the effort to succeed, and success may mean nothing more than the personal gratification of going safely through great danger or the evanescent interest of the onlookers.

Reason and calculation should eliminate the foolish moments and the reckless chances. The soldier, keyed up to a high tension for desperate deeds, would on impulse do all sorts of reckless things in all sorts of foolish moments, were it not for the disciplined mind of his superior, who acts according to reason. He is habituated from training and experience to disregard impulse even when the times are most exciting. Only by observing a similar course of study and discipline can the foolish moments and reckless acts so common to sport be eliminated.

THE RAIL.

IN the good old days of which the graybeards talk with so much regret, and about which the youngsters hear with envy and wonder, the opening of the rail season inaugurated the beginning of the fall shooting. In those happy days, the poorer shots often got from sixty to eighty birds to a boat, while the experts, when the tide was right and the flight was on, sometimes secured one hundred and fifty or two hundred.

For a number of years the rail shooting on many grounds in the Eastern States which formerly yielded abundant bags has been an absolute failure, so much so that many of its former devotees have altogether abandoned it. Five, six, nine, or at most a dozen birds to a tide, are not worth going for. The intervals between the rises are too long, and the shoring becomes monotonous. In the old days, before the marshes had been so much run over, one might often find there besides the rail other interesting birds, which added to the pleasure of the hours spent in the boat; a little bunch of winged teal, an early migrating brood of black ducks, a king rail, a little white heron, or a least bittern, might rise before the gun and add to the variety of the bag. But of late years there has been little of this.

This autumn, for some unexplained reason, the rail shooting all along the Atlantic Coast, while not nearly up to its old-time standard, has yet been so much better than that of recent years as to cause great surprise. We know of grounds, for many seasons almost barren, which this autumn have yielded bags of thirty, forty or forty-five birds—an increase in abundance for which we know of no cause, and which is hardly likely to be repeated another season.

There is no better school for the boy who is learning to shoot than rail shooting. The view is unobstructed, the birds fly slowly and straight; thus the beginner has plenty of time, and with proper tuition at once begins to kill birds enough to give him a little confidence in himself. Of course, there is a slight tendency for him to become too deliberate, and even to potter, but signs of his doing this should be watched for by his instructor, and promptly corrected. But as the rail are among the easiest to kill of game birds, they are the very best for the novice to practice on, and we should be glad to see all the rail grounds in the country absolutely reserved as a practice ground for the rising generation of those who use the shotgun.

SNAP SHOTS.

THE pathos of the letter from Harry Coons printed on another page is not lessened by the fact of his death in August last.

Harry Coons, to call him by his English name, was a full-blooded Indian of the Skidi tribe of the Pawnees. He received his education for the most part at the reservation school at the old agency on the Loup Fork, in Nebraska, and was a grown man when his tribe was removed by the Government to its new home in the Indian Territory. His suggestive letter tells us something of the conditions of Pawnee life when the tribe resided in Nebraska, and it was at this time that we first knew him and other Indian boys, while traveling with the camp in search of buffalo.

Subsequent to this period he served under Major North with the Pawnee scouts, where he was regarded as one of the most trustworthy and reliable men in that steadfast body. Of late years he had taken firm hold of civilization, possessed a farm, which he successfully managed, and at one time was stockholder and director in a local bank.

For a number of years he had been threatened with consumption, that fell enemy of the Indian race, which claims for its victims one-half of those who die. His trip to the North, made in the summer of 1898, and of which he writes in this letter, was undertaken in search of health.

Harry Coons was a man of determination, of unflinching courage and of great singleness of purpose. If he had lived fifty years earlier he would have been a great chief, for he possessed the qualities of mind which make chiefs. He was also a warm friend, and his death will be mourned not only in his tribe, but by more than one of his white friends.

We are advised by our Chicago correspondent of thirty-two acceptances of the invitation to go on the Minnesota excursion to inspect the region of the proposed national park. Seventeen States are represented; and if the public spirited promoters of the reserve project shall instil something of their own enthusiasm into their guests the result should be a powerful stimulus of general interest in the plan. If the people of the country realized what is the character of that Minnesota region and had a faint conception of all that the park would mean to the Mississippi Valley and the entire population, there would be no uncertainty as to the prompt action of Congress; the Minnesota forest reserve would be an assured fact.

The State of Washington has been so reckless of its game supply that the most stringent measures are now thought necessary to protect the remnant. An important provision in the new game code is one which embodies the FOREST AND STREAM Platform Plank, and absolutely forbids the sale of game. The text of the prohibition is given at the top of this page; and the statute contains a further clause forbidding the purchase of game. In this way an attempt is made to reach the special classes who provoke violations of the game law.

It takes people of all sorts to make up the world. There are some who never go shooting nor fishing.

If one is held up by a freight train wreck, how shall he employ himself during the detention? By writing for FOREST AND STREAM, of course, as did the author of the black bass paper signed Wadleigh Brooke, who writes: "The inclosed sketch was jotted down a night or two since on telegraph blanks and old letters as our train lay back of a very mixed up freight wreck, as a pleasant means of whiling away the time."

A most interesting bit of news in our fishing columns to-day is the report Mr. Livingston Stone sends of the capture of the first California salmon taken in the St. Lawrence River.

The Sportsman Tourist.

Yukon Notes.

(*Continued from page* 204.)

The Scurvy Sign.

When I said good-by to Col. Fred Mather in the office of Forest and Stream just before leaving for Alaska the white-haired old sportsman, whose circle of personal friends is only exceeded by those who have learned to love him from his writings, said several things which have lingered in memory. Next to his hearty "God bless you" at parting, and the old warhorse's wish that he were going too, I remember most keenly some gruesome details of prison experiences in the South during the war, in which scurvy figured, men's teeth dropping out and the calves of their legs sluffing off, and the like—the whole treated in a kindly half humorous way that in no whit detracted from the force of the picture.

The moral was: Take plenty of dried fruit, lime juice, vinegar, etc., and go light on salt meats.

We remembered the advice, and lost neither our teeth nor our limbs.

The Cheechakoes all had a wholesome fear of the disease, and the cases which occurred were confined either to men who were short of supplies or to the old-timers, who had gotten used to living on little or nothing, and who seemed to think things weren't just right unless they had a touch of scurvy in their systems.

Sore and swollen limbs are an indication of the disease, as are also brown patches on the skin; but there is one sure sign that never fails, and that is when the flesh loses its elasticity and becomes putty-like, retaining, for instance, the impress of a finger for some moments after the spot has been touched.

When a man gets in this condition there are various ways of treating him in use among the old-timers, all more or less of a kill-or-cure nature. Hughy Day, a mail carrier, says a decoction made by pouring boiling water on a mixture of quaking asp bark and spruce boughs is efficacious.

"The first year of the Forty Mile excitement," (1886), says Day, "I remember that a man named Holmes had the scurvy. We took and gave him his quaking asp and spruce drink, and then we bathed him and rubbed him with canvas till he yelled for mercy. It cured him, all right enough, and in the spring he pulled his own stuff to the mines."

A Modern Esau.

The day after leaving Five Fingers we found some very rough going late in the day. The pioneers of the trail had become discouraged by a more than commonly bad stretch of jammed ice, and had taken to the bank of the river. The pull was up an almost perpendicular bluff, over a series of icy ledges. Just as Mac and I landed the last sled at the top we were surprised to see an Indian youth appear, as though he had dropped from the clouds. The boy caught hold of the rope and gave a final tug to assist us, and then, as we continued on our way through a sparse popple growth, he trotted along between the sleds, stooping and pushing on the back of each in turn to help us over fallen trees or up the not infrequent rises.

"The boy seems willing enough," I remarked to Mac, "but if I wasn't looking I couldn't tell he was pushing, as far as the help he gives is concerned."

"Can't you see, man, he's sick?" Mac replied. "The poor devil's weak as a rat, and for my part I wish he'd leave the sled alone. Did you notice the color of his lips?"

I had. They were a chalky white, and had a burned appearance. Mac turned to the boy, who had not volunteered any information about himself, and learned that he came from the Indian camp at Cormack's, two miles away. Mac asked him if his people had meat or fish to barter, and the boy replied in the negative.

"No moose meat. No fish. No muck-muck," said the lad. "Injun go hunt. No come back."

My first impression of the boy had been that he was a runner sent out by the Indians to solicit trade, for on our way down the river the Indians at this point had been particularly noisy trying to get us to come ashore and buy their meat, but this supposition was no longer tenable.

As the next most plausible hypothesis I decided that the boy had come to buy flour or sugar, and resolved to be on my guard.

In coasting down a 50ft. bluff near the point where the trail again took to the surface of the river Mac's sled struck a tree and had a part of the top and several uprights carried away. The boy seemed sorry for us and did what little he could to assist in repairing the break. It was already growing dark, and finding an old camp site near by we resolved to stop where we were for the night.

I went off to get some wood, and on my return found the Indian still there. He had taken up his position near Mac, who was working over the broken sled, and his teeth were chattering with the cold, though the night was considerably milder than the average.

Mac was trying to get rid of him, much as he would have talked to a dog who had followed him unbidden. "Go home, now, like a good fellow," he was saying. "Ye'll get your death of pneumonia standing there in the cold. Go 'long, now, and clear out of here." The Indian avoided his look and said nothing.

Having split some wood and gathered up the chips and splinters I struck a match on the handle of the pocket revolver I happened to be carrying at the time preparatory to lighting the fire. The boy had observed the action, and a moment later was at my side.

"Gun, how much?" he asked.

"No sell," I replied; but a moment later an idea occurred to me, and I added, "You can have it for 5lbs. of moose meat." The boy shook his head sorrowfully, and from the longing glance he cast at the pistol I felt convinced he did not have the meat. It was plain that he would have given anything to procure the weapon. He inquired if I had a "machine" for reloading, and how many cartridges I had, and he seemed to be making a mental calculation of some kind.

When our meal was nearly ready Mac drew me aside and said that the boy had told him he was starving and had had nothing to eat for several days.

"It takes away my appetite to see him hanging around looking so hungry," said Mac, "and yet we can't tell whether he is lying or not, and for my part I believe we are more likely to starve in the end than he is. Now, I've got something to propose. There's that particularly bad lot of burned beans that you wanted to throw away, but that I thought we could get down some way or other. Shall we try him on them? What do you say, man?"

"It's a pretty good test whether he's starving or not," I replied. "If he can eat those beans, I'll guarantee he's no impostor."

And so the boy got the beans, and we watched him wade into the horrible half-charred mess and consume it till not so much as a bean was left. After that he got up of his own accord and went home, and Mac and I had our supper in peace.

The last thing Mac said that night before we turned in showed that he was still pondering over the case and trying to assure himself that we had not been improvident in parting with the beans.

"I know no common man could have eaten them," he said. "But I'm not so sure about this Indian chap. When these savages are real hungry they browse on the bark of trees, and perhaps the beans were a luxury to him after all."

I was hardly of Mac's opinion, and consequently the next morning when we came in sight of the Indian camp I was considerably shocked to find the boy and an old man waiting for us on the ice with pieces of meat, evidently intended for barter.

Though a self-confessed liar, the boy did not seem at all abashed, and he at once began bargaining for the revolver that had so taken his fancy the previous day. We were badly in need of the meat, and swallowing my indignation as best I could, I turned to the old man and asked him how much money he would take for the four lean ribs he held in his hand. He answered that he would not sell for money at all.

At our last camp Mac and I had decided to lighten our loads by getting rid of a part of the bedding and some small articles which were not absolutely necessary. Among the latter was a $7 hand satchel, containing my papers, besides hair brush and comb and a few knick-knacks. I unfastened the satchel from the sled and taking out the papers and the comb, signified to him that he could have satchel and contents for the meat. At first he shook his head. Then his curiosity got the better of the bargaining spirit and he put his dirty hand into the open satchel and drew out a key chain and ring with a few keys on it. Next he opened a small phial of sugar-coated laxitive pills, and smelt them, and last of all he rubbed the hairbrush over the back of his hand. He could resist the seductive argument no longer, and thrusting the meat into my hand he seized the satchel, turned, and hurried up the steep bank.

"He's like the monkey in the zoo, who's jerked a lady's hat through the bars of his cage," said Mac. "He's off now to find a quiet spot to pull his plunder to pieces."

The boy remained behind and again began his argument for securing the little gun. I looked at the piece of meat in his hand, which was about all gristle and bone, and told him it was no good, and that he must get something better if he wanted to talk with us. After a moment's hesitation he turned and made his way up the bank, giving us to understand that he would soon return. "Man, man! but he's a fraud!" said Mac, feelingly. "He ate our beans to economize in his meat, and now he's doing the same thing as selling us back our own food over again."

The boy returned a moment later with a fair sized piece of caribou haunch, and a trade was consummated. By throwing in a red blanket we succeeded in securing all the meat the Indians had shown. After that we continued our journey, but for some reason we did not take much satisfaction in our augmented larder.

There is a sequel to this story, otherwise it would never have been told. We learned afterward that the Indians really were starving at the time they traded us the meat, and it is very likely that, unknowingly, we took the last food they had in the world. The incident illustrates a remarkable characteristic that only those who are familiar with the North Pacific Coast Indian can understand. It is their inborn passion to acquire desirable objects for the purpose, later, of giving them away in a grand potlatch as a means of acquiring rank and position in their tribe. So strong is this characteristic and so deeply is it rooted that governmental intervention has been unable to stamp it out.

Our information came through the Northwest Mounted Police, who told us that a few days after we passed Cormack's word reached the post at the Little Salmon that the Indians were in a very bad way, and would die if they did not soon receive aid. Relief was sent, and it reached the Indians not a moment too soon, for they were weak and emaciated from starvation. We were told that they would not resist the temptation to trade for such desirable articles as we had shown them, even though it involved giving up the last hoarded remnant of their food. The hunters of the tribe had been gone for many days in search of caribou at some point up the Nordenskiold, and though no news whatever had been received from them, the remaining Indians, with characteristic happy optimism, had confidently counted on their return each day.

The Yukon Indian has no strong hold on posterity. The race is dying out, and the advent of the white man is hastening its extinction. The white man in this hungry country naturally takes to hoarding his food like a chipmunk, and it is little wonder that he cannot understand the Indian's recklessness of the future. In other matters he finds the Indian a shrewd, natural bargainer, and he has no scruples in trading him out of his food and his dogs, which are the next most important factor in the Indian's struggle for existence. Afterward, when the Indian in his extremity tries to trade back, nothing comes more natural for the white man than to view him as a lazy, improvident beggar, and kick him out.

Cabins on the River.

The Indians at this point occupied a couple of cabins, one of which had formerly belonged to Siwash George Cormack, the discoverer of the Klondike. Cormack was said to be a deserter from the United States marines at Sitka, and was a squaw man, having taken to himself an Indian wife. Apparently he was unable to quite reduce himself to the level of the Indians, for he exhibited various signs of civilized enterprise, operating as a trader in Harper's employ, and also opening a seam of coal in the bluff a few miles below his post.

For three days after leaving Cormack's, Mac and I saw no one to speak to. When we came to prepare our meat for cooking we found that it was frozen so hard it was impossible to cut it with our knives, and after a fruitless attempt to thaw it, which only resulted in burning the outside, we hit upon the plan of dressing out our steaks with an axe. The chunk was thrown on the ground, and with one moccasined foot on it to hold it still, the operator split off the smaller slabs by repeated strokes of the axe. The bone was but very little harder to cut than the rest.

The second day after leaving Cormack's, we found the recently deserted cabins of several parties of miners. Two of these, built side by side on a wooded flat that evidently was flooded at the time of the spring freshets, were of a kind that our ancestors in the stone age might have lived in. These primitive structures were two-thirds below the surface of the ground. The roofs had been made by a rude framework of poles covered by the earth taken from the excavations. Access was gained to each by a slanting passageway, and aside from the rude door and the wooden support of the roof there was nothing to give evidence that the builders of the dugouts possessed an axe. There was no window and no furniture of any description inside. For a bed a mass of earth 2ft. high and perhaps 5 by 7 in superficial area had been left at one side of the cabin, and this took up fully half the floor space. At the foot of the bed was a hole through the roof, and a pile of ashes and charred fragments of wood below showed that this had been the fireplace. Opposite the bed the wall had been nitched and a rude shelf constructed. The dirt floor was covered with chips, old shoes, broken suspenders, empty bottles and the like, a litter that no self-respecting bear would have permitted in his den. Mac and I left the place in a decidedly misanthropic frame of mind. The musty hole suggested the abode of brutes, and it would have fittingly suited our mood to find evidence of cannibalistic feasts or to see it occupied by creatures of the type of Swift's Yahoos or of Victor Hugo's Han, the "man beast of boundless savagery."

A little further on we drew up our sleds for lunch at the spot where a large scow had been wrecked in the ice. Above the hull of the boat a canvas water break 2ft. in height had been rigged. This was tacked to the gunwale at the lower edge, and had no doubt served to keep the waves in lakes and rapids from breaking over the heavily loaded boat. The ice, however, had ridden rough-shod over the flimsy construction, and it was like building up the perfect skeleton of an unknown animal from scattered remains to recall the fact that we had seen this boat twice the previous October on Lake Bennett.

Eagle's Nest and the Oxbow.

Isolated buttes are a feature of this part of the Yukon. Notable examples are Eagle's Nest, Tantalus Butte and Hoocheekoo Bluff.

The former is a mass of light gray rock rising abruptly to a height of about 500ft. It is smooth and regular in its general contour as an animal's skull, and only here and there have a few dwarf firs gained root.

Tantalus Butte was named by Schwatka, and if all of this traveler's other arbitrary names had been as appropriate, the majority of them would not have been consigned to oblivion, as is the case at the present time. The river makes at this butte from all points of the compass, lapping its base at one place and then running eight miles away before it again returns on the far side. Ogilvie says that it is only half a mile across the neck of land at this point. The distance appears to be greater, and as the country is pretty much on edge just here, we did not try to engineer a cut off, and traveled for two days in sight of the butte.

The Great Oxbow, just above, involves another annoying series of detours. As the country bordering the river here is very low and level, it would seem easily possible to make an advantageous cut off through the woods, which would reduce the twelve miles circuit to a mile or two at the most.

Major Walsh, the Governor of the Provincial District of the Yukon, told us, at the Big Salmon, that he had such improvements in view, and as a matter of fact his Indian scouts, acting under his instructions, had already made several important cut offs above and below his headquarters.

J. B. Burnham.

A Maine Head.

Lowell, Mass.—*Editor Forest and Stream:* I have mailed you under separate cover a photograph of a mounted moose head, which you may consider of sufficient merit to warrant publication. While there is nothing remarkable about the head itself, unless the length of the bell might be considered so, yet it seems to me that the appearance of the whole, mounted as it is upon a magnificently carved solid mahogany base board, is particularly fine. The photograph is by Mr. C. F. Morse and the carving by Mr. F. A. Sturtevant, both hunting companions of mine.

The spread of antlers is 48in., with 20 points, every one perfect, and are unusually even and well balanced. The bell measured when green 24in. (on the back), and is now 22in. in length. The animal was shot on the headwaters of the East Branch Penobscot in 1898, in the vicinity of Curren & Howe's Trout Brook Farm, the region which Mr. Burnham wrote so entertainingly about a couple of years ago.

Bay State.

[The head is illustrated on the opposite page.]

No Equity About It.—"Fate doesn't order these things with any degree of equity," said the young man with the up-and-down collar.

"Why not?" said the girl.

"For instance," said the youth, "the oyster retires for four months, but ice cream has an open season all the year round."—Cleveland Plain Dealer.

The Mirrors of the Old Magnetawan

I HAVE long thought what a blessing it would be if the hosts of Pennsylvania and Ohio people, and others as well, could fully realize during the sweltering summer season how much they could add to their stock of health; how much they could add to their stock of delightful memories by a sojourn into the cool and refreshing climate of northern Ontario. Nearly every ordinary wage earner may do this, if economical. Twenty-five dollars will suffice for a two weeks' trip to the Muskoka country and insure the tourist good boarding, good bathing, boating and fishing, and an abundance of ozone-laden air so rich and bracing that, barring organic troubles, it would even bring one back from the jaws of death.

If the tourist will go as I have gone, far from the haunts of men to some sheltered nook on a Canadian lake—and these lakes are legion—carrying a modest and meager camper's outfit, there he may, like Abraham and Sara, dwell in tents and not be ashamed to have angels or even anglers visit him. He may do this at a cost so small that staying at home is pure prodigality. Fuel is free, game and fish are free and abundant, and I have never found so many luscious wild fruits and berries in any other region. I gathered last season, within easy reach of our camp, down the Severn River at the Ragged Rapids, abundance of red raspberries, blackberries, blueberries, wild strawberries, wild gooseberries, currants and service or June berries. The June berry was a theme of much discussion in the columns of FOREST AND STREAM during the early part of this year. On the hillsides of old Pennsylvania the tree often grows 30ft. high, but here it rarely attains 8ft. in height; but the berries if anything are superior. All these you may gather and relish them all the more keenly because you did gather them and know they are fresh and home grown. In fact, you may almost forage in the enemy's country, and at the end of your sojourn go home all sunbrowned and vigorous-looking on the outside, and so renovated and repaired on the inside that you forget that there was ever a half broken down man in the wide world. You will have gathered and stored enough vitality to last you until the warming sun again crosses the Tropic and warns you that the time of your migration again draws nigh; and you are disturbed and restless and your spirit longs for the land where cool, bracing breezes always blow and where valiant, lusty trout and bass are gamely vaulting for the early flies; where giant pike and mighty mascallonge bask by a fringe of wild rice, or northern rush.

On a certain morning in early July a party of happy-hearted campers drew away from the Pittsburg station and swept down the splendid valley of the Ohio River, passing so many ambitious towns and villages that are persistently pushing their borders toward Pittsburg that the Smoky City may soon have the modest village of Wheeling for a suburb. Our Lake Erie train soon draws us reluctant from the rock-scarred hills of the old Ohio, and we hasten northward over miles upon miles of the most splendid upland country on the continent. We are borne through the very heart of the grape growing district of New York, and when we remember how delicious are those selfsame grapes, we marvel that the orange, the olive and the pomegranate did not select this lovely land to perfect their rich fruits.

We hasten by Buffalo, on past the thunders of Niagara, waiting not to watch its wonders, for far to the Northland are visions of deep, shady pools, rushing, riotous rivers, and the recollections of their rush and roar leap over many leagues of glad green fields to tell us of the haunts and habits of lusty, hard-fighting bass, pickerel and mascallonge.

"And 'tis there that we are going with our rods and reels and traces,
To a silent, smoky Indian that we know.
To a couch of new-pulled hemlock, with the starlight in our faces,
For the Red Gods call us out and we must go."

I might add that our experience of last summer's outing hardly accords with those of the poet Kipling. We had entirely too much "starlight" in our faces, and just as much too little "new-pulled hemlock" in our couches—so much so that those old Laurentian rocks that form the framework of the region bred a supreme contempt from an undue familiarity with my dorsal vertebræ. By way of friendly advice to any one desiring to taste the rather hazy pleasures of a balsam bed, I would say: Be sure to prepare your bed carefully the very first day in camp, and have the work done in daylight. When you think you have gathered enough balsam boughs for your bed gather twice as much more. Lastly, cut the pine tufts from a goodly supply of pine branches, scatter these over your bed to the depth of 2in., and your sleep will be so restful that you will leap into the delights of the coming day as joyfully as into a paradise.

At 11 A. M. July 7 we reach the city of Toronto, which by interpretation means "Place of meeting," for it is here the Indians met and bartered with the pioneer traders. Twenty minutes later we boarded the Muskoka Express on the Grand Trunk Railroad, a magnificent train, equal to the very best we could find in the States. We are soon thundering northward at a splendid speed, passing through a region of fine farms, large orchards and extensive crops. The conductor screams "Allendale, fifteen minutes stop!" and we all rush out to catch a glimpse of the fair Kempenfeld Bay, which sweeps with a long, rgaceful curve around past Barrie, a mile or more away.

We rush by Rama, the Chippewa Indian reservation, seeing many "smoky" Indians lounging around the station anxious to go as guides down the lonely reaches of the Severn River.

We are now well into the Highlands of Muskoka, and the ozone-laden air leaks into the car windows, bearing a rich perfume that is distilled in the tops of the pines, hemlocks and balsams that cover this region for a thousand miles to the westward.

Of the many jaunts I took during a two months' vacation in Muskoka, the most unique and entertaining was a journey down the lonely windings of the Magnetawan River.

At Burk's Falls, 170 miles due north of Toronto on the line of the Grand Trunk Railway, we reach the eastern terminus of the navigable waters of this river. Here the waters from Doe Lake, Pickerel and Stony lakes come down over Burk's Falls like the "waters of Lodore," and form the water supply for the Magnetawan River. The water is of a dark brownish color, like stain of walnuts, due, perhaps, to the iron in solution having been acted upon by the tannic acid from pines and hemlocks.

BRED IN MAINE.

We stayed all night at the Daly House, near the Grand Trunk station, and our accommodations were the best I have found in northern Ontario.

At 7 A. M. we boarded the steamer Wanita for our trip down the river, and never in my life have I seen anything so wild and grand as the weird scenery of the lower Magnetawan.

Magnetawan in the Huron tongue means "wide channel," but surely it is a misnomer, for were the channel as wide as the river it would still be narrow. Meander would better indicate the character of the river, for it winds out and in, forth and back. Rarely can you see 300yds down until your view is cut off by a rounding bend. Here is a region almost free from the despoiling hand of man. The forest primeval stands on either bank of a very narrow river. The water has so undermined the banks that the trees lean toward the middle of the river until from opposite banks their tops almost touch. This is not all. There is such a perfect image down in the shadowland of these ebony waters that stately pines and balsams show almost as clear in the shadow as in the substance. Beautifully festooned above with the tapering tops of pine, hemlock and balsam, below the shadows festoon again in even more subdued and dainty colors, so that our good steamer Wanita seems to sail down an avenue in fairyland that has been canopied above and carpeted beneath with a tapestry of delicious green.

From out the tangled wildwood on either side dart scarlet tanagers, Baltimore orioles, screaming shrike, bluejays and fleet-winged hawks, and all may be seen as directly down in the water as up in the air. Wood and black ducks are continually rising and dropping into the marshes near the river.

Nailed to a tree in this primeval forest, and with not another sign of human habitation near, I spied a double flaming sign that could be read from both up and down the river:

CHARLES A. GEISLER,
CARPET AND WOOL WEAVER.

There seemed so very few people to use carpets, and fewer yet using them, that the sign seemed superfluous. A rosy-whiskered, wrinkled old Irishman by the name of Mitchell, game warden for the district, said to Mr. Wade, an Orillia banker: "Thon sign's no warse ner Geisler. The auld Dutch goose kapes botherin 'the loife clane out o' me about a bit uf a bull moose that's been a-comin in his garden and atin the praties and tomaties. Just luck at the chake of him, sindin' me a letter loike this." From a mine of smoking tobacco, buckwheat, and sunflower seeds located in his capacious inner coat pocket, he fished out a grimy letter, which read:

GEISLER'S BEND, 12 July, 1899.—Thier herr Gove-mint: You nit keep your Moose aus mein garten I sure shootin him. Your citizens, C. A. GEISLER.

Moose have been protected by law for nearly ten years in Ontario and are now fairly abundant in this district. This is surely a land of promise for moose, deer, bear, lynx, and an occasional timber or gray wolf. Splendid cover, sparse population and an efficient and well enforced code of game laws have done much to check the wanton destruction of the native wild animals.

Some twenty miles from Burk's Falls the Magnetawan widens to the distance of two miles or more, and here answers to the call of Cecebe Lake, which means "much duck," and the many fleet feathered messengers that keep beating up and down the lake attest that this lake is well named in the Huron tongue "Cecebe." Heretofore much of the country traversed by the Magnetawan has been low and swampy, but here the islands and shore line stand high up out of the water. Numerous islands well wooded with pine, poplar, cedar and hemlock enrich the scenery. As we rounded a rocky point a lone but not lonely fisherman exultingly held up a string of twenty-five bass. I have never been able to see how any intelligent angler can be so foolish and barbarous as to kill twenty-five fish. Twenty of those fish might and ought to have been returned to the water. How often, oh, how often in the days gone by have I seen splendid bass rotting in heaps—anglers unable to use their catch and too foolish and cruel to return the fish to the water. Again and again I have seen campers trying to give fish away to the farmers. Let farmers catch their own fish and return all you can't use to the water, and fishing here at least would be good for generations to come.

In Cecebe Lake we found bass, pickerel and perch fairly abundant enough to satisfy the wants of any intelligent angler.

What is good fishing? Fishing is best when there are just fish enough to keep the angler out in the open air all day in quest of fish. Enough to add a zest and pleasure to the exercise of rowing boats or walking here and there for his fish. Enough fish to keep him interested and not enough to satisfy his desire to feel those delightful sensations that come when the reel screams and the line pays out. This happy mean between the two extremes is the *summum bonum* of good fishing.

At the village of Magnetawan there is a waterfall that is passed by means of a system of locks. Magnetawan is a mere village of perhaps 100 houses. A mile below Magnetawan we swing into view of a splendid, newly built brick house. The steamer Wanita wabbles up to the landing to unload two or three thousand dollars' worth of fine furniture. All this magnificence in this almost desolate country leads one to suspect some sudden stroke of fortune. My wife said: "I suppose he is just home from the Klondike. You know the Klondike is not far from here." Just then a tall, fair, handsome young man of perhaps twenty-three sauntered down to the landing, threw off his belt containing a large pistol, lifted his white military hat to some lady acquaintance and asked the captain if all the furniture had come.

"You seem to have struck it rich," I said by way of introduction, to which he only smiled. "Been to Klondike?" "Yep." "How long ago?" "Oh, I left Magnetawan away back in spring of '94. That's pretty early for Klondike, isn't it? Well, I first joined the mounted police at Winnipeg and was sent into that country." "How did you happen on such luck?" "Oh, I don't know; accidental, I guess. I and Dack Henderson were riding down a draw when my saddle girth broke. Fixing it my horse pawed up some stuff that looked suspicious, and in two hours I gathered up these nuggets." Here he displayed a crude looking but valuable watch chain made of fifteen gold nuggets. "Dack got more'n me."

When the Wanita pulled away from the landing Capt. McArthur, of the steamer, said to me: "See you talkin' to young Elthon Jenkins. He come back here with $200,000, hunted up his old sweetheart, took her to Winnipeg, dressed her like a queen and married her. Lord! but she's lucky."

A dozen miles below Magnetawan we entered Ahmic Lake. This resembles the Muskoka Lakes. Bold and rocky and abundantly supplied with islands—an ideal lake for the canoeist and camper.

The hordes of tourists now overrun the Muskoka Lakes and the advance guard is here of a horde that will overrun this region in days not far distant, for there be many that already hunger and thirst after new lands to conquer; and here are all the delights that gladden the heart of the hunter, the angler and canoeist. There are bass, pickerel, perch and trout in the waters, and in the woods deer, moose, bear, lynx, wolves, beaver, otter; and to welcome the tourist into this promised land are the most genial and kindly people I have met in Canada.

The Kentucky Home Camping Club owns a splendid club house here and enrolls some of the brightest men from the Blue Grass State, and I was more than pleased to learn that this region had been blessed by the presence of such genial and delightful tourists as the Hon. William H. Graham and Gov. William A. Stone, two of the most brilliant of the many eminent Congressmen that have gone out from the Pittsburg district; Chas. W. Gering, of Allegheny, and many others.

Friday morning I jointed my new Bristol steel rod and rowed down to a bay below the Rocky Reef Camp. I baited with large angle worms and quietly trolled up and down from the reef to some weeds in the bay, using 40 or 50ft. of line. I have found a long line an effective way of taking bass and pickerel, especially the latter. Pickerel and bass are both timid, and the further you get your oars from your bait the less chance do you run of frightening your fish. In slow trolling the oars should be used carefully and quietly, so as not to jar the water. While fish are almost insensible to sound, they are keenly alive to the effects of the slightest jars. As a rule, fish are more ready to take a moving bait; especially is this true if the bait be floating down with the current. Fish lie with their heads up stream, and readily see a bait moving toward them. The bait comes to them in the same way as their usual food and is apt to be taken. In a couple of hours I caught thirteen fine bass and returned that same number to the water.

Be it known there is no bait equal to worms for these Northern bass. I do not mean the small earth worm, but the large dew worms that crawl out on the lawns after a heavy rain at night. You may then gather them by torchlight by the hundred. The mating season for these worms is in May and June. Then they crawl out and lie in pairs in the garden. This worm is fully 12in. long and as thick as a lead pencil, and I would strongly urge any one going into this region to carry with him a solid gallon of worms for every fortnight he fishes. The worms may be carried in any ordinary chip basket lined with mosquito netting to prevent their crawling away. Baskets are best, since the air percolates freely through the moss in which you must not fail to pack them. Occasionally dampen your moss and your worms will toughen and grow better. By occasionally changing the moss and removing dead worms, you may keep them healthy for at least six weeks.

I longed for some swift current where I might fish for pickerel, but of course didn't find any in Ahmic Lake. A Baltimore doctor showed me a dozen fine pickerel that were unusually dark in color.

When I was on Ahmic Lake there was much excitement about deposits of copper, zinc, lead and nickel that were being found by prospectors. Here the ancient Laurentian rocks, the oldest known formation—rocks that have been scarred and scraped by the icy ploughshare of the glacial period—begin to give way to the Huronian, which often bear rich deposits of mineral. I saw some splendid specimens of nickel ore, and the day may come when this will be a famous mining district.

In the afternoon we hailed the steamer Wanita and wound our picturesque way up the tortuous course of the Magnetawan, filled with sadness on leaving, but determined if possible to return next year for a whole season's sojourn in this pleasant land. JAMES M. NORRIS.

ALLEGHENY, Pa.

On the Chagres River.

Editor Forest and Stream:

Once upon a time—I can't say when, but a long distance from the dim future—I visited the fever-laden banks of the Chagres River, on the Isthmus of Panama and domiciled with a family from the far-off State of Maine. The male portion of the family was a "forty-niner," but digging gold was not his forte, so he had headed for home, but got only as far as Panama, when he found his pockets empty and could go no further. A position as section boss on the railroad was offered him, and he thanked his lucky stars and took the job, intending to leave as soon as his pockets were replenished; but he became attached to the place and sent home for a wife, who went down and ministered unto him, and they appeared to be happy, though they were both held fast in the clutches of the curse of that fascinating region from spring till nearly fall, and from fall till nearly spring. My visit happened in the season when the Chagres fever is on its worst rampage, and nearly every one I met appeared to be cased in white leather instead of human skin, but I, being one of the immunes, came off scot free. I felt that it was a dangerous game to play, but it was so beautiful and the birds and flowers were so interesting, that I was blinded to the risk. Then, too, I was domiciled to my liking, for being in the employ of the railroad my host was supplied from the North with everything he wanted for the table; the female part of the family was a refined and highly educated woman with catering powers that would satisfy an epicure; and as I was a guest of the company, I could enjoy their good things as long as I wished without money and without price.

Added to all this, the engineers had orders to let me off wherever I wished to stop on my shooting trips and to stop for me at the waving of my handkerchief at any time and place. So that everything, except the threatening fever, combined to make a prolonged stay desirable.

I was warned that danger lurked in the dampness of the early morning, and was cautioned against going out till the sun had dissipated the fog and dew; but I heeded not the wise advice. When the men were ready to start with their hand car for their section trip the fog was so dense that the car could hardly push through it—a London fog would blush to come in competition with it. I would seat myself comfortably on a cushion, and soon the hot sun would begin to clear away the fog, and as birds would show themselves I would shoot them and the men would pick them up. Some of them were a species of partridge and were feeding on berries on the small trees along the road. It was the most luxurious and aristocratic shooting that I ever indulged in, but it was a dangerous luxury if health was at all considered.

Wild animals prowl around the woods, but nothing in that line that a man need be afraid of. There was a strip of cleared land along the railroad above our house, and one day I was anxiously trying to get a shot at a new and desirable bird, when a tiger (as they call them) sprang out of the bushes on the other side and got a goat for a dinner from a herd that were feeding close to the bushes. I ran over as fast as possible and could hear sounds that were evidently not coming from a healthy goat but a few feet from me; but as I had only birdshot in my gun I did not care to interfere with his repast. The living members of the flock of goats ran as if a pack of wolves were at their heels as far as I could see them.

Another time I was sketching in the woods on the sloping side of a hill that was almost clear of underbrush when I heard a distant growl. In a few minutes it grew louder and continued to grow louder until it seemed to come from a dense jungle just below me; but as their "tigers" are never anxious to make a man's acquaintance, I sat still and waited developments. In a few minutes he appeared to be going off the other way.

While at this place I met with an incident that made me wish old bloody Spain at the bottom of the deep blue sea. Some natives came one day and lassoed a cow and then lashed her head up against a tall palm tree before our house and left her there six or seven days in a broiling sun without a mouthful to eat or a drop of water, and not one of us dared to interiere under penalty of being butchered. It is to improve the meat! and is a custom handed down from the bloodthirsty, cruel Spaniard, and will continue to be handed down through generations yet to come. My hostess said that a cow with a little calf was tied up near the house one day, and when the owner came the cow, being naturally solicitous about the calf, made some demonstration that he did not like, when he got a heavy club and beat her nearly to death; but the woman knew the consequences of any attempt to interfere with the brute.

Every South American republic is crusted over with just such Spanish cruelty and ignorance, no advance having been made since Spain owned them; and yet there are thoughtless beings who are heaping anathemas on our country for liberating a few of their miserable victims. What would be thought of an attempt to establish an S. P. C. A. in a South American town? DIDYMUS.

ST. AUGUSTINE, Fla., Sept. 12.

In the Pawnee Country.

PAWNEE, Oklahoma Territory, June 15, 1898.—*Editor Forest and Stream:* In my letter to you last autumn from the Omaha Indian Agency in Nebraska, I spoke about our trip from the South across the country which our people—the Pawnees—once owned, and over which they roamed for generations.

It was one of our desires to visit once more the country where we were born and raised. I spoke to you in my other letter of visiting the place where I was born on the south side of the Platte River, opposite Fremont, Neb., and of visiting Pah-hoc-co (bluff in the water), that mysterious place where the spiritual animals are supposed to live—where the Pawnee people used to worship the Great Spirit through these animals. To this day the Pawnees talk about this place and hold it in great reverence, because they say it was the head lodge over all other lodges of spiritual animals.

My mother used to tell how after the Pawnees had made a treaty with the Government and had accepted for the first time a reservation upon the Loup River, they moved from lower Nebraska on to their new reservation. I was then about four years old, therefore do not remember the removal. They now built three villages—dirt lodges—between Loup River and Beaver Creek, one mile and a half apart. The lower one was the biggest, the upper one the smallest, consisting of only twelve lodges on a high bluff overlooking both valleys and the lower villages. Big Spotted Horse, my uncle, was the chief of this small band. It was the second year, I think, after the Pawnees moved here that their old enemies, the Sioux, came down in great numbers and attacked this small village on the bluffs. I can just remember it as if it were a dream. It is the first thing in my life that I can recollect—perhaps it was because I was scared. Mother used to tell me I was then about six or seven years old. The enemy attacked the village on foot and Spotted Horse rallied his few warriors to fight and hold it. Among the warriors was my father. The women cheered the men on to battle with brave words and war songs; but as the sound of the war whoops, the war whistles and the reports of the guns increased and the women saw one or two Pawnee warriors killed, they thought the battle was going against them, and, determining to save the children, took to flight and ran out of the village and down the bluff into the bottom toward the first main village. Mother had my sister, about three years old, on her back and me by the hand on foot running by her side. She said that soon I commenced to tire and that I told her to throw away sister and put me on her back. Years afterward she used to speak about this jokingly, and would say that if she had to throw away either child it would have been me, because I was a boy and would grow up to fight the battles for our tribe against our enemies and perhaps be killed anyway.

The Sioux could have overpowered or passed on either side of the few Pawnee warriors at the village and have overtaken the women and children and massacred them; but because they saw the Pawnee warriors coming in large numbers from the lower villages, they also took an opposite direction from us and began to retreat toward a cañon or ravine, where they had left their ponies. The Pawnees fallowed them up and succeeded in killing three Sioux, the Pawnees having lost four warriors, being all from Spotted Horses' band; but the little village was saved. Spotted Horse then decided to move to the first main village—that of the Skidi band—of which he finally became the head chief.

Spotted Horse was known both to Indians and whites as one of the greatest chiefs of the Pawnees. Among the Indians, before he became the head chief of one band, he was one of their successful warriors, going with his warriors into an enemy's country and defeating them and bringing home as trophies scalps and ponies, and so drying up the tears of those who had lost their relatives or friends by these very enemies, for this was their custom. Among the white people he was known as a great peace chief. He carried to his grave scars received from his own people in defense of the white men who were crossing the Pawnee country, and he induced his people to accept the ways of civilization. This chief was killed some time about 1864 by his old enemies, the Sioux or Cheyennes, on the Platte River above old Fort Kearney, Neb. He and two of his men were scouting for buffalo for his people, and while far from camp were attacked by their enemies. The chief and his two men, now fighting on foot, succeeded in reaching the river. While they were crossing on the ice over to a small wooded island their enemies, not wishing to follow them into the timber, fired their guns at them from the shore and the chief received his mortal wound, dying in camp a day or two afterward. The military authorities, upon hearing this, took his body and buried it at the fort with military honors. Thus ended the life of a great man.

In my visit of last July (1898) at the last home of the Pawnees on the Loup River, in Nebraska, I stopped at many historical places, remembered in my younger days. Where the two main villages stood not a trace remains except five round mounds where once the lodges stood twenty-five years ago. On a little knoll was one of the burying grounds. Here are buried my only two sisters, who died over thirty years ago. All about are corn fields, and there where the Indians buried their dead it is the same—corn and wheat fields. Over to the west on the bluffs, where Spotted Horse's village stood, is a pasture. Here the mounds of the lodges show plainly. On this bluff, as well as on those on the north side of Beaver Creek, north of where the Agency stood, the Indians buried their prominent men. What few graves I saw had been dug up and robbed, I think, of the few trinkets if any the dead had on.

The old people of the tribe say that their forefathers told them that the Skidi band used to live here once on a time, now over 400 years ago. Their words are verified by the round mounds to be seen all along these very bluffs, where the lodges once stood. There was a large round mound in the bottom just under the bluff, where they say the Skidi band used to make their medicine and once in a while sacrifice a captured enemy to Tirawa (Great Spirit) asking for his blessings. This mound has been ploughed up. As one stands here on this bluff overlooking the surrounding country, he sees to the north of Beaver Creek, where the Agency stood, Genoa, a town of about 1,500 or 1,800 inhabitants. Yonder stands the Genoa Industrial Indian School for the further advancement of Indian civilization; part of the old building is the very one where with other Pawnee children I first learned my A B Cs. There up the valley of the Beaver and here on the Loup the iron horse goes puffing along; everywhere are farm houses, corn and wheat fields, the work of civilization; but in the midst of all these beautiful surroundings my thoughts go back to the time when our people lived here last, when they were many and happy. I remember how they were removed to the far South, where under the changed condition of climate and from wild life into civilization, they have decreased to a few and a sad people. In their new homes the Government forced allotments on the Pawness, and by flattery and threats forced them to sell their last surplus lands, thus cutting off the unborn from their land and creating new conditions and repsonsibilities before they were prepared to accept them. Alas, what a sad history for the Pawnee, and indeed the Indian, since he came in contact with civilization. It is not denied that civilization accomplishes its great results; but what a cost it has been to the Indian, especially the Pawnee. It is a fact, and known as history, that the Pawnees were once a proud and powerful people, owning and roaming over a wide country. They say that before the white men came they knew no smallpox, cholera and other loathesome diseases—they knew no whisky. These and other changed conditions which came with the white men have caused more deaths and a greater decrease in the tribe than all their wars in former times. Thus, circumstances, destiny, or whatever it is, have placed the Indian where he now is.

After seeing our last homes, where we were born and raised, and visiting some kind friends we have in that country, we bade them and the country a last good-by.

HARRY COONS.

Why Don't You Go?

ALL the afternoon I have been sitting on the broad porch of a very civilized hotel, wishing I was back again in the country of the salmon and the moose, where one can live the life of a man and be deeply thankful for every breath he takes. Now I have been driven indoors by the chatter of a returned volunteer officer who is thrilling a group of girls with the story of his suffering in camp somewhere, being compelled to eat pork and beans and hardtack, and sleep in a tent, without even a cot under him. I have a great desire to kick this young man. I do not regard tent life as a hardship. Perhaps I should not be angry, because my camping is never enforced, and I can select my own tenting ground.

To my mind there is only one real camping country, and that is the great wilderness of the North. Wherever I go I carry in my valise a big map of Canada, and when my mind is disturbed I spread out the map of that earthly paradise and my heart flies away, like a wild duck in the spring, leaving every trouble behind. Land of the sunshine and the snow, how big and splendid and sweet you are, my sweetheart! Surely the God of all the earth never made any other country like you. After one has seen Canada, it's like having kissed the prettiest girl you ever saw. She spoils everybody else for you.

Devote ten years to the wilderness from Labrador to Lake Superior, and you will never care much for any other place on earth. You will only wish you had a thousand years to live, so you could really see the rest of that country. Nobody can tell you about it. You must see it for yourself. You must wake up in the tent and hear the salmon jump in the Mingan. You must drift down the dead water in the pitchy night, in the heart of the New Brunswick woods, and hear the bull moose roar and grunt, and rush at each other like devils, till all that

eeps the hair from bristling along your back is the ab-nce of the hair.

Go to lovely Lake St. John if you will, where you may tch the ouananiche unawares in front of the hotel. That too easy for me. I would rather try for him in Mis-ssini.

Watch the caribou as like ghosts they file up the rocky sses of the Bald Mountains. Try to determine by ex-rience the relative merits of a Miramichi pirogue and Ottawa birch-bark, and see, finally, that each is fitted its environment, the evolution of countless generations experience.

Seduce the guileless trout which still swim unharmed the lakes back of Georgian Bay and Superior. Swing ur legs to the "clitter-clatter" of snow shoes on the assy crust.

Encamp in a foot of snow, in an open tent, before a fire green birch logs, and learn what it is to be really warm d comfortable.

These are some of the things you can do, and thereby arn how you have wasted your previous life.

Some years ago the eminent card professor who settles sputes about casino and pinochle for the New York Sun dly queried, "Why will men waste their time over all ese foolish games when they might play poker?"

When I see men with time and money, who fool around ewport and Long Branch, and mountain hotels, who ear red coats and do various idle things, I wonder what ey are thinking of. They might be camping out with e best guide and cook in New Brunswick, with a mink atching to steal the grilse out of the spring hole close by.

When I come to my last camp-fire and no more behold e rising sun, I hope I shall go where they will have to rry me out in the bottom of a canoe. And whether ath catches me in my bed or in a foaming rapid, or no atter where, my last regret will not be that I leave wife friends, because these, please God, I shall see again. It ill be that never more, so far as I have any means of owing, shall my eyes behold the sweep of the dark een Northern hills or my sleep be sweetened by the rush the nearby rapids, or my senses lulled by the incense of e balsam and the spruce.

You men who never camped in Canada in the fall, I ll you, go! Don't waste any time practicing law, or aking money, or fooling with politics. You can get ck in time to vote. Go this week! Almost anywhere the Dominion will do. Some day you will get an ink-g of what you have missed. Suppose, when you die, e Lord asks you, "My child, what do you think of the aurentian lakes?" You will be compelled to reply, ashed, "Well, Lord, the fact is, I was so busy doing nith out of a little money I never heard of those lakes!"

FREDERIC IRLAND.

Natural History.

New York Zoological Park.

A visit to the park of the Zoological Society in New ork shows that within the last three months marked ogress has been made in the work being done there, and ves every reason to believe that before cold weather sets considerable collections will be exposed to the free in-ection of the people of New York. Even during the st summer, while the park was torn up and when there as nothing to be seen there but grass and trees and en ditches and buildings in process of erection, the rk was a favorite resort, as many as 10,000 people hav-g visited it on a Sunday. We may imagine that as the llections accumulate and are put on exhibition, and as e fact of their existence becomes better known, the park ill be one of the most attractive resorts in New York, t only to those who are interested in zoology, but also that great mass of the people whose pleasures are few ecause most pleasures cost money, and with them oney is hardly obtained and must be carefully expended.

The Zoological Society is already making the begin-ings of its collections, and has on hand something like o specimens of animals, large and small, with more ming. Of those at the park, most are American species, d we understand that it is the purpose of the society r the present to devote itself especially to gathering to-ether as complete a collection of American forms of life possible.

In the elk pasture are three superb specimens received om the Brooklyn Prospect Park. They were brought ence in two huge vans, the cow and calf in one, and the ll in the other. The wagons were driven into the pas-re, and first the cow and calf walked timidly down the ank to reach the ground, and, with head high and ears rown forward, moved off over the grass with the smooth ot that the hunter knows so well. The bull came next, acking out of the van clumsily and finally stumbling off e plank. After he had trotted a short distance he opped and bristled up the hair on his back while he oked about in search of his companions, and then, see-g them, his mind became more eaasy and he joined them d the three fed on quietly over the hill.

In the inclosure known as the moose range is a calf ribou, a gentle little animal, which should have a mate. one of the bear dens are four sea lions from Santa Bar-ra, Cal. They are the ordinary barking sea lion of the alifornia coast.

In the temporary inclosure behind some shops, where ost of the specimens are housed, and which is not yet en to the public, are two black bears, one of them from lorida, of immense size. Here also are two wolves, sev-al wildcats, a South American anteater and a great umber of smaller mammals, of Florida birds, of hawks nd owls, and of reptiles.

Besides the animals already on hand, a number of ante-pe are coming from the plains, several bears have been cured in the Rocky Mountain region, within two weeks me buffalo are expected to arrive from Kansas, and two f the largest polar bears known in captivity are on their ay from Europe.

The quarters for all these animals are in a forward state f preparation; the reptile house is completed, and one of s wings is now being fitted up with gorgeous tropical lants, among which the animals to be confined will have their homes. Each case for snake or lizard will contain rocks, earth, or sand like that of the animal's natural home, together with the plants which would grow there. Seen through the broad sheet of clear glass, the effect on the observer will be very much that of seeing the creature in nature.

The bird house is completed, but not yet furnished with cages. The huge flying cage, so large that it will contain several great trees, is being erected. The quarters for the wild fowl are completed. The beaver pond, otter pools, prairie dog inclosure, wolf dens, bear dens and homes for the small burrowing rodents are all either completed or lack only the fences which are to surround them. Besides this, all the larger inclosures for deer of various species, antelope and buffalo are erected and some of the shelter houses built. The foundations are laid for many of the roads. Through the whole a water system has been laid and tested. On the whole, there is every prospect that before the ground freezes the Zoological Society's park and its exhibition will be accomplished facts.

It is well worth the while of any one interested in these matters to make the trip to the park to see for himself what is going on. As has been said, it is already a favorite resort, and likely to become more so. It may be reached either by the Third avenue elevated and the trolley line, or by the Harlem Railroad to Fordham Station, whence twelve minutes' walk or a drive of half that time will bring one to the ground.

Big Game in Mexico.

Aztec has had nothing to say on this subject for some time past, mainly because he has ceased to be Aztec and has lapsed to his oiginal condition of Gringo. But my good friend Mr. E. W. Nelson, of the U. S. Biological Survey, has just bobbed up on the northern edge of the Sierra Madre de Occidente, and sends me the following breezy letter. To a man sweltering on the plains of Texas, and who has not smelled the pine woods for more than three years, such a letter and the editorial on "The Challenge" are tantalizingly refreshing. In the trip outlined by Mr. Nelson for the next two months he should certainly find the game he mentions. The location of bighorn sheep is particularly desirable, as there is little doubt that at present Mexico offers the best place for securing a head of this rapidly disappearing animal. I hope he will return another year to work the mountains of northern Coahuila; also that I may join him there. He writes from Nueva Casas Grandes, under date of Sept. 3:

AZTEC.

My Dear Aztec: Ya estamos! We came out of the Sierra Madre a few days ago after a pilgrimage of two months. Got plenty of deer, with a sprinkling of bears, wolves, coyotes and turkey. I have nine bear skins, both black and silvertip, four gray wolves and plenty of smaller stuff. I had some good times with the bears, of which I killed three still hunting and caught three in traps; so you see I had my share of the fun. Had two exciting chases on horseback after other bears that got away. In one case I tried to head off a big silvertip from a deep cañon, but he was too fast for me and passed about 20yds. in front of my horse's nose. I swung in behind him, and when he went over the rim I was only about 10yds in his rear. I sprang off my horse, but the excited beast wheeled in such a way that my foot caught in the stirrup. After a struggle I managed to get loose and rushed to the edge of the gulch, only to see my bear about 100yds away already and going still further at a rate that seemed to defy my 30-30 bullets. At least, he showed no sign that any of them overtook him, and quickly vanished from my agonized view. ?—?—?—? !—!—!—!—! I will not repeat my remarks! But it was great fun while the race lasted. As he raced by in front of me his claws (these silvertips have claws from 3 to 4in. long) showed up to great advantage, and as I turned in behind him the long hair on his back flapped up and down like a rug that was being shaken.

Not far from the same place I trapped the biggest bear of the season—a silvertip, weighing about 400lbs., though in his summer flesh. When fat, in the fall, he would weigh from 500 to 600lbs. This was a tricky fellow. As soon as caught he went about 30yds (it was in an open flat in the pine woods), lay down and deliberately gnawed in half the heavy sapling I had thrust through the ring of the chain as a drag. The interesting point was that he ate in half this 4in. pine pole just at the ring, which of course relieved him of both ends. Then Mr. Silvertip started off through the forest with only the weight of the trap on his foot. As fate would have it, however, he walked in the wrong direction for his welfare, for as I rode up to the summit of a little slope that morning, on my way to the trap, we met face to face. Tableau! He evidently recognized me as the owner of the rtap he was stealing, for he at once turned and galloped away. I put spurs to my horse, and in about 250 or 300yds. rounded him away from a deep cañon, after which I relieved him of further earthly trouble by administering a couple of Dr. Winchester's justly celebrated soft-nosed blue pills.

Two large bears escaped, carrying traps with them, which were never recovered, as the heavy daily rains destroyed all trails a few hours after they were made. I trailed one with a trap attached about two miles and a half, and when I was sure he was quite near a drenching shower came on that obliterated his trail. The deer hunting was fine, and we could have become typical game hogs if inclined that way. We leave to-morrow for a long trip across the plains of northern and northeastern Chihuahua in search of antelope on the plains, blacktail deer on the foothills and mountain sheep in the higher desert ranges. We expect to come out at Sierra Mojada, in western Coahuila, where we shall wind up our season's work and dispose of our outfit. This will cut us off from the pleasure of your company on a hunt in northern Coahuila, a finale I had counted on earlier in the season. We have been unable to cover as much territory as I hoped at the beginning, but we are getting some good things in the way of large game, of which series were much needed. Expect to wind up in November.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

A One-Winged Plover.

Manitoba, Sept. 8.—*Editor Forest and Stream:* While locating a line for the Northern Pacific Railway eleven miles west of Portage la Prairie, our party found a three-quarter-grown upland plover with only one wing. The bird was examined by six men, and none could discover any evdence that it had ever had more than one. At the shoulder where the wing should have been was a slight lump and a few feathers about 2in. in length, but no sign of a wound or scar. The bird was in splendid condition and showed no alarm at being handled. When released, it walked leisurely away.

EDWARD F. BALL.

Game Bag and Gun.

The Buck I Shot.

This is a story of the mountains where the deer live and where I have killed my first buck—the theory that a woman cannot shoot a gun, silently stalk a deer or leave her cozy nest before dawn, to the contrary notwithstanding.

With sympathizing pity for those who could not, and scornful pity for those who would not, leave the unprofitable summer city streets, I took the "ram-you jam-you" narrow-gauge train from San Francisco to Ukiah. Thence we drove a day and a half up and up and into the mountains of northern Mendocino county, till we reached the hospitable ranch house of Jim White. His latch string hangs out for hunters of deer in summer, and of bear and mountain lions in winter—the last spot holding civilization's comforts before you reach the upper heights of the Coast Range.

A hunter himself, Jim was more than willing to undertake the placing of our camp on the summit of Bald Mountain, about fifteen miles as the crow flies and at least thirty as a horse walks, above his ranch.

I did not say much about my determination to kill a deer, for the mountaineers have quite St. Paul's idea that a woman's proper place is at home, and this is the country of the mountaineers, whose wives are held of small account unless they can tell of a record of ten or twenty years without going out of sight of their homes.

A mighty hunter and trapper, one Sure Shot O'Leary, was engaged to provide two pack mules and himself as guide. This Sure Shot was a wonder in his own way—not always our way. He quite refused all pecuniary reward; he was insulted that one could think his time, his services, his property, himself, were not waiting hospitably for any guest of the mountains. A judiciously, quietly given present of two yellow eagles did not wound his dignity nor define his services.

He brought his impedimenta and proudly showed his outfit, including a collapsible camp oven of his own invention and fastened to his pack saddles by diamond hitches. It looked to me like a brace of cowskin bags hitched on a small sawbuck converted into a saddle, and having a rope snarled around it. As he expected admiration, and was the only obtainable mule owning guide, I could not but exclaim upon the wonder of that diamond hitch.

A red-eyed, pinky white, crossbred bull terrier was with Sure Shot.

"What is his name?" I asked in my most conciliatory manner.

"Wall, marm, I call him Peter; sorter arter the Apostle, 'cause he's a good un in water and on land. And," he continued, looking affectionately down at the beast between his feet, "I've traded my watch for him that Bill Jacobs gave me for trapping 183 coyotes in three months. It was a good watch, but what do I want with a watch? I know when it's daylight, and I know when it's dark, and I know when I'm hungry. But that dorg there—wall, wait till I git him trained and he'll beat any dorg in Cal. 'dennin'' coyotes. And deer—wall, you'll see. There won't no deer git away from him, I'll warrant ye that."

It was a long rough trail to our camping place on the mountain and most of the way was too steep for riding, so I led my horse, who would hang the rear half of himself over the edge of the steepest cliffs. Mountain-bred horses are a trial for the first few days till you are sure they are only teasing and have too much regard for their own necks to tumble them down among the rocks 50ft. below the hand-wide path. There was not a house or fence or human being or sign that man had ever been in those resting primitive hills. Tracks of bear and wildcat, coyotes, foxes and coons, and countless traces of deer we saw.

Just before nightfall at the bottom of a cool deep cañon I thought I saw a rabbit feeding, but they told me it was a doe. I have not yet made up my mind that it was not a rabbit.

In tangled manzanita thickets the hen of the mountain quail fussed and called to her half-fledged brood tempting Providence with her noisy scolding. Doves and grouse and squirrels invited shots, but the law protected the grouse, and we did not want the others badly enough to shoot and scare the deer.

It was quite dark when we sat down by our crackling camp-fire to our beans and bread and butter and coffee. I was too tired to stay long away from my bed of sweet-smelling spruce brouse in the tent which had been pitched for Minnie and me.

"If you git scart in the night, you girls jist screech. I don't sleep much when there's any responsibility to look after," Sure Shot said.

It was lonesome, with the silence sounds of the mountains all about.

The last I heard was the voice of Sure Shot out by the camp-fire, where our men were smoking a last pipe.

"You ought to have been here thirty years ago, the first trip I ever made to this here mountain. Do you see that gulch over there—that one that looks all a shadow behind that whitish cliff? Wall, I was all tuckered out and hungry enough to eat raw rattlesnakes, and my moccasins were clare worn through from walking. I wanted to git up here and camp where I could keep my eye on Injuns. I wa'n't afraid of the cussedest Injun

living if I seed him fust. Wall, jest as I came up that gulch, jest a mile to the right in the open, I see twelve of the biggest bucks I ever seen in this State. They was bunched, and I blazed away, and thought I would git one—maybe two—of them, and I guess I fired ten times. When the smoke cleared up I couldn't see no deer moving, so I went over, and may I be tarnally horn-swaggled to glory if I hadn't plugged the whole of 'em—twelve deer, sir! They wa'n't all dead, but I finished 'em with my knife. One of 'em put up some fight and I clean forgot all about the Injuns. They was a dirty black lot in them days, though they do seem so tame now. Wall, sir, I sensed a something behind me—."

But I went to sleep somewhere about here in the tale, so I missed the best of it. However, as Sure Shot is still alive to tell about it I venture to opine that he killed the entire band. Between 8 and 9 o'clock next morning we were eating breakfast, when the hunters returned laden only with hunger and directions to Minnie and me as to the surest way to bring down four-point bucks.

Toward noon we two went to "stake out" our hunting ground. Neither of us said much in public about the four-pointer we were determined to have, but we were chatting about it and making ourselves happy in a raspberry patch beside a brook. I heard a crackling in the bushes and then a splash in the water about 30yds. away, and a great tawny buck was standing in the brook, with his head up scenting the air. Beyond him a yearling and two does were drinking. A slight breeze was blowing from them toward us, and we were quite concealed by the berry bushes, but the beautiful animal seemed to know instinctively that some intruder was near.

He need have had no fear, for I stood petrified, and my heart was in my throat. We must have made some sound, for they bounded away up the hill and were lost in the heavy woods. I turned to Minnie; she was as white as her collar and said I had even less color. Then we sat down and had a good laugh. We did not tell what we had seen when we returned to camp, but the lust of the chase grew in us every hour. We merely said we had chosen that side of the mountain for our morning's hunt.

"All right, you shall have that whole mountain for your own. Don't tire yourselves too much though, and I would not get up till it is quite light if I were you. There are plenty of berries up that way, but don't get frightened at the deer, and don't lose yourselves."

It was Minnie's brother. He had been hunting before. The nights are very cold upon Bald Mountain.

Very early next morning when Minnie whispered to me that she believed it was time to get up nothing but those deer we had actually seen could have moved me. It was quite dark, but along the line of the east was a promise that it would be light some time.

The men were still sleeping, so we had the first chance at the cold coffee before we started over the hill, which had been so generously given to us.

I carried the rifle and Minnie a pair of field glasses to distinguish between rabbits and doe when they were feeding in cañons.

Something was moving on the next ridge, but after straining our ears and eyes we found it was only Sure Shot's wandering buckskin mule trying to keep up his meek spirits on the blue bunch grass, with one flopping ear forward and one aft listening for Injuns of Sure Shot's tales.

Our berry patch was about a mile from camp, over the ridge of Bald Mountain, and half-way down into the cañon. The heavy silence and the clammy wind of early dawn made us keep close together. The snapping of dead leaves and twigs under our feet seemed loud enough to frighten the game for miles. When we had to pass under a madrone tree our treading on tiptoe the dry yellow leaves seemed to call an echo from every peak. We had come too early, but that was so much better than being too late, and you are in another world when abroad at 3 A. M. We crept cautiously up to the top of the ridge beyond the brook and sat down to wait.

It was growing light, and the fog clouds in the upper cañon were rosy. We heard several distinct shots. Squirrels were scolding, and a brood of quail fluttered and called. Watching in every direction, we fell to wondering if we would have to go home without so much as a sight of deer.

A strained intent look came into Minnie's face, and her eyes were fastened on a spot back of my shoulder. Following the direction of her eyes, I saw a buck feeding in the shadow of the tan barks which skirted the opening we were watching.

He was partly facing us, and much lower down, not 100yds. away, and in his feeding moving slowly nearer and out into the better light of the opening. I was almost afraid to turn and raise my rifle into position lest his keen senses should be aware of us. I took a long careful aim at the point of his shoulder where the light struck it and fired.

When the startling noise and the slight smoke of the nitro powder had cleared away no buck lay on the ground. We ran down the hill to where he had stood, and there was a great smear of dark blood and on the grass plashes of blood a few feet apart leading back into the woods and over a fallen trunk of huge tan bark. There in the brush lay my buck. He was a four-pointer, just what I had promised myself. The small head on the long, slender neck stretched on the dead leaves, the great brown eyes still soft and unglazed, and the free, wild grace of the body and delicately slender legs made me feel like a murderess as I trembingly stooped to feel if there was any life. I wonder if men who kill deer feel as I did. After all the trouble, packing over the mountains, walking for miles and miles, all the heat and rough living, I would have given a great deal to have been able to give back to my first deer the power to bound away in God's green woods.

As we started back the sun had turned the fog a shiny white in the lower valleys, and the whole mountainside was alive and awake with a thousand voices.

It seemed hours since we had picked our way over that trail through the deathlike silence and chilly gloom.

Sure Shot came in soon with no game and a wondrous story and Peter the dog close at his heels, one eye closed and his pinky white hide frescoed by tarweed, which he decently tried to wash off in our spring set aside for drinking. I asked how Peter had hurt his eye.

"'Tain't hurt; all them well-bred dogs have that way of looking," answered Sure Shot, as he wiped his pocket knife on the rear of his trousers preparatory to eating breakfast. He was very deliberate, but at last got his mule and the rope to go out to bring in my deer.

The vultures were circling around and around the spot, and the yellowjackets were humming and buzzing eager to dispute Sure Shot's right to fasten the buck on to the mule with what he explained was a "hog thief hitch." He was not half so patronizing when he found that the one shot from my little Winchester had gone through the heart and out through the short ribs.

He stepped off the distance from where the buck lay to the first stain of blood, and it was 87yds. The buck had traveled that distance and jumped a great fallen tree after the bullet had torn through its heart.

HELEN GREY.

CHICAGO AND THE WEST.

Movements of Western Sportsmen.

CHICAGO, Ill., Sept. 15.—Mr. Byron E. Veatch, member of the Chicago Fly-Casting Club, returned this week from a trip of some duration at the Mason chain of lakes accessible from the town of Fifield on the Wisconsin Central Railroad. Mr. Veatch fished in all five of the lakes of this chain—Mason, Long, Connors, Pickerel and Price lakes—and also in the Flambeau River, and he is so infatuated with that country that he has purchased a building site there and will put up a summer place next season, building a log house after a design that he has seen elsewhere, and which will make a very commodious and handsome camp. Mr. Veatch brought home a splendid lot of fish with him, the largest muscallunge weighing 21lbs. and measuring 44in. During his trip he took many other muscallunge, and on last Tuesday was so lucky as to kill sixteen nice fish to his own rod. He had several fish in the neighborhood of 10lbs., and returned a great many muscallunge of smaller weights. Mr. Veatch tells me that on this trip he saw fifty-five deer, and believes that neighborhood to be one of the best deer countries in the fall. He reports partridges also abundant. As to bass and wall-eyed pike fishing, he says there is all of it that one could want. After traveling over a great deal of the Northern country, Mr. Veatch has settled on this spot as the best fishing place he has yet discovered. He speaks with especial praise of the gamy qualities of the muscallunge of that country, citing one 15lb. fish that sprang clear of the water six different times before being brought to boat. As to the edible qualities of these fish I can speak very intelligently and sympathetically. Mr. Veatch sent me out a muscallunge which weighed 11lbs., and I ate it for breakfast this morning with other things, and enjoyed it very much. This has been rather an off year for muscallunge in the West, and I believe that Mr. Veatch's catch is about the best that I have heard of this season.

Mr. J. Edmond Strong, of this city, came into my office to-day, asking for an itinerary for a good canoe trip, along in October, stating that he and a friend wished to find a country where they can get some good boating, shooting and fishing. They thought that they might like to try some Southern river, and I suggested the St. Francis River as a good place for fishing and wildfowl shooting. A friend who was present advised a trial of the upper Mississippi River, and to this seeming good counsel we at length settled upon Lake Itasca for the starting point. Mr. Strong and his companion will probably take canoes from this point and go in at Walker, Minn., portaging from the railway to Lake Itasca, and thence descending the Mississippi River for perhaps 200 miles, and crossing the very country which is so much in public view just now as part of the tract sought to be set aside as the National Park. Mr. Strong is one of our most genuine Chicago anglers, and he will have grand sport in the Minnesota wilderness at the time of his visit. There will also be abundance of wildfowl in that region in October, and on the whole these gentlemen should have a splendid time.

To-day Mr. W. B. Mershon, of Saginaw, Mich., came into my office, and as usual when I see him coming I closed my desk, not because I fear he will take anything out of the desk, but in order that I might show him about the town, with which he is but partially acquainted. Mr. Mershon is just back with his private car from a business trip in Arizona, and was accompanied by his friend Mr. Watts Humphreys, one of the best lawyers and trout fishermen of Michigan. Both Mr. Mershon and Mr. Humphreys I have met on divers occasions in the Wolverine territory. With them were Messrs. E. R. Wheeler, William S. Baker and W. R. Thorsen, all of Manistee, Mich. These gentlemen have been out in the mountains of Arizona, not far from the Grand Cañon, and they report a very pleasant, though very hurried, trip. They saw plenty of deer and antelope, and contemplate some sporting experiences in that region later.

Messrs. Mershon and a few friends have been having some great fishing on Mr. Mershon's leasehold along the Cascapedia River. They made a hurried trip in August, after the close of the salmon season, and had magnificent sport with the smaller, but no less gamy, trout. In six days Messrs. Mershon and Humphreys, with their friends W. A. Avery and J. F. Keena, of Detroit, killed 1,276 trout. In one day Mr. Mershon had twenty-three trout ranging in weight from 2 to 2¾lbs. He took one which weighed 4¾lbs. Every member of the party had good success, and for once in a way the natives of that region, who are barred out from the fishing, got all the trout they wanted to eat.

My Michigan friends tell me that the wonderful Kinne Creek preserve yielded over 3,000 trout to the club members this season. The heaviest fish taken this summer was 3lbs., though a great many were taken of 1 to 1½lbs.

Grayling.

We are in the habit of supposing that the grayling is about extinct, yet to-day Mr. Mershon told me that he knew of one man who cought fifty-seven grayling in one day this summer, and they were very large, hardly any running below 10in. My informant would not tell me where this good thing was, except on condition th would go with him on a trip there next season. Lockwood, general passenger agent of the G., R. has often told me that he could assure me grayling o upper waters of the upper Manistee, not far from kaska. To-day Mr. Wheeler told me that he was p sure one could take grayling on the Manistee in neighborhood. I am glad also to state that the of quail and ruffed grouse in lower Michigan is rep to be generally good.

At St. Louis.

When I was a youngster I always used to think I w like to go "out West," and see the country. We al do whatever we really want to do in life, so part o early dreams come true. Later on in life, when I b to write about "Chicago and the West," I thoug would like to learn all about the Western regions t could. From the West of the present to the bigger bolder West of the past is but a step, so recently I begun to have a kind of hankering to learn somet about the old West that existed before our times. means that one must read books, and until one begi look into the subject he can have no idea wha of the great numbers of such books which exist to-d books dating back twenty-five, fifty or more than hundred years in their time of printing.

The largest and most complete collection of b on the early West is that contained in the Merca Library of St. Louis, Mo., and this collection is du the work of the librarian, Mr. Horace Kephart, never hears of any book on the West without sen for it and buying it. Mr. Kephart is to-day, wit doubt, the best posted man in America on early We life and history, and one of these days I hope he write a book on the actual West which shall b thoughtful and authentic as he alone can make i suppose it was a matter of course that I should eve ally drift down to St. Louis and meet Mr. Kephart, as I am always meeting the nicest people in the w It was he who got for me my old "Great West" boo replace the one I read to pieces when I was a boy. a matter of fact, I never met Mr. Kephart until week, and when I did meet him and saw him surrou by all these books on the early days—from 1600 d I thought his lines were surely cast in pleasant plac

I should say, if it were necessary for the reader of sportsman's journal to have it said, that Mr. Kepha not only an authority on rifles and rifle shooting, b himself a rattling good rifle shot. He brought ou me his collection of rifles, a whole armful of t apologizing because he could not carry any m Among his target rifles, hunting rifles, nitro rifles, sm bore and all other sorts of rifles, there were two whic handled with especial fondness, an old, old squirrel and a genuine old Hawken rifle, the latter in almost fect preservation, although it dates back to the early f tier days west of the Missouri River. Veritable treas these, and fit to belong to the man who has at his fing ends more actual information about the glorious time West than any other man you shall find.

Mr. Kephart has to do with books, yet he gat not all his lore from books, but on the contrary hunter of the most practical sort, and delights in notl more than a solitary camping trip. He is thorou posted on the deer and turkey country of Missouri, tells me that any time I want to get a turkey he can sure me of a successful trip within 150 miles of Louis. He says that he has known wild turkeys to killed within fifteen miles of St. Louis, less than years ago. It is his custom each fall to take a mo in the wild regions of the Ozarks, the St. Francis other good parts of the Southwest, and he usually meat. He tells me an odd incident of one of his camp trips. He and his party had gotten into a part of country where they were not wanted, and all at once woods were set on fire at several points not far f their camp, this fact being charged to their party some of the settlers who were injured by the fire. might easily prove the touchy situation in that cour and Mr. Kephart admits that when a certain long-ge stranger rode up to the camp he was a trifle une "Look here, man!" said the native, as he got d from his horse. "I declah, you all have plum' ru me! Weuns has to raise our hogs on the mast, and all done burned up the mast. I reckon I'm plum ruin What kind of a gun is that you got, man? Let me se Mr. Kephart, as it chanced, had in his hand a rifle a telescope sight. The native had never dreamed of s an object, and he spent an hour or two looking it and apparently entirely forgot the fact that he "plum ruined" by the fire. He went away expressing wonder at such a singular looking gun, but saying n ing more about his hogs.

Speaking of old Western days, the city of St. L was once the very heart of the wilder West, and it is full of traditions of those early days. Mr. Kephart his friend Mr. Lehman took me to see the old Fre Cathedral, which was built in St. Louis in 1834, and wh still stands in good preservation, bearing proudly inscription "Ad Honorem S. Ludovici." This was c the greatest building west of the Alleghanies. St. L is talking about holding a world's exposition wh shall show fitly h er commercial prominence, and doubt this exposition will have features showing early life and customs when St. Louis was the outfit point for the fur trade of the entire Northwest. That the day of the voyageur, the fur merchant, the hun the trapper, and when the old Louisiana Purchase still in doubt whether it was French, Spanish or Am can. They tell me that at St. Genevieve, not far fr St. Louis, the old French methods of life exist as t did fifty years ago. The bankers will lock the front d of the bank any time to engage in a game of poker in back room with a neighbor, and if a customer co into town after business hours either merchant or ban will open his shop for his accommodation.

Wanted a Church.

Speaking of the old French Cathedral reminds me another sort of church, of which I heard to-day. Mershon is a member of the firm of Mershon & Mor who make the portable houses advertised in the FOR AND STREAM, and he tells me they have had inquiries fr

parts of the country and from all sorts of people. ey sell a great many of these houses, for boat houses, y houses, servants' houses at summer resorts, etc., the firm was somewhat staggered not long ago at eiving an order from a man who wanted them to build a portable church. The dimensions he named were ond the ability of the manufacturers, and it is probable will have to try elsewhere for his church.

Yellowstone Park Animals.

Hon. John F. Lacey, of the old Sixth District of Iowa, o has, since his appearance in Congress, made so en- ble a record for himself in many matters pertaining to preservation of American wild animals and wild na- e, has just returned from a trip to the Pacific Coast l the Yellowstone Park. The Park never had a better nd than Mr. Lacey, and reference to the public records l show that it was he who introduced the bill in 1894 ereby it became a penitentiary offense to kill a buffalo hin the limits of the National Park. In a private let- from which I dare to make some extract, Mr. Lacey rs to the animals of the Park. He says the restrictions firearms have produced good results. He saw some r in the Park, and plenty of bear, finding bird life very rce, owing to the altitude. "The buffalo," he says, "is ctically extinct. There are somewhere from seven to nty-five still living. It is too high for buffalo breed- , and the herd is now so small that it is difficult for cows to defend their young against the wolves. The nagement dare not exterminate the wolves, because ground squirrels would then become so numerous as eat all the grass and starve the animals to death. They trying to reduce the wolves in number sufficiently so t they will not hunt in packs." Mr. Lacey says he nd the trout very abundant, and very few of them un- lthy, a great improvement over their average condition he time he was there twelve years ago. The percentage wormy fish is very much less now than it was then. to the elk, Mr. Lacey think there are no doubt between 00 and 30,000, though he saw no elk at the time of his t, as they were still back in the mountains, away from usual lines of tourist travel. The worst slaughter of , he says, is in the winter, when these animals drift over the Jackson's Hole country to escape the deep snows.

Minnesota National Park.

Mr. Lacey is one of the members of Congress whom rybody was most anxious to have go up into Minne- a with the Congressional party of exploration and in- tigation this month, and his inability to attend, by rea- of lack of time, is a source of much disappointment to concerned. Matters regarding the trip still progress, l at this writing it would appear that prospects are y flattering for a successful expedition. The invitations now all out, and there have at this date been forty- ht responses, of which sixteen have been acceptances. ere are over 400 Congressmen yet to hear from, and this number all likelihood would indicate a large num- of acceptances, perhaps so large that the party may ve much bigger than was at first supposed. Those mbers of Congress who have signified their intention attending are as below: Hon. J. D. Bowersock, of wrence, Kan.; Hon. R. P. Bishop, of Ludington, ch.; Hon. J. G. Cannon, of Danville, Ill.; Hon. S. A. venport, of Erie, Pa.; Hon. J. H. Davidson, of Osh- sh, Wis.; Hon. Wm. H. Graham, of Allegheny, Pa.; n. Joe R. Lane, of Davenport, Ia.; Hon. A. C. Lati- re, of Belton, S. C.; Hon. D. Meekison, of Napoleon, ; Hon. Geo. W. Prince, of Galesburg, Ill.; Hon. . W. Steele, of Marion, Ind.; Hon. J. B. Showalter, Chicora, Pa.; Hon. J. R. Thayer, of Worcester, Mass.; n. V. Warner, of Clinton, Ill.; Hon. G. A. Waymouth, Fitchburg, Mass.; Hon. Edgar Weeks, of Mt. Clemens, ich.

Most of the responses received as yet are from points in e Middle West, there having not yet been time to hear m the more distant portions of the United States. ould the total number of those joining the expedition t up thirty to fifty names, it will be quite enough to eguard success for the whole enterprise, for that would an an adequate and satisfactory investigation of the untry, which is all the projectors of the enterprise ever ked or wanted. There has been no scheme to put rough, and it has always been reiterated that if it should t appear proper and fit to Congress to set aside a large dy of this Minnesota wilderness, just as it did a large dy of the more remote and scarcely less interesting llowstone wilderness, then there would never be heard e first murmur from those who have begun the move- ent to that end. Sometimes it may be difficult for a blic man or a private man to believe that such a move- ent can be begun or carried on without some scheme dden behind it or boldly exposed through it. There is such scheme in this. The members of Congress who iss the trip will miss a pleasure, but they can still vote the matter when it comes up in Congress, and there ll be enough eye-witnesses to tell them how to vote. he Minnesota National Park and Forestry Association s never presumed to tell any Congressman how to vote. has only offered to lay the facts before him, or rather, rhaps, to lay him before the facts.

Col. Cooper, the tireless worker for this Minnesota re- rve plan, is to-day in St. Paul on business connected th the expedition.

Sept. 15.—Three more acceptances of invitations by embers of Congress arrived at headquarters of the innesota National Park and Forestry Association this orning, making nineteen acceptances at hand at this te, with still about 400 members to hear from. It is ought that the trip will be a success.

The meeting of members of the Association at the rlors of the Commercial Club, St. Paul, Minn., on the ening of Tuesday, this week, was a notable event, many rsons of consequence being on hand, among these Dr. A. Schenck, formerly of Berlin, now of the Vander- lt forests at Biltmore, N. C., and recognized as one the great authorities on forestry. Archbishop Ireland, Minnesota, and Bishop Gilbert, of the same State, ere also at the meeting, besides many members of the gal fraternity and of business circles. Col. Cooper, of icago, addressed the meeting, with other speakers, and e whole question of the reserve came into lucid and ffective handling. It has always seemed that Dr. chenck had about the most thoughtful and convincing position on this forestry proposition, and his address carries out his former theory, to-wit, that a forest reserve does not rob the settlers already on the ground, but gives them employment, and prepares the way for a yet larger and more useful population. Dr. Schenck said at the Commercial Club meeting that it was always to be borne in mind that forestry is not a sentimental art. It was useless to expect American lumbermen to observe the forester's precautions so long as it does not pay them to observe such precautions. When matters had changed so that it was money in the pockets of the land owner to cultivate trees upon land fit for little else, one could urge the owner to encourage forestry.

Dr. Schenck laid stress upon the contention that it was not possible, nor even desirable, that all lands once producing forests should be reforested. A great deal of that land, especially in America, had proved very good for agricultural purposes. Therefore, until agriculture in any section became profitable, it would be wiser to keep such lands ready for the plow instead of the axe.

On the other hand, no small quantity of the former forest is almost worthless for any other purpose than that of cultivating trees. Such lands, then, should be reforested. In Europe about one-fourth of the whole area of the country was under forest. In America it might perhaps be better, under existing conditions of population, fertility of the soil and the like, to increase that proportion to one-third.

The two principal obstacles to reforesting here were forest fires and over-taxation. There would be little encouragement for any one to start a fresh growth of timber if that timber was likely to be burnt down. And as to taxation, it was wise to remember that unless prices of lumber advanced remarkably the statement will hold true that the natural revenue from the growth of timber does not exceed 4 per cent. per annum upon the value of the land. Hence the highest reasonable taxation should not exceed 2 per cent. per annum. Any higher taxation would make forestry unprofitable.

It was becoming a strong government like that of the United States to preserve and increase the national forests. Weak governments had always been recklessly improvident of forest wealth. During the Revolution France had sold so many of the State forests that their relative area was reduced from 25 to 16 per cent. The first Napoleon had quickly arrested this extravagance. Bavaria had once been stripped in like manner by incompetent rulers. That waste is now being repaired at great expense.

Dr. Schenck recommended the policy of the Canadian Government, which sells the timber upon its lands, but does not sell the timber land itself. Thus the national forest can be readily perpetuated. If the 10,000,000 acres of forest in northern Minnesota could be preserved, it would form the most royal preserve in all the world.

Movements of Western Sportsmen.

Sept. 16.—Mr. John Sterneman, of Muscatine, Ia., passed through Chicago this week and outfitted for a trip to Eagle River, Wis., after muscallunge.

Mr. S. D. McLeish, of Evansville, Ind., left this week for a fishing trip on the Eagle waters of Wisconsin.

Mr. C. S. Petrie, fire marshal of this city, and one of the oldest of our old-time sportsmen, is lying at his home dangerously ill, and his condition occasions his friends some anxiety. Mr. Petrie is a man of fine physique and constitution, and it is within hope that he may soon be around again.

Removed.

The Economic Smokeless Powder Company, of this city, lately removed their offices to Hammond, Ind., to be in closer touch with their plant, and from their new place report a fine business and a trade which is on the increase.

Snipe.

Jacksnipe have appeared in some numbers in upper Indiana, and yesterday and the day before some very fair bags were made around Lake George, Hyde Lake, and near Lake Station, Ind.

Chickens in the Pine Country.

One of the most satisfactory trips of which I have had word was that made by Mr. Neal Brown and wife, of Wausau, Wis., whose party I joined this week at Babcock, Wis. We had a very delightful and fairly successful hunt, and I enjoyed it thoroughly, more especially as it was an entirely new thing in my experience. The State of Wisconsin is a grand one for sportsmen, offering the best of deer shooting, and angling in almost every line one could ask. It also has fine ruffed grouse shooting, some quail and woodcock shooting, some of the best canvasback shooting in America, and about as good sport on all around duck shooting as most of our Western regions can boast. I had also long known that some very fair prairie chicken shooting was to be had in the lower part of Wisconsin, but I did not know that these birds were to be found far up in the State in the pine woods country. I had always been used to shooting prairie chickens in the prairie country, where the wild grass lands were broken up by wheat fields. This was in the long ago, and more recently I had come to suppose that praririe chicken shooting in this country was resolving itself into a question of corn and wheat fields. It never occured to me that one could get chicken shooting, and very good chicken shooting, too, in just about such slashed-off country as one would expect to find good for ruffed grouse. I am continually discovering that I don't know everything in the world, and perhaps a great many persons do not know what good prairie chicken shooting there is in this part of Wisconsin.

I do not know just how far Babcock is north of Chicago, but I left Chicago at 10:30 in the evening on the Milwaukee & St. Paul road, and got there about 6 o'clock in the morning. The whole train was filled up with chicken hunters. The baggage car was full of dogs and the aisles of the sleeping cars were packed with guns and cases. I had supposed that I was about the only man who had ever heard of the chicken shooting in that country, but the officials of the road told me that a great many people were going up into that country this fall. I think fully a dozen men got off at points near Babcock, several going to Nekoosa. These men had been there before, and they told me that I would find the shooting not along stubble fields, for there were no stubble fields, but in stump grounds and heavily covered marshes. I found their statements correct.

Babcock is in a district which was lumbered off for its pine some forty or fifty years ago. Some of the hard wood has also been cut, and there remains rather a barren and desolate looking country, covered with fallen trees, burned stubs of pine, poplar thickets and wide expanses of grassy marsh running in between the ridges, which have been stripped of their timber. The town of Babcock itself was made a division point at the time the railroad went through. There was on auction sale of lots, one brief day of glory, and then Babcock settled back with a dull, heavy sag into a position from which it has never since attempted to emerge. A so-called farming community has tried to settle up that country, but the class of the population is like the soil itself, sullen and uncompromising. Every man hates his neighbor cordially, and hates himself as well. The ground, though underlaid with sand, is low and damp, and will not raise wheat or corn in any great acreage. There are but two products—hay and buckwheat. Miles and miles of good hay grounds lie waiting for the mower, and a few men are engaged in putting up hay on a considerable scale. How any farmer makes a living there I cannot tell, for in twenty miles of country I saw no crops except some straggling fields of buckwheat. Around these buckwheat fields the prairie chickens are concentrated more or less, but it is against the law to let a dog run in the standing crops, and the farmer of that country who sees a shooter come on his land usually goes into hysterics until the shooter leaves or gives him a dollar. It is a solemn, weird, doleful sort of country. You wouldn't see a smile there in a hundred years, and every one acts as though he wanted to make you unhappy because he is unhappy himself.

But, though this was once a country of pine, it is still a country of grass, and therefore you have the secret of the presence of the prairie chicken. There are literarlly scores of miles of breeding ground—a wilderness over which it is not possible to drive with a wagon, and with cover so dense that no dog can hunt it out completely and no man walk over it or ride over it with ease. In these wide seas of broken grass lands there is a splendid harborage for the pinnated and the sharp-tailed grouse. The latter birds are much the more numerous and outnumber the former about three to one. The local shooters call the pinnated grouse the "regular prairie chicken" in distinction from the sharp-tail. They tell me that the birds stay out in the grass country and live on grasshoppers until the time of the frosts, and then they begin to pack up and hang around these little stubble fields of buckwheat. I think the real cause for the packing up of the grouse in all the Western country is the fact that the grasshoppers are killed by the frost. The grasshopper is the favorite food of young prairie chickens.

Good Luck.

I have at divers times in the columns of the FOREST AND STREAM reverted to my fondness for the meat dog, and mentioned my own luckiness in falling in with the same. Indeed, as I have remarrked, I am sure if I should fall off the bridge into the Chicago River I should come up with a meat dog in one hand and the best fellow in the world in the other. I did not fall into the river this week, but had much the rest of the experience. Mr. Brown, of Wausau, Wis., I had never met before, but he is surely the best fellow in the world, and his Gordon setter Jimmy is a meat dog, with the simple and direct habit of going where the birds are, and not wasting time in putting on any airs for style, speed and other frills and furbelows. Then again, we had with us young Varney, of Babcock, and his own meat dog, a long-eared pointer which he called Cub. Cub would hardly win on the bench, for he is about 8ft. long and has feet the size of a pie pan, but he could take those feet over the soft ground all day long, and he showed all the sagacity of the old-time chicken dog, which I have always thought was a most admirable animal. I am pleased to say also that Cub was broken to retrieve, a most valuable thing in this heavy grass country, and he saved us many a bird we otherwise would have lost, and never lost one which was knocked down. Indeed, he pointed once in the grass and caught a crippled bird which none of our party had shot. At another time, after we had about given up huntng for a bird which Mr. Brown had knocked down, Cub came along half an hour later, took up the trail and found the bird about 200yds. from where we sought for it, bringing it in still alive. Both these dogs did us grand service on our first day, the weather being moist and damp all day; but the next day came off very hot, so that both men and dogs were nearly helpless.

I found that Mr. Brown had arranged everything perfectly before I arrived at Babcock, and there was little for me to do except climb into the wagon and start out. There were three or four other parties which went out of town that morning, mostly of non-resident shooters, so that I think fully thirty or forty guns were in operation in that neighborhood. A local paper stated that by Sept. 1 there had been 235 resident shooting licenses taken out in that country, so it would appear that although this is a good chicken country, it is not being left altogether alone. We heard a great deal of shooting all day long, but most of the parties made the mistake of hunting all in a bunch, so that if a bird went up everybody shot at it. Sometimes we would hear a dozen shots fired in quick succession—enough to clean out a whole covey—yet when we met any shooters it seemed they had no more birds than we, and at the hotel that night we discovered that our party was high bag, getting twenty-four birds, the nearest to our number being nineteen. There were four guns in our party, yet every one knows that two guns will kill as many chickens as four. We usually hunted pretty closely together for the sake of companionship and did not hurry ourselves, but took things easy, so that I must say we had as pleasant a day as I ever passed in the field. Mrs. Brown has been using a shotgun for about half a dozen years, and she is a very clever wing shot. She killed fully her share of the bag. One could only compliment her very much on her pluckiness, for she walked all day through the tangled grass, which was sometimes up to one's chin and full of water, so that we were all as wet as though we had plunged into the river. Though rather slight of figure, Mrs. Brown seemed to stand it as well as any of us, and moreover absolutely do-

clined to accept any courtesies in the shooting which would not be extended to a man, always insisting that if a bird went up no one was to wait for her to fire. It is not often that one finds a woman shooter who can actually walk, actually shoot, and be a good fellow all day long, under all the changing conditions of weather and walking. Mr. and Mrs. Brown spend a great deal of time together fishing and shooting. Neal Brown himself is a 6ft. lawyer, an ex-member of the Legislature, a man of large affairs and a sportsman of large heart. He knows how to take life comfortably and get something out of it, and I am sure I don't know what more he could ask than he has.

When we got out of the wagon in the morning the grass was dripping wet and a few minutes served to wet feet and limbs completely. We hunted for an hour or so without success, and got ordered off from one or two farms. Then we put up a couple of old birds wild, and marked them both down. Mr. Brown and Varney went after one and got it, and Mrs. Brown and I hunted after the other for a long time without success. Finally, as we started away the bird rose out of the grass some distance from where we had marked it, and by the time we got done with it it was voted unanimously killed. Then we went on, and after a time Mr. and Mrs. Brown got into a flock of sharp-tailed grouse, knocking down four birds in about that many seconds. One of these birds flew some distance, and I had a race with a shooter from another party who cut in ahead after our scattered birds and did his best to rob us of our covey. He actually picked up our crippled bird first, but I took it away from him and carried it back to Mrs. Brown. All through the day we put up only four coveys of birds, and on two occasions, when we had our scattered birds marked down, we saw other parties break for them on the run and go to shooting among them before we could come up. Had we been left alone, I think we should have killed a dozen more birds, for the coveys were very large and full.

The prettiest shooting we had was just about noon. Varney and I were together on a bit of open ground when we fairly stepped into the middle of a big flock of chickens. One bird rose on the outside, and in some way Varney and I both managed to miss him. He killed with his second barrel and so did I, my shot being a peculiar one for prairie chicken shooting. The bird started straight up and was nearly 30ft. high when I shot him, though it was almost directly above me. I could see his neck stretched up and the whole expression of his countenance seemed to say that he wanted to get out of there as soon as he could. We marked this covey down and also marked the wagon load of hunters who stopped and made for it. Just at this moment Mr. and Mrs. Brown also walked into a covey and they killed four birds as quickly as one could snap his finger. Then we went to lunch, came back over the same ground, picked up a half dozen more birds, and by means of silver placated some farmers who kept on ordering us off the land. Once in a while we sat down and rested, and once in a while we got into the wagon and rode away. We only got out six or eight miles from town that day.

On the following day we made a long drive, going about fifteen miles out across Cranberry Creek. We located some splendid looking country, but got there too late. We learned that over 200 chickens had been killed in that neighborhood on opening day, and we thought if we were up there next year we would make for that part of the country at once. On this second day it was too warm to work very hard, so we took a good long noon hour, fried some prairie chickens over our camp-fire, made a pot of coffee and enjoyed ourselves in spite of all. We only killed six birds on this last day.

The general hostility of the citizens of Babcock and vicinity was rather amusingly exemplified at our hotel in town. The landlord was apparently suffering from a blighted life, and it was a source of great comfort to me to hear him and Mr. Brown argue their respective opinions as to the size and the excellence of the field lunches provided for our party. Next door to us there was a butcher, and the butcher kept a dog, and the dog kept on howling all night. Mr. Brown told the butcher he would shoot the dog if he could get to see him, and the butcher told Mr. Brown he would shoot him if he shot his dog, and Mr. Brown said he didn't mind about that; so we had quite a pleasant time. "I have lived in this Northern country too long," said Mr. Brown to me, "to pay any attention to people who say they are going to shoot me full of holes. You must expect that sort of thing, for it is part of the game. These folks around here have just got it in for the rest of the universe. They don't mean to be unpleasant. It is just a way they have."

A Genuine Wild Pigeon.

There is perhaps some news in this, our chicken hunt at Babcock, regarding this northern range of the grouse in Wisconsin. Still another bit of news, and rather an important one, came out during our little trip. We killed a wild pigeon! We have all read from time to time about the occasional appearance of the wild pigeons, but it is rather singular that the representative of the FOREST AND STREAM should personally fall across one of the few instances of the actual killing of this bird in recent years. Yet this is without doubt true. While we were cleaning our birds at lunch time on the first day, our guide Varney pulled out of his pocket some turtle doves which he had innocently been shooting that morning. Among these was a bird to which he called our attention, saying it was "too big for a dove" and he did not know what it was. "Why, that's a pigeon!" cried Mr. Brown. "It's a young wild pigeon." And so it proved. The bird was about two-thirds grown and the plumage was yet pale and devoid of the fine luster of the adult bird. The tail feathers were pulled out in the pocket of Varney's hunting coat, but I got them and have them now, with the skin of the bird, which I secured. I cannot give many details regarding the killing of this bird, except that it was shot from a tree early in the morning by Varney. There were a lot of doves hanging around a buckwheat field and some of these lighted on a tree. Varney fired at the largest bird he saw on the tree, and put it in his pocket, thinking that it was a dove. It was nearly twice as large and heavy as a dove when we came to place the two birds together. Mr. Brown tells me that he and his wife have seen these birds in northern Wisconsin within six years, and they were once abundant all over this country where we were hunting. The FOREST AND STREAM has always been very anxious to secure any positive proof of the appearance of the wild pigeon, and here is proof which is direct and unmistakable. It was the last feature needed to make my little Babcock experience a curious and enjoyable one.

I have written to Mr. Brown that I am afraid he has gotten into trouble, for we have promised to go on all sorts of shooting and fishing trips together in the near future, and Mr. Brown declares that he knows the best trout stream that ever was in the whole wide world. We are to look into that next spring, and may possibly visit our new-found chicken country again next fall. It seemed to me a fine thing to see these grand brown birds once more.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Arkansas and the South.

ST. LOUIS, Mo., Sept. 15.—From reliable information, I am led to infer that the present chicken season is one of the very best within recent years. From nearly every section the reports are most favorable, and there are yet many points where good shooting may be had during the next few weeks. Up about Atkinson and Nebraska, and in fact in any part of Holt county in that State, I am told, the shooting has not been so good for some seasons. I understand that at this point one can easily bag twenty-five birds a day, notwithstanding that the sooner has been very active in this locality. It was in this vicinity that J. E. Brook and V. W. McDonald bagged seventy-six birds on Sept. 4. Mr. Brook tells me that the coveys are very large, and the birds all about matured, so that they afford excellent sport.

Messrs. Kingsbury and Pyper, of Council Bluffs, went to Neligh, Antelope county, Neb., about the same time and found the conditions much the same. In connection with a local shooter, they killed seventy-five birds. The weather was very warm, and for this reason very unfavorable. Mr. Johanas, of Omaha, found time to run up to Hershey for a day, and here in six hours' shooting he bagged eighteen; he too reports evidence of the sooner. Mr. M. C. Peters, of Omaha, has for the past ten years been doing his shooting in the vicinity of Pierce, Neb., and he tells me that the birds were more numerous this season than at any time since he has been going there; though he adds that they were very wild and hard to approach on the open prairie, due to the persistent shooting for months previous. His party, consisting of four me nand two ladies, bagged thirty-five in two days, though most of these birds fell to two guns. He says the birds were so wild that their dogs—of which they had four—were practically useless, and they did not secure a half-dozen points during the entire trip. The only shooting they got was in the high corn, where it was possible to get within range of the birds, but as the corn was nearly 8ft. high, it was mostly snap shooting.

Mr. Al Patrick, his two brothers and one other friend did their shooting in the vicinity of Verdigris, Neb., and this party brought back thirty-eight birds. At Inman the birds should also be in fair numbers. It was at this point that Mr. Jno. A. Kuhn and two others bagged forty-one birds.

Mr. C. C. Herman, of Kansas City, and Dave Hancock and Ed Conway, of Marshall, Mo., went to Wood Lake, Neb., and though they report good success, they say this was only accomplished by the hardest of work, and that they were compelled to go thirty miles from the railroad, owing to the inroads made among the birds by market-hunters, who were flocking to this country and rapidly diminishing the supply of birds. This party also report the teal duck shooting very fine on Marsh Lake, Neb., though they gave them no attention. All these points are on the Elkhorn Railroad.

Good chicken shooting is also to be had on the Burlington Route in Greeley and Custer counties, Neb. In going to the former, Greeley Center is the station to go to, and in the latter county Broken Bow is the objective point. This line also traverses some of the finest duck grounds in the entire West, among which Lakeside, Sheridan county, Neb., is one of the best. This is on the Sheridan line and right in the heart of a lake country. The finest of grouse shooting is to be had along the line at Wyola, Mont., on the Crow Indian Reservation. In order to shoot on the reservation one must get permission from the agent, but this, I am informed, can be readily obtained. A party of New York sportsmen were out there this week, and they report the shooting superb. There are many other points along this line where good shooting is to be had, and those interested have but to communicate with the passenger agent at Omaha, who will cheerfully furnish all information.

Two members of the Dupont Gun Club could not wait for the opening of the chicken season, but had to go out the last week in August. Such conduct is hardly to be expected from persons who are members of an organization whose object is the protection of the game. For personal reasons, I will not give any names, but it behooves the club to look into this matter and to purge the organization of such material. Either practice your doctrine or go out of business.

I also learn that a well-known Kansas City trapshot was out in Kansas shooting chickens in August. The argument he advances is that the birds were too old and too tough in October, and therefore not fit to eat.

Another party, consisting of E. E. Morris, R. M. Rigby and J. H. Starkie, of Kansas City, went to Hayes City, Kan., where, in connection with a local shooter, they killed quite a bag of birds. I am not certain that these parties knew that they were violating the law, but according to the *Game Laws in Brief*, it is illegal to kill chickens in Kansas until Oct. 1.

Russell Klein writes me from Spirit Lake, Ia., that the chicken shooting was very good in Dickinson county, and that the duck shooting was also very fine. A great many more ducks nested there this season than for years past, which he attributes to the very late spring. The ducks did not return until after the close season, and as they were not molested, many more remained with them than heretofore.

Reports of the Arkansas chickens are to the effect that they are by no means plentiful, which makes their extermination practically an assured thing, for it will be two years before the Legislature convenes again, and by that time the work of destruction will be complete. Hundreds of shooters were afield on opening day, and as most of the birds are confined to three counties it is easy to perceive that it will not take long to carry out the work of slaughter. Under the present statute chickens can be legally shot during five months of the year, from September to February, so that in the next two years all the good derived from the five years' close season on these birds will have been more than wiped out. It is possible yet to kill a few birds, and for the benefit of those who want to join in the slaughter, I would suggest Hazen and Devall Bluff, on the Choctaw & Memphis Railroad, or Stuttgart, on the Cotton Belt Railroad, or DeWitt, which is reached by a branch road from the latter place. Of course, it must not be expected that the birds are to be found adjacent to the towns, but from these points one can get to the best chicken country. Oct. 1 would be a good time for such a trip, as then one can legally shoot any game in Arkansas, and as all these places are located in good quail country, one could easily turn their attention to these, if the chickens should not pan out. While, if one goes to DeWitt, it is not a great distance to where good turkey shooting is to be had. These birds are quite plentiful along Bayou Meto Creek and also the White River. Devall Bluff is also on the edge of a big game country.

While the prospects of the Arkansas chicken are quite gloomy, all other game is reported very abundant. Quail fared exceptionally well this season, and from all parts of the State the reports are to the effect that this will be an exceptionally good year for sport with this bird. Then the turkey and deer should also have done better this year, because we had no overflow, so that they were not driven from the lowlands, and in consequence the bottom lands will afford much better shooting than heretofore. Of course, it is a trifle too early to say definitely just where to go for big game, though there are many places along the Iron Mountain Railroad where one can get good shooting. In one or two localities it is possible to combine both hunting and fishing, for as a rule bass are readily taken during October and November in the South.

Reports on the quail from Missouri, Kansas, Nebraska and Iowa are similar to those from Arkansas, so that this fall should be fraught with much pleasure for those who are fond of such shooting.

PAUL R. LITZKE.

Staples and Novelties.

EDGEWOOD, Ia., Sept. 12.—*Editor Forest and Stream*: I am disconsolate, inconsolable, and it is your fault (perhaps). Last Christmas my wife made me a present of a year's subscription to FOREST AND STREAM. I have received the paper regularly on Friday till last week. I did not receive it then, nor has it come since. Now please send me another copy of last week's issue, as I cannot miss a single one. My wife says I was cross all day Sunday on account of it. (Ladies take notice.) You are doing a grand work among sportsmen for moderation, and the influence must certainly be productive of good.

I have a few items which may interest readers of FOREST AND STREAM. I will classify them as we do our dress goods, viz., staples and novelties. To illustrate: If I go out hunting and a bird gets up in front of me and I hit him, that is a novelty; if I miss him, that is a staple.

Staples.

Quail are very plentiful, but occasionally a covey very small. I think the first setting was washed away by the heavy rains, and the second is late. Under the conditions this season, the change from Nov. 1 to Oct. 1 was an error, although in ordinary seasons it would be beneficial.

I have been chicken-shooting twice; got seven the first day and twenty the next. I flushed fully 100 birds the last day, a very good showing for a country that has been shot to a standstill for the past ten years.

Last season squirrels were very scarce, and we hunters agreed among ourselves that we would not shoot squirrels. Result: This year they are quite plentiful. Another argument in favor of protection and moderation.

Last winter we had an unlimited number of rabbits. This year they are very scarce. Will some one please explain why?

Novelties.

During a hunt last winter, one of the boys shot at an owl flying over. He did not get the bird, but he got a rabbit which it dropped that was not quite dead. The boys have said so much about shooting rabbits on the wing that it isn't safe to say anything now when Elmer is present.

A friend of mine near here found a nest of young squirrels last spring which he carried home and placed in a cage, where he still has them. One of them is an ordinary gray squirrel and the other is pure white, both in the same nest. Is this a common occurrence?

Last spring we had a very destructive cyclone, which passed about three miles south of here. It struck a barn and other buildings about five miles southeast of here, totally destroying them. A friend of mine, searching the ruins the next day, found four eggs, two of which were quail's eggs and the other two unknown to him. Having an incubator, he took them home, and upon testing them found young birds in the quail's eggs. The other two were fresh, and upon being placed in the incubator, after due time they hatched out two woodcock. These eggs were found right in the midst of the ruins, and with no nest anywhere near that was known of. In my peregrinations (not exterminatory however) around this vicinity, extending over a period of twenty-five years, I have seen but one woodcock. Where did the eggs come from? H. E. JAMES.

Oh, Dread Disease!—"Bickersniff's doctor has ordered him to cease riding in his horseless carriage for a while."

"What's the trouble?"

"He's used it so constantly that he has become auto-mobilious."—Philadelphia North American.

Anothe Summer Visitor Case.

FERRISBURGH, Vt., Aug. 31.—*Editor Forest and Stream:* For several years past the shooting on our marshes has been spoiled by poachers long before the open season. The promising show of wood ducks and dusky or black ducks to be seen early in August failed to materialize on Sept. 1, and the scattered few then remaining gave evidence, in their wariness and wildness, of frequent molestation. Guns were heard morning and evening where there ought to be no shooting done; the suspected parties were summer visitors on the lake shore, but none of them were caught in the act. This summer promised a repetition of the old story; there were ducks and there was shooting, of which they were well known to be the object; but though boats were seen prowling morning and evening in the haunts of ducks, no one was caught in the act of shooting a duck, nor with one in possession.

Warden Ramsay, of Vergennes, was on the watch in the Little Otter Creek marshes; and one evening about the midddle of August saw shots fired from a boat at two flying ducks, one of which fell. The boat was in a sort of cul de sac of what is known as the Broad Marsh, and Ramsay getting his own boat in a course to cut off the other's retreat, soon overhauled it and proceeded to search it.

There was a muskrat and a few poor little sandpipers in sight, a rail in a coat pocket, and a black duck concealed under the seat on which the Rev. Mr. Ogilvie sat. The other occupants were Dr. Furness and their boatman, M. Durfee.

The professionel gentlemen thus taken red-handed begged to be allowed to pay the fine and go their ways of peace and healing; but Warden Ramsay was inexorable, and took them to Vergennes, where they were arraigned before a magistrate, pleaded guilty, paid the fine and costs and departed to their camp on Thompson's Point, wiser but not entirely happier men, though the Rev. Mr. Ogilvie thanked God that he did not live in Vermont. To this we all say a hearty amen, for we do not desire as residents, even for a little while, him nor any of his sort—persons who, in the guise of gentlemen, sneak out in close time to cheat honest sportsmen of their lawful rights.

Mr. Ogilvie took his punishment hard, and came out with a statement of the case in the Burlington Free Press, directly after the affair was made public, but it was a pretty lame excuse. It is noticeable that poaching clergymen when detected and punished take it with very ill grace, and no wonder, for it is a contemptibly mean business for an ordinary sinner to be caught in, and how much more so for a teacher of religion and morality to be engaged in. AWAHSOOSE.

A Maine Opening to be Filled.

MATTAWAMKEAG, Penobscot Co., Me., Sept. 13.—*Editor Forest and Stream:* After a silence of several years your quondam correspondent, Amicus, makes a bran new bow to brother Nimrods, and being in the State to which many eyes are turned and for which many hearts are yearning, I may be able to write a few words of interest to the hordes of sportsmen who will visit the State during the three months beginning Oct. 1. I have for a time been a resident of the State and am quite familiar with the hunting and fishing grounds. Indications point to a more successful game season than has been seen for several years. The game laws are about all that could be desired, and they are being enforced by an efficient corps of wardens, who show no favor to friend or foe, rich or poor. This is as it should be, and to-day we can truthfully boast of as fine a hunting and fishing country as can be found anywhere, while the facilities for getting here, the low rates for hotel or camp accommodations as well as other necessities of the chase, are proving great drawing cards. Probably the most frequented localities are to be found along the line of the Bangor & Aroostook Railroad, and the record of game taken out every year is something surprising, yet, in spite of this seemingly wholesale slaughter, the game is yearly increasing in point of numbers—to such an extent, in fact, that upon payment of a small license fee citizens of the State have been allowed to kill one deer for food purposes during the present month. Right here in Mattawamkeag is one of the most ideal spots to be found in the whole region. Within five miles of the village nestles among the hills one of the most picturesque little bodies of water imaginable—Lake Mattaceunk—where there are a number of well equipped camps. On the shores of this lake there have been seen the past summer a large number of deer and a few moose. The village can boast of first-class hotel accommodation. Being slightly to one side of the main wilderness, there are not so many sportsmen; and, as a natural consequence, those who visit this locality have a proportionately better chance of getting the full quota of game. Amicus extends a cordial invitation to brother knights of the rifle to come and see us, and will guarantee to a limited number of the craft a delightful locality, good camps, reliable guides and all the big game that the law allows. AMICUS.

Senator Chahoon's Bear.

SENATOR CHAHOON tells the following to the Plattsburg Press: "On Saturday, Sept. 9, Mrs. Chahoon and I took a little drive in hopes of getting a couple of partridges. We left our home in Ausable Forks in our buggy, with my bird dog and .12-gauge shotgun. We were driving through a swamp. Mrs. Chahoon held the reins, while I had the gun cocked ready for a quick shot, when about 30yds. in front of us four bears came into the road and looked at us for an instant and started up the road from us. The dog made chase, and was close to the bears as they entered the woods on the opposite side of the road. This was fun for the dog, and we sat laughing at his audacity, when from up the road we saw a procession of dog and bear coming toward us, the dog leading with the old she bear in close pursuit, and clearly gaining on the dog. The horse did not like this and started for home backward, but the buggy did not turn over, and as the bear and dog passed the buggy, the dog had less than 6ft. of lead, and as they passed I fired both barrels of No. 8 bird shot into the mother bear at a range of about 10ft. She showed no evidence of being hit, and kept after the dog for 10 or 12yds., when she turned abruptly into the woods. When the young bears were opposite the buggy they also turned into the woods. The dog turned and followed the old bear. At about 30yds. from the road, he stopped and began to bark. I jumped from the buggy to go to the dog, and when I was nearly to him, Mrs. Chahoon called for me to return, and when I got back she told me that another large bear had come into the road and stood on his hind legs and looked at the horse, while the horse stood on his hind legs and looked at the bear. As soon as the horse was quiet enough to hitch, Mrs. Chahoon and I went into the woods to try and drag the bear I had shot to the road, and while thus engaged Mr. Roberts came along with the stage and helped us to put the bear in the wagon. The ground where the bear was shot showed no blood or other evidence of being hit. Both charges struck behind the shoulder and were driven downward and part of them through the body. The bear showed no evidence of a struggle, and doubtless fell perfectly dead where she lay when I got to her. In all, she must have run 50yds. after the shot. We had a pleasant little drive, and Mrs. Chahoon thinks bird shooting in the Adirondacks is not entirely without interest."

Three Paragraphs.

I.

SOMEONE asked about breech-loading guns in Civil War times, the bullet of whose cartridge might be bitten off if so desired. Now among a lot of war relics I once saw a carbine (I believe) with a peculiar breech block. The front end rose up above the top of the barrel, the cartridge was shoved in base first, the block shoved down, and it was ready for business, after capping. The specimen leaked fire at the joint in a way to astonish the natives; otherwise, it looked serviceable.

II.

Have the painted tortoises of our Northeastern streams other enemies besides the destructive small boy? I never saw an empty shell.

III.

Old African hunters used to tell tales of the toothsomeness of some antelopes—e. g., the eland. If true, is there any good reason why they may not be utilized as game park stock in the South? Frost is not unknown to them, I think. We need a new kind of beef. Isn't it possible that it is being allowed to follow the dodo unheeded? A dodo drumstick, now, would have made a pièce de resistance at an ornithologist banquet. Why not save up a few eland steaks, then, for future generations? J. P. T.

New England Partridges.

BOSTON, Sept. 18.—The partridge gunners are out in good numbers. The open season began Sept. 15, both in Maine and Massachusetts. Expectations have been great, particularly in Maine, and dozens of gunners from this section have gone there. Locations were selected and the dogs in training a week or two ago. Gunners from this way propose to go by themselves and without guides, in spite of the not-well-understood guide laws passed last winter. Local gunners were also out in the home woods on Friday and Saturday, and a few birds were taken, but not as many as expected. From several sections come complaints that the broods had been broken before the opening. SPECIAL.

Next Sportsmen's Show.

NEW YORK, Sept. 15.—*Editor Forest and Stream:* The sixth annual Sportsmen's Show, under the auspices of the National Sportsmen's Association, will open at Madison Square Garden, New York City, March 1, 1900, and continue for seventeen days. New features and attractions are being arranged, and will be submitted to the public at an early date. The coming Sportsmen's Show will undoubtedly be the best that has yet been brought together, and will cover every branch of sport.

J. A. H. DRESSEL, Sec'y-Treas.

Camp-Fire Flickerings.

"That reminds me."

History Repeated.

THE allusion of Tarpon to an old book entitled "Tales of the Ocean" has awakened my recollections of the same, which I read more than fifty years ago, and which was one of the number composing the library of the old red school house at New Platz Landing, now Highland-on-the-Hudson. With us boys the book was a great favorite. It told of Kidd, Lafitte, Gibbs and other piratical characters, giving vivid accounts of the buccaneers' cruelty at that period. It was very well illustrated with wood cuts, representing pirates striking off the arm of an important prisoner, whose name I fail to remember; huddling captives in the bow of their vessel and blowing them into fragments with cannon; shooting a prisoner out of a connon at the enemy; a pirate captain in the rigging casting a lock of his hair into the air with an invocation to Satan to accept the offering and henceforth aid him in the accomplishment of his schemes of diabolism; Capt. Kidd hung in irons, etc.

Some of the accounts were of a humorous character. One I remember very distinctly, and when I read in the newspapers of Admiral Dewey doing the same thing which was related of a sea captain long before the Admiral's time, I asked myself, without any attempt to belittle the famous Admiral, or bring in question his originality, whether he had not himself read that very book. Now what the sea captain did, and Dewey afterward, was this: Some sailor had thrown a big quid of tobacco on the deck, and the entire crew was ordered to remove it with heavy block-and-tackle, and with considerable trouble and ceremony. N. D. ELTING.

Sea and River Fishing.

The Uncertain Bass.

Varium et Semper Mutabile.

WHAT a shame it is that they have no anti-hounding law in France. If they had poor Dreyfus might have had what I believe is technically known as a "look in."

However, the case of "me frien' Alf," as Mr. Dooley doubtless designates the unfortunate Frenchman, has established the fact that in a Gallic court of justice (?) it don't make much difference when and how you offer your testimony, and upon this precedent I proceed to submit a little in support of the claim of one Shanganoss, who, many months agone, delivered himself in the columns of FOREST AND STREAM of some most truthful statements anent our old friend the black bass.

M. dolomieu, according to Shanganoss, is an uncertain critter, whose present appetite for feather hooks or the tempting minnow may not be prognosed according to any precedent.

Shanganoss is right. The day may be fair, the water just right, the lures enticing and the tackle of the best, but—no bass. Yesterday, the prototype of to-day, they took furiously; but to-day, alack, they will turn up their noses at every inducement one may offer.

Why is it? I don't pretend to explain. I don't know. Nor does anybody.

Twenty years ago I knew all there was to know about bass fishing. To-day I know absolutely nothing, and readily admit the fact. The Dutchman who said "that so long vat you lifs so more you findts py gosh owd" had never followed a bass river, or he would have been forced to modify his statement.

Your only safe premise as you load an after breakfast pipe preparatory to starting for a day on the river is that it is the unexpected which is going to happen. Indeed, it is generally when the prospects are brightest and the angler's hopes highest that his thud is the loudest as he falls into the slough of disappointment over the blankness of a day which promised so fair.

Once in a long, long time, however, while the same general rule holds good, the method of its application by our finny adversaries is along diametrically opposite lines. Everything may seem to be against you, and yet, as the country papers always say, in speaking of some rural festivity, "a good time is had." One day in particular I recall when our expectation was nil, and our sorrow was turned into joy, and this is how it happened:

The Iron Chancellor, the General Manager and I were engaged in deep consultation upon the hotel porch.

The Iron Chancellor, so called because of his resemblance to the great German, his talents and his tenacity of purpose, is a lawyer of prominence with a shocking fishing wardrobe. The General Manager (ætat. 13) is so known because of his thorough insight into the affairs of the great through line of railroad on which he resides. I am just the General Manager's daddy.

It was a crisp, cool Sabbath morn in late September. The day was exquisite, the air superb, but our hearts were filled with gloom because the morrow was to be our last day on the river, and we had hoped for a propitious one, so that we might put a fitting climax to a most successful fishing trip. But, alas for human hopes, Saturday had honored us with a heavy rain, which, up above the 'York State line, had well nigh attained to the dignity of a cloudburst, and our trusty boatman (have you ever noticed how boatmen and guides are always "trusty"?) had just come up from the boat landing to tell us, with tears in his eyes, that "She was up a foot, still a-raisin', and runnin' moss 'n' leaves." A sorry outlook, this, on a stream where, as a rule, a 2in. rise stops every bass from biting as certainly as would his own decease.

So with heavy hearts we deliberated on the advisability of driving in twelve miles to a small lake and spending the night and our last day there.

Then out spake the Iron Chancellor: "Darned if I do. The last time we were in at the lake I was led by the mosquitoes, the infamous grub and the fiendish coffee into an immutable resolve never to go there again. Let's take a good lunch and a bottle of claret and go up the river anyhow. We'll have the run down the rapids, the beautiful scenery, and, I know, lots of fun, though as far as the fishing is concerned, we might just as well leave our rods and tackle at home."

The prospect of running the rapids in flood and unlimited comestibles proved too much for the General Manager, and he voted "Aye," so there would have been a clear majority against me, even if I had cared to conduct a minority campaign, which I didn't, as the run down ten miles of the most beautiful river in the world appeals to me even more strongly now than when I first took it twenty years ago. Besides which, the Chancellor's remarks about the provender at the lake, were, if anything, too mild.

So it was arranged that Frank should meet us at Van Camp's Rock, ten miles up river, at 7:30 o'clock the next morning with the boat, and, *pro forma*, a can of live bait.

Bright and early we started on Monday morning. Tom and Jerry, the two big upstanding bays, took our buckboard along at a gait which put the ten miles of beautiful river road behind us long before we had wearied of the exquisite outlook across the valley to the mountains just beginning to assume their bright autumnal raiment, and almost before we knew it we were at the trysting place.

Frank was there before us, and shook his head gloomily as we appeared. "Up 2ft., at least," he said, "and runnin' full o 'trash."

We got out the rods, grubs and camera, stowed them snugly aboard the boat, and then dropped down a short rift into a big eddy, a famous place and the scene of many an exciting conflict, in which either the Chancellor or I had been at the butt end of the rod and an angry, leaping bass at the end of the delicate line and leader.

"Long we fished with our nicest art,
But there came not a nibble to gladden the heart,"

so we landed, took a lot of photographs, looked for fossils along the river bank, and then had lunch.

Now, whether it was inspiration or a mere lucid interval I do not know, but with no special theory in my mind I suggested over the first after-luncheon pipe that we

should pole up the rapid and take one try in the little eddy formed by Van Camp's Rock.

Frank looked at me reproachfully for a moment, but, as he is too good natured to mind poling a boat half a mile up a rushing, seething torrent, even if it be in compliance with a mere whim, he simply said "Come along," so forthwith we re-embarked and started up stream.

Just above the rock there is a curious backset or eddy, caused by the rushing river striking against the barrier, which whirls a portion of the water back up the stream, to properly fish which you must anchor your boat down stream and fish up. You lie snugly on the edge of the current and cast your line up into this eddy, which is only about 30ft. wide and about 150ft. long. The back wash carries your bait up stream and then out into the main down-river flow, by which it is whirled back to you again. Naturally, as the bottom of the river is a maze of enormous rocks, one loses a good many hooks, owing to the tackle fouling as your line comes back to you, and the place has a bad name on that account.

We started to anchor "bow and stern" across the eddy. I was tending the stern killick and my rod was lying athwart the boat, with about 10ft. of line and leader waving pendulous in the depths beneath with a beauteous blond "stone cattie" at the end thereof. Before I had made the anchor rope fast I heard click, click, br-r-r-r-r from my reel. Grabbing up the rod, regardless of Frank's muttered "Dast ole eel, I reckon," I reeled off several feet of line in order to give the fish time to turn and swallow the bait, and then struck.

Up from the depths he shot, a good 2ft. above the water, with that bull terrier shake of the head which a bass knows will dislodge a hook as no other ruse will, and then out into the rushing river. With such a current to help him the tussle was a protracted one, but finally I got him back into the eddy, the net was slipped under him and the spring balance applied.

"Three 'n' a half, strong, an' fatter 'n' lard," was Frank's comment.

Then the Iron Chancellor gave a whoop, which the General Manager echoed, as they each struck a good fish, both of which were finally landed—2lbs. to the boy's credit and 3lbs. 2oz. to the Chancellor's.

Then my turn came again, and forthwith there was a fight which would have satisfied even such gluttons as Mulvaney and Learoyd. Without a leap he bored out with resistless force into the surge, and then with a mad rush down stream, down, down, down, until I could see the spindle of the reel glinting through the few remaining turns of 100yds of line. Down went my thumb, but slowly to avoid a sudden stoppage upon the spool of the reel, and I mentally bade farewell to fish and tackle. But the line held, and away off down stream he came up into the air.

What Frank and the Chancellor said when they saw him I will not repeat, lest the Editor's blue pencil should be called into play. Fortunately, as I subsequently found by very diplomatic questioning, the boy was too excited to notice it.

Gradually, but with constantly weakening rushes, I worked his Majesty back up stream, the Chancellor performed most gracefully upon the landing net, and the stout old warrior was mine. The scales said 5lbs. 2oz. The Chancellor said, "I think we should take a drink on him." I said nothing, but silently admired.

To make a long story short, we took that afternoon out of that one eddy seventeen bass, and their actual (not guessed) weights on scales which had been carefully tested were as follows: 1¾, 2, 2⅛, 2⅛, 2¼, 2¾, 2¾, 3, 3⅜, 3⅛, 3½, 4, 4¼, 4¼, 4⅜, 4¾ and 5⅛.

I have never seen or heard of such another catch in Eastern waters. I know the guides around the boat landing said that no catch approximating it had ever brought in there.

But doesn't such sport under such adverse circumstances go to prove the truth of the statements of Shanganoss the wise? WADLEIGH BROOKE.

The Pacific Salmon and the Fly.

IF the stream has not been fished out long since by Podgers, Henry P. Wells, Kipling and the rest of them, I would like to cast a line over that (in more ways than one) much be-damned Pacific Coast salmon.

I drifted out here ten years ago and have fished persistently, in season, *bien entendu*, each succeeding year since my arrival. Before coming here I had fished the Ristigouche, Nepisiguet, Cascapedia and Charlo for salmon, and one season in Nova Scotian waters. My father, who had been a fly-fisherman for over fifty years, and who had to his credit, besides countless years of the best salmon fishing in Scotch, Irish, Canadian and New Brunswick waters, two seasons on the Wefsen, one of the best known Norwegian rivers, preceded me here, and on my arrival we two determined intsanter that we would demolish that hoary-headed fable that the Pacific Coast salmon wouldn't rise to a fly.

Well, we tried for three seasons—at least he did. About the third day out each year, an attentive observer might have noticed a spasmodic groping on my part in the general direction of my coat tails, and if his eyesight were very keen, he might have remarked a brown paper parcel, and if he looked closer he might have seen me extract therefrom a *Crangon vulgaris*—otherwise known as a shrimp. Thereupon, the fishing began to pick up on my side of the river.

Before, however, hauling down my colors as a fly-fisherman, I always deemed it my duty to give these untutored savages the choice of the contents of a dozen fly-books. I wooed them with everything from ouananiche patterns, which we used on the St. Croix in the seventies, up to Wefsen flies as big as hummingbirds and even as big as sparrows, flies indescribably gorgeous, adorned with $5 worth of the golden pheasant top-knots and enough bullion to deck out a drum major—and yet I never once caught a Pacific Coast salmon on a fly, when I was fishing for salmon.

I did, however, just twice in ten years' experience, catch a salmon on a fly, when I was fishing for trout

And thus it was:

In 1894 I was fishing the mill pond in the Garcia River, about 120 miles north of San Francisco, when I saw a large fish come up to the surface and "browse," i. e., he stuck his nose out of water and sucked in some floating object, probably a dead fly. I took off my cast of three small trout flies, and after assuring myself that my leader was strong enough to hold him, I rummaged through my fly-books and mounted a silver-doctor on a No. 4 hook, which I had used seven years before in Nova Scotia. I had him the first cast, and after a weak fight, lasting probably twelve minutes, I landed him. He was a spent fish in very poor condition, and his back and side bore the mark of a spear. I did not weigh him, because my scales were not large enough, but I estimated his weight at 7lbs, and judging by his length, I have no hesitation in saying that in good condition he would have weighed 10.

My second salmon was captured four years ago in the Lagunitas, a beautiful little brook only twenty miles from San Francisco; now, alas, not fished out, but netted out, by miscreants who come there each year before the season opens and seine every pool, taking even the fingerlings.

This salmon made a grand strike, and seized my tail fly, a royal-coachman tied on a No. 10 hook. It was at a place locally known as the Pot Holes, and I was perched on a rock with sheer sides, 6 or 7ft. above the water, with a 4oz. rod, drawn gut leader, no gaff, no net and not a blessed foot of ground in sight where even a congenial idiot would attempt to land a fish. And how he did rip around that pool, and how he sulked, and how he sawed that tapered casting line against sunken rocks and plunged and lunged and struggled for life and liberty! And how I held on, the sweat of mute agony exuding from every pore, for one whole hour and ten minutes to boot! Five times I had him on his side, the crimson stream from his gills painting the dark water; but just so surely as I got him there and started to prospect around the top of that rock, rip-p-p, away he would go again! Finally I saw that he was as tired as I was, so I dropped off into 4ft. of water, reeled him in gently to my chest, drew my hunting knife from its sheath, chopped him across the back, and lifting him by the gills, waded down stream until I found a place where I could get ashore. He weighed next day 9¼lbs. dressed.

Both these fish caught by me were salmon, not steelheads. I have caught hundreds of steelheads with the fly.

My conclusion is: That the Pacific Coast salmon does occasionaly and under exceptional circumstances take the artificial fly, but that they take it so seldom that it is not worth while to fish for them with it.

As to Mr. Wells' suggestion that possibly fishermen have not as yet discovered the right fly, I would mention that in 1890, 1891 and 1892, when my father and myself tried our experiment, we had a collection of upward of 1,500 flies to draw upon, and that this colection included not only all the standard Norway, Scotch, Irish and Canadian salmon patterns, but ouananiche flies, bass flies, Moosehead Lake trout flies, etc., and innumerable fancy flies of every conceivable size, shape, color and previous condition of servitude.

I do not wish to be understood as saying that we tried every fly we possessed, but, first and last, we experimented with several hundreds, including, for both of us were versed in the act of fly-tying, some especially designed confections in feathers, such as any right-minded woman would gladly pay her milliner $30 for. But the Chinook savages wouldn't have them as a gift.

MARIN.

Fishing Up and Down the Potomac.

Angling vs. Malaria.

"EVERY man at forty is a physician or a fool." It may be added "sometimes both." Washington and the entire tide-water region of the Potomac may be classed as malarial. Exactly what this means nobody seems to know. If Koch's theory proves to be correct, though there is an unaccountable lack of enthusiasm among his brother scientists, it is mosquitoes, and we shall at least have the satisfaction of a certainty regarding the vehicle.

Until its demonstration, or acceptance, the pests must be counted as two, instead of a joint stock affair, and we must be content to be bled by the one and poisoned by the other, as our forefathers were. They are at least associates, and the Potomac has plenty of both, and to spare. The mosquitoes are not of the largest, but they are a brave race, hunting in packs, and used a long-distance weapon before the Mauser was thought of.

A party of fishermen were caught one night at a little station some thirty miles down the river, and found no better lodging than the shack of a depot, which gave them shelter. It was too warm to smudge and seal the openings, but they did what was nearly as bad: they retired in slickers and rubber boots, and finally, worn out, slept. A commotion in the night, and the party awoke to find the General sitting bolt upright with his revolver in his hand. Demanding an explanation, he poured forth a voluble dissertation on mosquitoes, their relation to original sin and the doctrine of total depravity, with hopeful prophecies of their ultimate destination and their function in the scheme of eternal punishment. It was not orthodox, either from a religious or scientific standpoint, but it was interesting, both for its originality and its impassioned fervor, as if the speaker felt what and while he spoke, as well as for the quaintness of emphasis and gesture, the latter indeed so reckless at times as to inspire a dread in his audience second only to that occasioned by the invaders. Roused to a sense of their misery, there was no more sleep that night save for one only of the party, who was an immune. We have never been able to determine whether long exposure had inoculated his system or that he was fortified with an antidote that induced D. T. in such luckless buzzers as came his way, or if forty years of wind and weather had not left him pachydermatous and lance-proof; at any rate, he slept that night and laughed at his companions' misfortunes in the morning.

In the older histories of settlements along the river bank, the localities are spoken of as exceedingly healthy, except for a month or two in the late summer and early fall, when agues and fevers were prevalent. The same conditions obtain at the present day, and coincident with the decay of the season's rank growth, in the river and along its borders. Wherever it can be afforded, the dwellers on the river, all the way down, move back into the country for a couple of months, sometimes only three or four miles, which seems to be the limit to which the miasma may be wafted in dangerous volume. Even the cattle are taken back when possible, "to get away from the mosquitoes, which make them poor."

That this is not absolutely necessary is proven by the fact that many who cannot afford this expense remain, and apparently suffer no more than the nomads. But that there is some foundation for the belief seems probable, since it has stood for centuries unshaken, as did the belief that "de sun do move."

Since the reclamation of the Flats in front of the city, malaria is no more common or deadly in the contiguous localities than in any other city in the States. Along the Eastern Branch, between the Arsenal and the Congressional Cemetery, the families in the low-lying districts still suffer, and individuals may be seen with the unmistakable jaundiced ague signs, but these flats, too, are about to be reclaimed, and when this is done malaria will be driven from the borders. That it is not very bad anywhere along the Potomac, is amply proved by the anglers and hunters of Washington, who do with impunity what would be certain to result in great shakes elsewhere. They use, for 100 miles up and down the river, through all the long season and take not the slightest precautions as regards exposure. Out in the morning, when the mists hang low and heavy on the marshes, waiting before daylight for the ducks, or whipping the streams and pools before the morning sun has warmed from the air the swamp taste, that some claim to identify as the fever poison, and late into the night the enthusiasts stay, eager for one more shot or bite, with never a thought of the danger, which cannot be serious, for if pain attended the risk it would be avoided. A chill is nearly sure to follow a cold caught in the open, by the sedentary, as after a drenching, but the system seems generally able to repel the trouble, and a coldless trip is rarely followed by any malarial symptoms. The fact is that that man is far more likely to be sick who is disappointed of his holiday.

But it is also true that nearly all the anglers here do carry certain specifics which they firmly believe the source of immunity from ague attacks. It may be only a buckeye or a rabbit's foot, but it is generally quinine in some form or combination.

One has a little bottle of black pills of quinine, strychnine and iron, and he thinks one every night he's out will make him live forever. Another substitutes arsenic. Some use phenacetin and quinine, some valerianate of quinine, and many the ordinary sulphate pills or capsules; but the very best—that's ours—as a preventive or cure, is muriate of quinine and salol. Four-grain capsules, with two grains of each, make the standard dose, and its friends stand for it as a specific for any trouble, from congestion or grip to neuralgia. The muriate seems to leave less of the buzzing effect and deafness than the sulphate, and according to the absurd theory of the physician who recommended it to us, was much purer than the commercial sulphate, for the reason that in reducing the cinchona bark with sulphuric acid it might be adulterated with the cheaper willow bark, and salicylic acid precipitated with the sulphate, but that muriatic acid would not resolve the active principle in the willow, and consequently the muriate would be found to be pure. Just why a reliable firm would not furnish pure sulphate, which costs next to nothing, as readily as the muriate, or why the muriate might not be as well adulterated after precipitation by a dishonest dealer, is not quite clear, but the muriate was recommended, and is unanimously indorsed by those who use it, as, of course, are the other remedies.

My chum, fifteen years ago, moved to a house on the marsh, about three miles below Washington, for the fishing, and has for every season since that time put in two or three hours each day, and sometimes far into the night, with his rod, besides sleeping within two rods of the water's edge, and suffers no ill consequences from the exposure, unless he forgets the muriate and salol, which is on an average of once a year, and at that he has never lost a day's work that may be charged to malaria, since he found this remedy.

It is not meant to convey the impression that quinine forms a part of the regular diet of Washington anglers, but that, as nearly everywhere in the United States, it is a remedy almost as standard and popular as the *spir. fru.* with which it is usually taken. When one recalls that half the deaths in this great world are credited to malaria; that we use one-third of the quinine of the world, and that last year we imported above a billion and a half grains, it will be seen that our fishermen only get in line with the rest of the country when they pin their faith as a chill cure to the bitter bark. HENRY TALBOTT.

Carp Cookery.

Editor Forest and Stream:

Mr. Talbott is all right in his defense of the carp. The carp is all right if properly cooked. The way to cook him all right is told by Isaak Walton. Give heed:

"But, first, I will tell you how to make this carp that is so curious to be caught, so curious a dish of meat, and will make him worth all your labor and patience; and though it is not without some trouble and charges, yet it will recompense both.

"Take a carp, alive if possible, scour him, and rub him clean with water and salt, but scale him not; then open him, and put him, with his blood and his liver, which you must save when you open him, into a small pot or kettle; then take sweet marjoram, thyme and parsley, of each half a handful, a sprig of rosmary, and another of savory, bind them into two or three small bundles, and put them to your carp, with four or five whole onions, twenty pickled oysters, and three anchovies. Then pour upon your carp as much claret wine as will only cover him, and season your claret well with salt, cloves and mace, and the rinds of oranges and lemons; that done, cover your pot and set it on a quick fire, till it be sufficiently boiled; then take out the carp, and lay it with the broth in the dish, and pour upon it a quarter of a pound of the best fresh butter, melted and beaten with half a dozen spoonfuls of the broth, the yolks of two or three eggs, and some of the herbs shred; garnish your dish with lemons, and so serve it up, and much good do you." POLYCARP.

The Rangeley Lake Screen.

BOSTON, Sept. 16.—The newly organized Rangeley Angling Association gave a dinner in honor of the Maine Fish and Game Commissioners, at Rangeley, on Monday. Messrs. Carleton, Stanley and Oak were present. The primary object of the meeting seems to have been a hearing before the Commissioners in regard to screening the outlet of Rangeley Lake, to prevent the fish from going down into the other lakes of the chain. It will be remembered that Rangeley Lake is the uppermost of the five larger lakes of the Rangeley system. For a long time most of the restocking, with trout and salmon, done by the State, through the Commissioners, has been in Rangeley Lake. The Commmissioners have repeatedly stated that they put the fry into Rangeley Lake on the theory that the mature fish would distribute themselves in the lakes below. Under the same theory there is a law of the State requiring fishways at every dam. The law of fish migration, so far as understood, is that the parent fish seek the uppermost waters to breed, and that the young go down as they grow. Rangeley Lake interests have for a long time been jealous because of the fact, or possibility, that the lakes below were getting some of their fish; that is, fish hatched by their individual association as put in by the State. Hence comes the petition to the Commmissioners for the screen and the hearing. Report says: "There being no opposition, the Commissioners grant the request of the petitioners."

"There being no opposition!" A gentleman interested in the lakes below says that he knew nothing about the hearing, and he is ready to guarantee that others knew nothing about it. The president of the dinner occasion, after the Commisioners had reported their decision, said that $1,000 ought to be raised then and there to pay for that screen; and about $500 was actually raised.

SPECIAL.

The First California Salmon Caught in the St. Lawrence River.

CAPE VINCENT, N. Y., Sept. 11.—*Editor Forest and Stream:* The first full-grown California salmon ever known to have been taken in the upper St. Lawrence was caught by Mr. Arthur C. Gardner, of Cape Vincent, N. Y., yesterday afternoon, Sept. 10. The fish was caught trolling with a common pickerel spoon bait, not far from the freight house of the R., W. & O. R. R. at Cape Vincent village. It weighed 10¼lbs., and measured 27in. in length and 16⅝in. around the body. Its stomach was full, containing a fish of the shad family 8in. long, and two minnows, which were too much decomposed to be identified. The fish was in prime condition and appeared to be in perfect health. It was a very handsome specimen.

The United States Fish Commission has planted California salmon in very considerable numbers along the Atlantic coast in the vicinity of the mouth of the St. Lawrence, and has also planted several millions in Lake Ontario. It is consequently a question, and a very interesting one, whether the individual just caught came up the St. Lawrence from the ocean or came down from Lake Ontario.

It is an established fact that the stomach of the California salmon begins to shrink when the fish leaves the salt water on its way up the fresh-water rivers to deposit its spawn, and soon becomes incapable of receiving food. No California salmon that had been to the ocean was ever found 300 miles above tide water, as this fish was, with any food of any size in its stomach, or with its stomach in normal condition. The fact then that the stomach of this fish of Mr. Gardner's was in normal condition and full of food seems to indicate that it came from Lake Ontario and not from the ocean.

The village of Cape Vincent is situated at the head of the Thousand Islands of the St. Lawrence, where the waters of Lake Ontario, narrowing at this point, form the St. Lawrence River.

The scientific name of the California salmon is *Oncorhinchus tshawytscha.* LIVINGSTON STONE.

Carp in California.

Editor Forest and Stream:

Under the above heading is a note in the Sept. 9 issue of FOREST AND STREAM that does great injustice to the California fishery authorities and conveys an entirely erroneous idea regarding the carp. Your correspondent says: "The most successful effort at propagation yet noticeable in the State has been the supplying of the Sacramento River with carp and catfish. * * * The carp are good for hog feed and fertilization, but other fish have other various virtues that most people would prefer."

The efforts of the California Fish Commission to increase the fishery resources of the State by the introduction of non-native species have not been equaled by those of any other commission. Why should your correspondent mention only the carp and the catfish as the principal acclimatized fishes, ignoring the phenomenal success which has attended the introduction of the black basses, various trouts, the striped bass, the shad and other fishes?

With regard to the food value of the carp, there are few fish that are not "good for hog feed"; but the implication that carp are fit only for such purpose is wholly imaginary. As is well known, the carp is one of the most extensively eaten fishes in the United States, the annual sales being upward of 5,000,000lbs. In California the carp is not in much favor as a food fish, but the catch for market in the past decade has been over 1,000,000lbs., with a value to the fishermen of more than $20,000. The sales in San Francisco alone during that period were over 500,000lbs., according to official reports. Perhaps the chief value of the carp in California is that it is the principal, and at times the exclusive food of the introduced striped bass, which is as abundant in the Sacremento basin as in any locality on the Atlantic coast.

S. M. H.

WASHINGTON, D. C.

Mr. F. L. Wright sends us from Geneva, O., a photograph showing the result of one day's hunt in Hartsgrove, O., by which they shot forty squirrels.

The Old Home Haunts.

THERE'S a sound that rings in my ears to-day,
That echoes in vague refrain,
The ripple of water o'er smooth washed clay
Where the wall-eyed pike and the black bass play,
That makes me yearn, in a quiet way,
For my old fly-rod again.

Back to the old home haunts again,
Back where the clear lake lies;
Back through the woods
Where the blackbird broods,
Back to my rod and flies.

I'm longing to paddle the boat to-day,
Throught water-logged grass and reeds;
Where the muskrat swims and the cat-tails sway.
Where the air is cool and the mist is gray;
Where ripples dance in the same old way,
Under the tangled weeds.

Back on the old oak log again,
Back by the crystal brook;
Back to the bait
And the silent wait,
Back to my line and hook.

I wish I could wade by the water's edge,
Where the fallen leaves drift by;
Just to see, in the shadow of the ledge,
How dark forms glide, like a woodman's wedge,
Through driftwood piles and the coarse marsh sedge,
And to hear the bittern cry.

Back where the tadpoles shift and sink,
Back where the bullfrogs sob;
Back just to float
In the leaky boat,
Back to my dripping bob.

Oh, it's just like this on each misty day,
It's always the same old pain
That struggles and pulls in the same old way
To carry me off for a little stay
By the waters' edge, in sticky clay,
To fish in the falling rain.

Back to my long black rubber boots,
Back to the old patched coat;
Back to my rod
And the breath of God—
Home—and my leaky boat.

—F. Colburn Clarke in Scribner's.

Tarpon and Shark.

J. Morris and Loren Hill (guide) had a peculiar experience with a tarpon and an immense shark near Punta Gorda. While they were playing a very large tarpon a shark came up and bit a half-moon weighing about 10lbs. out of the tarpon's belly. This killed the tarpon, but before it could be gaffed and pulled in the shark took out another half-moon a size larger. As they were hauling the tarpon aboard the shark bit off the tail, equaling one-third the length and about one-fourth the weight of the fish. The part that was left weighed 164lbs. They beat the shark over the head with the oars. The fish would have been a record breaker, and would have weighed about 220lbs. The scales were preserved and measured 3½in. by 4½in.—Savannah News.

Parasites in Fish.

NEW YORK.—*Editor Forest and Stream:* I have fished more or less summers in New Hampshire lakes, and have found a large per cent. of black bass taken weighing 1lb. or more infested by tape worms. It has spoiled my appetite for black bass, though some people eat the afflicted fish just the same. I should be glad to know if this is something common to the fish or peculiar to the locality; if such fish are a safe article of food, and if there is not danger in drinking the water of the lakes where they live.

R. D. M.

New Hampshire's Dry Brooks.

CHARLESTOWN, N. H.—Sept. 12.—Lovely autumn weather up here, but the country completely "dried up." The trout have suffered severely. There will be few left in some of the brooks.

VON W.

NOTICE.

THE New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

A 6ft. alligator crawled out of the little lake at the south end of Central Park, New York, Thursday, and badly frightened the women and children in the vicinity, some of whom imagined that it was a sea serpent. They were reassured, however, by one of the attendants, who explained that it was only a pet alligator, which somebody had gotten tired of and had surreptitiously slipped into the lake as the best means of getting rid of it. Every effort to catch the 'gator when it comes out of the lake for a promenade has proved a failure, and the Central Park authorities now propose to go 'fishing for it. Giving inconvenient and undesirable "pets" to city parks is a favorite method of disposing of animals that have become "elephants" on the hands of the owners. But the keepers and guardians of municipal menageries have long since cut their eye teeth with regard to such matters and have learned to beware these Grecks bringing gifts. How the owner of the New York 'gator managed to smuggle his 6ft. pet into Central Park lake without detection it is difficult to understand, unless he paid some of the attendants handsomely for the privilege.—Baltimore Sun.

A former Sultan—so runs the story—offered a golden ball for lying. Many lied to him, but the Sultan replied that he could himself lie better. Finally an aged man from Angora appeared before him with a large jar on his shoulders. "Your father," he said, "borrowed a jar like this full of gold from my father, and said that you would repay the gold to his son." "Impossible," said the Sultan. "If the story be true," replied the pilgrim, "pay your father's debt; if impossible, I have won the golden ball." The Sultan at once awarded him the prize.—London Truth.

Manitoba Field Trials Club's Trials

As has been the case at nearly every trial held at Morris, Man., birds were plentiful, although there was much less available land, the encroachments or agriculture resulting in larger and larger areas of wheat field where once was open prairie and good chicken ground.

Handlers and dogs had ample time to rest and prepare for the contest, there bing a good interval of time since the trials at La Salle were concluded.

The dogs were given good opportunities for competition, birds being plentiful enough for that purpose. The grass was very heavy in places, which added to the labor of the dog's work and also made a difficulty for the judges, as in the heavy grass the dogs were hard to see; but the sections where the cover was less heavy were kept to as much as possible.

Among the visitors was Mr. James L. Breese, of New York, who years ago was an active member of the Eastern Field Trials Club. There were also Major J. M. Taylor, of New York; C. E. Buckle, of Charlottesville, Va.; S. C. Bradley, of Greenfield Hill, Conn.; J. M. Avent and D. E. Rose, of Tennessee; A. S. Code, A. C. Reed, E. Hamber, W. C. Lee, J. Lemon and W. C. Denison, of Winnipeg; J. Wootten and W. C. Ellis of Manitou, Man.; E. H. White, W. S. Cottingham and Miss Blanche Cottingham, of Brandon, Man., and Mr. Flynn, of San Francisco.

The judging was done by Mr. W. W. Titus, of West Point, Miss., who has had much experience in the matters of field trials, and he gave gratifying satisfaction to the competitors.

The Derby.

There was a good support in the way of entries, and consequently there was a good trial. The Derby had twelve starters, the All-Age had twenty-one. The quality of the dogs was also of a good grade.

The Charlottesville F. T. Kennels' l. and w. pointer dog Mahdi (Tippoo—Queen of Kent), C. E. Buckle, handler, with E. H. White's b., w. and ticked English setter bitch Manitoba Prairie Bird (Brighton Monk—Manitoba Belle), Wm. Pickering, handler.

John Wootton's b. and w. English setter dog Star Bondhu (Dick Bondhu II.—Bonnie Lit), owner, handler, with D. E. Rose's (agt.) l. and w. pointer dog Brant (Von Gull—Baby Ruth), D. E. Rose, handler.

W. Gould Brokaw's l. and w. pointer dog Fairview Tom (Sir Walter— Van's Pride), R. Storey, handler, with the Charlottesville F. T. Kennels' l. and w. pointer dog Dervish (Tippoo—Queen of Kent), C. E. Buckle, handler.

W. Gould Brokaw's b. and w. English setter bitch Misfortune (———Queen), R. Storey, handler, with Avent & Duryea's b., w. and t. English setter bitch Sioux (Count Gladstone IV.—Hester Prynne), J. M. Avent, handler.

Avent & Duryea's b., w. and t. English setter bitch Ute (Count Gladstone IV.—Hester Prynne), J. M. Avent, handler, with D. E. Rose's (agt) b., w. and t. English setter bitch Minnie W. (Dude B.—Miss Bessie), D. E. Rose, handler.

D. E. Rose's (agt.) b., w. and t. English setter Bona (Tony Boy—Christina), D. E. Rose, handler, with Avent & Duryea's b., w. and t. English setter dog Victor (Val Lit—Maid of the Moon), J. M. Avent, handler.

First Round.

Mahdi and Manitoba Prairie Bird began the competition, commencing at 7:35 in the morning. The range of both was irregular and lacking in methodical judgment. They worked well to the gun, however, and both had good speed. Bird first made a point and nothing could be found to it. Sent on, she made a finished piece of work on a covey, locating and pointing it steadily and behaving well to wing. Mahdi made a bad showing on birds, first flushing a covey and then several singles, with an inclination toward unsteadiness.

Star Bondhu and Brant came next. They were cast off at 8:16. Each flushed a part of a bevy as a starter. They were narrow rangers and showed poor judgment in beating out their ground. Brant was steadying to a point

when the chicken flushed wild. Bondhu made a good point, but marred it with a chase when the bird was flushed, and her next effort was a false point. The heat was rather inferior in every respect.

Fairview Tom and Dervish were cast off at 8:52. Tom made a flush which was his worst error of the heat. Dervish made a very inferior competition, ranging poorly, flushing and being unsteady, though he did make one point. Tom ranged wide and at good speed, covering his ground well and doing good bird work. He made a good point on a covey, and afterward pointed a number of single birds well; always reliable to wing.

Misfortune and Sioux were cast off at 9:43 and ran about forty minutes. They were unfortunate in not finding any birds, though they worked diligently, ranging fast and wide, and with good judgment.

Ute and Minnie W. began at 10:29. Minnie made two flushes and a point and was reliable to wing. Ute refused to back and stole a point. Ute ranged fast and wide, while that of Minnie was very irregular.

Bona and Forest Hall Victor were started after lunch, at 3:47. Bona's work was very faulty. She flushed three times and false pointed three times. Victor made a good point, and displayed the better ability in locating, though in this particular his work was far from skillful. They ranged well and at good speed.

Second Round.

Fairview Tom and Sioux were cast off at 4:27. They were run about thirty-eight minutes. Sioux pointed and Tom backed for a moment, then moved on and no bird was found to the point. Next each made a flush and was steady to wing. Sioux next made a good find on a bevy, which he pointed well. Both ranged well in the beginning of the heat, but they narrowed down gradually to the fin-

Ute and Misfortune were cast off at 5:09. Misfortune soon made two good points; Ute backed to order. Misfortune next made a point on a single, followed by a point on a covey. Ute made a flush and a point, had the more speed, but there was not much difference in the area of ground covered, though Ute had the poorer judgment.

Minnie and Manitoba Prairie Bird were cast off at 5:40. Out of the many opportunities, Bird made one point and Minnie flushed repeatedly and inexcusably.

Third Round.

Sioux and Forest Hall Victor had good opportunities, but each started with a flush, and Victor made two chases. Sioux next made a false point. Working on further, Victor located and pointed the birds a few yards to one side, and birds flushed near to both dogs. The heat was lacking in steadiness to wing and good point work when there were good opportunities for it.

Misfortune and Bona were next, and the latter opened her competition with a flush and chase, and then she made two good points and was steady. Both made a point next and were steady. Neither worked up to their previous performance, going slow and showing a disposition to potter.

The judge announced the winners as follows: First, Sioux; second, Forest Hall Victor; third, Bona.

All-Age Stake.

Del Monte Kennels' o. and w. English setter bitch Minie's Girl (Antonio—Minnie T.), S. C. Bradley, handler, with Avent & Duryea's b., w. and t. English setter dog Prime Minister (Count Gladstone IV.—Hester Pryme), J. M. Avent, handler.

D. E. Rose's (agt.) l. and w. pointer dog Lad of Jingo (Jingo—Dot's Pearl), D. E. Rose, handler, with Del Monte Kennels' b., w. and t. English setter dog Sam T. (Luke Roy—Bettie B.).

G. O. Smith's b., w. and t. English setter dog D. Antonio (Dash Antonio—Imagination), Wm. Pickering, handler, with Thomas Johnson's b., w. and t. Engilsh setter bitch Nellie (Ponto—Bess), A. C. Reid, handler.

The Charlottesville Field Trial Kennels' l. and w. pointer bitch Nana (Rip Rap—Toxic), C. E. Buckle, handler, with Hamber & Code's b. and w. pointer dog Bang III. (Rector—Dinah), E. Hamber, handler.

The Charlottesville Field Trial Kennels' b. and w. pointer bitch Ranee (Rip Rap—Toxic), C. E. Buckle, handler, with Del Monte Kennels' o. and w. English setter dog Gilt Edge (Count Gladstone IV.—Lillian Russell), S. C. Bradley, handler.

Avent & Duryea's b., w. and t. English setter dog Topsy's Ranger (Roderigo—Topsy Avent), J. M. Avent, handler, with W. F. Ellis' b. and w. bitch Silver Lace (Val Lit—Cam Sing), owner, handler.

Thomas Johnson's b., w. and ticked pointer bitch Jubilee Princess (Rector—Dinah), A. C. Reid, handler, with W. F. Ellis' b. b. English setter bitch Maid of the Morn (Val Lit—Cam Sing), owner, handler.

Winnipeg Kennels' l. and w. English setter dog Duke's Rush (Duke of Manitoba—Cam Sing), owner, handler, with D. E. Rose's (agt.) l. and w. pointer dog Alex. C. (Glenbeigh—Saddlebags), D. E. Rose, handler.

Avent & Duryea's b., w. and t. English setter dog Roysterer (Count Gladstone IV.—Hester Prynne), J. M. Avent, handler, with D. E. Rose's (agt.) b., w. and t. English setter bitch Pearl R. (San Gross—Donnasky), D. E. Rose, handler.

Avent & Duryea's b., w. and t. English setter bitch Rachel (Count Gladstone IV.—Hester Prynne), J. M. Avent, handler, with John Wootton's b. and w. English setter bitch Bonnie Lit (Orlando—Lady Lit), owner, handler.

D. E. Rose's (agt.) b., w. and t. English setter dog Lady's Count Gladstone (Count Gladstone IV.—Dan's Lady), D. E. Rose, handler., a bye.

Prime Minister and Minnie's Girl made a very good competition. Ranging, pointing and speed were very good. They worked well to the gun and maintained their work from start to finish. They were cast off at 8 o'clock, and were run 45 minutes. The race between the two was very even, though Minister succeeded in finding the more coveys, and his point work was a bit more precise than was that of his competitor. The work of Girl was also of a very high order, and the brace made a most favorable impression on all who saw their work.

Lad of Jingo and Sam T. were cast off next; time 8:47. Sam started with a flush and seemed to be careless. Next they did some inaccurate work on birds. Sent on, Sam pointed a bevy and held his point most insistently after the birds had flown. Jingo was the better ranger. Sam's range was not conducted with the best of judgment.

D. Antonio and Nellie were diligent workers and seemed to have a pleasing amount of bird sense. While their speed and range were useful and well applied, they were not so dashing as were some of their competitors. Their performance on birds was good, both pointing and backing well, though D Antonio marred his work in one instance by flushing and chasing. Both worked pleasingly to the gun as a whole.

Nana and Bang III. ran a very superior heat as a whole, the former however, excelling in every particular, not only in respect to his competitor, but in some respects superior to the others in the stake. The heat lasted about forty-five minutes, and it was well sustained throughout. The work of Bang was of a high order. He ranged wide and fast, beat out his ground with judgment, and his work on birds had a precision and finish which were admirable. Nana in these respects was decidedly inferior. Her ranging was irregular and was conducted with far less judgment than was that of her competitor.

Ranee and Gilt Edge were the first brace after lunch, and they were cast off about 3 o'clock. The latter ranged well and was independent in her work. Ranee took matters easy at times and at times went out well. Each made a good point, and a flush was an error made by Ranee. Lace was very unsteady and unreliable. She flushed and chased on opportunity, and showed an intention to be unsteady, so far as actions could do so. Ranger's work on birds was commendably good. He showed that he was good at either finding or work on single birds. He did not finish strong in the way of ranging, while at the close Lace showed a disposition to work to the gun.

Jubilee Princess and Maid of the Morn made a good showing on birds. Maid found two coveys and did some work on single birds. Princess made a good exhibition on single birds. Both worked well to the gun.

Alex. C. and Duke's Rush were cast off at 5:45. The former was decidedly unsteady to wing, flushing and chasing repeatedly. Rush showed good purpose in working to the gun, though he was not so sharply accurate as were some of his competitors. Alex. made one point in the heat. They were ordered up at 6:49.

Royster and Paul R. were started at 6:44. The former took his ground with the better judgment and succeeded in finding the most birds. Both had good range and speed. Royster found a bevy. Each scored on singles, Royster the more. He was not steady at all times.

Sept. 8.—A rather late start was made, though the weather was favorable for the work. After a ride of a quarter of an hour from town the dogs were cast off.

Lady Rachel and Bonnie Lit were turned loose at 7:44. Lady made three good points and two flushes, while Lit made two points and two flushes. Lady was the better in pace, range and judgment in working her ground. Lit's work was mixed—good and bad.

Lady's Count Gladstone ran alone, he having been started while the brace mentioned above was running. His performance was considered sufficiently meritorious to warrant his retention in the second series.

Second Round.

Nine dogs were retained in this series.

Bang II. and Prime Minister were given a thorough trying out in an hour's hard run. The heat began at 8:01. In a second trial there is always a keen interest to observe whether a dog who has performed superlatively will continue his good work. A good performance may be a fluke or it may be a characteristic. Bang demonstrated that he is a class performer and maintained his good work of his first heat. His speed, judgment and range were very fine. He completely overshadowed Minister in the competition. The latter was near a bevy, which flushed, and the inference was that he flushed it. He made a false point, flushed a bevy up wind and made a good point on a bevy. Bang made a point on two coveys, and made two flushes on singles. Each was prompt and reliable on back.

Minnie's Girl and Royster were started at 9:42. The day was quite hot and the work was most distressing to the dogs at this hour. At the end of fifty-five minutes the heat ended and the work was suspended till later in the day—some time after 4 o'clock. Minnie made a point, nothing found; Royster backed well. The latter next made a false point and nothing was found. Both ranged wide and at good speed, seeking diligently.

Lady's Count Gladstone and Maid of the Morn were started at 4:20. Count was first to find. He found and pointed a bevy after taking a long cast, and was well backed. He next pointed a bevy which Morn had pointed and left, the latter chasing beyond control. The performance of Count was rather sound on the whole. Morn made a very poor showing.

Lady Rachel and Ranee were cast off at 5:02. They made a very poor showing in the way of ranging, neither displaying the judgment of the good seeker, though in this part of the work Ranee was much the better. Lady made a weak point and the birds were flushed by her handler after she had moved on.

Bonnie Lit had a trial alone. She made a flush and stopped to it in an indecisive manner, and her handler flushed some birds ahead of her. Her range and speed were very ordinary.

Third Round.

Minnie's Girl and Lady's Count Gladstone were cast off for the deciding heat at the evening hour after the sun had set. Girl made four good points on chickens. In the meantime, Bang was away with his handler in another direction, and though he was ranging well and fast, he found no birds. He sustained his effort to the end, while Girl fell off somewhat in range and speed.

The judge announced the winners as follows: First, Bang III.; second, Prime Minister; third, Minnie's Girl.

Notes.

The field trial men of Manitoba will make an effort to include Brandon sportsmen in the field trial interests, there being quite a number in that town and vicinity. It will be remembered that field trials were held there a few years ago. It is more of a foxhound fancy than of setters and pointers, though there are many there who are strong supporters of the dog and gun. To encourage the foxhound fancy, prizes will be offered in connection with the chicken trials, for contests of hounds in the hunting of wolves.

There was an abundance of chickens this year, the short season—Oct. 15 to Dec. 1—giving them ample opportunity to multiply and grow strong before the open season begins. The laws are better observed in game protection and there is a better public sentiment to support them in Manitoba than there is in the States. The rapid settlement of the land and the large areas taken up for agriculture will in time make a poor habitat for the chicken, and if he is not killed he will have to move on to places where he can better make a living.

The trainers will make a movement toward the States soon—that is to say, such of them as live therein will do so, and the next efforts will be directed toward preparing for the trials on quails, which are now next in order. Good work will be necessary to get the young dogs in proper shape for those trials, and unless the season is favorable it will not be possible at all.

There were not so many spectators at the trials as in some of the years past, though as a matter of course there must be years when the number will be less than the number which was present in some other years. As for the reasons of it, some would claim this thing, some that thing; but the reason is that it happened so.

Western Canada Kennel Club's Trials.

La Salle, Manitoba.—The weather was of the kind which is of the best for the work of dogs, though in the midday hours, from 11 o'clock to 3 o'clock or thereabouts in the afternoon, there was more or less of the heat, not uncomfortable, which is peculiar to the whole prairie region at this season of the year, and in these hours the chickens lie by and are much more difficult to find. Still birds were amply pletniful, and as to numbers were all that could be desired.

As is known, these trials are amateur, the conditions restricting entries to club members, and no professionals are allowed to handle in these trials. There were eight starters in the All-Age Stake and seven in the Derby.

There were present Messrs. F. McArthur, E. H. White, H. Rolston, J. Lemon, S. A. Ritchie, H. G. Spurgeon, A. Gale, E. Hamber, P. Cooper, W. Pickering, D. E. Rose, E. Colier, A. S. Code, F. W. Scott and others.

Mr. E. Hamber acted as judge in the Derby, while the office of judge was filled by Mr. D. E. Rose in respect to the All-Age Stake.

The Derby.

The drawing was as follows; all were handled by owners:

E. H. White's b. and w. ticked English setter bitch Manitoba Prairie Bird (Brighton Monk—Manitoba Belle), with F. W. Scott's b. and w. pointer bitch Zulika (Sport—Tannie).

H. Cooper's l. and w. pointer bitch Modern Jess (——Lulu), with J. Lemon's b. and w. pointer dog Piccolo (Ned—Belle).

Fred McArthur's b. and w. setter bitch Nellie (Larry—Angela), with C. C. Bradley's l. and w. pointer bitch Princess Bonnie (Shot—Tannie).

A. Gale's l. and w. pointer dog Tobe.

Zulika and Manitoba Prairie Bird began the trials at at 7:30. The former behaved very badly on game, first making a flush and afterward refusing to back Bird's good point, going by and stealing the point instead. Next Zulika made a flush when there was a good opportunity to point. The heat ended at the end of the half hour, Bird the better in every respect.

Morden Jess and Piccolo began their competition at 8:02 and were down thirty minutes. Piccolo made a good point and find, but in drawing closer she flushed. Jess disdained backing and was unsteady when the bird flushed. Piccolo made a good point next and Jess made some of a rather indecisive sort on birds. Jess had the better range, though that of Piccolo was not bad. There were abundant opportunities offered during the heat.

Nellie and Princess Bonnie were run thirty minutes and they made a very commonplace showing.

Tobe was started at 9:07. He flushed at such opportunities as he had and chased once. He ranged well, but his bird work was very poor.

All the dogs were taken in again except one.

Second Round.

Manitoba Prairie Bird and Piccolo started with less vim. The latter flushed; the former false pointed and was backed. Bird made a good find and point on a covey and behaved very nicely to wing. In range and speed neither worked up to the quality of their first heat.

Morden Jess and Zulika came next, the latter making a very poor showing. Jess made a good point on a single. She was far away the better of the two in the competition.

Tobe and Nellie made a very poor showing in the few minutes in which they ran, going very slow and close, without finding.

Third Round.

Manitoba Prairie Bird and Jess were started at 10:39. Bird did some good, steady work on birds, while her competitor was running with less merit than in the former heats.

The judge announced the winners as follows; First, Manitoba Prairie Bird; second, Morden Jess; third, Piccolo; owned respectively by Messrs. E. H. White, H. Cooper and J. Lemon.

All-Age Stake.

The entries were:

J. R. Waghorn's b. and w. pointer dog Go Bang, H. G. Spurgeon, handler, with Hamber and Code's b. and w. pointer dog MacHamber (Croxteth's Ned—Mamie), E. Hamber, handler.

C. W. Graham's b., w. and t. English setter dog Gladiator II. (Gladstone's Boy—Queen Novice), owner, handler, with A. Gale's l. and w. pointer dog Swift, owner, handler.

Hamber and Code's b. and w. pointer dog Bang III. (Rector—Dinah), E. Hamber, handler, with A. Gale's b. setter bitch Blackie, owner, handler.

. Lemon's b. and w. pointer dog Sport (Buster—Belle), owner, handler, with A. Gale's l. and w. pointer dog Prince Ightfield (King—Frankie Paul), owner, handler.

Go Bang and Mac Hamber ran till 2:31. Bang pointed

a single and next a covey, an outlying bird of which was pointed by Mac. Both dogs covered a great deal of ground at high speed, and were steady in their bird work. Their competition was of a good class.

Gladiator II. and Swift ran twenty minutes and were ordered up, their work being of a very low grade.

Bang III. and Blackie.—The former fairly smothered the latter in the quality and work of their heat. He found and pointed a bevy well, and was far superior in range, speed and good judgment in seeking.

Prince Ightfield and Sport.—The former was romping instead of hunting and made two flushes in his careless running about. Sport had a very sore foot on which was a cloth boot, and though he worked well, it was not up to the standard which he generally shows. He pointed a bevy and made two good points on single birds, and he sought diligently as well, on the whole making a very good showing.

Second Round.

There were five dogs in this series, and they were run in order as follows:

Bang III. and Go Bang.—The former fell off materially in the quality of his bird work, though he kept up his speed and range. He pointed a covey and was unsteady to wing; next he refused to back Bang's point on a covey, stealing the point when he should have backed; and next he flushed several birds and was unsteady to wing. Bang in the meantime made some excellent work on single birds, pointing them with admirable exactness and success.

Mac Hamber and Sport.—The latter succeeded in roading to a covey skillfully while his competitor drew away in another direction; next he flushed a single excusably. Mac next found and pointed a covey, and Sport made two points and two flushes. Mac was much the better on the work done.

Blackie was given a five minutes run, but showing that she had no chance to win, she was ordered up.

Third Round.

Mac Hamber and Bang III. were given a ten-minute spin, but there was nothing found. Both ranged well The heat and trials ended at 5:42.

The judge announced the winners as follows: First, Bang III.; second, Mac Hamber; equal third, Go Bang and Sport. The first two are owned by Messrs. Hamber and Code, J. R. Mayhew owns Bang, and Sport is owned by Mr. J. Lemon.

Notes.

To the winner of the Derby there was an elegant extra prize—a silver cup—donated by Mr. John Wootten, who has been enthusiastic in field trial matters these many years. Mr. W. H. White, of Brandon, Man., was the winner, with his good performer Manitoba Prairie Bird. He was the recipient of many hearty congrautlations. Mr. Code, of Winnipeg, was the fortunate winner of the All-Age special, a collar called the chain of evidence, the links of which are silver and so made that the winner of each year may have his name inscribed thereon, the winner now holding it but one year unless he can win it again.

There was a lot of good fellowship at these trials, and they deserve the most liberal support from sportsmen.

Canadian Kennel Club.

Secretary Donovan's annual report, read at the meeting Sept. 6, shows the club to be in a flourishing condition, with increased membership and full of influence. The officers for the new year are: Patron, Mr. William Hendry; Hon. President, Mr. Richard Gibson; President, Mr. John G. Kent, Toronto; First Vice-President, Dr. J. S. Niven, London. Vice-Presidents, Mr. F. T. Miller, Trenton, Ont.; Mr. Jos. A. Laurin, Montreal; Mr. E. R. Colier, Winnipeg; Rev. J. W. Flinton, Victoria, B. C. Secretary-Treasurer, H. B. Donovan, Toronto. Executive Committee, Dr. Wesley Mills, Montreal; P. G. Keyes, Ottawa; H. P. Thomas, Belleville; Geo. H. Gooderham, W. P. Fraser, A. A. Macdonald, Dr. A. Boultbee, F. W. Jacobi, Toronto; James Bertram, Dundas; C. W. Ford, Kingston; Rev. Thos. Geoghegan, Hamilton; Dr. H. Wallwin, Barrie. Delegate from Gore Kennel Club, Hamilton, F. C. Mills.

Eastern Field Trials Club.

Greenfield Hill, Conn., May 1.—The Eastern Field Trials Club takes pleasure in announcing the twenty-first annual field trials meeting, to be held at the club grounds, Newton, N. C.

Beginning with the Members' Stake on November 17, 1899, followed by the Derby, All-Age and Subscription stakes, open to the world.

The club will use every available endeavor to leave upon the the minds of all in attendance a pleasant remembrance of this meeting which the Club desires to make one of the most interesting outings of the season.

Simon C. Bradley, Sec'y and Treas.

Points and Flushes.

The Eastern Field Trials Club announces in our business columns its twenty-first annual field trials, to be held at Newton, N. C., commencing Friday, Nov. 17, with the Members' Stake, and with the open trials on Monday, Nov. 20. There are four stakes—the Members' Stake, the Derby, the All Age Setter and Pointer Stake and the Eastern Subscription Stake. The judges are Messrs. Arthur Merriman, Memphis; Theo Sturges, New York, and N. Wallace, Farmington, Conn. Entries of All Age Stake close Oct. 1.

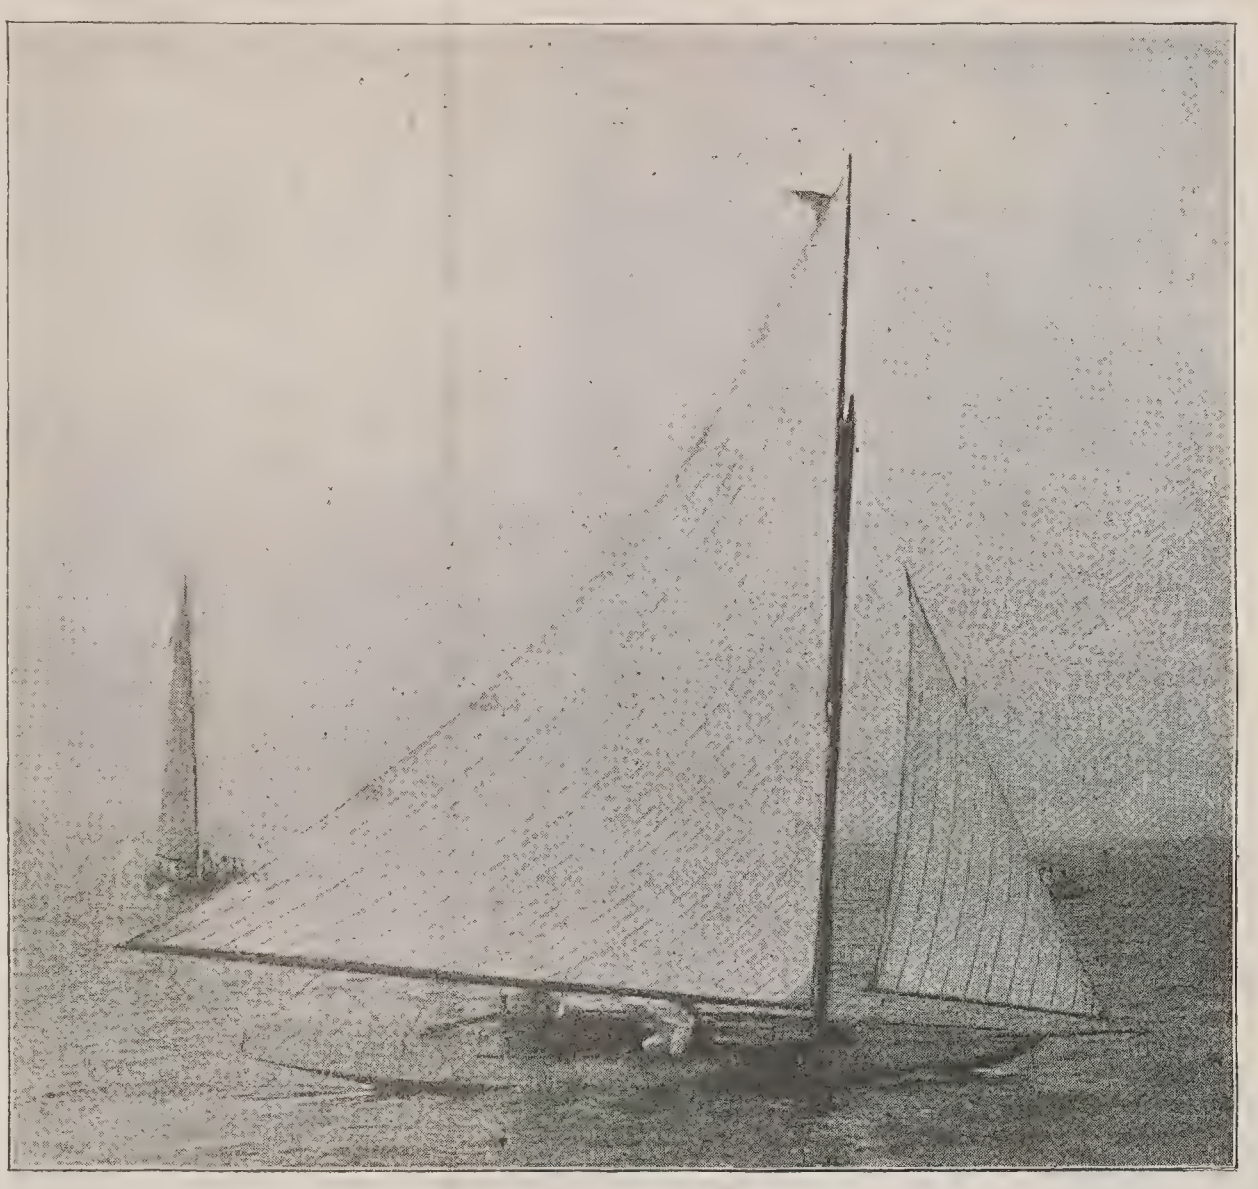
It is a mistake to suppose that crabs will not eat offal. They are the scavengers of the deep. They will eat any kind of flesh. A dead body will fatten a hundred crabs. They are baited with putrid tripe. They will eat all summer, except when shedding or soft. The hard crab never sleeps, but always eats. Their claws may be called hands, but it is the sole business of these hands to convey food to the mouth when not in use for defensive purposes. Crabs will eat each other if confined in a peterboat in the water. It is wonderful how much they do eat, and a mystery what they do with it. Put a ½lb. crab in a livebox with an alewife in the evening and in the morning it will be found that the crab has eaten the fish, and it is still a ½lb. crab, plus possibly an ounce.—Baltimore Sun.

Yachting.

Fixtures.

SEPTEMBER.

23. Corinthian, Phila., knockabout, Essington, Delaware River.
23. Riverside, fall regatta, Riverside, Long Island Sound.
24. Williamsburgh, annual fall regatta, Bowery Bay, L. I. Sound.
27. Taunton, ladies' day, Taunton, Mass.
30. Corinthian, knockabout, Essington, Delaware River.



OCTOBER.

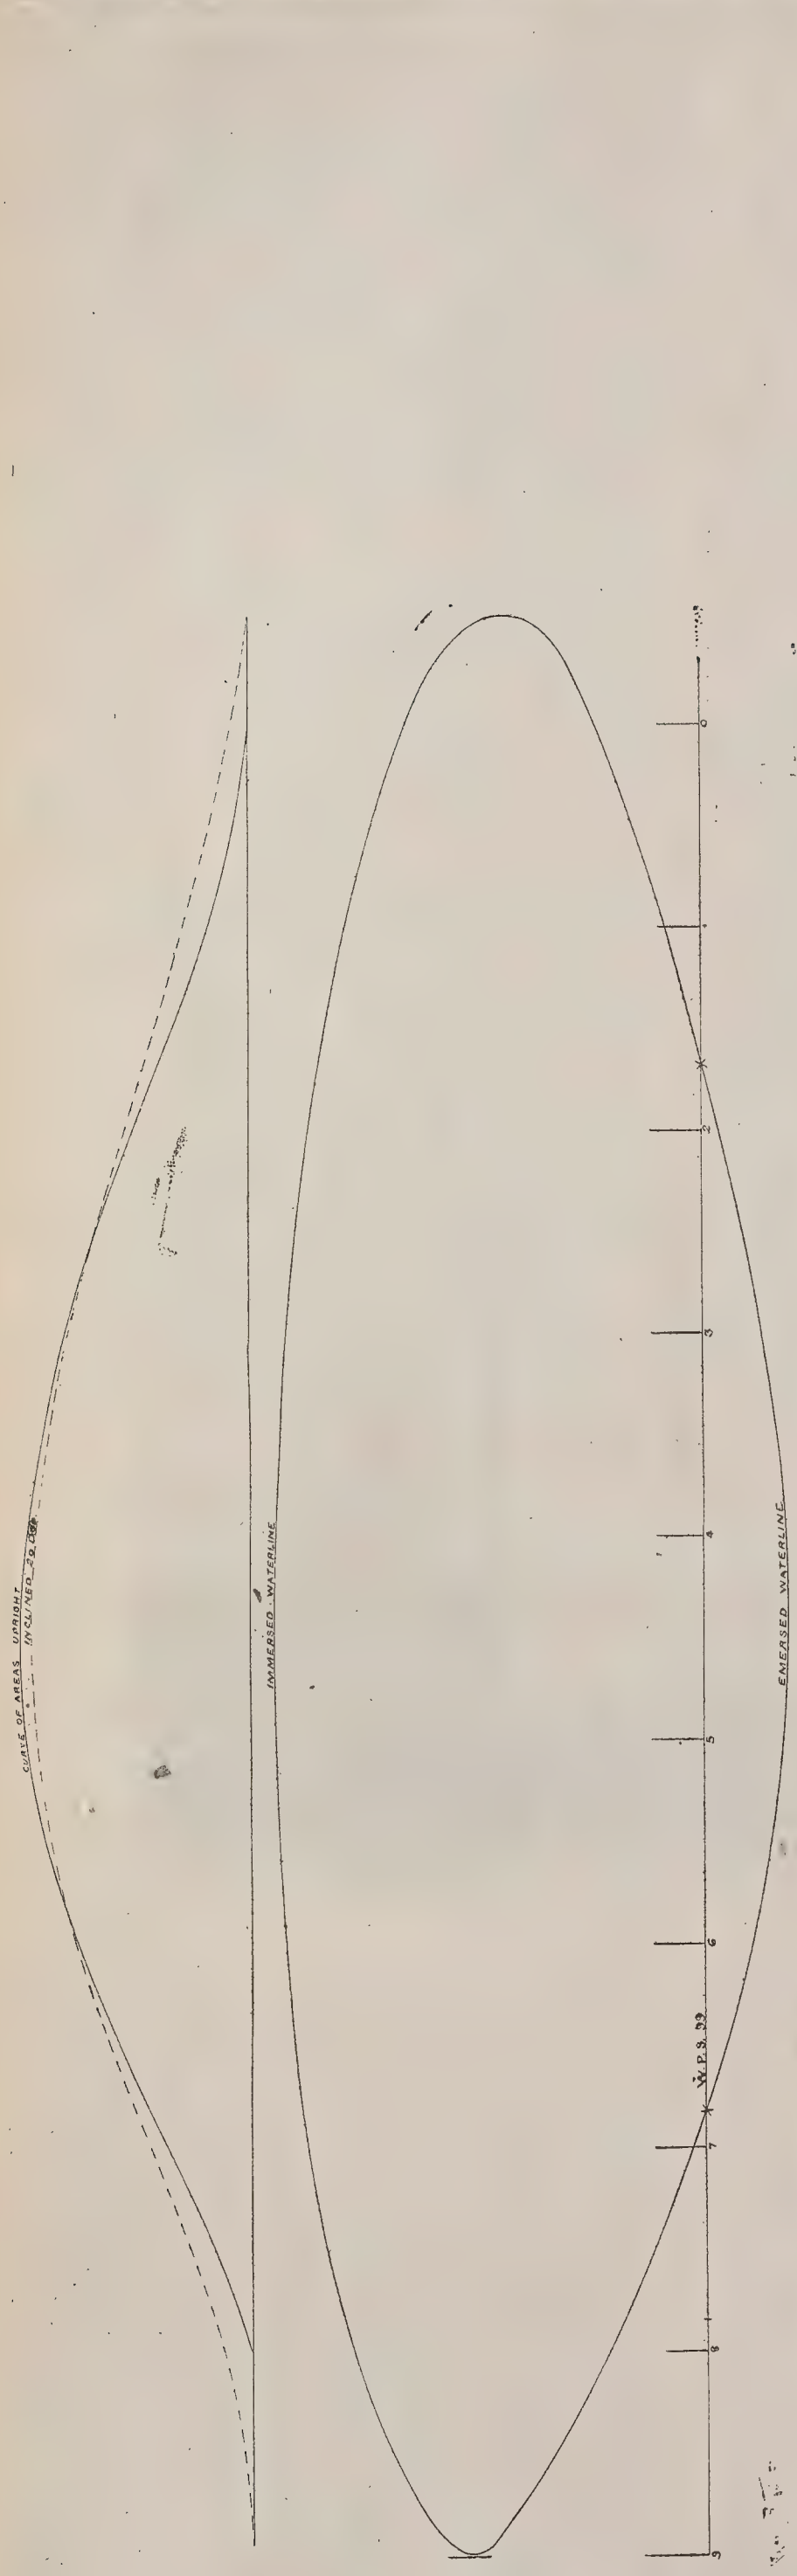
3-6-7. New York, America Cup matches, Sandy Hook.

Glencairn I.

In the development of the modern light displacement racing yacht that has come into such general use within the past three years, there are three very different boats that are of special interest—Sorceress, Question and Glencairn I. The first of these, designed by Mr. Linton Hope in 1894, and raced with such marked success in England, demonstrated the speed of the light displacement type in a new form, with the modern long ends. The second, designed by Mr. L. D. Huntington in 1895, and exceptionally fast under certain conditions, served to call attention to a new method of evading the waterline measurement. The third, designed by Mr. G. H. Duggan in 1896, as the representative of the Royal St. Lawrence Y. C. in its races for the Seawanhaka cup, represents the complete development and perfection of an entirely new principle in designing, both in the method of working and the end to be attained.

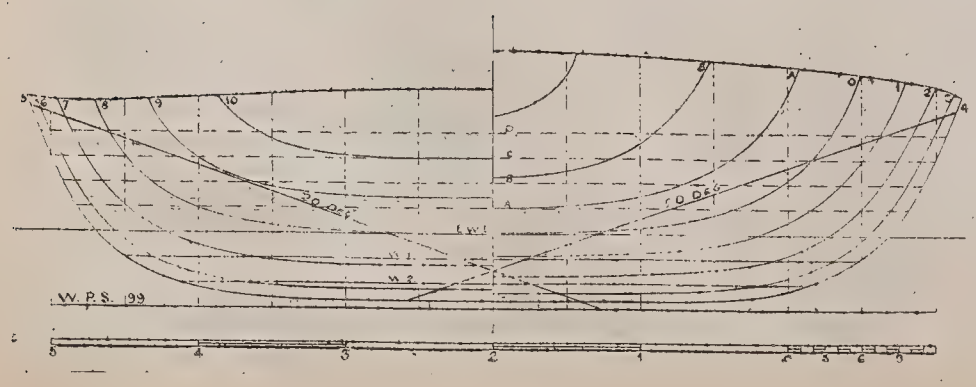
When the Royal St. Lawrence Y. C. issued its challenge for the cup in October of 1895, after the successful defense of the cup by Ethelwynn against Spruce IIII., the club had in its fleet nothing in the shape of a modern 15-footer or half-rater. The racing yachts of the club were mostly from 21 to 30ft. l.w.l., and the smallest class, 18ft. R.L., was made up of skiffs, catboats and an odd lot of small craft, none of which were in any way available for the development of a 15ft. class. It was necessary to start at the bottom and to build up an entirely new class, which was done very successfully, sixteen new yachts taking part in the many races of the class throughout the season. Of this fleet seven yachts were designed by Mr. Duggan, in addition to two trial designs, which were not built from. The work of designing was begun very shortly after the challenge was accepted in October, and continued through the winter and up to the middle of May, Glencairn I. being the last of Mr. Duggan's boats.

GLENCAIRN I., 1896.

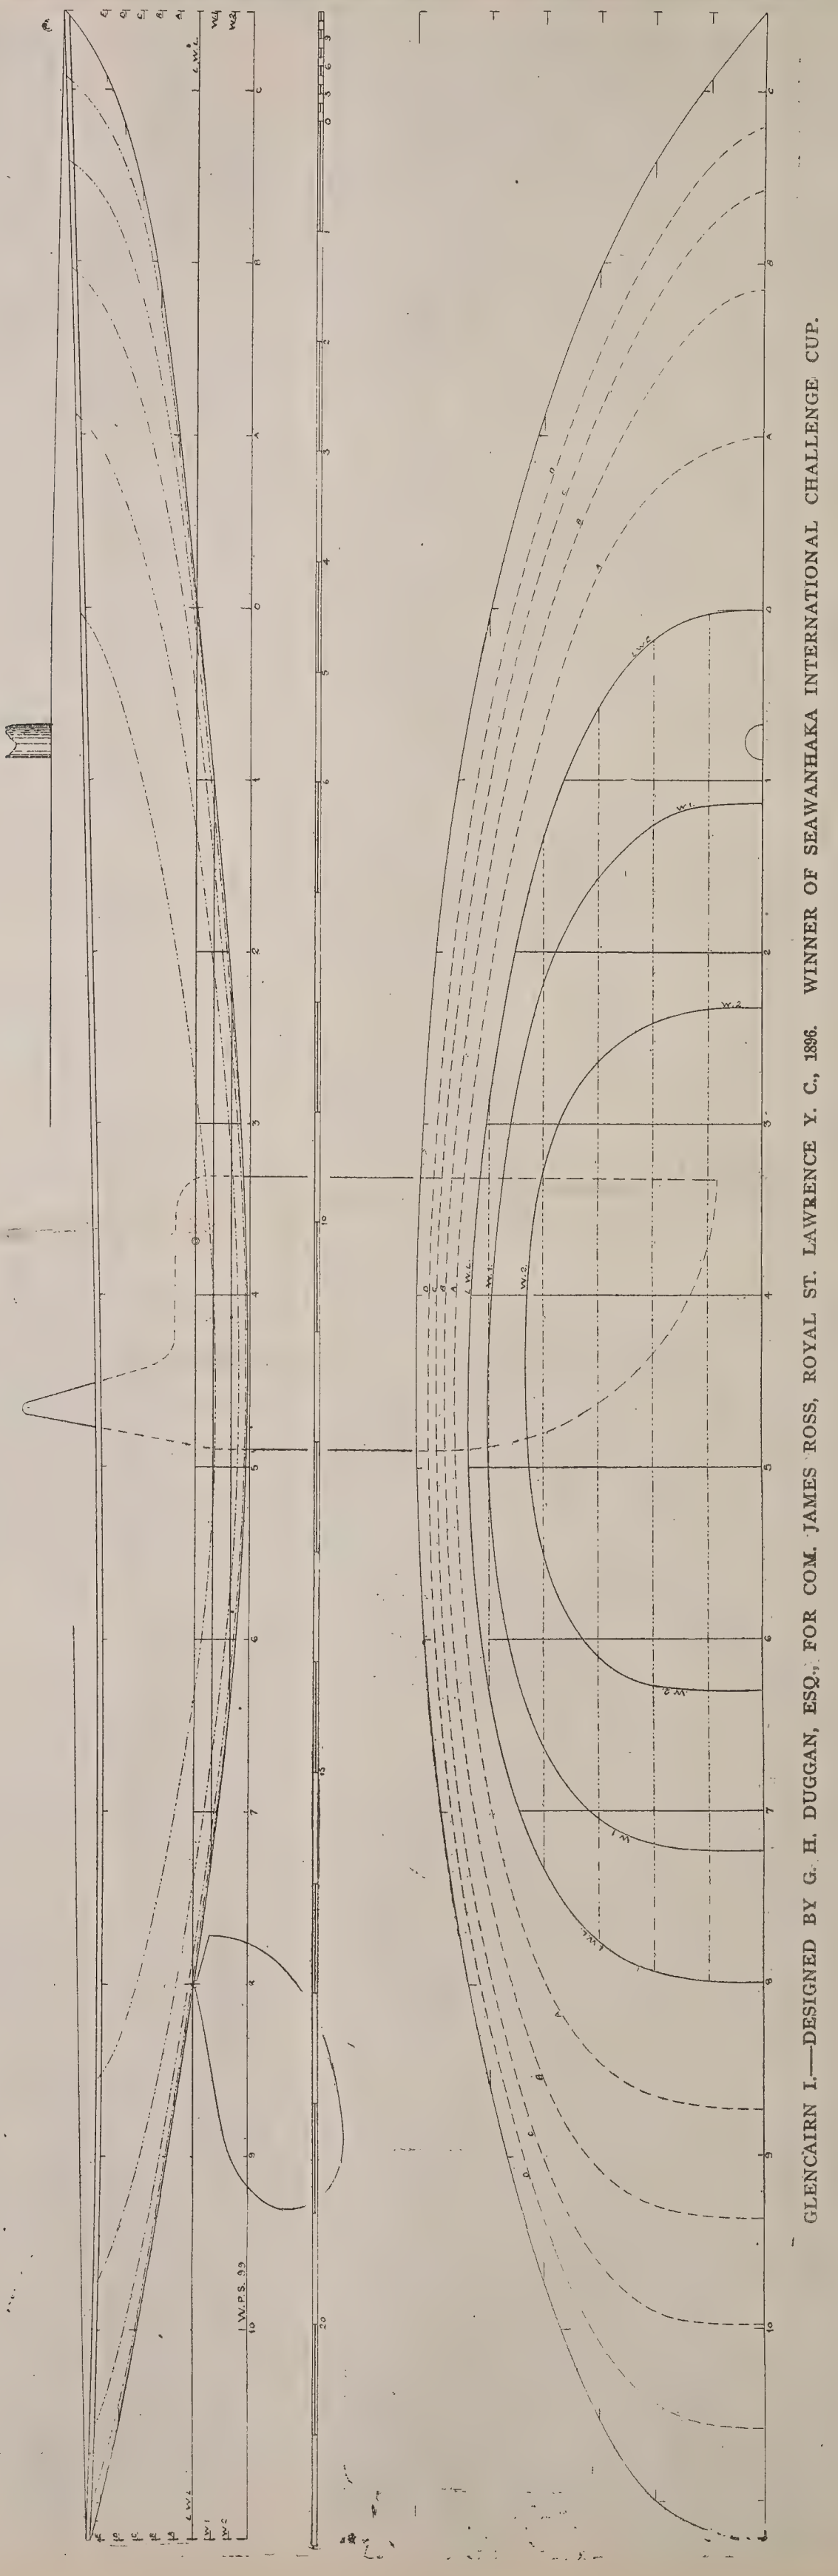


Ethelwynn, the head of the class in 1895, though of American design, was of the Sorceress type, with a waterline of nearly 15ft., a small sail plan and a very light bronze centerboard. Her midship section was of a flattened V shape, and her waterline, though comparatively full, ran to a point at the stem. In his first studies and designs Mr. Duggan started with this type of 15-footer, and some of his boats ran to a waterline of 14ft. 4in. His experience in various classes on Lake St. Louis had convinced him of the value of a large sail plan, and as the work of designing progressed, his efforts were more and more directed to the shortening of the L.W.L. as a means to an enlargement of the sail plan.

The performances of the 15-footer Question in some of the races during the season of 1895, when she showed exceptional speed in strong winds and rough water, had directed the attention of yachtsmen to her, and her peculiar form had been the subject of much discussion. It had been pointed out by different writers that while she measured but 15ft. or less when upright, she gained rapidly in effective length, as she was heeled to an extreme angle, with only the lower corner of her square form immersed, at the same time narrowing her beam and improving all of her immersed lines.



It was probably through this discussion that Mr. Duggan first saw his way to the shortening of the waterline as the yacht heeled, but whatever the source from which it was derived, this idea was soon developed into the leading principle of his designing work. In the earlier of the 15-footers the waterline was cut to little over 13ft., the sharp V at the stem being cut away. One change led to another, until in Sothis, designed for himself and Mr. Shearwood late in the winter, the extreme of but 12ft. 9in. was reached. The form by this time had changed from the saucer or flat V section to a perfectly flat floor with flaring sides, joined to it by hard bilges, the level lines above and below water being hard and blunt, but the inclined lines at an extreme angle of heel being very long and easy.



In spite of her extreme form, short waterline and large sail plan, 280 sq. ft., Sothis was satisfactory to her designer from the time of her trial trip early in the spring, and the first races showed her to be easily the best of the entire fleet. Her purely experimental features proved so successful that Mr. Duggan was tempted tho carry them to a further extreme in another design, at the same time correcting two faults disclosed in the first trial sails, a lack of freeboard and a very large cockpit. The new boat, ordered by Com. James Ross and named by him after a ship built by his father, in which he at one time sailed, was designed in the middle of May and built under Mr. Duggan's personal supervision at the Dominion Bridge Company's works, Lachine, by men sent from Toronto by the builder, Harry F. Hodgson, who had already built Sothis, Anita, Mischief and Otowynn. Prior to the designing of Sothis, the first vague ideas had been expanded and developed into an entirely new principle of designing, which has since been followed by Mr. Duggan, reaching its legitimate conclusion in the noted Dominion of 1898, illustrated in the Forest and Stream of Oct. 1, 8 and 15 of that year. In designing by this system the end in view is the production of a yacht with a very short waterline, as measured in the upright position at anchor, but with an excessively long waterline when heeled either by her sails or by the weight of crew to leeward. As a means to this end, at the outset, the upright position of the vessel is entirely disregarded and she is assumed to be heeled to an extreme angle, not less than 20 degrees. The immersed portion of the hull when in this position, practically one-half of the vessel from keel to gunwale, is treated as a whole, without reference to the other half, its load waterline (the ordinary immersed and emersed waterlines as usually plotted when a design is nearly completed) is plotted as soon as the sections are sketched in, and changes are made until this waterline is as long as possible for a given measurement in the upright position, as narrow, and as nearly symmetrical as it can be made. While in the earlier boats the lengthening of the inclined waterline and the symmetrizing of the two sides had been merely incidental, in the later, and especially in Glencairn I., the whole design was dominated by them. The waterline in measuring trim was cut to an extreme point, the bilge was hardened amidships and carried as far fore and aft as possible to obtain a long, narrow canoe hull of adequate displacement. In the upright position the length of the L.W.L. was 12ft. 6in., and the breadth on the L.W.L. was 5ft. 5in.; in the inclined position the length was 15ft., and the beam but 4ft. By means of different auxiliary lines not shown in the design, the immersed half of the hull was faired up and the areas of sections made to conform to the theoretic curve; in fact all the operations to which the hull in the upright position is usually subjected were carried out first on the inclined half. After this half-hull was designed the lines were completed by duplicating it on the other side and drawing in the overhangs in harmony with the other portions.

The consideration of the hull in the upright position, the starting point of a design according to the old method, came in last of all, being of little importance, as

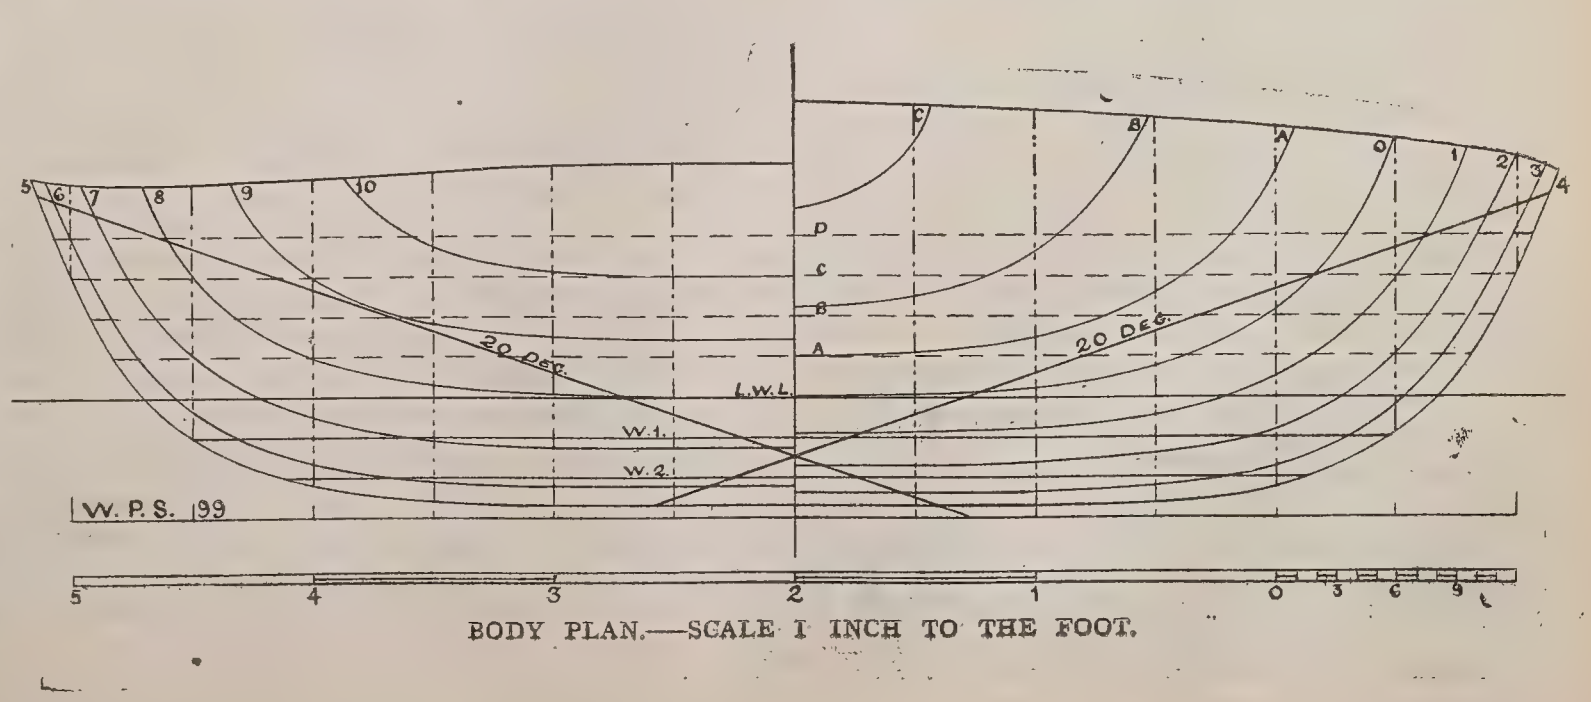
IMMERSED AND EMERSED WATERLINES AT INCLINATION OF 20 DEGREES. CURVES OF AREAS OF SECTIONS FOR UPRIGHT AND INCLINED POSITIONS.

GLENCAIRN I.—DESIGNED BY G. H. DUGGAN, ESQ., FOR COM. JAMES ROSS, ROYAL ST. LAWRENCE Y. C., 1896. WINNER OF SEAWANHAKA INTERNATIONAL CHALLENGE CUP.

GLENCAIRN I.—SAIL PLAN.

the boat was intended to be heeled artificially by her crew to leeward in light winds; being nearly vertical only when under spinaker. As shown, the curve of areas was plotted, for both inclined and upright positions; the altered form of the displacement showing the gain in length and the easing and fining of the form through heeling.

When tried against the home fleet on June 17, 1896, Glencairn won very easily in a light air, as she did in several subsequent races, and in the many informal trials made day after day she proved the best of the class. She was not quite as fast as Sothis in light airs, and some of the class could beat her in a hard blow, but her whole racing record proves her to be a good all-round boat, and a most successful compromise between the two extremes. While she was primarily designed for light to moderate weather, as found in July and August both at Oyster Bay and on Lake St. Louis, with an extremely short waterline and large sail plan she was given generous topsides and good ends for hard weather. The leading feature of the scow type, the gain of effective length by excessive heeling, was carried to a greater extent in her than in the true scows; but unlike the scows, she had good freeboard and the general form of a yacht instead of a box.



After demonstrating her superiority to the others of the home fleet, Glencairn was shipped to New York early in July, Mr. Duggan and Mr. F. P. Shearwood accompanying her, and after refitting and a week of trial sailing outside Oyster Bay, she was ready for the cup races. The defending yacht, El Heirie, illustrated in the FOREST AND STREAM of Aug. 22 and Sept. 26, 1896, designed by Mr. C. H. Crane, the winner of a trial fleet of twenty-seven yachts, was even more closely allied to the scow type than Glencairn, with the narrow beam and very low freeboard of the type as then developed on Long Island Sound. She was, however, much longer on the waterline and carried a smaller rig than Glencairn. In the trial races she had demonstrated her superiority to the rest of the big fleet, though the fin-keel Riverside pushed her close in extremely light weather. El Heirie was very fast in the strongest winds of the week, and defeated the best heavy weather boat of the fleet, Paprika.

The first race, on July 13, was sailed in light to moderate winds, with smooth water, with a squall in the latter part, which compelled Glencairn to take in and afterward shake out two reefs, a maneuver quickly executed. The course was three miles to leeward and return, and at the end of the first round Glencairn led by 6m. 55s. At the second turn of the lee mark she led by 9m. 6s., and as the wind fell after the squall, leaving El Heirie becalmed, Glencairn finally won by 47m. 11s. On the next day, over the triangular course, and in light to moderate winds, Glencairn again won by 6m. 22s. On the third day both started under single reefs in a fresh west wind to leeward, shaking out the reefs on the first windward leg as the breeze fell. Glencairn had a lead of over 6m. at the end of the first round, but lost 2m. on the second run. However, she finally won by 5m. 50s., taking the cup.

In the following year the 15ft. class was superseded by the 20ft., in which Glencairn II., Dominion and Glencairn III. have defeated successively Momo, Challenger and Constance, retaining the cup at Montreal. The three later Duggan boats have been merely variations of Glencairn I., designed in the same manner. Glencairn II. was the fastest of a fleet of 20-footers designed by Mr. Duggan in 1897, practically enlargements of Glencairn I. with the form perfected; in particular, the bilge was hardened and emphasized as it was carried into the overhangs, so as to further lengthen the inclined waterline. Many minor variations of form and dimensions were tried in Rogue, Islander, Avoca, Glenowen and Glencairn II., the latter being about the average and the fastest all-round boat.

In Dominion, the defender of last year, the new principle of design was carried to a further extreme, the middle portion of the bottom being entirely cut away, so as to greatly improve the form of the immersed bilge, which was of sufficient displacement to float the vessel without aid from the other half.

In Glencairn III. a return has been made to the less extreme form with a flat floor, as certain objections were made to Dominion. In her the inclined waterlines are more symmetrical, and the form of the immersed bilge more perfect than in any of the previous boats, except Dominion, but the bilge has been softened, to gain speed in very light weather, and she lacks the all-round qualities of her older sisters. At the same time she is to the eye less like a yacht and more like the up-to-date scow or raft than

BODY PLAN.—SCALE 1 INCH TO THE FOOT.

any other Duggan boat. The dimensions of Glencairn I. are as follows:

	Glencairn.	El Heirie.	Ethelwynn.
Length—			
Over all	22ft. 11½in.	23ft. in.	23ft. 4 in.
L.W.L	12ft. 6 in.	15ft.	15ft.
Overhang—			
Bow	5ft. 5 in.	4ft. 9 in.	3ft. 10 in.
Stern	5ft. ½in.	3ft. 3 in.	4ft. 6 in.
Beam—			
Extreme	6ft. 4 in.	5ft. 6 in.	6ft.
L.W.L.	5ft. 5 in.	5ft. 9½in.	4ft. 9½in.
Inclined	1ft.	3ft.	4ft. 3 in.
Draft	5½in.	5¼in.	8 in.
Freeboard—			
Bow	1ft. 3 in.	8¾in.	1ft. 5 in.
Least	10½in.	8¾in.	10 in.
Counter	1ft.	8¾in.	11½in.
Displacement	975lbs	987lbs.	1022lbs.
Sail area—			
Mainsail	246sq.ft.	217sq.ft.	169sq.ft.
Jib	52sq.ft.	35sq.ft.	30sq.ft.
Total	298sq.ft.	252sq.ft.	199sq.ft.
Mast—			
From stem at L.W.L.	1ft. 2½in.	3ft. 3 in.	4ft.
Deck to hounds	18ft. 4 in.	16ft. 6 in.	22ft.
Boom	20ft. 2 in.	18ft.	18ft.
Yard or gaff	15ft.	11ft. 6 in.	.....

Glencairn I. was fitted with a leg-o'-mutton sail with a gunter rig, a yard up and down the mast, with hand-reefing gear on the boom. El Heirie carried the ordinary gaff rig, and Ethelwynn had a plain leg-o'-mutton rig, the sail hoisting on the mast with no gaff. The construction will be illustrated next week.

Heroism of a Yachtsman.

THE following distressful experiences of William L. Brooks, of Stamford, Conn., a prominent member of the New York Y. C., who was at one time owner of the schooner Clytie, have been furnished the FOREST AND STREAM, through the good offices of Mr. Chas. Hallock, who was at one time his shipmate on a previous voyage of a less trying character. Mr. Brooks is an athlete, and almost a giant in stature, a lifelong sailor, in the prime of life, and at all times resourceful in emergencies; which endowments combined could alone have saved any mortal under like circumstances. Hardly a worse place for such a happening could have been found on the Atlantic coast than the Race, or Gut, at the eastern end of Long Island Sound. Mr. Brooks' innate modesty would have prevented him from exploiting his achievement, but it is so wonderful as to be well worthy of publication. The disaster occurred on Aug. 9, and the letter, written to an intimate friend, was dated at:

BOSTON, Mass., Aug. 21.—My Dear Old Chum: At last I get an opportunity to write you. I received your telegram at New London and almost turned back, but concluded to go on, and that P. M. got my little boat (a 14ft. craft with sail) out at the island and had the pleasure of catching twenty-one fine bluefish, getting in shortly after dark. I found the family delightful as usual. Com. Smith came along on his large schooner Viking, and he insisted on taking me on the cruise of the New York Y. C. with him, and I concluded to go. We went fishing, and again made havoc among the fish. Next day, to New London and aboard the Corsair, Com. Morgan's boat; had the pleasure of renewing old times with many of the captains of the fleet. Tuesday, proceeded to Gardner's Bay, where I again took up my residence on Plum Island. Wednesday, getting off early in my little boat, I went out to see the start for Newport from a point six miles away in Gardner's Bay. A magnificent fleet were there, and all passed very close to me, I being rather proud of my little ship, and being hailed by my friends as boat after boat passed. After all had departed, I sailed over to Orient, where I had supper with some friends, and about 7 started for the lighthouse, getting my lines out on the way. Having caught three fish and getting close to the island, I commenced to take in my lines. Thinking it would be hard work getting through the Gut in the early morning, I concluded to leave the boat on the north side.

I found the rip rough and noisy, tide runnig very hard, and had some trouble to keep the little boat from turning round and round. Suddenly I heard a louder noise behind me, and looking to see what it was, saw the bow of a large steamer coming straight for me within 15 or 20ft., pushing a wall of water on each side of her bow. Without time to yell, I dove and swam down, way down, hoping she would go over me, and expecting each kick would hit her wheel and be my last. When I could stay down no longer I started up, but don't know anything more about it until I found myself with my hand down the centerboard trunk on the bottom of the boat. Resting there in the seaway, I soon felt able to put my finger down my throat and get rid of the salt water, then tried to get the mast out, but failed. I was not far from the eddy, and hoped to swim the boat in to shore and right her, but the tide running very strong, I soon saw I was drifting out into the Sound and had to content myself by simply resting one hand on the boat and making as little effort as possible. So hour after hour passed, I calling Help! help! at regular intervals, but there was no one near. At last I saw a schooner coming right for me, and called long and loud, but on she came right over me, and I had to dive again. Coming up, I called and called and could not find my boat, but seeing the loom of the schooner, swam after her. After a while I caught hold of a fish line, following which I soon touched the boat. Pretty well played out, I was glad to feel the mast and sail floating alongside.

By this time the tide had turned, and we were again approaching the Gut, and the rips, whirls, etc., could be plainly heard. Soon getting into them, trouble commenced again. At one moment her stern, where I was, would be sucked down, and she would roll over and over. Meanwhile, I would right her and sit in the stern holding onto the sides with both hands, using my legs to balance her. This contsant exertion was commencing to tell on me, and the water very cold and always up to my chin, made my teeth chatter, so as to spoil the clearness of my contsant calls. Some vessels came, I thought, near enough to hear me, but no one heard. Finally I went to sleep, waking in the water and soon in my old place in her stern. I think she must have turned completely over more than one hundred times, which, I suppose, was good in keeping up the circulation. At last, when I felt my chances were very small, I saw the lights of another schooner, seemingly coming straight for me. I could see both her lights and thought this time I was a goner, but coming within say 5 or 10ft. she only washed me out of my boat and turned it over on me. I yelled and yelled, and soon saw signs that showed me that I had been heard, but she faded away like the rest, and I could hear nothing but the roaring tide. I kept up the call, louder if anything. Half an hour later I heard the flapping of sails, followed by the lowering of a boat, and was soon on board the schooner Georgia Berry, where I was stripped, put to bed and carefully nursed back into shape by Capt. H. S. Tuttle and his steward from Mt. Desert, Me. I cannot say too much for their kindness. Leaving the little ship, the water being rough, they kept their course for City Island, arriving at 12:30, when Capt. Tuttle kindly telephoned to Gus Hurlbutt, but he having heard from Plum Island, was already on his way to recover my body. My sister, B., wired to him at New London. He sent notice to B. W. At City Island Emerson met me and supplied me with money, etc., and escorted me to Stamford. After a few days in bed I am now in fine shape, none the worse for the experience.

If you had been with me, sitting in the boat facing me, we would have had no trouble. Am tired writing.

Love to you and yours, W. L. B.

Shamrock.

THE sudden and heavy blow of Sept. 11 caught the Lipton fleet in a bad place inside of Sandy Hook, where the N.W. wind had a clear sweep. The tug Lawrence was away for coal, and there was no steam on the Plymouth, when the wind freshened to a gale on Monday afternoon. The big derrick barge which carries the spare spars was anchored some distance to windward of Shamrock with one man on board, and but two men were on the yacht, the crew being on board of the Plymouth. About sunset the barge began to drag down on the yacht, and the two launches were sent from the Erin to tow Shamrock out of the way, but the wind and sea were so heavy that one launch was nearly swamped and the other could do nothing. Before the launches were able to lend any aid, the storm abated and the barge rode in safety to her anchors, but only a short distance from the bows of Shamrock. Had the two come together in the sea, it would probably have ended the Cup match of 1899. During the day Shamrock had shipped her big boom, 111ft. long, the other being taken on board the barge. The new gaff was also shipped, and it was expected that she would be under way on Tuesday. Her new mainsail was bent and hoisted on Tuesday morning, and the club topsail set above it, but she lay at her moorings all day. The mainsail is a very fine piece of work, a crosscut sail, and the topsail is also, to all appearances, a fine sail. On Tuesday afternoon Com. Morgan ran down to the Hook in Corsair III. and paid a visit to Sir Thomas Lipton on board of Erin.

Early on Wednesday morning the crew of Shamrock was busy making sail, and at 10 o'clock the yacht cast off her moorings and started under lower sails and club topsail, accompanied by the Lawrence and Erin. On her way out to sea she passed the new Oceanic, bound in, exchanging salutes. The day was clear and fine, with a light northerly wind and smooth water. After sailing about for a time near the Scotland Lightship, the tug Lawrence was sent off to mark a fifteen-mile course to leeward, S. by W., and the Erin took her position to make a starting line. The starting signal was given at 11:43, Shamrock going over with spinaker set, the wind blowing by this time over twelve miles per hour. Within a couple of minutes of crossing the line, Shamrock's new gaff buckled and broke about 15ft. from the inboard end. Her mainsail was lowered as quickly as possible after some difficulty and without tearing it. Later on the club topsail was lowered and she was towed in to her moorings. The injured spar was immediately taken on the tug to the Erie Basin Drydocks, and at the same time the old and shorter spar was taken up and lengthened, to be used temporarily. On Friday the yacht started out again with the old gaff, the wind being light from N. W. A course of ten miles to leeward was laid off and she started at 12:42, under club topsail, spinaker and baby jib topsail. The run of ten miles in smooth water and with a moderate breeze was made in 1:15:30. The beat home occupied 1h. 45m. 20s.

On Thursday afternoon Sir Thomas Lipton steamed up to New Rochelle on the Erin and dined with Mr. C. Oliver Iselin at All-View, the other guests being Com. J. Pierpont Morgan, Mrs. Royal Phelps Carroll, Mr. Ratsey, Mrs. Cora Randall, Woodbury Kane, Newberry D. Thorne, Herbert C. Leeds, Colonel Delancey A. Kane and members of the Iselin family.

The London Times of Sept. 12, in connection with a long description of Shamrock, gives the following dimensions and elements as "absolutely trustworthy"; it is possible that they are correct, but much more probable that they are mere guess work:

Length, 127ft. 9in.; breadth, 24ft. 6½in.
Load waterline, 89ft. 2in.
Length of overhang forward, 17ft. 2in.
Length of overhang aft, 21ft. 5in.
Overhang aft, 21ft. 5in.
Draft, 20ft. 3in.
Area midship section, 130ft.
Coefficient midship section, 0.278.
Area of lateral plane, 970ft.
Coefficient of displacement, 0.134.
Area of load water plane, 1,493ft.
Wetted surface, 2,916ft.
Tons per inch immersion, 3.54.
Displacement, 160 tons.

On Monday morning Shamrock was towed out to the Scotland Lightship by the tug Lawrence, Erin accompanying them. The day was clear, with a light S.E. wind and smooth sea. While Erin lay off the Lightship to mark the line, the tug was sent away with a logline over her counter, to mark the turn, S.E. fifteen nautical miles. The start was given at 11:45, Shamrock going over with all windward sail set, her club topsail, a new one, being somewhat smaller than that used last week. Within a few minutes after she crossed the line the breeze had freshened to about eight knots, and as she beat out to the weather mark it increased to about double that strength. She moved rather slowly at first, doing better work as the wind increased. The mark was turned at 2:10, just 2h. 25m. from the start. The spinaker was set flying in a very short time, and she started home at a good pace. After two miles were covered the wind hauled to the south, and sheets were hardened for a broad reach, the spinaker being stowed. On this point of sailing she proved very fast, covering thirteen nautical miles in fifty-eight minutes. She finished at 3:24, her time for the run home being 1h. 14m., and for the entire course, 3h. 39m.

RONA.

Rona.

THE fine steel steam yacht Rona, owned by the late Baron Rothschild, has been purchased by Amzi L. Barber, of New York, who will rename her Sapphire IIII. Rona was designed by Mr. Watson and built by D. & W. Henderson in 1893 for Mr. A. E. H. Wood. She is 243.70ft. b.p., 30ft. beam and 18.25ft depth, with triple compound engines, 23, 38 and 64 by 36in. She has been refitted and altered by Day, Summers & Co., Southampton, and is now on her way to New York under the American flag. Her arrival in American waters will probably bring up the question of the actual scope of the Payne yacht exclusion bill, which has never yet been tested. If the bill fulfills the intention of the "born sportsmen" who framed it, there is a good deal of trouble in store for the owner, but it is probable that the matter will go to the courts before the exact meaning of the bill is made clear.

Atlantic Y. C. Gould Cups.

SEA GATE—NEW YORK BAY.

THE race of the Atlantic Y. C. for the Gould cups, postponed on Sept. 9, was sailed on Sept. 13 in a light N.W. wind. The times were:

	Finish.	Elapsed.	Corrected.
Schooners—Start, 10:35.			
Ramona	4 17 07	5 42 07	5 42 07
Sachem	4 36 40	6 01 40	5 52 32
Katrina	4 07 55	5 32 55	5 09 41
Cutters—Racing Trim—70ft. Class—Start, 10:45.			
Wenonah	4 41 06	5 56 06	5 56 06
Cutters—Cruising Trim—51ft. Class—Start, 10:50.			
Mariquita	Not timed.		
Uvira	3 20 31	4 30 31	4 29 10
Eidolon	3 41 18	4 41 18	4 33 17
Sloops—Racing Trim—51ft. Class—Start, 10:55.			
Syce	3 10 04	4 15 04	4 15 04
Acushla	Disabled.		

Acushla lost her topmast and withdrew.

Larchmont Schooner Cup.

THE unfinished race for the Larchmont schooner cup was resailed on Sept. 12 with but three starters, the times being:

	Elapsed.	Corrected.
Colonia	4 25 32	4 25 32
Amorita	4 57 02	4 44 10
Quissetta	5 06 06	4 49 57

A race was also sailed between the new Ludeah and Hussar, the former winnig by 10m. 8s.

The most important item of news during the week is the announcement by Sir Thomas Lipton that Mr. Will Fife, Jr., will be in command of Shamrock in the Cup races. Without questioning the ability of the skippers of Shamrock and former challengers, it is very plain that these great yachts cannot be properly handled by a skipper whose time is fully taken up with the handling of the tiller. Mr. Fife is as expert as a practical yacht sailor as he is as a designer.

Columbia and Defender left New Rochelle late last week for Narragansett Bay. Columbia reached Bristol on Sunday, where she will ship a new suit of sails, after which she and Defender will sail several races. Sir Thomas Lipton has stated that Shamrock will be docked at the Erie Basin Drydock, South Brooklyn, on Sept. 28, where the public will be permitted to see her. It is also reported that Columbia will be docked at the same time, as the big dock will easily accommodate both yachts.

Com. Morgan was in Washington last week, and in conference with the Secretary of the Treasury in regard to the patrolling of the courses for the Cup races. The U. S. Government will lend all the aid possible, and definite plans are now being prepared by the New York Y. C. and the Government for the buoying and patrolling of the course.

The Newport yachtsmen who have made such a success of the special 30ft. class, have revived the scheme of a larger class, proposed a couple of years ago, and they are now conferring with Mr. Herreshoff. The proposed new class will probably be of about 65ft. racing measurement.

The Massachusetts Y. R. A. closed a very successful season with the rendezvous of the fleet at Hull on Sept. 10. After the review the fleet sailed over to City Point.

Columbia Y. C.

The Columbia Y. C. of Chicago sailed an open race on Sept. 9, the times being:

	Finish.	Elapsed.
Class A—Start, 2:00.		
Tartar	6 09 18	4 09 18
Class B—Start, 2:00.		
Peri	5 50 08	3 50 08
Hattie B.	6 02 52	4 02 52
Wizard	6 04 37	4 04 37
Class C—Start, 2:00.		
Nymph	5 29 29	3 29 29
Vixen	5 57 56	3 57 56
Widsith	6 00 35	4 00 35
Class D—Start, 2:00.		
Spray	5 44 35	3 44 35
Alca	6 11 35	4 11 35
Class E—Start, 2:05.		
Atlantic	4 28 55	2 23 55
Class F—Start, 2:05.		
Wishbone	4 03 32	1 54 32

May B	4 09 34	2 04 34
Red Bird	4 17 53	2 12 53
Query	4 02 57	1 57 57
"B"	4 36 18	2 31 18
Imp	4 38 07	2 38 07
Bud	4 54 08	2 49 08
Dewey	5 06 29	3 01 29

Hempstead Bay Y. C. Open Regatta.

FREEPORT—HEMPSTEAD BAY.

Saturday, Sept. 16.

The Hempstead Bay Y. C. sailed an open race on Sept. 16 in a very light breeze, the times being:

	Start.	Finish.	Elapsed.	Corrected.
Sloops.				
Quo Vadis	1 36 11	5 18 33	3 42 22	3 42 22
Mayita	1 36 40	Did not finish.		
Fleet Wing	1 37 48	5 34 33	3 56 45	3 46 18
Catboats—35ft. Class.				
Ellen	1 42 18	5 04 07	3 21 49	3 21 49
Beulah	1 46 00	4 51 05	3 05 05	3 04 18
Mabel	1 42 35	5 07 34	3 24 39	2 22 39
Dot	1 41 57	5 14 44	3 32 47	3 29 35
Mardi	1 46 00	5 12 29	3 26 29	3 22 51
Catboats—20ft. Class.				
Little Minister	1 46 00	5 04 57	3 18 57	3 18 57
Fellowcraft	1 41 43	Did not finish.		
Grace	1 45 00	Did not finish.		
Wenonah	1 46 00	5 05 20	3 19 20	3 16 39
Dolphi	1 42 50	Did not finish.		

Manhasset Bay Y. C.

PORT WASHINGTON—MANHASSET BAY.

Saturday, Sept. 16.

Two races for the Rudder cup were sailed on Saturday by the Manhasset Y. C., making three wins for Mascot. The times were:

	Finish.	Elapsed.
First Race—Start, 2:10.		
Mascot, T. Clapham	3 38 20	1 28 20
Old Squaw, S. F. Carstein	3 39 10	1 29 10
Uneeda, S. Jackson	3 41 45	1 31 45
Second Race—Start, 3:50.		
Mascot	4 37 02	0 47 02
Old Squaw	4 39 25	0 49 25
Uneeda	4 44 15	0 54 15

Chicago Y. C.

CHICAGO—LAKE MICHIGAN.

Saturday, Sept. 16.

The Chicago Y. C. sailed a special race on Sept. 16 in rough weather and a strong breeze. Vanenna sailed alone in the large class. The new Briar, Josephine, Prairie and Blade made up a class together. The times were:

	Finish.	Elapsed.
Start, 2:35.		
Vanenna	4 19 17	1 44 17
35ft. Class.		
Josephine	4 53 20	2 18 20
Prairie	4 54 40	2 19 40
Blade	5 01 25	2 26 25
Briar	5 01 30	2 31 30

The Larchmont Y. C. will hold a series of three races for the championship of the season in the 21ft. knockabout class, to be sailed off Larchmont on Sept. 20, 21 and 22. A souvenir prize will be given to the winner of each race, and the yacht having the greatest number of points to her credit for the three races will be awarded the championship cup.

YACHTING NEWS NOTES.

The Pacific Inter-Club Yacht Association held its annual meeting on Aug. 30, electing the following officers: Pres., T. F. Tracy; Vice-Pres., E. N. Walter; Sec'y, R. R. l'Hommedieu; Treas., C. F. Michaels; Members of the Regatta Committee, L. Q. Havens, C. L. Tisdale, O. Eastwood and G. W. Robson. J. M. McDonough and Com. Allen M. Clay were elected Delegates to the North American Yacht Racing Union.

The Huntington Y. C. has elected the following officers: Com., J. W. Shephard; Vice-Com., R. L. Cooke; Rear-Com., A. W. Palmer; Trustees, George Taylor, E. W. Sweet and A. B. Gildersleeve; Treas., G. R. Rogers; Sec'y, Z. J. Caril.

The Newport Y. C. has elected the following officers: Com., J. M. Morrell; Vice-Com., C. A. Van Iderstine; Sec'y, H. D. Ackerly; Treas., B. W. Caril; Board of Governors, N. S. Askerly, J. W. Hiltman, J. H. Ireland, Edward Thompson and J. A. Berian.

Studio, scr., once well known about New York Harbor, was completely wrecked on Sept. 10 in the gale which struck Atlantic City. She was driven ashore while anchored, with no one on board. Her owner was Mrs. Mortimer Thorne.

The second supplement to Lloyds' Yacht Register contains numerous alterations and additions up to July 24, 1899. Shamrock's dimensions, as given by it, are: Length between perpendiculars, 105.50ft.; beam, 24.55ft.; depth, 10.55ft. Thames tonnage, 260. Steel frames and aluminum bronze plating.

Yachtsmen who are preparing for the fall shooting will be interested in the new catalogue of W. H. Mullins, Salem, O. In addition to the sheet metal dinghies made by this firm, light, strong and practically indestructible, the catalogue describes a variety of metal hunting boats adapted for all waters. While, small, light and of compact form, these boats have wonderful carrying capacity.

Frank Weston, alias Shaw, was sentenced to eighteen months in the House of Correction after pleading guilty at Lawrence, Mass., to stealing the yacht Takitesy from J. F. Appleton, of Salem. The detection of the thief is due to T. F. Day, of the Manhasset Y. C.

Conqueror, steam yacht, F. W. Vanderbilt, arrived at New York on Sept. 12 from Marseilles, via St. Michaels. She experienced heavy weather throughout the voyage, but sustained no damage. She left New York on June 10, since which time she has cruised in the Mediterranean.

Norna, scr., N. L. Weaver, was reported at Honolulu on Sept. 3 on her way around the world.

Canoeing.

Red Dragon Canoe Club.

Editor Forest and Stream:

The Red Dragon Canoe Club of Philadelphia closed its racing season on the Delaware, at Wissinoming, Pa., Saturday, Sept. 16, under the most favorable conditions.

The boating season has been a most successful one for the Red Dragons, and the interest in the club has never been more manifest.

The damage by fire to the club house in the early spring was but lightly felt, and with its restoration came a desire to improve the entire club house. This was done, and the old mansion home of the Red Dragons was placed in the most presentable and comfortable shape that it has ever been.

The past season has been one of the brightest in the history of the club, and to Com. Joseph Edward Murray and officers belongs great credit for the success attained. One of the noticeable changes was the canoeing interest, which displaced the sailing and half-rater craze which has predominated for the past three or four seasons.

With the closing of the boating season comes the sport of trapshooting, and the gunning contingent are already preparing for the winter's shooting. New traps are to be added, and the filling up of the open space in front of the club house will afford a suitable and permanent shooting ground.

On Sept. 16 the Red Dragon Canoe Club held the final race for the Wilt novice trophy and the McFetridge paddling trophy of 1899. The novice paddling race was an easy victory for T. W. Cook, who made a total of 11½ points in the series, which consisted of two races with double blades and two races with single blade. Mr. Cook, who is a comparatively new member in the club, won first in the single once, first in the double once and tied for second in double, which gave him a total of 11½ points. As no one could win first place from him, he did not enter the final contest, which was a single-blade race. In the series good form was shown by Messrs. Titus, Davis, Rogers and Hemingway.

The McFetridge paddling trophy, representing the championship of the club, caused a hard paddled contest. Maurice D. Wilt was the winner, after one of the closest and most exciting races ever seen over the Wissinoming course. His opponent was E. W. Crittenden, whose marvelous spurt at the finish nearly won him the race. The time made by Mr. Wilt was 3:55 for the half-mile. Crittenden was but a few inches behind when the canoes crossed the line. Lloyd Titus was third, and E. D. Hemingway a close fourth.

A joint regatta was held at Burlington, N. J., on Sept. 4, by the Park Island Canoe Association of Trenton, N. J.; the Red Dragon Canoe Club of Philadelphia, and the Lakanoo Boat Club of Burlington. Many handsome prizes were offered, and the programme was extensive.

A number of races were arranged, in which the winners received points in the ratio of 5, 3 and 1, according to their finish. The winner of each race received a prize, and the club winning the greatest number of points during the entire regatta was presented with a handsome silver loving cup.

The conditions were favorable, and the races passed off pleasantly, all being well contested and interesting. The following is the order of races and winners:

No. 1, one-quarter mile, one man, double blade, juniors:

	Points.
B. F. Havens, P. I. C. A., first	5
H. E. Davis, R. D. C. C., second	3
L. R. Titus, R. D. C. C., third	1

No. 2, hand paddling race, one-quarter mile:

	Points.
E. D. Anderson, P. I. C. A., first	5
H. C. Allen, P. I. C. A., second	3
M. D. Wilt, R. D. C. C., third	1

No. 3, one man, single blade:

	Points.
H. C. Allen, P. I. C. A., first	5
M. D. Wilt, R. D. C. C., second	3
E. D. Anderson, P. I. C. A., third	1

No. 4, tail-end race, double blade:

	Points.
H. C. Allen, P. I. C. A., first	5
E. D. Anderson, P. I. C. A., second	3
Dr. Roberts, L. B. C., third	1

No. 5, tandem, double blade, junior:

	Points.
Woodin and Sterling Hewitt, L. B. C., first	5
Moorhead and Havens, P. I. C. A., second	3
Cook and Hemingway, R. D. C. C., third	1

No. 6, one man, double blade:

	Points.
H. C. Allen, P. I. C. A., first	5
M. D. Wilt, R. D. C. C., second	3
E. D. Anderson, P. I. C. A., third	1

No. 7, tandem, single blade, junior:

	Points.
H. E. Davis and T. W. Cook, R. D. C. C., first	5
Davis and Lea, L. B. C., second	3
Farman and Moorhead, P. I. C. A., third	1

Tandem, double blade:

	Points.
H. C. Allen and E. D. Anderson, P. I. C. A., first	5
E. W. Crittend and M. D. Wilt, R. D. C. C., second	3
Havens and Moorhead, P. I. C. A., third	1

Tournament:

	Points.
Davis and Hemingway, R. D. C. C., first	5
Titus and Crittenden, R. D. C. C., second	3
Hewitt and Horner, L. B. C., third	1
Hamilton and Wilt, R. D. C. C.	Disqualified.

Tandem, overboard:

	Points.
Dr. Roberts and Lea, L. B. C., first	5
Hemingway and Cook, R. D. C. C., second	3
Hewitt and Woodin, L. B. C., third	1

Swimming race, 100yds.:

	Points.
Clayton, L. B. C., first	5
Leigh, L. B. C., second	3
Farman, L. B. C., third	1

Total number of points to clubs: Park Island Canoe Association, 44; Red Dragon Canoe Club, 31; Lakanoo Boat Club, 24.

W. K. P.

Trapshooting.

Fixtures.

Sept. 19-21.—Hastings, Neb.—Amateur tournament of the Hastings Gun Club; $500 added; 2-cent targets. W. S. Duer, Manager.

Sept. 19-22.—Detroit, Mich.—John Parker's eighth international tournament; live birds and targets; $500 cash added.

Sept. 23.—Wissinoming, Pa.—Philadelphia Trapshooters' League.

Sept. 23.—Hartford, Conn.—All-day shoot of the Colt Gun Club. L. H. Bradley, Secy.

Sept. 23.—Ridgewood, N. J.—New Jersey championship, Harold Money, holder, against Chris Wright, challenger, at 2 o'clock, Ridgewood, N. J.

Sept. 23.—Sinking Spring, Pa.—Tournament of the Independent Gun Club.

Sept. 26.—New Haven, Conn.—New Haven Gun Club's all-day tournament; open to all; $15 added. J. B. Savage, Sec'y.

Sept. 26-27.—Squaw Creek Park, between Niles and Girard, Trumbull County, O.—Tournament of the Rummell-Gaston Gun Club. Dr. James E. Gaston, Sec'y, Mineral Ridge, O.

Sept. 26-27.—Muncie, Ind.—Magic Gun Club's tournament.

Sept. 27-28.—Oswego, N. Y.—First annual tournament of the Riverside Gun Club. Robert Oligshaut, Sec'y.

Sept. 28-29.—Tyrone, Pa.—Tyrone Gun Club's target tournament. D. D. Stine, Sec'y.

Sept. 28-29.—Alton, Ill.—Third annual open tournament of the Piasa Gun Club. F. C. Riehl, Sec'y.

Sept. 30.—New Brunswick, N. J.—Ten-men team contest; four teams; teams of Brunswick Gun Club and Reservoir Gun Club against teams of Climax Gun Club and Dunellen Gun Club.

Oct. 2.—Wissinoming, Pa.—Philadelphia Trapshooters' League.

Oct. 3.—Kansas City, Mo.—J. A. R. Elliott, holder, against W. R. Crosby, challenger, for Review cup.

Oct. 4.—Kansas City, Mo.—J. A. R. Elliott, holder, against W. R. Crosby, challenger, for Republic cup.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

Oct. 10-13.—Newark, N. J.—Smith Brothers' grounds. Live birds and targets.

Oct. 11-12.—Reading, Pa.—Live-bird and target tournament of the Independent Gun Club.

Oct. 11-12.—Paris, Ky.—Hill Top Gun Club's two-day tournament. John L. Bosley, Sec'y.

Oct. 11-12.—Newark, N. J.—On Smith Brothers' grounds; two days' tournament of the New Jersey State League.

Oct. 13.—Batavia, N. Y.—E C cup target championship contest between Mr. W. R. Crosby, holder, and Mr. R. O. Heikes, challenger. Match begins at 3 o'clock.

Oct. 16-19.—Du Pont Park, St. Louis, Mo.—Fall tournament; three days at targets; one day at live birds; $300 to $500 added money. J. A. Corry, Manager.

Oct. 17-19.—Baltimore, Md.—Sixth annual fall tournament of the Baltimore Shooting Association. J. R. Malone, Manager. 2

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $750 added. W. R. Elliston, Sec'y.

Oct. 31-Nov. 3.—Cincinnati, O.—Tournament of the Cincinnati Gun Club; two days at live birds; two days at targets. Arthur Gambell, Sec'y.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

Watson's Park.—Burnside Crossing, Ill.—Medal contest the first and third Fridays of each month.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. E. S. Rice, Pres.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

The New Haven Gun Club, New Haven, Conn., will hold an all-day tournament on Sept. 26. It is open to all. There are twelve events, 175 targets in all, and a total entrance of $18.50. Shooting commences at 9:30. Shooters may enter for targets only. Targets 2 cents. Added money $15. Take electric cars to Green, and transfer to Scheutzen Park. The secretary is J. B. Savage.

The Colt Gun Club, of Hartford, has been doing some good preliminary work in furthering the interests of its tournament, fixed to take place on Sept. 23.

The programme of the Cincinnati Gun Club's second annual tournament can be obtained of Mr. G. W. Schuler, 626 Vine street, Cincinnati. The dates are Oct. 31 and Nov. 1, 2 and 3. It is open to all. There are added moneys as follows: Fifty dollars to the first high gun and $25 to the second high gun shooting through all the target events of the first and second day. Each day there are ten events at targets. On the third day there are four live-bird miss-and-out events and one event at 7 birds, two moneys; one at 10 birds, three moneys. On this day the Cincinnati live-bird handicap, $500 purse guaranteed, is the main event. The conditions are 25 live birds, $25 entrance, birds extra; handicaps, 26 to 31yds. Regular entries for this event close on Oct. 23 and must be accompanied by $10 forfeit; the remainder must be paid before the last man has shot at his second bird. Post entry $35. Targets 2 cents, live birds 25 cents.

The different systems—Rose, equitable, Jack Rabbit and class shooting—are all explained and illustrated in FOREST AND STREAM'S score book, thus affording a ready reference for cashiers and all others who wish to learn these systems. The manner in which the score sheets are ruled is illustrated in our advertising pages, the heavy lines being distinctly advantageous in bad, dull lights, which are the lights most prevalent in the scorer's box. In addition, these books contain the rules of the Interstate Association governing target and live-bird shooting, the American Shooting Association rules governing the same, the Hurlingham rules, a form of club organization, and a sample of FOREST AND STREAM trap score type, showing the scores of Messrs. Marshall and Grimm in the closing contest of the last Grand American Handicap.

A truly remarkable score was that of Mr. Coburn in a recent match with Mr. Abbenseth, at Bergen N. J., and the wonder is how he could make it, for it is a truly difficult feat to shoot at 15 pigeons and lose 14. But this is how the story is told: "There was lots of excitement at the live-pigeon match between Contractor C. W. Coburn and Herman Abbenseth. The match was for $25 a side, each man to shoot at 15 birds. Abbenseth killed 4 out of 15 and Coburn killed 1. Coburn really killed more birds than did Abbenseth, but as he shot all except 1 before they arose from the trap, the referee refused to allow them." The referee often is a bold, bad man in "refusing to allow them."

Mr. Paul R. Litzke, our correspondent in the Southwest, in his newsy contributions in the "Arkansas and the South" column, writes us, under the caption "Here and There," that the St. Louis and Kansas City shooters are considering the matter of a challenge trophy, to be contested for by Missouri shooters. This is an admirable proposition. Its sterling good purpose is assured from the men who are endeavoring to establish it—Messrs. Chas. McL. Clark, of St. Louis, and Mr. Chris. Gottlieb, of Kansas City.

Dr. A. A. Webber and Dr. Joseph Creamer, two of the Brooklyn Gun Club's brightest pupils, wandered over to Dexter Park on Wednesday of last week as guests of the Erie Gun Club, the event being the solving of equations between the gun and live birds. In the main event, at 7 birds, Dr. Webber killed all, while Dr. Creamer had all but one. Although there were eleven others, Dr. Webber's score was the only perfect one, while that of Dr. Creamer was as good as the best after Webber's.

Under date of Sept. 18, Mr. H. Nelson, captain of the Pawling Rod and Gun Club, Pawling, N. Y., writes us as follows: "Owing to the Dewey parade, which comes on the 29th of this month (date of our regular monthly meeting), I am requested to call our September shoot for Saturday, Sept. 23, at 1 P. M. Members' cup handicap, 50 targets, 50 cents entrance; cash handicap, open to all, 25 targets, 50 cents entrance; sweepstakes at option of contestants."

The Dunellen Gun Club and the Climax Gun Club, of Plainfield, will each organize a team of ten men, and these two teams will contest against two teams, one organized by the Dunellen Gun Club, of Dunellen, the other by the Climax Gun Club, of Plainfield, N. J. Sept. 30 is the date and the grounds of the New Brunswick Gun Club the place. This should be a most interesting contest.

The Philadelphia Trapshooters' League will hold its next team match on Saturday of this week on the grounds of the Florists' Gun Club, at Wissinoming, Pa. There are ten events on the programme of 10 and 15 targets, entrance 50 and 75 cents. Class shooting and three moneys if the enries are not twenty or over.

In the unfinished races of Aug. 22, shot off at the Worcester Sportsmen's Club tournament, Sept. 12, Wheeler made the extraordinary good score of 98 out of 100; and the hardly less extraordinary score of 96 was made by Miskay. Wheeler's average in the twelve events of 240 targets was .970.

On Thursday of this week the Cast Iron Stove pendant again comes into prominence, Mr. Charles Zwerlein, of Yardville, N. J., taking a try at it. It will be Mr. J. A. R. Elliott's busy day, for on the grounds at Yardville Mr. Zwerlein, always formidable, is still more formidable.

Under date of Sept. 14, Mr. J. R. Malone, Baltimore, writes us: "Please claim dates in your paper for the sixth annual fall tournament of the Baltimore Shooting Association, Oct. 17, 18 and 19, 1899. Two days targets, one day live birds; $200 given in added money."

The dates of the Tyrone Gun Club's target tournament have been changed to one week later, Sept. 28 and 29, on acount of those dates having been previously fixed upon by the Johnstown Gun Club and the Windbur Gun Club.

Quite a lot of interest centers at the Keystone League grounds, Holmesburg Junction, Philadelphia, on Tuesday of this week, where Messrs. J. A. R. Elliott and H. E. Buckwalter shoot at 100 live birds for $200 a side.

We are informed that work is progressing finely on the grounds of the new Interstate Park Association. The plowing and seeding to grass and all the preparatory work of surfacing are progressing energetically.

Mrs. M. F. Lindsley (Wanda) arrived in New York last week and will visit relatives in the East during some weeks. Mrs. Lindsley has been doing some very creditable shooting at the traps of late.

We learn that Mr. Edward Johnson, of Atlantic City, is recovering nicely from his serious accident and again will make it lively for any one who contests with him at the traps, in due time.

BERNARD WATERS.

WESTERN TRAPS.

Chicago Sportsmen's Handicap Trophy.

CHICAGO, Ill., Sept. 15.—The initial shoot of the series of diamond medal contests for the Chicago sportsmen's handicap diamond trophy came off to-day, and struck twelve the first thing. Twenty-four contestants and one visitor took part, and the handicapping and the shooting together were so good that there was not time enough left in the whole afternoon to get to a finish, no less than fourteen out of the twenty-four going into the 15 hole, thanks to summer birds and a short race. The weather was fine for the sport, and the birds all one could ask at this season, and it was at once apparent that this series of contests, devised by Manager Leffingwell, is destined to rival in popularity the two diamond contest series so successfully completed this summer. The open handicap idea seems a popular one here, and certainly under the conditions of these shoots the contestants have plenty to interest them. The capital prize is a grand thing, a medal worth $225, and the Watson high average medal is fit company for the biggest trophy. These and the liberal list below them make it well worth while taking the Illinois Central for Watson's every other Friday afternoon for the next six months.

In the shooting to-day Wilcox, Roll, Odell, Holly, Mussey, Leffingwell, Palmer, Shaw, Adams, Felton, Parker, Steck, White and Amberg all went out with 15, and after that they simply shot till the tinkle of the cowbells called John Watson home to supper, and he put up the shutters of the park for the day. It was discovered that after an argument running up to 20 birds, Wilcox, White, Roll, Felton, Palmer and Holly were still strictly in it. All these agreed to sleep on their arms until to-morrow afternoon at 3 o'clock, at which time the shooting in the ties on 15 will be resumed and the winner of the trophy for the first time be determined.

The ties on 14 included Crow, Boa, Von Lengerke, Gillis, Simonetti, Barto and Levy. With these also it went to 20 birds in the tie, and at that station Messrs. Crow and Von Lengerke agreed to divide, as it seemed doubtful if either would miss again this week. In the 13 hole there was only one man, Young, who took down the proceeds by himself and went home before candle light. Elias shot out Rice in the 12 tie.

Fred Gilbert was present and shot in with the boys, seeming to find it easy to reach 15 from scratch. There were only seven men who killed their strings of 15 straight without needing the handicap birds, and among these were two Audubon men, Wilcox and Felton. Col. Felton added to his performance by remaining in the tie till the shades of night came, and will be on the ground to-morrow by sunup. When I add that Col. Felton is old enough to be the grandfather of half of these Chicago shooters it will be evident what quality lies in the lake breezes of Chicago. It used to be one of John Davidson's boasts that "auld age ne'er chills the Douglas blood." The Colonel is something of a Douglas himself, it seems, and I am sure everybody hopes long may he wave. It may be of interest to reprint the rules governing this series of contests, which are worth copying by other live-bird cities. The rules follow below:

Rules.

1. There will be twelve contests, the first of which will be held on Friday, Sept. 15, 1899, at 1:30 P. M.
2. All contests thereafter will be held on the first and third Fridays of each month at 1:30 P. M.
3. Those wishing to participate in any shoot must be present and be prepared to shoot before 2 o'clock, and have their names entered as contestants. No entries will be allowed after 2 P. M.
4. All contests will take place at Watson's Park, Burnside Crossing, Ill., and Mr. John Watson will act in the capacity of referee and handicapper.
5. All contests will be at live pigeons at handicap distances of from 26 to 31yds., the scratch men shooting at 15 birds, and the others at from 15 to 19, as the referee may decide, and at the distance he determines.
6. The successful contestant is to receive a diamond trophy and to retain the same in his possession until it is won from him at a regular shoot. He will also receive 40 per cent. of the entrance money.
7. The second high gun in ties of 15 will receive $5 cash in each shoot, donated by Mr. E. S. Rice.
8. The one winning the diamond trophy the greatest number of times in twelve contests shall retain the same permanently.
9. All ties for the diamond trophy will be shot off the same day and immediately following the trophy contest, and each contestant shall shoot at 5 birds, subject to an equitable allowance of birds, but at the same distance he stood during the main event.
10. The high gun on ties on 14 will receive 30 per cent. of the entrance money, and the second high gun, 100 hand-loaded shells, loaded for pigeon shooting, donated by a contestant.
11. The high gun on ties on 13 will receive 20 per cent. of the entrance money, and the second high gun, 100 hand-loaded shells, loaded for pigeon shooting, donated by a contestant.
12. The high gun on ties on 12 will receive 10 per cent. of the entrance money.
13. All ties on 14, 13 and 12 will be shot off at 3 birds, and at the same distance as contestants stood during the main shoot.
14. A high average trophy, donated by Mr. John Watson, will be given the one winning it the greatest number of times. To be eligible for this medal, the participant must shoot in at least eight of the twelve contests. The medal each shoot will go, temporarily, to the one scoring the greatest number of consecutive kills, beginning with the first bird shot at.
15. The one winning the John Watson highest average trophy at a shoot is privileged to retain the same until the next regular contest.
16. The holder of the diamond badge and the John Watson highest average trophy shall, before the commencement of each shoot following the one when the trophies were won, deposit the same with Mr. John Watson, and by him be handed to the winners.
17. The contests are open only to residents of Chicago and Cook county, Ill.
18. The trophies are given by popular subscription, and each participant must pay the sum of $5. The amount thus paid in is to pay for the diamond trophy. Should there be any surplus after paying for said diamond trophy, the same will be disposed of in such manner as a majority of the subscribers may decide.
19. Each participant must pay the sum of $1 entrance fee in each contest. Birds extra. The money so paid will constitute the cash prizes other than the one made by Mr. E. S. Rice, as stated in Rule 7.
20. The rules governing these contests are those now in vogue at the grounds of Mr. John Watson.

Watson's Park Gun Club.

Jim Crow and O. von Lengerke divided.

S E. Young being the only 13, he received third money.

Ties on 12:

J Elias	012 122	E S Rice	022 021

Mr. John Elias won.

Eureka.

Sept. 16.—Fourteen members and one visitor, Mr. S. B. Trimble, attended at Eureka Club shoot this afternoon. The day was not altogether favorable for target shooting, the light being not of the best, and the wind strong, so that the flights were unsteady, though most of the scores indicate that the boys found the curves capable of solution. In the trophy event the burly president, Mr. A. W. Adams, won the Class A medal, A. C. Borroff the Class B, R. B. Mack the Class C, and W. H. Cornwell the Class D. Mrs. Carson made the nice score of 19 out of the 25 in the medal shoot, and 15 out of 20 in one of the 20-bird contests which filled in the remainder of the day. Following were the scores:

Sundermeier	10011000011110011111111101—16
A W Adams	10110101111111110110111110—20

Piasa Third Annual.

The third annual tournament of the Piasa Gun Club, of Alton Ill., will be pulled off Sept. 28 and 29. F. C. Riehl, secretary says that this is going to be one of the big shoots, and wants everybody to come. It is "everybody's shoot," the management states, a pretty big proposition at first sight, but it is as easy for the Alton boys to run a shoot for everybody as it is for anybody, so there you are. I wish to call especial attention to the fact that Alton is the town which claims as a citizen Mr. H. R. Wills, one of the best rifle shots and best fellows in the world, and I am advised that Mr. Wills has a sneaking idea that he could also hit targets. As a matter of revenge I hope some one w ill prove to Mr. Wills that he cannot shoot targets a little bit, unless they are tacked on a board.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, Sept. 16.—The appended scores were made on our grounds to-day. The day was hot and a very strong southwest wind blew directly across the traps, making the flight of targets very erratic and the shooting consequently very difficult. Class A trophy was won by Dr. Shaw on a score of 23; Class B trophy was won by Pollard on a score of 20, and Class C was won by Fanning on a score of 19.

Team shoot, 10 targets, six men on a side:

Dr. Shaw 9, Hicks 7, Hellman 8, Dr. Meek 6, T. Eaton 6, Brabrook 9; total 45.

Richards 5, Kuss 8, J. Fanning 7, Mrs. Shaw 7, J. Wolff 8, Dr. Mathews 6.

The scores in the trophy shoot follow:

Richards	10110111111000111111111011—19
Dr Shaw	11101111111111111111110111—23

RAVELRIGG.

Trap at Sedalia.

SEDALIA, Mo., Sept. 9.—Inclosed please find scores for our regular monthly shoot for the Dickman cup. Owing to a street parade in the city our attendance was small, and our scores were not up to the standard on account of a very stiff wind quartering the traps.

The first event was a practice at 10 targets. The scores: A. Linabary 10, J. Roe 8, McClure 7, Kerr 10, Fleming 8, Smith 9, Van Ripes 8.

Cup shoot, 50 targets: A. Linabary 34, J. Roe 34, Smith 26, McClure 29, Kerr 25, J. Linabary 27, Fleming 32, Van Ripes 28.

In the shoot-off for the cup Linabary was 8, J. Roe 9.

New Jersey Rifle Association.

The Wimbledon Cup Match.

THIS contest, which took place at the eighth annual meeting of the New Jersey Rifle Association, but shot under the auspices of the National Rifle Association, took place at Sea Girt on Sept. 8. It was open to all citizens and residents of the United States. The conditions were: Distance, 1,000yds.; 30 shots; weapon, any rifle within the rules; cleaning allowed; position, any without artificial rest; 18-point handicap for military rifles; 6-point handicap for special military rifles. First prize, the Wimbledon cup. The scores:

First Lieut F C Wilson, 1st Batt Inf, Ga Vols	149
Priv W. C. Hudson, 4th Regt, N G N J	134
Col G T Cann, I G of R P, State of Ga	113
Sergt G H Doyle, 71st Regt, N G N Y	107
Lieut W W Cookson, 6th Batt, D C N G	101
Wm deV Foulke, Philadelphia Rifle Association	97

The Schuetzen Match.

All comers' continuous match; 200yds.; standing; number of shots, 7 on the Standard target, with 11in. bullseye (including the 7 ring). Any weight rifle, with any trigger-pull, palm or other rest allowed. When firing, the muzzle of the rifle must be kept outside the loophole of the shelter. The allowance for military rifles will be four points on each string. Cleaning allowed between shots. The aggregate of three scores to count for all prizes. Entries unlimited; fee, $1 each ticket. Prizes: First, $40; second, $20; third, $15; fourth, $10; fifth, $8; sixth, $7; seventh and eighth, $5.

				Total.

A Philadelphia physician who died the other day left a will containing some queer provisions, including this one: "If my family never settled with Mr. Foster concerning the dog, I wish and want them to give to the boy Foster who was bit the sum of $10, but if they have settled with the said Foster, then they are not to pay any money to said boy. This is in fulfillment of a promise I made to them when I was in trouble concerning the dog."

Lost or Dead.

The Res Adjuticata.

A CORRESPONDENT sent us the following clipping, taken from columns of a contemporary. The first paragraph of it contains question and answer which appeared in FOREST AND STREAM Aug. 26, under the caption "Lost or Dead." The second paragraph contains the ruling of our contemporary, and places the matter *res adjudicata;* for we can readily infer that the ruling of "Recognized Authority" is final and better than the ruling of a gun, everyday authority, or a higher authority, or the highest authority, though we were under the impression that any authority, existing in fact, was recognized—without recognition there is no authority.

Our correspondent desired that we give our reasons for our answer as set forth in the following:

"G. H. S., Wichita, Kan.—In a recent issue of one of your contemporaries, the following query was propounded and answered, and as I do not fully agree with the decision given I send it to the 'recognized authority' for an answer: 'A shooter at the score calls out to the trap puller, "Are you ready?" and receiving the response, "Ready," he calls, "Pull," simultaneously with which, or a moment after, but before the trap is sprung, he discharges one barrel. What should be the referee's decision?' 'Ans.—If he does not fire his remaining barrel at the bird, or if he fires and the bird is not gathered within bounds, it is a lost bird. If he fires and the bird is gathered within bounds it is a dead bird.' Do you agree with the above decision?

'Ans.—No, only in part. If the shooter's gun was discharged before the trap was opened it was no bird. If, when the trap was opened the bird was a sitter and he fired and killed it on the ground it was no bird. If the bird took wing when the trap was opened and the shooter used his second barrel and the bird was gathered within bounds, it should be scored a dead bird; but if the bird was not gathered within bounds it should be scored a lost bird. There is no rule that we ever saw which requires a shooter to use his second barrel when the first barrel has been discharged before the trap was opened."

We contend that, under the circumstances specified in the foregoing question, it is a "lost bird" if the shooter does not fire his second barrel. We will support our contention with a pertinent line of authority and reasoning.

To us, the point seems so simple, so analogous to many other points of a related kind, and so fully covered by usage and the rules that the invoking of any authority, "recognized" or unrecognized, is unnecessary. It is possible that there are people who would find difficulty in understanding that two and two are equal to four, yet it would hardly be necessary to invoke the dictum of "recognized authority" to establish this simple point, nor would it hardly be necessary for the "Recognized Authority" to refer the matter to itself before the point could be well established.

Let us briefly examine the question on its merits, for the moment setting aside dogmatic assertion and consequent *res adjudicata,* and in their stead considering rules and usage and reasons supplemented with a little argument.

When Does Competition Begin?

There must be a definite starting point at which the shooter, who is ready to compete, begins his competition formally. There also must be a coincident point of time and circumstance at which official cognizance, in respect to competitor and competition, has its beginning. This point is when the shooter declares himself in the competition by the order "Pull." All the rules recognize that competition begins at this order, and they all caution the trap puller to heed it carefully. As governing him in this matter, the American Shooting Association rules set forth: "And it shall be the trap puller's duty to pull the traps evenly and fairly for each contestant, and instantly after the shooter calls 'Pull.'"

This command thus denotes that the shooter is ready, and that competition shall begin. The rules further impose that if the bird is liberated before the shooter gives the proper order, or if it is not liberated promptly after the order is given, the shooter may declare it a "no bird." All of which go to show that when the shooter calls "Pull" competitive action begins thereat. There are many other rules which recognize that the shooter is in competition when he calls "Pull," but enough has been adduced to illustrate the matter under consideration. Once in the competition, the shooter is responsible for his doings.

The rules thereon are all so mandatory that when the order "Pull" is given they impose that the contestant is irrevocably committed to the competition and must continue it to a formal conclusion. He cannot declare a "no bird" and consequently cannot declare no competition, because of any error or oversight on his own part. He is held directly responsible for his own competitive acts, be the same acts of omission or commission. Indeed, no one but himself can be held responsible for his competitive doings. Faults ascribable to his gun or ammunition, or failures caused by extraneous interference, are not chargeable to him under certain qualifications, and are therefore not pertinent to the argument.

Declaring a "no bird" under legal conditions, either by the shooter or the referee, is equivalent to declaring that at that attempt there is no competition, and that the shooter will begin the competition anew.

The Logic of Never Saw.

The "Recognized Authority" sagely and judicially declares: "There is no rule that we ever saw which requires a shooter to use his second barrel when the first barrel has been discharged before the trap was opened." This is its reason for deciding "no bird."

A decision founded on such a principle or on such an authority can hardly be accepted as sound. On the one hand is the dogmatic ruling, "no bird," which, on the other hand, is frankly admitted to rest on rather a cloudy source; that is to say, "on a rule that we ever saw." As a process of reasoning, the "Recognized" seems to reason on rather a sharp slant from a simple subject into vacuity.

Let us for a moment depart from the "Recognized's" logic, which proves one material point by citing another point which it never saw. Let us consider some rules which all can see, some usages which all know, and some principles which are necessarily inherent in the competition. Let us consider the rules first:

The shooter at the score calls "Pull," and fails to shoot because his gun is not cocked. Who is responsible for the oversight and the consequent loss? What is the decision? We might declare that it is "no bird," because "there is no rule that we ever saw" which requires a shooter to shoot with a gun which is not cocked, nor one which is not loaded; but unfortunately for the "no-bird" decision, there are rules which require the shooter to be responsible for what he doesn't do, as well as for what he does do in a competitive way, and the decision under them is a "lost bird." On this point Rule 18, of the American Shooting Association rules, declares: "If the gun is not cocked or the safety not properly adjusted, and the bird escapes, it shall be scored a 'Lost bird.'"

The intent to hold the shooter responsible for his own oversights, etc., is further shown in the same rules—Rule 22: "A shooter, having fired his first barrel and left the score, cannot return to fire his second barrel."

Thus, from the beginning to the end of the shooter's inning, he is held to a strict accountability for his acts of omission and commission. This is in accord with the spirit and purpose of the competition, and permeates the rules.

But let us assume that he does not shoot at the bird at all. What is the decision? "No bird"? Yes, if we rest it on the authority that there is "no rule that we ever saw" which requires the shooter to use his gun if he does not choose to do so. It is, however, a "Lost bird" under the rules, which take the shooter in hand for what he doesn't do but should do. Who is responsible for his failure to shoot? Why, himself. The Interstate and Hurlingham rules are alike on this point, namely: "If the shooter advances to the mark, and orders the trap to be pulled, and does not shoot at the bird, or his gun is not properly loaded, or does not go off owing to his own negligence, that bird is to be scored a lost bird." Note the strict accountability to which he is held after he "orders the trap to be pulled." His errors of omission and commission are then scrupulously charged to him. Under that rule he cannot fire off his gun before the trap is pulled without being responsible for it.

Now, "he advances to the mark" and calls "Pull," and discharges one barrel before the trap is opened. Remember that he does not shoot at any bird, because he cannot do so; there is none in sight.

The premature shooting is an error arising from excessive nervousness or misjudgment in pressing the trigger too firmly in preparing for the shot. Who is responsible for his error after he calls "Pull" and has declared thereby that he is ready and is in the competition? Himself, of course. It is his act, and with it is his responsibility.

On what ground, then, can the referee declare there is "no bird" and consequently no competition when the shooter has advanced to the mark and ordered the trap to be pulled, and committed the error? On what ground has the shooter a right to declare himself in the competition, and then, when he makes a harmful error, have the audacity to declare that the competition is then and there ended and suspended till he can correct his error, and commence anew fully prepared? Under what rule or usage—apart from the logic of things that he never saw—can a referee excuse any of the shooter's competitive errors? How, from any matter of reason or any matter of fact—apart from the logic of things unseen—can a referee, when the shooter is in competition, declare there is "no bird," basing his decision on a circumstance which occurred before the trap was opened? It is a physical impossibility, then, to shoot at the bird, and equally it then is a physical impossibility for the bird to fly. To be a "no bird," it must have an opportunity to fly, and to be exposed to the shooter's fire.

Suppose that, after the trap is pulled, the shooter flinches, and shoots into the ground a few yards in front of himself. He then has but one barrel to shoot at the bird. Who is responsible for his crippled ability? Suppose that he does not then shoot his other barrel and the bird escapes. What is the ruling? "Lost bird." But his responsibility at that moment was no greater than it was at any other moment after he had called "Pull."

The shooter who fires his gun after he calls "Pull," or when he calls "Pull," is not to be excused because he has but one barrel when the trap is opened. But, because he has committed an error thereby, he must stand to the responsibility of the act. The empty barrel is not a datum of the competition. The shooter's acts and their results are the data, and he must abide accordingly as they are for or against him, and by these acts and their results it is determined whether he wins or loses.

The "No Bird" Contention.

It has been advanced as an argument, on the matter under consideration, that the bird is on the ground when the erroneous shot is fired before the trap is pulled, and for that reason is a "no bird." The fallacy of this contention is easily shown, as follows:

First, if the bird is on the ground when the first shot is fired, and this before the trap is opened and after the shooter has called "Pull," the bird must needs be killed with the second barrel to make it a "no bird." If it escape, it is a "lost bird," according to Rule 10, Interstate: "If a bird is shot at on the ground with the first barrel, he may use his second barrel, but such bird if gathered is a 'no bird'; if lost, it is a 'lost bird.'" So also declare the other rules.

Second, if the birds in each trap are on the ground before a trap is opened, after the shooter calls "Pull," then all the birds in all the traps are on the ground before a trap is opened. Here we are confronted with the rather peculiar situation of five birds on the ground at once. But the principles of the competition, and usage and the rules, consider only one bird in the competition at a time. Before a trap is opened, the shooter does not know which bird will be released, and the rules particularly guard against his knowing which bird will be released; thus he cannot know which bird to shoot at before the trap is opened.

How, then, can the referee, under the rules, declare "no bird" when no bird had been exposed to fire, and the bird, further, had no relevancy to the shooter's nervousness or misjudgment? The shooter could not be allowed another bird on the ground of extraneous interference, for there was none; and it could not be a "no bird," because of the shooter's own error; and also because it is contrary to the letter and spirit of the competition that a shooter should be allowed to correct his own erroneous acts after he has directly engaged in competition; and it was a physical impossibility that it could be a "no bird" when it was safely inclosed within an iron inclosure, the trap, when the shooter made his erroneous act. Bird and wild shot were unrelated. The referee might say that he excused the shooter for the accidental discharge of his barrel, and though he would violate the rules if he so excused him, he nevertheless would be dealing with a matter of fact; but if he declared a "no bird" when the latter was safely within the trap when the accidental shot was fired, and when the shot had no significance whatever in respect to the bird, as it had not been liberated to be shot at, he would be dealing largely with a matter of fancy, not of fact.

If we assume that competition begins when the trap is opened—as some shooters contend—it does not in the least free the shooter from the responsibility of his acts. On the contrary, he is held the more closely to such responsibility. If his gun is not loaded when the trap is pulled or the shooter does not fire at the bird, the rule already quoted applies to him, as follows: "If the shooter advances to the mark and orders the trap to be pulled, and does not shoot at the bird, or his gun is not properly loaded, or does not go off owing to his own negligence, that bird is to be scored a 'lost bird.'" This is very much against the logic of the never-saw.

The error of discharging the gun unintentionally is analogous to the error of unintentionally misplacing the safety or not adjusting it correctly, or of forgetting to load the gun, or of standing at a nearer mark than the one prescribed, or of closing the gun after shooting, the second barrel being needed, etc., and all these competitive acts of omission and commission stand together in the shooter's responsibilities, or they fall together. Yet, as commonly accepted, the rules governing the shooter's doings stand as good law. Through past ages, the wisdom of the trapshooting world has formulated its rules and usages, covering the points which may arise in competition; and these rules which all can see are much better authority than the rules any one never saw.

We have gone into this subject at some length because it has afforded a subject of discussion to some shooters for some months, particularly in and about New York. Concerning it, opinions were much divided. We will give space with pleasure to the communications of those who wish to discuss the matter.

Trap Around Reading.

SINKING SPRING, Pa., Sept. 14.—At a meeting of the Independent Gun Club, of this place, held this evening, it was decided to hold a grand sweepstake target shoot on Saturday, Sept. 23, the programme to consist of seven 10 and 15 target events at a reasonable entrance fee. The club also decided to hold its annual fall target and live-bird tournament Wednesday and Thursday, Oct. 11 and 12, on the club's grounds at Hainly's Hotel. The first day will be target events with added money. The second day the Independent Gun Club will furnish live birds for its events that are claimed to be some of the fastest and finest live birds ever trapped for a shooting match. The club has secured 400 pairs of fresh country birds that will be left to fly until the morning of the shoot, when they will be used. The live-bird programme will consist of the Independent introductory, 7 live birds, entrance $5, class shooting, and the Sinking Spring handicap, 15 live birds, $10, class shooting. Miss-and-out events and extra events to suit the shooters will constitute the balance of the programme. The Sinking Spring grounds are easily reached from Reading every 20 minutes by trolley line, taking the Womelsdorf car with the red flag on Penn street. Arthur A. Fink, of Reading, will manage, and any information wanted will be cheerfully given by addressing him at 426 Franklin street, Reading, Pa. The representatives of the sportsmen trade are invited to be present, as they can shoot for the price of targets and have fine accommodations for a display of their goods. In the live-bird events they can contest for the purses.

Phœnixville, Pa., Sept. 14.—West Chester turned the tables on the Phœnix Gun Club and defeated their team in a fourteen-men team race to-day on the Phœnix Gun Club's grounds at this place by the score of 258 to 248. Each man shot at 25 targets over the magautrap. The first match was shot at West Chester and was won by Phœnix. As both clubs have each won a victory, a third match will be shot, the place to be decided by toss. The scores of to-day's match follow:

West Chester.		Phœnix.	
Greene	23	Miller	22
Lumis	22	Buck	22
Henry	22	Pehlert	21
Ford	21	Holman	19
Torpey	21	Hodge	19
Gill	20	Ennis	19
Peters	20	Winstead	19
Sellers	20	Dotterer	18
Davis	18	Harris	18
Jackson	18	Pierce	17
Howard	15	Erb	16
Harrison	14	Stevens	15
Pechin	13	Dunlap	14
Mowere	13—258	Farley	9—248

Pottsville, Pa., Sept. 15.—An interesting live-pigeon shooting match took place here to-day. There were 5 live birds allotted to each man and Head and Walker grassed their full quota of birds. The scores: Head 5, Walker 5, Jenkins 0, Davenport 3, Hallihan 2, Stone 2.

West Chester, Pa., Sept. 16.—Henry won the West Chester Gun Club's challenge cup to-day by breaking 22 out of 25 targets. The scores follow:

West Chester challenge cup, 25 targets per man: Hoopes 13, Harrison 15, Todd 17, Davis 21, Nate 11, Peters 20, Ford 21, Gill 21, Henry 22, Hoar 19, Mowere 15, Howard 19.

Pottstown, Pa., Sept. 15.—The Shuler Gun Club received the South End Roman shield trophy, won at Reading in the team shoot on Sept. 9, and have placed it on exhibition in Custer's window, this place. Arrangements are being made to hold a shoot, when this handsome trophy will again be contested for by teams of five men each.

DUSTER.

Florists' Gun Club.

WISSINOMING, Pa., Sept. 12.—The weather was clear to-day, though there was a stiff wind, which made some added difficulty in the competition of the Florists' Gun Club's monthly shoot, the third shoot in the second series of monthly handicap contests. In the afternoon the strong wind caused the targets to make uncertain flights, making the shooting very difficult. The conditions for the contest were 25 targets, known angles, thrown from five expert traps, and 25 targets, unknown angles, thrown from a magautrap, handicap added to the score. At the known angles everybody, with the exception of the State champion, A. B. Cartledge, shot well. After the first 10 Cartledge became very erratic, missing 8 out of his last 15, George Anderson making high score. On the magautrap the shooting, with the exception of Wolstencroft and Park, was very erratic. This was caused by the high wind. For the 50 targets Wolstencroft broke the greatest number, Park getting into first place by having a longer handicap. The scores:

Twenty-five known, five expert traps, and 25 unknown, magautrap:

Points won to date: Anderson 5, Bell 5, Harris 5, Wolstencroft 4, Ball 4, Burton 3, Smith 3, Dorp 3, Coleman 3, Jones 3, Park 3, McKaraher 2, Cartledge 1, Craig 1.

Team match, 25 targets, unknown angles:

McKaraher's Team.		Craig's Team.	
McKaraher	13	Craig	16
Bell	17	Cartledge	16
Jones	16	Wescott	14
Harris	20	Smith	20
Dorp	19	Parsons	17
Anderson	21—106	Park	20—103

The neighbors were naturally interested in the scientific parent. "Why," they asked this person one day, "do you always give your son chloroform when you administer corporal punishment to him?" First, of course, the scientific parent laughed heartily at their ignorance and simplicity. This done, he said: "I wish to bring him up not to know when he is licked."—Detroit Journal.

Arkansas and the South.

Washington Park Gun Club.

Kansas City, Mo., Sept. 13.—A good crowd of shooters journeyed out to Washington Park to-day to participate in the regular monthly shoot of the club. The club had out an even dozen and there were also three vistirs present. Gregory captured the club event on a straight score, which exempts him from paying for his birds, as this is one of the incentives this club holds out to its members. The one making the highest score at each monthly shoot is exempt from paying for his birds, while in addition a very handsome cup is given to the one making the best general average and participating in no less than eight shoots. The conditions were ideal and the birds showed considerable snap and vigor, though there was no wind.

Bramhall showed the best form, as he scored 31 birds straight.

Frank Hodges, of Olathe, Kan., was one of the visitors present.

The scores:

Gregory	121112222222122—15
*Bramhall	222222211222212—15

Intercity Team Race.

Arrangements are now pending whereby the first of a series of three team races between ten men from Kansas City and a like number from Omaha will be shot at the former place during the first week in October—either the 2d or 5th has been suggested, so that this event will either precede or follow the Elliott-Crosby matches, which occur on the 3d and 4th. At Omaha I was assured that they were ready and willing to shoot at any time and to either go to Kansas City or to entertain that delegation at home. While at Kansas City I was informed that the above date would suit them, and that negotiations would at once be opened with a view to having the Omaha shooters agree to come on one of these days. Probably in another week we will be able to speak definitely in this matter.

St. Louis Doings.

St. Louis, Mo., Sept. 9.—The Griesedick-Sumpter match for the possession of the Busch medal was shot at Dupont Park to-day and resulted in "no contest" after each had shot at 50 birds. The conditions are 25 birds per man, but in this original number each shooter accounted for 24, so that a shoot-off was naturally in order, which, however, failed to bring about a decision, notwithstanding that each shot at 25 birds. This time the contestants scored all their birds, so that the final score was 49 out of 50. Both lost birds were dead out of bounds. Sumpter lost a twisting outgoer, while Griesedick lost a rapid towering incomer. The birds for the first part of the race were a fair lot, but the latter half were very ordinary. Had Griesedick scored a victory to-day he would have retired the medal, as he has already won it five times. In about two weeks these shooters will meet again, and the result will probably then be more decisive. The scores:

Sumpter	22222222222222222*2222222—24
Griesedick	11221222122221112111*12222—24
Shoot-off:	
Sumpter	2222222222222222222222222—25
Griesedick	21221212112221222121222222—25

Omaha Gun Club.

Omaha, Neb. Sept. 9.—Every Saturday afternoon during the months of May, June, July, August and September the members of this club will gather to contest with one another for club honors, which is settled in a 20-target race during the afternoon. A shooter can at any time, by previously announcing it, shoot his score to count as the club event. Thus to-day Grant made but one straight score, but this came when it counted most, and thereby he carried off the honors of the day. On the other hand Loomis, who actually outshot Grant, is low man, for the time he announced his club score he could only break 14, though he made three 18s, a 19 and two 20s, and finished with 43 straighht. Parmelee was also unfortunate, as in four trials he broke two straight, but in his club score he got but 18. This shooter made one run of 50 without a miss.

The following are the scores shot during the afternoon, while the club event is given in full:

Loomis	18 18 18 14 19 20 20	Bates	18 19 15 .. ..
Grant	18 19 20 14 19	Lincoln	16 17 13 .. ..
Plumber	17 15 13 18 18 15 ..	Watson	9 7 9 .. ..
Parmelee	17 20 20 18	Kimball	19 18 .. ..
Brucker	14 17 15 13	Townsend	18 16 .. ..
Burgess	16 18 14	Litzke	17 .. ..

Grant	11111111111111111111—20
Bates	11111111111111011111—19

O. K. Gun Club.

Kansas City, Mo., Sept. 14.—The O. K. Gun Club, which has done no shooting since last May, as the members of this organization are opposed to shooting pigeons during the hot weather, resumed their regular monthly contests to-day, and on this occasion shot two scores, the first counting as the June score and the other for September. F. N. Cockrell was high man in the first trial, making a clean score. Gottlieb was but one behind. The second trial proved quite a surprise, as all of the best shots showed poor form, and those who do not rank among the high averages came to the front. C. B. Cockrell, J. W. McCurdy and Kit Colyer tied on 17, and the latter won by virtue of a forfeit, as neither of the others responded when called for a shoot-off. The birds were quite active, and to this may be attributed the ordinary shooting of some of the members.

The scores:

June Score.

C B Cockrell	12211222111212122111—20

Here and There.

Mr. W. Fred Quimby, the affable representative of the American E. C. & Schultze Powder Co., has been spending a few days at Blue Lake, near Onawa, Ia., bass fishing in company with Mr. and Mrs. W. D. Townsend, of Omaha, Neb. Mr. Quimby will attend the Hastings tournament and will then make a tour of the Pacific Coast in the interest of his company, returning in time to be present at the Belle Meade tournament.

Mr. Herman C. Hirchey, of St. Paul, won the championship of Minnesota at the St. Paul tournament by scoring 44 out of 50 shooting at 26 single and 12 pairs and scoring 22 of each. His shooting on the doubles was particularly good, but Mr. Hirchey has often demonstrated that he is capable of some capital performances.

Mr. C. H. Curtice won the club trophy at the last club contest of the Dupont Gun Club, of Omaha, which is a 20-target event. On this occasion Mr. Curtice broke 19 out of 20 in a high wind.

There is considerable talk among the St. Louis and Kansas City shooters of establishing a challenge trophy for Missouri shooters. Mr. Chris. S. Gottlieb, of Kansas City, and Mr. Chas. McL. Clark (Chase), of St. Louis, are the chief advocates of this project, and any one interested should communicate with either of them. Such a trophy would materially increase the interest in live-bird shooting in the State of Missouri.

Paul R. Litzke.

IN NEW JERSEY.

Hackensack River Gun Club.

Hoboken, N. J. Sept. 16.—The Hackensack River Gun Club held the third of a series of six live-bird shoots yesterday. A fine lot of birds were on hand.

We were favored with the presence of Capt. Money and his son, Harold Money.

No straight scores were made. Four tied with 9 for first money.

The return match between Wm. Hexamer and H. M. Heflich, at 50 targets, was postponed till our next club shoot, Friday, Oct. 20, business preventing Hexamer from being present.

A supper will be furnished by Mine Host Heflich after this shoot at the club's expense. All are welcome.

Club shoot, 10 birds, $5, two moneys:

*Capt. Money	1122211022—9	Fred Durr	210212110*—7
*Harold Money	2220222222—9	John Chartrand	11*1220222—8
H M Heflich	2222012221—9	H W Kramer	01*0021211—6
Frank Jack	*221010211—7	L F Kleber	1022002100—5
Leonard Stebzle	0*00*12000—2	E Weikert	111212220—9

*Guests.

Miss-and-out sweep for price of birds:

Frank Hall	211222222*0*	Capt Money	1221211222
Harold Money	1212112220*2		

Mr. Frank Hall pays for birds.

John L. Chartrand, Sec'y.

Central New Jersey League.

South Amboy, N. J. Sept. 16.—Five teams competed. The two New Brunswick clubs tied on 69. The shooting was extremely difficult, which accounts for the low scores. Each man shot at 25 targets, 125 targets to a team. There was a high inblowing wind and the targets were thrown far out. The two New Brunswick clubs will engage in a team contest with the Climax Gun Club and the Dunellen Gun Club Sept. 30 on the grounds of the New Brunswick Gun Club. There will be ten men on a side and each man will shoot at 25 targets, making a total of 250 targets for each team. This should be a very interesting contest. The scores:

Brunswick Gun Club, of New Brunswick.	
Capt Bunk	18
Arthur	17
Nichols	15
Oakley	11
Vanderveer	8—69
Reservoir Gun Club, of New Brunswick.	
Bissett	21

Norr	6
Green	6—45

Morfey Against Heflich.

Lyndhurst, N. J., Sept. 14.—The somewhat novel match between Messrs. Heflich and Morfey was shot to-day, the latter killing his 25 birds straight to 20 for Heflich. Morfey shot a Winchester, Heflich a Burgess. The conditions were 30yds. and pump guns were allowed as many shots as they could use.. The day was one of September's best—clear, cool and pleasant, with hardly any wind blowing. As is usual at Morfey's grounds, the birds were good. Heflich's gun did not work well at times, which hampered him accordingly, and cut down his score appreciably in consequence. More than two shots in a narrow boundary is not such a distinct advantage as it would seem to be, for out of the 50 birds only 3 were killed with the third shot, and some were lost which had been shot at three times. This is the first of the two matches arranged between these two shooters. The second is fixed to take place on Wednesday of this week. The scores:

Trap score type—Copyright, 1899, by Forest and Stream Pub. Co.

Worcester Sportsmen's Club.

The tournament of the Worcester Sportsmen's Club Tuesday, Sept. 12, was one of the best ever held by the club. The attendance was good and the weather perfect.

In the unfinished race from Aug. 22, which was finished at this shoot, the following averages were made. Each shooter shot at 100: Wheeler 98, Miskay 96, Griffith 95, Ewell 93, Eager 93, Leroy 92, Herbert 92.

The story is best told by the appended scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

"I reckon the most useless man in this world," said Uncle Allen Sparks, "is the fellow who has played just enough lawn tennis to spoil him for a harvest hand."—Chicago Tribune.

ON LONG ISLAND.

Brooklyn Gun Club.

Sept. 16.—There was a fine gathering of shooters at Wright's shooting forum, a number of whom were visitors. main event of the day was the gun contest, this being the of the series of twelve. Dr. Gardiner, Blauvelt, Dudley, Creamer and David scored the maximum of 10 points. Pat and Amend scored 49 each. Messrs. Banks and Waters, members of the handicap committee, withdrew from the con both in respect to the gun and G. A. H. free entry event, th they were assured that they were acceptable in both capaciti handicappers and competitors.

Among the spectators was Mrs. Webber, who watched Dr. ber's good shooting with keen interest, and the day was all brighter for her coming.

A feature of the competition was the good shooting of Du who made a very consistent, high-class competition through

Rifle Range and Gallery.

Rifle at Shell Mound.

San Francisco, Cal., Sept. 11.—A number of clubs engag their regular monthly competitions at Shell Mound range y day.

The medal score of the Golden Gate Rifle and Pistol Clu as follows:

Dr. S. O. Rodgers 217, D. McLaughlin 216, H. Stelting 129, Budgar 201, F. W. Belknap 193 and 190, C. M. Henderson 20 194, J. E. Gorman 218, E. L. Moore 192. Pistol Class—J. E. man 94, and 91, Dr. Rodgers 81, D. McLaughlin 80, C. Hend 79, J. F. Briges 74, C. N. Moore 71 and 69, C. Roberts 73 a Major Tompkins 71 and 68. Record scores—J. W. Tompki and 86, C. Roberts 81 and 80.

The scores at the monthly medal shoot of the San Fra Schuetzen Verein were as follows:

Champion Class—F. Schuster, 429; first class, R. Stettin, second class, August Jungblut, 379; third class, Otto Lemcke fourth class, William Goetze, 393; best first shot, R. Stetti best last shot, August Jungblut, 23.

Good scores were made by the marksmen of the Ger Schuetzen Club. In the first champion class F. P. Schust cured 437 points; second champion class, N. Ahrens, 406; class, H. Stellings, 393; second class, A. Jungblut, 400; bes shot, J. F. Briges, 24; best last shot, Dr. Rodgers, 23. Bu medal scores: D. McLaughlin 222, D. B. Faktor 210. Cash competition: F. P. Schuster 74, D. B. Faktor 74, Dr. Rodge N. Ahrens 71. Ro

Cincinnati Rifle Association.

The regular shoot of the Cincinnati Rifle Association wa on Sept. 17. Payne was declared champion of the day; also wi the Dietrich medal for fifth and final time. Conditions, o at the German ring target, 200yds.:

The officinl tests of the Mauser pistol in behalf of the U. S ernment, made by J. D. Griffith, of Kansas City, Mo., a ported to be very favorable toward it. From 50 to 500yds. very accurate and very deadly. It fires 10 shots without rel and all can be discharged within three seconds with an ac which is remarkable. It is .30cal. The cartridges are loade nitro powder, the bullets weighing 85 grains. They consis lead core, surrounded by a nickel-plated copper jacket.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1899, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 30, 1899.

VOL. LIII.—No. 14. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

THE FARMER'S BOY.

No one among the lovers of nature recalls more fondly the scenes of childhood and youth than he who was once a farmer's boy but in youth or early manhood has wandered far from the farm and the paternal roof in quest of fame and fortune.

In all the varied scenes of the larger world he has come to know in later life, none have the charm of those his young eyes first beheld, and the sounds that grew as familiar to his ears as household words.

Alps or Andes rear their peaks of eternal snow in no loftier grandeur than did the blue hills of the strange, far-off land of the next county lift their tops to catch the autumnal snowfalls while the valleys at their feet were yet green with aftermath. The storm-swept ocean is not more majestic in its resistless rage than was the turbulent lake beating its rocky rim with a fury of small waves; nor is the Niagara's tremendous plunge more awful than was the downpour of the mill dam in a spring flood.

Nowhere are there scenes of more tranquil beauty than along this mill pond that loops pasture and meadow land in its placid curves, or where the quick stream comes clattering and flashing to it out of the shadow of the woods, or where, in the heart of the woods, the slow reaches crawl among the shadows and never wrinkle the reflections of bank and tree, or where noisy rapids toss the shivered doubles amid a confusion of foam bells and scattered sunbeams. Here the wood duck reared her dusky brood, in near neighborhood to the grouse and her callow family, and it was here, perhaps, that the farmer's boy got his first shot at each and knew the ecstacy of his first success, and in the pond caught his first big fish—joys that could never be quite repeated in a lifetime.

What a pleasant place was the hill pasture that slopes upward in grassy undulations to the woodside, where the ferns grow rank in the out-reaching shade, and sumacs and elders canopy and embower an old wall beneath a loftier growth of scattered hickories. Thither the boy felt himself always drawn in the drowsy August afternoons, though the cows were waiting at the bars, for he must know how the broods of young grouse were growing and whether the squirrels were coming out to the nut trees yet. What a thrill ran through his nerves when he heard the harsh barking of the gray squirrel in an outlying hickory, the dribble of chips through the leaves from a gnawed nut. And what an ecstatic shock, when by ones, twos and threes the grouse sprang from their interrupted feast on the drooping cymes of elder berries and burst through the green roof of sumacs, the young birds almost full grown and strong of flight, shaking thunder from their wings. How he planned what a glorious day that should be that he might have for his own, with the battered but precious old gun, the squirrels, and the partridges. How could he ever wait for it? He has learned to wait since.

There were the old woods that clothed the ledges and ravines of the hill beyond, where he first felt the exquisite delight of fox hunting when leaves were in the glory of autumnal color, and cliff and gorge rang with the wild music of the hounds; and where, in a January thaw, he first tracked the raccoon in the soft snow to his lair.

There, too, when the farm hands turned lumbermen for the nonce, he watched the warfare against the venerable pines and hemlocks, and beheld with sorrow their mighty downfall. Yet it was a boy's sorrow, not of a sort to spoil a youthful appetite whetted by exercise and the wholesome atmosphere of the winter woods. Such a one he brought to the cold dinner, served at noon around a roaring fire. It was the sweetest meal he ever tasted, and like great John Ridd, he thanked God for the room that was inside him, which was indeed marvelous, considering his outward dimensions. It was the first realization of a dream of camp life, and needed but little imagination to people the surrounding forest with terrible savages and wild beasts.

Amid all these scenes he dreamed day dreams of the great outer world that was to be his to conquer when he grew to manhood, which would make all things attainable—wealth and power and perfect happiness. Now he dreams of those blissful days of boyhood when he was happier than he ever could be again, and happily knew it not. No wonder that he holds dear those blissful days of boyhood and takes a sad pleasure in living them over in memory, a sadder pleasure in revisiting their scenes; for, alas! how changed must they be in this world of swift change.

Woods that once seemed to him as enduring as the stars, have utterly vanished, devoured by the insatiate saw mill, pulp mill and engine; and the once full streams are shrunken. The wood folk whom he once knew so well, are gone from their old haunts; the flowers and plants that he alone could find, grow and bloom no more in the sunburned, arid ledges that once nurtured them in perpetual shade. The leaves of nature's primer, wherein he unwittingly learned to read her secrets, and to love her, are torn and disfigured. But the old lessons are not forgotten, and he loves her still, never so fondly.

When it fell to the lot of the farmer's boy to continue upon the paternal acres and the boy's tastes are preserved in the man, he will still find days, though they be few, for the indulgence of them. With something of youthful zest he fishes in the stream where he caught his first fish, and hunts the infrequent grouse and wild duck in the old haunts that were populous with them in the old days. He has a handsome breechloader now, but it is not so precious a weapon to the man as to the boy was the battered fowling piece with its clumsy lock, altered by the neighborhood blacksmith from flint to percussion, its mended stock and crooked ramrod, and the shoulder of the coat is not worn through with carrying it as the boy's jacket was by the other. And the heart does not beat so high beneath the coat as it did beneath the jacket when autumn leaves are underfoot and the elusive odor of autumn woods teases the nostrils, for alas! youth comes only once in a lifetime.

There are farmers' boys of another sort, who spend their lives on a farm, who never see the beauty that is all around them. To them a tree is so much lumber, so many cords of wood, and nothing more; a moss-grown rock is rubbish or available material, as the case may be; the brook a convenience for watering stock. He would not spare for the woodcock's sake a rod of alder copse that the brook crawls through, any more than for beauty's sake he would save the willow that ripples the current with its trailing branches. His mission seems to be to destroy, not to preserve, the beauty of that portion of the world which has been committed to his care. He is above the weakness of indulgence in field sports, which he considers a mere pretext for useless idleness. Therefore he is quite indifferent to the protection of fish and game, for since he is virtuous there shall be no cakes and ale. He may be a better and more successful farmer, but not a wiser nor a happier man, than his brother who finds wholesome, harmless recreation with rod and gun in his own woods and streams, and though confessing to no sentimentalism, gets genuine pleasure from communion with nature.

MOSQUITOES AND MALARIA.

THE investigation into the function of the mosquito in the communication of malaria to the human family has been carried so far that the ascertained facts appear to furnish an apparent support of the theory. There is some satisfaction, however, in the assurance which the scientists now give us that we need not regard the whole mosquito tribe as malaria disseminators, for, so far as is now determined, the mosquitoes which transport the malaria parasite belong to the single genus known as *Anopheles*.

The theory that the mosquito is an agent in the spread of malaria is not a new one, and it had been generally noticed that at the most active period of mosquito life, malaria is also most prevalent. The subject has been investigated in India by Major Ross, and in 1897 this investigator traced the malarial parasite into the wall of the stomach of the mosquito, after it had fed on malarial patients.

Grassi, an Italian observer, studied the mosquitoes of different malarial sections of country and found that where mosquitoes of the genus *Culex* alone existed there was no indigenous malaria, but that this did occur where the large mosquito *Anopheles* was found. Two other Italian students endeavored to infect a man with malaria by having him bitten by mosquitoes, but were unable to accomplish this infection until they imported mosquitoes from a certain malarious district, and, these, when they bit the man, infected him with the type of malaria prevalent in the district from which they had come. The whole subject is one of such interest that it is certain to be studied exhaustively, and most interesting results will be obtained.

SNAP SHOTS.

The protest put out by Commodore Bliss, of the Interlake Yachting Association, against the presence at the meets of rowdy individuals, who, under ordinary conditions at home, would not be recognized as fit associates by decent and self-respecting men, is a word which is well spoken. There is no good reason whatever why the rowdy element in any branch of sport should be permitted to obtrude itself. Yachting has been cursed in past years by a class—more or less in evidence—of men who, taking advantage of the temporary escape from the accustomed repressions and restraints of their every-day surroundings, converted their "yachting" cruises into seasons of bestiality, disorder and uproar. They were a curse to the waters that gave them harbor and the communities they smirched by their intrusion, and not less a reproach and injury and insult to yachting. We use the past tense because, for the most part, and in most yachting circles, a new order has taken the place of the old, and as a rule such reproaches as those uttered by Commodore Bliss must be accepted as applying to specific districts and specific clubs and individuals, but not to yachting at large. There is then all the more reason why respectable yachtsmen should jealously protest the good name of their chosen sport and repress with harsh and vigorous and peremptory measures the disorderly conduct of those who are a disgrace to yachting.

The same rule applies to other branches of sport. The rowdy gunner who trespasses on posted lands, tramples the farmer's crops and shoot his live stock, tears down fences or walls, leaves open gates and bars, and insults the owner—this fellow is not a sportsman, as sportsmen understand the term, and yet with thousands of people he is the only type of sportsmen known and recognized. One blackguard shooter in a neighborhood will make a stronger impression on the community than a dozen decent and well-behaved sportsmen, and the pity of it is that the dozen have slight protection or none at all against the one. The profitable course to pursue, however, is to be strenuous in season and out of season in condemnation of the rowdy with the gun, and ready and active at all times and in all practicable ways to promote his repression in the interest of sport.

If we have no patience with the deer hunter who shoots a human being by mistake for a deer, what shall we say of him when his act is that of a drunken man? It appears to have been well established that a hunter who killed a man in the Adirondacks the other day by a so-called accident was under the influence of liquor. If, in addition to the possible heedlessness of sober hunters, the recklessness of drunkards in the woods must be taken into account, the prudent man will be content to do his deer hunting by proxy.

President Smith of the New York State League has taken commendable action in urging upon the members to use their influence in promoting the proposed national park in Minnesota. The subject is one which should engage the attention of all sportsmen's organizations, and we look to see the example of President Smith followed by many others. As is reported by our Chicago correspondent, the outlook for the viewing excursion is most promising; and since the Minnesota wilderness is in itself the most eloquent pleader for this enterprise of forest preservation, he must be insensible to the charms of nature and dull to the influences of the primitive wilds, who shall not return an enthusiastic advocate of the park.

In Long Island City the other night a man who was searching for something on a shelf knocked off a book, which fell and struck an old gun that had been lying on the shelf for years—loaded and waiting for a chance to do something. The gun went off and the bullet ploughed its way through the man. This shows the danger of keeping books in the house.

The Sportsman Tourist.

The Vampires of the Tuasivi.

While this is a story of good hunting on the mountain peaks of Samoa, it is only proper that it should begin where the event itself really did begin—with the pigs of Vaiala on the ocean beach of Upolu. If the village swine had not put the idea into Talolo's active brain I might never have had the moonlight shooting at Suatele's clearing, on the very top of the mountain over which I had often watched the frigate birds disappearing every evening as the sun went down.

The Samoan pigs, native to the soil and in several particulars different from the civilized hog, were a great nuisance. Even a six-wire fence was of no sort of use in keeping them out of the compound which surrounded the consulate; in fact, the closeness of the lower wires seemed only to attract them to the more earnest effort to scrape through the barrier. As an abatement of the nuisance, I took a leaf from Robinson Crusoe's book and planted a hedge. My hedge was planted just as the great exile's was; 5ft. stakes were driven into the ground. Within a week they were all growing in the most equatorial luxuriance, and before the month was over the hedge was a wall of green already crowded with flowers. It was an interesting feat in horticulture; it availed to restrain the mature and elderly porkers, but the little pigs scraped through and laughed at me. It is really exasperating to be laughed at by a young hog. I found by actual measurement that a pig 2ft. long could scramble between two stakes in my hedge 4in. apart. Just how this happened I must leave to anatomists to explain.

Whenever official life and Samoan affairs seemed out of kilter, I called in Salatemu, because she seemed to be the most permanent and abiding of those whom I learned to recognize as the wives of Patu, the portly chief of Vaiala village, which lay about all sides of my compound, except the seaward aspect. She looked the situation over and referred the subject to her lord and master. Patu put his administrative brain to work upon the problem, and finally settled it. The tabu which he had set for all Samoans on the premises should be extended to all pigs as well. The owners of pigs should be notified that my premises were sacred, and any pigs found trespassing were to be killed ruthlessly. I have often wondered if Patu meant that I was entitled to shoot his trespassing Samoans as well as their pigs. At any rate I never tried it, for it is so dreadfully easy to stir up an international complication in that worrisome kingdom. The only stipulation that Patu made was the provision that I was to allow one of the villagers to enter the compound for the purpose of removing any pig which I might shoot. Thereupon Vaiala dined with great glee on the assassinated pork. I have some reason to suspect that the boys in Vaiala organized a system of stampeding the young pigs of the Matautu village, a quarter-mile along the beach, driving them into my compound for me to shoot and then holding their own feasts over the delicacy. Toomalatai, the one-handed chief of that neighboring community, made complaint that such a reprehensible game was being played. The only answer he got was that any pig in the garden was a pig shootable, and therefore shot, for close watching had convinced the Samoans that I never missed a shoat among my struggling flowers.

One morning while we were at breakfast, my own particular boy, Tanoa, came to me breathless with the whispered warning, "Tamaitai e, manuvaefa e tolu i le lotoa," conveying the information that three "four-legged animals" were in the garden, for Samoan courtesy will not admit of using "pua'a," the name of so vile an animal as the pig, in speaking to a superior. Tamoa had brought my single-barreled Winchester shotgun, already loaded, and two extra shells. The first pig was easy, for he stood and snouted at me. The other two were better shots, for the fate of the first pig sent them careering around in wild commotion, and it was quick work to break down the gun and reload. The last pig was killed just as he was struggling in the hedge, and another minute would have taken him beyond my right to slaughter. The usual shout arose in the village at the prospect of baked pork for dinner, and little Fuatino promptly appeared for the purpose of dragging out the slain, a considerable task for so small a girl.

After the commotion was over and I had settled down in my shady corner on the veranda, I was surprised by a warlike figure with a long gun sitting on the wrecked mast of the old warship Trenton, which lay at the foot of the flagstaff. It was my young friend Talolo, making a front after his own fashion. When he felt that he had produced the impression he sought to make, he came through the gate and took his seat on the floor of the veranda with his customary polite salutations. The gun he carefully stood under the consular coat of arms. Somehow, in his mind, that seemed to make it official and proper.

"What are you going to do with the gun, Talolo?" I asked. "Tau le taua? Are you going to fight the war?"

"Please, no." The lad seemed hurt that his intentions were misunderstood. "This the good season; no war in good season; bimeby the bad season come, then fight the war. That my shootgun. When I fight the war I have head-chopping knife and big rifle-gun and kill rebels. Mebbe Patu he rebel perhaps, then I kill the government. Always fight in rainy season, the Vaipalolo. You want go shotting for me for you to-night; go shotting pe'a?"

Any one who has passed a sleepless night listening to the vampires or flying foxes quarreling in the mango tree when the fruit was ripening would be glad to go on an expedition of revenge and extermination, or, as Talolo worded it, "To go shotting pe'a."

But lately there had been few vampires about the beach. The manager of one of the large German plantations had drawn on the resources of science and had inoculated them with the germs of mice typhoid, and they had died off very completely. But Talolo said the sickness had not extended back into the bush, and there were just as many as ever on the mountains where the berries were now ripening.

"Fa'amolemole, Tamaitai," continued Talolo, "smooth out the wrinkles of your heart, lady, I give for you for me my shootgun in love."

I had to spend a great part of my time in turning down Talolo's loving gifts, for he was an adept in the Samoan art of making presents in order to receive tenfold in return. The gift of his "shootgun" would mean only that I should give him my own light Winchester. There were several reasons why I shouldn't do that. One was that I should be helpless with a muzzle-loader "made in Germany" and with the bore of a lead pencil. The other was that the consuls visited heavily any traffic with the natives in firearms, and as one of the few white women in this outpost of civilization among the savages, I had no wish to add to the dangers of life. What these might become, I had already had a taste of in the last rainy season, when I was left alone in the house with a hundred stand of rifles, and Muliufi and his crowd of rebels had surrounded the place from midnight to dawn, hoping to get the weapons, yet afraid to face my rifle, as I patrolled the veranda against them.

But savage etiquette prescribed that I should look the odd gun all over and appear to return it reluctantly as too rich a gift for me to receive. After careful inspection, I gave the "shootgun" back to Talolo and made him happy by the announcement that I would give him a tin of powder, a box of caps and a supply of shot for his use on our trip after vampires that night, "as my servant shooting food for me," which is a way of getting around the law which even consuls have been known to wink at. Thus for about the thousandth time Talolo got not only more than he deserved, but twice as much as he expected. I knew, and he knew that I knew, that all of this provision he could save out would be used for the making of Mauser cartridges for the next war. But that is Samoa.

As our expedition was a hard one, I needed more assistance than Talolo could give, for I knew that I should be out all night after the vampires, which in other lands would be regarded rather as carrion than as game. Our shooting ground was eight miles away, nearly 4,000ft. nearer the sky and accessible only by a difficult trail. Accordingly, I must have Tanoa, whose affectionate middle-aged heart would be broken if I should count him out of any of my adventures. He was willingness personified, and could be of asistance if only he understood what was wanted. My maid, Tonga, was also to be of my party. Between them a sufficiency of supplies could be taken to meet my needs, and also to have some presents for the chief Suatele, at whose mountain-top home we should pass the night.

Talolo and Tanoa were sent on ahead with orders to await us at the end of the road, some three miles inland, with a boy to bring back my horse and cart. At noon Tonga and I, with the provisions, set out in the cart.

At the end of the road there was no gradual cessation of the means of travel. The road cut itself off square at the edge of unbroken jungle, and all that was left was the narrowest kind of a trail, where the bare feet of Samoans kept down the weeds which otherwise would soon obliterate the stony path long ago marked out as the Ala Sopo, the "cross-over road." It is little more than a foot in width, nothing but jagged lumps of lava, which may be easy enough for the tough bare feet of Samoans, but difficult for any shod foot. As usual in the islands, it follows the highest crest of the ridges. And it is hot—how hot can only be appreciated by one who is familiar with the cool shade of the American woods. Overhead and all around the monster trees interlace their obscuring leaves, and branch is tied to branch with long lianas. High overhead is a thick green ceiling which cuts off the light of the sun and lets all the heat sift through into green sweltering arcades, where no breeze ever penetrates. From the leaves above the moisture patters down on the leaves beneath, and as one mounts toward the summit the sudden afternoon showers come pelting down. Not a bird is ever seen in these solitudes. The mournful cooing of the manutangi dove faintly echoes along the tangle of trunks, but the bird itself is on the upper surface of the canopy, which the eye cannot pierce; the lupe pigeon sometimes sounds his long roll and Talolo fruitlessly points his empty "shootgun," but he knows that at this time of day he can see no game. In the path the muffled rustling of soggy leaves gives token of the presence of the blue pili lizards scuttering out from underfoot. Talolo does not mind the pili when they are underfoot, but he takes all a boy's delight in telling how his mother's brother was walking on this very Ala Sopo and a pili dropped on him from a tree and he died and then turned blue, for that is the superstition. And Tanoa tells weird tales of the aitu, ghost devils, that are known to haunt this spot. There is the lady devil who lies in wait for handsome young men to rub noses with them and then they die. There is Sooalo, who nets men and women from his tia or stone hunting platform which we must pass, just as a century ago he netted lupe. His body is buried on the very summit of Mount Vaea, but his soul has never found rest. Some of the tales pass my comprehension of the Samoan, but Tonga is ready to translate for me. "Fool man," she says, by way of comment on the wild tales of the woodland demons; because she has traveled, because she has been to America with Barnum's Circus and the Midway Plaisance, she would have me think that these old tales have no terrors for her. "Fool man," she says of Tanoa, but her lips are blue and her teeth are chattering, and she keeps close to me. The circus and the Midway cannot altogether destroy the faith of a lifetime.

We pass the tia of Sooalo in safety without being netted, we hear the roar of the Holy Cataract of the Vaisingano and escape the black-boy cannibals who have run away from the German plantations and have made their wild abode near that waterfall. We reach the bank of one of the confluent brooks of that stream and sit down to rest in a little open space, where my Samoans recover their spirits sufficiently to eat a tin of salmon apiece and to point out to me the path of the crowing snake, and speculate on the length of time since he last passed that way. Then on again up the steep mountain, until we reach the flat mile of summit of the pass. It rained yesterday; it is raining now; it will rain to-morrow; it always rains by daylight here, and the mountain top is a sour morass feeding the rivers that run north into Apia Harbor, and those that run south on the other slope to meet the sea in Safata Bay and at Siumu. The last stretch is the worst; the going is something frightful, now striding from one slippery root to another, and now missing the footing and plunging waist deep into yellow mud. There is just a mile of this, the Palapala Tele, which means the big muds. Every step is a burden of mire or the risk of a sprained ankle; it is just as hard for the Samoans as for me. At the further side of the morass we can look down for one brief glimpse on the long slope of jungle to the Southern Sea, the first view of the whole trip. Just here a dry trail picks itself out of the mud and makes off toward the east. A few minutes bring us to a clearing at the head of a picturesque valley with a waterfall dashing spray over the scene. At the end of the path is a 10ft. trunk of timber, half that in diameter, a thatched shed roofing it over to keep the rain out of its hollowed-out interior. All fatigue forgot, Talolo rushes onward and beats on the log with a stick, evidently trimmed for that purpose. The soft, yet distinct, notes of this wooden drum ring out over miles of mountainside to advise Suatele that visitors have arrived whose rank entitles them to smite his drum.

The house lies just beyond, the only native house in all Samoa which has its sides closed in. Here lives Suatele on the Tuasivi, the backbone of the mountain. It is right that his house should be closed in, for it is cold at this altitude, and when one comes from the sea it is hard to bear the lower temperature. But Talolo finds some dry wood and Tanoa gets out dry matches from my rubber-cased traveling bag, and soon we have a hot fire crackling in the open fire-box in the middle of the floor. It seems odd to write of the comforts of a bright fire in the tropics, but the chill of the Tuasivi is too great to bear in soggy clothing. Tonga lets fall a screen behind which I may change into dry garb, and then, as I lie on the only raised bed that can be found in any Samoan house, she kneads me from head to foot after the ancient Samoan fashion of "lomilomi," which is the most perfect of all massages, and the tired feeling leaves me altogether. Soon after this is completed Suatele comes back from his work in answer to the summons of the drum, and extends the courtesy of his mountain home. Savage though he is, it would be hard to find any man more polite in every little one of the oftentimes wearisome details of Samoan etiquette to a guest. There is none in all Samoa who can compare with him in this punctilio except Mataafa and his son Tupuola of Amaile. From the mystery of Samoan housekeeping he sets food before us, cold yams and taro, a fish toasted in its leaf wrapper and a piece of pork cut straight across the back behind the shoulders, which is the proper dainty for those of rank. Tanoa, already trained in foreign cooking, has warmed a tin of beans and beef and salmon for the people, together with a pot of chocolate, which all appreciate. The first duty of the occasion is complete when I have overborne all of Suatele's polite objections and have induced the chief to share my meal. When we have finished and the water for the washing of our hands has been passed, his people and mine cluster about the abundant supply and make their meal with Tonga as hostess of the feast.

It rains steadily till the moonrise, but at 9 o'clock the clouds suddenly vanish, not breaking away, but sinking down the slope to the lower levels and to the coast. The moon, just past the full, makes the scene as light almost as the day. It is time for our vampire hunting. Talolo has his remarkable German "shootgun" with its thread-like bore. I am armed with the only weapon I ever cared to use in that trying climate, a light, single-barreled Winchester. Tanoa has brought another of my breechloaders, which at my order he exchanges for Suatele's muzzleloader, so that the chief may have better sport. Tonga takes charge of all the ammunition except the shells. I think she intends to keep strict watch over its use in the hope of saving as much as possible wherewith to make cartridges for her warrior husband to use in the next war.

We have not far to go, only to the clearing outside the house. There is fruit growing there, and where fruit grows the flying foxes gather. They are there ahead of us, the night is filled with their squealing. Suddenly Suatele gently touches my arm to direct me toward the moon. The vampire was out of range, but for the moment the scene lasted it was a marvelous picture. The great bat was soaring somewhere between me and the moon, and for a second or more was outlined fairly within the bright disk of radiance. Every detail was in perfect silhouette, even to the eager head and snapping jaws, and the claws at the last joint of the wings seemed to catch on the very edge of the moon. It was only a glimpse, but while it lasted it was a perfect picture.

When the shooting began it was evident that Talolo had, through some mischance, told the truth as to the number of vampires on the Tuasivi. Really, I do the lad an injustice; he could not avoid lying about the ordinary affairs of life on the beach, but his bush information was always accurate. Talolo and Tanoa stalked their game and took none but pot-shots at the bats when feeding. Suatele tried to imitate me and shoot them on the wing, but without much success, and it was hard to say which caused him the most chagrin, the missing the vampire or the waste of so precious a commodity as powder is to the Samoans. In a little more than an hour's shooting we killed three score bats to four guns, and it was all done without leaving our stands. In size they averaged from 3 to 4ft. of wing spread, only one falling as low as 30in., and several spreading over 50in. The bodies of these large ones were about the size of black and tan terriers. They take a lot of shooting, for a charge of shot merely through the wing does little damage.

When our game was brought back to Suatele's house it was at once cleaned and skinned. As fast as each bat was dressed it was stuffed with leaves, tightly wrapped in leaves of another plant and buried. This, it was explained, was necessary to prepare them for food, as otherwise the taste would be too rank to be borne. As the rats abound on the mountain and have a lively appetite for meat of all sorts, it was necessary to set a

atch over this temporary cold storage of the vam-res we had shot. As Talolo emphatically declared they ere "Good for eat for 'me for you," it was quite sential that they should not be stolen by the rodent arauders.

My tramp had been such a hard one, and the cool ght was so unusual a luxury, that I was fast asleep ng before our game had been disposed of, and I ept soundly even without the steady roar of the surf eaking on the reef, to which I had become accus-med at my seaside home. It hardly seemed that I d slept at all when Tonga roused me in the gray of e dawn to come out and listen to the song of the a'oma'o, which is silent except at that hour. There no bird note that can compare with the beauty of this ountain bird's morning song. It fills the jungle valleys ith trills and roulades of melody for five minutes at a e of a plaintive composition that carries every fine ade of music. When one bird sings, all others listen, d not until one has finished its effort does another ne up. While we were listening to the dawn concert e heard the distant sound of shots, and Tonga told me at Suatele, fearing that I would not care to eat vam-res, had taken a boy and had gone off to shoot me me pigeons. While waiting for him to return, we ent part way down the southern slope to the waterfall f Papapapa, and had our morning plunge in a pool at was almost icy.

Suatele's fears were without ground. The vampires hen baked in wrappings of fresh leaves after the night's terment were as succulent as our squirrels, and as ainty a viand as could be desired, being both tender nd juicy. What with the pigeons and the vampires here was enough for me to take back with me a good pply for my dinner at the end of the long homeward amp down the mountain.

LLEWELLA PIERCE CHURCHILL.

Happenings.

I.

Inclosed find a perforated penny and a 5-cent nickel. f you can plug the coins and pass them they are yours. I was at Greenwood Lake a while ago, and while not aving money to burn we had a little to shoot. There nothing new in shooting for or at money—what strange in this case is that we got a portion back. ertainly there was a return of a bad penny. It was laced in the withered knothole on that dead tree in front i the Lakeside House, and shot at from a distance of oft., with a .22 long rifle cartridge. The report of the ifle and stinging on my left shoulder were synchronons, nd the penny dropped at my feet. Can you tell what did ? I have a theory, but some of my profoundest houghts (to me) fall flat with others.

II.

I saw a shrike circling over the tree tops about Has-brouck Institute the other noon, and in each foot was lutched an English sparrow. Was the shrike catching neat, and will the little imps own all the buildings and rolley roads around that place if that shrike stays about?

III.

My people took our black field spaniel out a few days go for an airing and exercise. Well, he is more dog, ound for pound, than anything around. In a hilarious noment he essayed to climb up the glass hothouse roof t Peter Henderson's. He partially succeeded and nostly didn't. Then there was a crash of glass, a blend-ng of colors, and he was let in on the ground floor via he roof. He was a hybrid and an exotic among the plants, and the plants were damaged to the value of the dog. Flowers were cut, but the dog got away to run muck some other day.

While they were telling me of the escapade, Dusky winked at me and practically said: "I was right in it."

IV.

A neighbor moved away and another thought she saw Moses, the big tiger cat belonging to the departed, sitting on the fence. Appreciating the sorrow of the owner, and wishing to do a kindness to both cat and owner, she, by gentle persuasion, secured the cat and carried it to the supposed home. She was met at the door by the reality, and the real Moses resented the presence of the bulrush Moses, and there was nothing else to do but carry the alias back to the original local-ity. It belonged to another neighbor.

To Happen.

I am to spend the first two weeks of October deer hunting in the wildest portion of the Adirondacks, and I am to spend the little sum hoarded up throughout the summer for that purpose. If the two weeks in the woods as a reality are as enjoyable as the two weeks of prepara-tion, the pleasure will be great. Do you know what it is to anticipate a few days away in that delightful place? You look at the trunk and the various equipments, and wonder what you will carry. You get the trunk down, you pack it and unpack it, you discard some things and then decide to take them, you look for leaks in your old boots, count the number of shells on hand, wonder how much tobacco will answer, and whether you will require more than one "first aid" package or not. Then you write to your guide, making all kinds of prepara-tions, and worry yourself thinking that something will happen and the connections will not be made.

If the trip amounts to anything, I will write you and tell you about it. With a big hunting knife in lieu of shears, a packbasket for a paste pot, and a rifle for a blue lead pencil, I will clip from nature's book such writings as interest myself and may interest others, and will paste them on the walls of the camp as you would file away valuable documents, and with the lead of the pencil make such records upon birch bark and deer skins for parchment, that the grand combination, worked over by yourself and resubmitted to the printers for correc-tion, will make some new subscriber to your paper marvel at the triumph of "mind over matter."

W. W. HASTINGS.

Interior Alaska as a Game Preserve.

To the man who finds himself in the inhospitable in-terior of Alaska, the question of game becomes at once an interesting problem. The prospector is dependent for support on the provisions he carries with him, and even then he is deprived of fresh meat, unless he can find it in the country he traverses. It is more or less of a supposi-tion that the vast game preserves of the North are in-exhaustible, for great inroads have been made on its former state of plenty by the cupidity of the traders and the necessities of the Indian populations.

In the Yukon country are found quantities of moose, caribou, bears and foxes, but in the wilderness south, in the Tanana hills and over the vast region drained by the muddy Copper River and its tributaries, the dearth of game strikes one more forcibly than any evidence of its abundance.

In the early part of March we landed at Valdez, and a month later had crossed the glacier of that name. As we came into the slate-colored valley, one of our party shot a couple of mountain goats which he saw on the top of a shale-covered hill. That was our first taste of fresh meat, and rank as it was, it was a delicacy after thirty days of bacon and beans. The animal itself furnished us with a good-sized white-haired robe, which proved useful when the cold weather came.

Our anticipations from that time ran high as far as game was concerned, for our deductions had every appear-ance of being founded on logic; we could not have hoped to find any living thing on that thirty-mile expanse of snow and ice, but even there, ptarmigan were plenty, and the footprints of large bears were often visible on the trail. The day after the goats had been shot we saw a caribou on a green knoll some thousands of feet up a hillside.

The appearance of the Copper River country leads one to the impression that it could not be improved as a breed-ing ground. Seen from the high ridge which skirts the Klutena for a hundred miles, it presents a most beautiful view. Far away to the south rise Mountains Drum and Wrangel, their tops crusted with snow; to the east and the west appear glaciers innumerable, and to the north one sees the winding course of the Copper River set in an undulating country filled with small lakes and muddy tributaries of the glacial streams. The absolute solitude tends to increase the impression that game is plentiful, and the fact that the population consists of roving colonies of Indians confirms the impression. Long before we had seen any of these people, we learned that it was an un-written law among them to kill the first white man caught in the act of shooting a moose or a caribou. This gave us an inkling of the probable scarcity of fresh meat. We found afterward that the Indian lived almost entirely on salmon. King Salmon is responsible for the existence of a miserable people now fast dying out.

After our capture of the goat we traveled along the Klutena for fifty miles before we again caught sight of an animal, then on the banks of a clear stream called St. Ann's River we shot a brown bear. He fought viciously and was killed with difficulty. It is the custom of these animals to come to the streams to feed on the spawning fish, and they are to be found quite as often on the banks of these tributaries as in the berry laden bushes of the woods. Several men were injured seriously by coming on them unawares. We found in various spots antlers of moose and caribou, mostly in a state of decay. The valleys bore an air of forlorn loneliness, and in spite of the evidence of hundreds of rabbit skeletons in the low trees we did not once see a rabbit. It was evident that the coun-try had been overrun with them at a very recent period. Later we learned from an Indian that the cold weather of three years before had frozen every one of them.

The underbrush which covers the Copper River region looks at a distance like a green carpet, but in reality it is a tangled undergrowth, from waist to shoulder high. In ascending the various hills, this brush makes the journey a constant battle; in addition, scattered over the lowlands, are large trees, leveled by fire and lying in inconceivable confusion. There is no doubt that in many cases the fires which destroyed them were purposely set, and during the late gold fever flames were to be seen in the summer months on all the mountain sides, where they looked at night like the outpost lamps of a great city.

On one of our expeditions into the low hills, we found some twenty miles from the river a beaten moose trail winding up toward the high mountain tops. Though no animal was to be seen, the distinctness of the path assured us that it had been used by numbers and often. The large game have an enemy who preys on them more persistently than man, and that is the mosquito. To avoid this pest he goes into colder altitudes. The pests are so persistent, so numerous and so virile that all the large animals, with the exception of bears, climb to the high mountain tops and remain there from the middle of May till the middle of September.

The Indians with whom we came in contact on the Tazlina and Copper rivers were a dwarfed people, re-sembling the Japanese—harmless and honest. They were waiting, at our advent, for the approach of the salmon, and when it came they offered up thanks in true Chinook fashion. We found among them a few furs, notably some fine specimens of silver fox skins, which we purchased at a trifling price. The Indians informed us by gestures that they were caught to the far south, pointing to Mount Wrangel.

As we proceeded further north, we saw even less game than before, the high clay banks of the Copper River offering no subsistence for life. It was with great diffi-culty that we kept alive the one horse we had, and as the weather grew colder there was no way of procuring enough hay to last him through the winter. In the end we had to shoot him and use him for food.

The scarcity of game is explainable not by the lack of forage, however, but by the severe winters which often sweep down on that region. Many times the thermometer falls as low as 60 degrees below freezing for long periods, and the dark days and free course of the northern gales in winter, added to the hordes of mosquitoes in summer, prevent the multiplication of game which one expects to see on first entering the country.

PERCY LOUIS SHAW.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Natural History.

Pet Deer.

ONE occasionally meets a person who hears with polite incredulity the theory that if a hunter picks up a fawn in the woods and fondles it a moment, if put down it will follow him home. I have told the truth so much that I know how it is generally received, and I have seen people who did not take much stock in my tales of the wonder-ful docility of a fawn captured wild in the mountains.

My two brothers had occasion to pass through a strip of woods to reach a strawberry patch in June, 1888. They saw a fawn in its bed, where, no doubt, the mother deer had left it.

It ran when they came near, but after a hard chase they caught it. They brought it home and we shut the gates and all stood around expectant, waiting to see it loosed and run. We felt misgivings about the fence being high enough, but decided to risk it. When released the fawn sidled up to the one who had carried it in, and I suppose we who had been expecting a chase looked foolish. We taught it to drink milk, and it thrived. The women folks named the new pet Diana (a most extraordinary name, you must admit), and for two years the deer was a delightful nuisance.

Diana never became thoroughly civilized in the matter of shelter. She would persist in lying out in the weather, and the colder the rain the more contented she seemed to be. I remember her lying in the snow upon which chilling rain was falling, neglecting to make use of the barn or any other sheltered place. Whenever the rain was over she would get up and shake herself and want something to eat. The deer hunter recognizes the fact that after a rain all the deer will be moving. After two years she put on so many airs that we accepted an offer of $10 and sold her to a deer hunter.

He put her into a pen on a hillside with a low fence on the upper side. Deer could jump in, but once in they were securely trapped. Diana was the cause of the violent deaths of a number of her visitors that fall, and the next year she went to the woods to be wild.

But in regard to the tameness of young fawns, an inci-dent related to a surveyor proves it better. As a rule the hunter who gets his clutches on a fawn thinks too much of it to try the experiment of letting it follow him home, but this surveyor was very far back in the moun-tains, where the corps could not even carry as much grub as they needed. Then, when a fawn was found on the line he was running he picked it up and petted it a little while and put it down, intending to let it stay where it was. The fawn followed him all that day, and while it was not afraid of the other men in the corps, it singled its captor out and was close at his heels the whole time. Those who know how a surveying party works through the woods will remember that no two of the party walk together. The rod man goes in front; next the men with axes; then the wizard who follows the course through the trackless forest; then the chain-carriers at either end of the chain.

When camp was made that night on the line, one of the men had so much pity for the little stray fawn that he walked over a high mountain to a mountain farm to get it some milk. It is safe to say that the whole corps would have gone hungry before they would have made the trip for themselves. For this act of humanity, the fawn naturally fell to him.

In a pet fawn, the observer has a good opportunity of studying the spots on the little animal and to note the changes. As fall approaches the spots gradually fade out, and no man can very well say what day the fawn ceases to be spotted. I am reminded of the fact that all artists are not naturalists every time I enter a barber shop in this village. On the wall is the picture of a park in winter—one of the yard-square cheap chromos. A herd of deer are depicted there, and a fawn eats out of a young female's hand, and notwithstanding that snow covers the ground and the trees are leafless, the fawn is spotted. The picture is much enjoyed by this hunting community.

On the whole, nearly every one has found petting deer very unsatisfactory sport. The bucks are dangerous and the does mischievous. One family living on the banks of a stream in September saw a fawn come down the river and enter a cluster of willows. The hounds came in presently, and the hunters, one of whom had shot at it and missed it, went away. The fawn was then found in a thoroughly exhausted condition in the willows, and was carried to the house. It recovered and became very tame. It re-mained with them a year and a half, and one fine day in early spring, after playing hard and running in the sun, it died. The owners were so much moved by its death that they never adopted another deer, giving as the reason that they had become too fond of the one that died.

The finest herd of pet deer probably ever owned in this county belonged to R. B. Kerr. There were seven of them, and they all but one met with violent deaths one fall, and that one went to the woods and never returned. Mr. Kerr is a bachelor, and the deer were his especial pets, and as they were very troublesome and would bring a good price in market, the other members of the house-hold had urged their extinction. He stood between them and death nearly the whole hunting season.

They were kept in the orchard, which was surrounded by a very high rail fence, built for the purpose. One day in the early fall the big buck of the herd had been chased by dogs and had run for his place of refuge. The gate was shut, but after he was safe in he ruffled up his hair and seemed to have an insane notion of jumping out. In trying he fell back with a hind leg through a crack in the fence, breaking it, and they gave him the mercy stroke.

One stormy night a great commotion was heard in the deer corral, and when morning came it was seen by the tracks that a marvelously big buck from the mountains had jumped the fence, and after stampeding the herd had returned to the mountains with a yearling doe.

The first snow Mr. Kerr took his big mountain rifle and went up into Cheat to hunt deer. He had not gone far be-fore he came upon the trail of eight deer, and he followed them faithfully all day. Near night he found he had circled back near his house and was just preparing to cease hunting when he saw a deer through the pines. He shot it and three others which appeared about as fast as he could load and fire. When he went up to his game, elated by his luck, he saw he had killed four of his pets.

The worst part of the occurrence was facing the family with the news. The one deer which remained was then killed, and the whole herd wiped out. It has been a standing joke for a generation, and when the hunters congregate, they tell the tale anew, generally adding a few deer to the total amount brought down on that day, but this account is the true tale of Uncle Bob Kerr's seven deer, as related by him to the writer the other day. It has long since ceased to be a sore subject to him, but at one time it was no laughing matter.

ANDREW PRICE.

MARLINTON, W. Va.

A Snake and a Man with a Hoe.

Editor Forest and Stream:

While reclining in my boudoir yesterday, wondering what I had better do next, Providence furnished entertainment. There was sudden and unannounced music a few yards away, just beyond the veranda of my mansion, that I recognized immediately. The music, a kind of noise, was furnished by a native of these hills, the diamond-back rattlesnake (*Crotalus horridus*).

My cat (an excellent cat) had found the reptile, and acted as though he would like to have it. The cat was standing upon a granite boulder, sprying and sparring among the ferns that grew thickly about the stone. Whenever Tom struck at the ferns, although he did so gently and with great consideration, the snake touched off his whizzing extremity. It sounded much like the dripping of water on a red-hot stove.

Upon investigation, I could see the snake between the boulder and the fence, and under the ferns. I was somewhat surprised by the size of him, for he would have filled a fair-sized water bucket. He was coiled, and his dart-shaped head and rattles stood erect and almost side by side. His head, with forked tongue protruding, moved alertly from side to side, while at intervals he played the tune that is always inspiring.

I found a hoe, which was rather short in the handle for the purpose, but I succeeded in stirring the snake up to the effect that I was astonished by his activity. He was almost as transitory as a Filipino, but probably not so constant to any one direction. In fact he seemed to have no definite intention of going away very far as long as the cat, my dog and myself surrounded him, and I never could be sure as to the exact whereabouts of his principal extremity, owing to his vacillation, and the protection he had in the fence, vines and boulders.

In fact, he vacillated so much that several times I suddenly gave him more room, and receded from him. I had on a pair of slippers, and although my feet are mates one of them—one of the slippers—came off by becoming entangled in the vines. Being somewhat aggravated, I decided it would be as well to kill the reptile; so I struck at his head with the hoe. Just as I struck, however, he took his head away, and all I got was most of the rattles that the hoe severed from the other extreme of his person. The snake recoiled himself, but when he shook his tail, and found it wouldn't whizz, he was unmistakably angry. He had gotten under the fence and I couldn't reach him without getting into briars and vines, which would interfere with the agility I wanted to use.

Leaving the cat and dog on guard I went into the house and got my .22 rifle. Returning, I could see the flat head of the snake in position for business, but the small pellet of base metal that I plunked through it caused him to subside like a Spanish gunboat. I then drew him out with the hoe and found he was an elegant specimen, 3ft. 10in. long, and about 6in. in circumference.

Placing a cord around his beautiful throat, I hung him up in a tree until he was dead throughout. Upon examining him from time to time, I became interested in his scaly skin and concluded to preserve it as a trophy. I never skinned any snakes before, and I am now of opinion that few people have any notable conception of the flexile possibilities. A living snake is something of a contortionist, but if you will flay a serpent and cause its entire anatomy to evolve through the hole in its head, you will realize that most other problems are simple, everyday matters.

It was along about sundown when I had that snake somewhat disassociated, having removed his skin, intact, by taking the snake out through his own mouth. I had first removed the deadly chemical equipment from his death magazine, and then simply turned him wrong side out.

Familiarity breeds contempt, especially for nice nonsensical distinctions, and some old superstitious. Snakes are as cleanly as fish, or more so. This one's flesh was as white as that of a brook trout; there was not a thing inside of him but one long, empty tube, heart and organs like lungs and liver, and entirely lined with fat. I removed the fat, and placing it on a fire, reduced it to a phial of oil that is almost as colorless as water and odorless.

Finally I coiled the reptile into an iron pan, placed it in an old oven and baked it to a nice aristocratic brown. Twent-four hours after either the cat or dog had seen it alive I placed it before them as a savory cold roast. Neither of them cared for any. They were even both afraid of it baked. They have the natural or the acquired prejudices of some people. Perhaps Coahoma can account for this.

At present writing the baked reptile is being devoured by a swarm of yellowjackets. They have removed every vestige of flesh from a part of the bony skeleton, which in itself is a wonderful thing. The skeleton is as white as ivory, and I have seen no more wonderful bonework than the vertebræ of a rattlesnake. The skin will be a beautiful thing when it is cured—that is, to one of cultivated tastes.

RANSACKER.

SHASTA MOUNTAINS, Cal., Sept. 6.

Growth of a Tortoise.

IN the report of the Australian Museum for 1897 is found an account of the growth of one of the Galapagos tortoises (*Testudo nigrita*) which is interesting. The specimen was brought to Sydney, New South Wales, by the American whaler Winslow in 1853, and at that time weighed 53lbs. At the time of its death in 1896 it weighed 368lbs., an increase of 315lbs. in forty-three years. This rate of growth is much more rapid than tortoises are commonly credited with.

The United States Fish Commission steamer Albatross, which sailed from San Francisco with the scientific party under Prof. Agassiz, bound for the south Pacific, was commanded by Commander Jefferson F. Moser, whose comprehensive volume on the salmon and salmon fisheries of Alaska was issued not long ago. The voyage of the Albatross will take her to regions where little or no deep sea investigation has previously been done, and most interesting results may be expected from it.

Game Bag and Gun.

DON'T SHOOT

until you SEE your deer—and see that it is a deer and not a man.

A South Carolina Hunt.

THE fact that I am fond of narrating my experiences with dog and gun is the only apology I have to offer for penc..ing these lines.

Fr..m the mountains to the sea in search of game may seem a strange move to the unacquainted, but such is the o..der of things at this period of time. The "happy hunting ground" is no longer in the hill country where the Indians found it, but in the swamp regions and low lands near the coast.

January, 1899, found the writer, with four companions, a party consisting of four tried huntsmen and Henry, leaving the mountains of North Carolina, bound for the sea coast region of South Carolina, and a deer hunt. We reached our destination, an old plantation on the Cooper River, twenty miles from Charleston, on the 5th. At the railroad station we met our host, Mr. S., as clever a man as ever trod the soil of the State of Calhoun, and a number of old-fashioned South Carolina negroes. These old negroes seem to be a distinct species, especially in the matter of dialect, for they use a brogue which a mountaineer can understand but little of. Just as the shades of evening are coming on we arrive at what we suppose would be a hut in the wilderness, but are surprised to find instead as our temporary abode an old-time mansion, and in its day a magnificent one. Upon inquiry we learn that this old mansion, which is now surrounded by a wilderness inhabited by wild beasts, and used only as a hunting lodge, was built about the year 1680 by a landgrave Smith, out of brick and other material imported from England. An inscription carved on a large granite slab mounting a little eminence in the front yard tells the story of the life and character of this early proprietor in the following words: "Here lieth ye body of the Right Hon-bl Thomas Smith, Esqr., one of ye landgraves of Carolina, who departed this life ye 16th of Nov., 1694, Govenor of the Province of Carolina, in ye 46 year of his age."

After a night's rest and listening to assurances from our host of a successful expedition, we early the morning after our arrival started for game.

Every hunting party has to have its fun, of course, in addition to the enjoyment we get out of the actual experience of hunting, and this amusement is usually at the expense of some member of the party. Henry seems to have been both by nature and circumstances well suited to "bear the white man's burden"—in this instance the practical jokes. His paternal ancestor was born and reared on the banks of the Cooper River, and though Henry had never before visited the scenes of his father's childhood, and though he was wholly ignorant of the art of hunting, he had heard his father tell so many stories of his exploits in this region with dog and gun that he was full of chivalrous desires and anxious to vie with the most experienced huntsman for supremacy. In fact, it is not believed that the descendants of Daniel Boone ever took more pride in the exploits of their ancestor than Henry on this occasion exhibited in behalf of the memory of the hunting record of his father.

We proceed but a short distance till we come to a pond upon which we observe swimming in nice style a diver or penguin. Instantly it occurs to us all that the honor of bagging the first game should belong to Henry, so with his double-barreled gun cocked and primed, we urge Henry on ahead to kill the duck, as all hands pronounce it. He approaches to within good distance and discharges both barrels, and when the bird no longer appears above the surface of the water Henry acts as if he believes, and we thought at the time did believe, that he had killed the object of his aim, and that it had sunk to the bottom.

When Henry finally discovered his coveted bird swimming in the pond 100yds. from where it was when he did his shooting, he was very much puzzled to know how this could be, and upon learning that the privilege which we had granted him of having the first shot was merely in aid of a joke, he did not feel quite so kindly toward us as he was at first inclined to feel. Humoring the joke for awhile, we go on.

"Boys," says Mr. S., "we will drive for bigger game to-day, but to-morrow we will go to the river and shoot ducks. I saw a large number over there no longer ago than yesterday, some of them a fine species known in these waters as the 'decoy duck.'"

"All right! All right!" says Henry. "I would like to get a shot at those decoys, for I am satisfied that is the kind of ducks I have heard my father tell about shooting when he lived here."

The hilarity that followed this exclamation was enough in this quiet region to frighten all the game for miles away, and Henry finally detecting from the meaning of the term decoy the awful mistake he had made, chimed in.

"Wild hogs are frequently found in these woods," says Mr. S., "and if any of you see a hog to-day you may be certain he is a wild one, and shoot him."

Henry, who had by this time become suspicious, took this statement as a further effort to procure a practical joke at his expense, by inducing him to shoot some farmer's hog; but remembering that he had heard his father give some of his experiences in chasing the wild boar Henry took occasion to tell us what he had heard his father say. He also ventured to ask some questions which showed that while he pretended to disbelieve the story as to the prospect of our encountering wild hogs he was nevertheless apprehensive that there might be some truth in it.

After a short walk further on, the hunters are soon stationed in their stands about 200yds apart, and then breathlessly await the approach of game. A half mile or more in our front we can hear the toot of our driver's horn and the occasional yelp of a dog. We wait for the nearer approach, but not patiently. We think we are anxious to see a huge buck with long horns come dashing up, but we are not certain. We have heard of the buck ague, and while we have some confidence in our ability to ward off and resist such a state of feeling or disease should we be threatened with it, still we are fearful. The noise made by the drivers and dogs presently becomes much more distinct, indicative of their approach at a rapid rate. A little nearer and we understand that a chase is on. A few moments more and the great commotion only a few hundred yards in our front reveals to us the fact that the game is nearing our stands. Stout hearts beat as they never beat before, for mingled with the voices of our excited drivers and the mouths of our faithful dogs we can hear the ferocious growl of the wild hog. Instantly the feeling in every man's breast is "I have got to face and fight a wild boar." Directly in our front is a dense thicket, and from this and through his stand each huntsman is expecting the savage beast to come. So ferocious is the sound, so exciting the chase and nervous the hunters, that the bravest of us are found mounting logs, and each about half way hoping that any other than himself will have to bear the burden of the onset.

Henry about this time is observed perched in the fork of a tree, and when questioned about it later, excuses himself by remarking that he remembered to have heard his father say wild hogs could not climb trees.

To our surprise, and somewhat to our satisfaction, no doubt, though we would not have admitted it at the time, the dogs overtake their prey just before emerging from the thicket, our drivers are soon in the midst of them, and the dogs, encouraged by their presence, lay violent hold of the hog, and though some of them are in a short space of time torn and bleeding from ugly wounds made by the tusks of the beast, they hold him with such tenacity that our drivers, with true huntsman's courage, plant a pole across the back of the animal and with the aid of the dogs press it to the earth, and while being so held, tie the legs hard and fast with a cord. This being done, the drivers announce the capture and the hunters approach. The hog by this time is lying in the grass almost concealed from view and perfectly quiet. His position was directly on a line between us and the captors. No sooner is the announcement made that the animal has been secured than Henry comes out of his tree and leads the van. Suddenly a great "Boo! Boo! Boo!" right at our feet announces to us one and all that Henry has in his haste and excitement walked almost into the mouth of the hog. The poor boy is so dreadfully frightened over the incident that it becomes a matter too serious for laughter. After Henry had somewhat recovered from his fright and had ventured close enough to examine the game, which he thought he had discovered was in no condition to do him any hurt, he remarked: "Boys, this reminds me of what I have heard my father tell about hunting wild hogs, and I would like very much to have the tail of that boar to carry home as a trophy." Now, the fun of this latter remark consisted in the fact that our game was not of the boar gender.

We all agreed, however, that Henry should have the tail of a live wild hog, provided he secured the trophy with his own hands. Henry hesitated, but finally agreed that if a knife was furnished he would do the work. The knife being procured, slowly and cautiously he approached his intended victim. Getting very near, and while in a stooping attitude reaching after his prize, one of the men in the rear gave a sudden "Boo! Boo!" and Henry fell forward, catching with his hands on the rump of the animal. At this sudden awakening the hog made a tremendous lunge, snapping and growling as scarcely beast ever did before. Henry with a bound scales the hog, grass and all, and the hog with another surge, as if encouraged by Henry's effort, breaks its fetters, springs to its feet and with the fleetness of a deer plunges into the thicket, and the chase is on again. This time it is short-lived, however, for very soon a well-directed shot from the gun of Mr. S. ends the life of the creature, and Henry in triumph claims the tail.

The tension on our nerves during the excitement of this chase had been so great that the relaxation consequent upon a rest was almost prostrating, and when what we intended as a little time for recuperation came to an end the shades of evening were coming on and we retired to the lodge for the night.

Seated by a dim firelight that night, some of our party sleeping, and no doubt dreaming of witches, hobgoblins and hog hunts, our host, much to my entertainment, related a number of incidents connected with the early history of this region of country. One of these incidents I will attempt to tell, and whether or not any virtue be discovered in my manner of telling, I hope the reader will bear in mind that the value of the story consists in its verity.

Legend of Goose Creek.

Nearby the old mansion which I have described in the first part of this article stands as another evidence of this ancient civilization what is known as the "Old Goose Creek Church." This old structure—it is now more than 200 years since it was erected—is of imported brick also, and though covered with moss and ivy is still in a fair state of preservation. For more than 150 years after its erection this old church was the place of worship for the highest type of Southern civilization, but its usefulness, consequent upon the new order of things brought about by the results of the War of the Rebellion, has long since passed away. From Charleston and other places, even to this day, though, once a year go the descendants of this ancient people to the old church for worship. On account of the associations and the legends that are told in

onnection therewith the place is regarded as a very acred spot.

After the death of Gov. Smith, whose biography is contained in the epitaph which is given verbatim in the first part of what I have written, a number of other persons of note from time to time occupied the old mansion which he had caused to be built, and among such occupants were Gen. Marion and his brother Samuel.

After Gen. Marion's death Samuel continued to occupy the house alone, and tradition says that the remaining brother lived from this time on with the implicit belief that the spirit of the dead General, like a guardian angel, continued to hover about the place, and many are the stories told as emanating from Mr. Marion himself of the midnight visits and communions had between the living man and the spirit of the departed brother. Whether or not these beliefs of Samuel were well founded, or whether they sprung from the hallucinations of a susceptible mind, we can of course only conjecture, but it is certain that their effect on his mind and character was very marked.

Samuel was by a number of years the junior of his brother, and at the time of which I write had hardly reached the meridian of life.

Though Mr. Marion was just the style of man calculated to charm and win the affections of the opposite sex, and though he had been what is popularly termed a ladies' man, he had never known from experience the sweets and bitters of conjugal life. He seems to have been one of those characters in whose breast will for years smoulder the fires of disappointed love. He seems also to have been, in his treatment of the fair sex, a very sensitive man.

Some years before the time of the chief happenings recorded here, Mr. Marion, the account says, was engaged to be married to a woman who was a relative and helpmate of a French schoolmaster in the neighborhood, but some unexplained disagreement had brought about an estrangement between them which had never been healed.

It is a part of the history of love affairs that reconciliations are as often brouhgt about by as strange fatalities as have part in the original match making.

Mr. Marion became suddenly very ill, and having a premonition that his earthly existence was nearing its end, he sent for his once affianced in order that he might relent and ask forgiveness if any was needed or wanting, and to bid her an affectionate farewell. She came promptly, and the result was of course a complete reconciliation.

After the scenes enacted as a consequence of this sudden healing of these long differences, the sanctity of which I do not feel at liberty to invade, and therefore out of deference not only to the memory of the participants, but for the sake of all lovers as well, I draw the curtain, Mr. Marion began in a calm manner to tell of his physical condition, and expressed the belief that the end was near with him.

"And now, my dear," he says, "much as I would like to remain with you on this earth for awhile at least, fate has decreed otherwise. I cannot, though, in my present state of mind, and in the face of the teaching that God is love, and that all creation is filled with His presence, help believing but that, when my body is returned to mother earth, my affections, which are but a part of my immortal nature, will live on and on throughout eternity, and that though we may be dead in the body we are still capable of making our affections known to those living creatures whom we dearly love. With this belief in my mind I want you to make me a promise. I ask of you that on next Easter Day, which is not very far hence, between the hours of 5 and 6 in the afternoon, you go all alone to the church, and for a little while at least occupy your accustomed pew, and if it is possible for the spirit of the departed to commune with the living I will at that time and place make myself known to you."

The promise was made, and after words of encouragement for the sick man, and an affectionate farewell, the lovers parted.

Mr. Marion died that night. The hour and manner of his death was never known, for the attendant being in the early part of the night advised by his patient that all was well, fell asleep, and not until the dawn of morning was it known that the sick man was dead.

They buried him in the churchyard, and as the mourners returned to their homes, only one among the number knew of, and pondered in her heart, the sleeper's last sad request.

When, after the lapse of only a few weeks, the time came for a compliance with the sad injunction, the lady in question was laboring, of course, under a state of great excitement. Timid to a degree uncommon for one even of her sex, and to the wonder and alarm of her friends reduced to a state of nervousness beyond which endurance does not go very far, when Easter morn came, faithful to her vow, she watched the old clock in the corner, and when it began to chime 5 she ventured all alone out into the yard, then into the road, and as the sequel will show, a little distance on, to the old Goose Creek Church.

What transpired in that old church that afternoon will, I suppose, never be known till all secrets are revealed. Whether or not Mr. Marion came in his spirit form and communed with his once beloved, or whether she realized his presence, has never been told; but when, after a diligent search, she was found about 9 o'clock that evening in her accustomed pew at the old church, stone dead, the sorrow of the occasion was largely merged in the wonder over the incident.

A well prepared note found in the lady's room, as if she had been anticipating what happened, told the story in full, and when the contents of this became generally known the wonder grew and has been growing from that day to this without any further or better solution.

Neighbors gathered to perform the last sad rites, and while dressing the body for burial they found tatooed on one arm the word "Ney." She was buried beside the one for whose wish she seemed to have voluntarily sacrificed her life, and the note in question was buried with her. It seemed to be the desire of the schoolmaster, her only known relative, that every trace and recollection of the affair should be blotted out of existence.

The French schoolmaster, being left alone in the world, migrated to other regions, and it is said finally located in Cumberland county, North Carolina, where for a number of years and up to the time of his death he continued his occupation as an educator, and where the people confidently believed, and do to this day believe, though he was known by another name, that he was the original and only Marshal Ney.

An Episcopal clergyman in North Carolina has lately written and caused to be published a book concerning this man in which it is proved to the satisfaction of the author, at least, that this character was Michel Ney, the celebrated French marshal.

A further account of our hunt and what we learned of the early history of the country we were visiting may be the subject of another letter.

WILLIAM WHITSON.

A Story of a Stutzen.

Editor Forest and Stream:

Having read with much interest and sympathy the reminiscences of an Old Sportsman, later of W. W. Hastings, and others who write so true from life, without much nonsensical poetry thrown in, I am led into temptation of giving the readers of FOREST AND STREAM a few of my own happenings of life across the ocean, and if this should not turn out as it ought to be regarding style and the manner of giving things in such a way, so as to be interesting to a majority of the readers, I beg pardon in advance, as I am only an adopted citizen.

In Austria a short gun, say about 26in. barrel, is called a stutzen; why I don't know myself. Father's old and new guns were sold. Among others there was the stutzen, which was not sold, as I loved the old gun dearly and had hid it away up in the garret, where even my older brother, in spite of the most careful ransacking among old boxes and spinning wheels and other old things, could not find it, and so it was given up as stolen or lost. I was trying to save a nice black setter puppy by taking it away to a farmer's boy friend, but the pup found its way home, and all my pleading did not prevent its being sold. I believe I actually cried a little over that pup.

Father had been forester to an estate belonging to Count W., and all this happened after he was dead and gone about four weeks. I was about fifteen years of age then, and having received many a valuable hint when roaming over the fields with him regarding the proper education of a bird dog I felt pretty confident and was determined to buy another pup as soon as the necessary cash was saved up, and to train him myself; but quite a few years elapsed before I could accomplish the buying, for good dogs were even higher in price than they are now. But I was going to tell you about the gun.

I had shot quite a few sparrows and starlings—the latter especially—about cherry time, for these birds are more fond of cherries than any other bird in the country, and could be shot those days in order to protect the fruit grower from their depredations. But my ambition was to kill a rebhuhn (not unlike our prairie chickens). These birds abound in Austria in clover, potatoes, rye and wheat fields. When flushed in front of the dog the old cock issues a warning cry, sounding like Ki-ri! Ki-ri! They are very swift of wing, but lie well to a dog, and are fine birds for the table. Having been compelled to go to school most of the time when father was out with the Herren from the city, I would not have been allowed to accompany them, as they would have only made a game carrier out of me. Some of these fellows were even too lazy to cock their own gun, and although they paid liberally for such services, I myself could never have a chance to shoot, being considered as a sort of inferior being by them, and perhaps by my own father—for the boys across the ocean are brought up very strictly in comparison with boys in this country.

But my opportunity came a few weeks before Christmas, when I stole out one foggy afternoon, the stutzen hanging on a strap over my right shoulder, the powder horn and shot pouch on the left. About gunshot distance, behind the house, was a brook running its course down toward the meadows, and following down stream I was soon in open country. About 300yds. to the right of the brook the ground rose, gently sloping toward a hill, on which was built one of those hut-like shelters for birds, erected every year in early winter, composed of limbs of the oak about 6ft. long and leaned together on a pole of about the same length, which is driven into the ground. The pole is set in the center and the limbs with leaves on leaning around it form a tent-like shelter, which is fastened on top and bottom with wire or strong cord in a hoop. This gives an excellent protection for the birds, as there are plenty of apertures at the bottom to let them in and out. The covering can be made so dense that the finest snow will not find its way through the branches, and in stormy and uncertain weather one was sure to find a covey (or kette) in or around it. Here I peeped. My expedition was a poaching trip pure and simple; and I was afraid of being arrested by a game warden, for I had neither gun nor hunting license. Sitting down and leaning against the hut, I was waiting for twilight, and as soon as I thought it was dark enough for me to see, and also not to be seen, I poured powder enough to be a good load on the palm of my left hand, and letting it slide down the one and then the other barrel, I put tow on top, and rammed it home with the ramrod until the rod would jump about half way out of the barrel, which my father used to say was a good sign of proper loading. Then I did the same with the shot. There was just a trifle of snow on the ground, and seeing no bird tracks I proceeded to tramp slowly along in a direction away from town. I was now all expectation and excitement, and hugged my little gun in a businesslike way with left hand on the fore-end and right on the trigger. Suddenly I was startled by the well-known cry of the old cock—Ki-ri! Ki-ri—and up rushed eight or nine black shadows following the cock, which was somewhat in advance. The gun was at my shoulder on the instant. I do not remember whether I closed one eye or shot with both open, or both closed, as some fellows say they do; but at the double crack of the old gun two of the shadows were on the ground.

I felt like giving a yell, but suppressed myself in time, thinking about the gamekeepers, who I was sure must have heard the shots and would come rushing forward. I seized my prey, and running down toward the brook and being once among the willow shrubbery I first proceeded to examine the much-prized birds more closely, and at that moment I was as proud as I had been at the time I got my first high boots, and as happy as a king, for a king is said to be happier than other people. After all the excitement and joy had settled down a little I was thinking how to solve the problem of what to do with the birds, for under no consideration could I have brought this poached game home to mother; it would have broken her heart to think me guilty of such a thing—poaching, an act which the father in his position as forester had spent his lifetime to prevent, and the son had committed. Never! But a happy thought struck me. There is my old nurse at the other end of the town; she will and must have them. Besides, I can tell her these are a couple of chickens presented to me by a boy friend of mine, etc., and even if she guesses the truth, she will not betray me. But what of the gun? I could not carry the old stutzen so far through the town without being seen. A hollow tree! That was the thing; and looking around for one I put her down into it, but in my thoughtlessness muzzle up, and what became of that gun will be related in some other chapter.

Now, putting a string on each bird's head, and taking off the old overcoat, I put the cord over my neck and let the birds dangle down on each side of the hips, and put the coat on again, hiding the birds completely. Arrived at the old lady's little straw-thatched house, I presented the birds to her as common chickens. Good old soul; she found out quickly enough after I had left, but never did anybody hear a word from her about it; and whether she ate them as game or as barnyard fowl, does not matter. I only know that next to my mother, she was the best old being I have known up to the present time. She had known the whereabouts of the old stutzen all the time, and had kept the secret. How many women are there that could immitate her? C. F. B

DANBURY, Conn.

The Railroad a Coming Influence.

Editor Forest and Stream:

It seems altogether appropriate that the railroads should interest themselves in game protection and propagation. Never before were their interests as public carriers so nearly identical with those of sportsmen.

Two seemingly diametrically opposed conditions exist for the railroads; they are steadily at work blazing new paths along which settlement may be made; driving new lines through forests, across plains and over mountain ranges. This is good business, for it opens up, develops, makes productive contiguous territory, thus increasing both freight and passenger traffic, and swelling the revenues. But they are equally industrious in seeking to enlarge their excursion and tourist business.

At first sight there may seem to be no incongruity in this, but a little thought reveals a different aspect. It is discovered that the railroads are rapidly encroaching upon nearly all sections that have thus far been considered difficult of access, thus opening them to frequent invasion by civilized man, who is, unrestrained, the most destructive creature afoot, especially of the natural, primitive or virgin conditions that have hitherto existed, and on which the railroads have so largely relied, in the past, to attract alike excursionist and tourist; those two moving portions of the pody politic, the one bent on quickly reaching and as quickly returning from a given point, the other bent on a more or less leisurely survey or exploration of a more or less extensive series of localities.

Not for a moment can the railroads be blamed for the damage wrought by their excursions. The censure rests wholly upon the blind stupidity that has permitted the individual to thus destroy. But it is reasonable to question whether such destruction of existing attractive conditions can continue without great detriment to passenger traffic; to question the congruity of thus building to walls that rest on a crumbling foundation.

Can the one thrive while the other wanes; or will the one cease as the other is destroyed, even as effect ceases upon the disappearance of cause? For travel abroad may be largely ascribed to the inducement latent in the purely virgin or markedly unique and foreign outside the little world that is the work-a-day matrix of the individual.

Travel is either by inducement or compulsion, for pleasure or business, and the former is, per capita per mile, vastly more profitable to public carriers than the latter, and if they can be made to see that increased attractiveness is always followed by a sharp increase of attention—that the converse is equally true and that both axioms apply forcibly to railroads—there is little doubt that they will interest themselves in working for increased attractiveness.

Is development, then, acting without restraint along present lines, diametrically opposed to increase traffic business? Does travel for pleasure increase or diminish with each added mile of railway constructed? That is the questions the railways are even now beginning to ask themselves; it is a business point of view. If passenger traffic may be increased with reasonable effort by increasing attractiveness, it seems pretty certain that efforts will soon be bent in that direction

And here it is well to explain that travel is, in this instance, used in a restricted sense, embracing only those jaunts of a few days, a week or two, a month perhaps, that the middle classes feel able to occasionally allow themselves; not to the continent-touring, globe-trotting and the like, so frequently indulged in by the wealthy, but which fall so infrequently, like bright shining days, into the lives of the less fortunate.

What, then, will draw the workers, the majority, out if alluring districts are to have their chief feature of attractiveness, their virginity, destroyed by this extension of commerce? Clearly there will be less and less inducement to travel, consequently less travel, unless a compromise be struck whereby development is restrained from thus destroying or artificial features of equal attractiveness be promulgated. What the nature of such a compromise may be; what that of these possible artificial magnets; what the railroads have, or have not, done to advance either; and by which they are likely to profit most—which prove the more attractive—these are pertinent considerations.

There is no sentiment in a railroad. Profit and loss alone appeal to them. If they take an active part in protection and propagation of game—subjects nearest a sportsman's heart, most often in his mind and on his

tongue—it must be because they see there a means of advancing their own interests, their passenger traffic. And if they enter the lists for this purpose it will be in the cold-blooded, level-headed, masterful way that has characterized their undertakings in the past. They have the capital, the brains, the unity of purpose, the persistency required by business interests, that make them determining factors in legislative halls; factors that have thus far been lamentably absent in the past consideration and promotion of these matters.

When they realize that it is to their advantage to push along these lines it may be taken for granted they will do so. They will see that our streams are stocked; that our game birds are artificially replenished; that our big game is granted the rest that alone can save it from positive extinction; and above all, that our open seasons are determined less by State boundaries than by common sense; and that politics—as pernicious in the enforcement of game laws as in the prosecution of railway business—ceases to wield so large and detrimental an influence in the matter of wardens.

Total divorce of these matters from the States will never occur. They are matters the constitution has given into their charge, and they cannot drop them. State hatcheries there will always be, and by the State legislatures all codes will be contrived. Railroads cannot, and will not try, to oust the States from this control. But they will, sooner or later, take such effective steps in quietly and unostentatiously influencing the legislatures, interesting and uniting sportsmen, that there will appear a consistency between State codes that is now so markedly absent. And there will cease most of the pernicious political influence and intrigue that makes enforcement a contemptable farce. This is the nature of the compromise that is almost certain to be struck.

Still, it is reasonably certain that it will not be struck until the railroads become convinced that artificial attractions are less attractive, therefore less productive of results—of profit in passenger traffic—than are the attractions such a compromise would conserve. Proof that this conviction is forcing itself upon them lies in the constant and increasing vigor with which they are and have been for some time past advertising contiguous fish and game territory—advertising that is more constant and effective than that turned toward any other feature of attraction.

Of the nature of artificial—or made—attractions it may be said that they seek either to amuse or instruct. They are quaint old towns, fairs of major or minor importance, picnics, conclaves, reunions, a hundred and one things evolved from fertile brains. Few are of universal interest; few demand more than a passing attention. They are seen once, twice, perhaps, and the visitor passes them by thereafter. They pall, grow stale—they are artificial. But the stream that turns the mill wheel—the great Yellowstone National Park, and all of camping, fishing, hunting and tramping that lie between—these are ever alluring. They always call and beckon us from a narrow life to an existence that seems to have no limits. Yet the call is weaker, fainter, and the realized pleasures fewer, smaller, for every bullet-bitten stag that leaves a lair unwarmed at night, for every leaping fish drawn from dim retreat, for every bird cut short in flight. It is life, intense and quivering, that adds the greatest beauty, that calls most potently. It is the friend, with his bright eye, cheery smile and warm hand clasp that draws us again and again to the mansion. We do not call repeatedly merely to admire the architecture. Santa Fe, without her quaint population, becomes a glaring stuccoed grave; the forest, bereft of life, a boundless tomb of shade.

Beyond our little world of humdrum daily life we find new worlds throbbing with sweet unfamiliarity. Take away the life that is the heart of it and much that drew us there is gone. So we go less often.

For this reason artificial attractions are less attractive than those of virgin nature, or even of those assured by compromise. Logically, therefore, the benifits accruing to the railroads from them are less, and it is only a matter of time until they clearly see it. With that discernment will come action along the lines defined.

On the surface this may seem a long way off, for scarcely a move has yet been made. A few isolated instances have occurred, but so far either of uncertain character or local importance. A California railroad has established a hatchery of its own, is stocking the streams along the line, or contiguous thereto, and is active in the enforcement of piscicultural protective laws. A mountain railway is about to interest itself in rectifying and strengthening the Montana code. Heretofore they have made little effort to conserve the virgin qualities or to create artificial ones. They have been content to take them as they found them; to accept, unquestioned, their growth or decadence.

But below the surface there is a force at work that will ere long show itself; how soon no one can say. It will be because business interests, not sentiment, demand it; and it will be the more effective because of that. Let us hope it will not be long delayed.

NORMAN N. SPEAR.

Opening Day in Massachusetts.

"THREE o'clock! Are you up?"

"Yes; I'll be right down."

And it didn't take long to dress, for the old hunting clothes were out ready to hand, the lunch was put up, and the coffee pot was on the stove in the kitchen.

In just an hour everything was stowed away in the buggy, and I was clattering down Main street to meet George and Tom, Sept. 15, and the law off woodcock and partridges in Massachusetts.

At about the same hour two members of our party were off out of town by another road. We had an eight-mile drive to the covers we had selected, but a more glorious morning one could not imagine—cold and clear, with the sky as full of stars as a good pattern from a choke-bore gun.

Just as daylight was making the stars creep back into the sky we drove up to an old barn and unhitched. A bite from the lunch basket was next in order, and then with shells in our pockets, guns in hand, and dogs whining their impatience to begin, we crossed the road and entered a birch cover.

George started the birds first, a bunch of five, but failed to get a shot. I swung around the lower edge of the cover and Lee pointed just as we went through a gap in the stone wall—the little 16-gauge grassed its first bird in great shape, and we scored one partridge.

Swinging around up the hill, Lee pointed, a woodcock flushed, and I missed with both barrels, as the cover was very thick. I marked her down well, and George soon had her pinned, but she flushed wild. After a short search George had another point, Tom pinning his bird in great style, and George scored.

Two birds, 6 o'clock!

From here we went back across the road, and Lee made a grand point on a pine knoll, and I killed partridge number two. A few moments later I heard George shoot, and when we came together we each had a bird.

The cover being pretty thick and the birds well scattered we went back to the team and drove on to another cover.

This proved to be worse than the one we had left. The country was very dry, and the birds were in the thickest swamps, and it was almost impossible to see them. George, however, secured two partridges before we got back to the team. It was now nearly noon, and as we had agreed to eat lunch with Bob and Cutler we started for the appointed place. As we were nearing the farmhouse we heard shots, and soon saw the boys hunting in some pines just under the hill. They had bagged five birds—two woodcock and three partridges.

We spent about an hour at dinner—and such a luncheon as was demolished at that gathering, and how we talked over each shot of the morning and compared notes! The camera came in handy then, and we were all photographed about the remnants of our feast with the guns and dogs.

Our next move brought us to a fine bit of cover, but it didn't pan out well. Bob and I tried a likely looking place along the road, he and Jake on the inside and I on the outside. I heard his call of "Mark!" just as a fine partridge came out to cross into another cover, but she never got there, and that made one more. George killed one more partridge, and then in the darkness we drove home again, tired but happy, with a bag of thirteen birds.

That may not seem so many, but to one who knows partridge shooting in the early season, when the leaves are thick in the trees, it was a good bag.

And then again that is not all; the day afield counts for as much more—the company of such good fellows and such good dogs, the old age and cares you leave in the woods—all is worth the going for. And when you lie down good and tired and sleep—what is there more?

NOXALL.

New Brunswick Notes.

AMERICAN sportsmen hunting in New Brunswick this season seem bent upon surpassing even the phenomenal record of success made last year. Among those who went on the hunting grounds Sept. 1, a large number have returned, and up to the present I have not heard a single case of failure.

No record heads have as yet been reported. One of the best so far brought out was the property of Sumner L. Crosby, of Bangor, who shot his moose in the Nictor Lake country. This head had a 53in. spread. Mr. Crosby also brought down two deer. Writing to a Fredericton friend, Mr. Crosby states that moose are as plentiful on the Tobique as deer are in Maine. Mr. F. W. Ayer, of Bangor, who, with his two sons, hunted in the Tobique country, secured two moose and a very fine caribou.

Mr. Fred P. Townsend, of Cooperstown, N. Y., has returned from McKeil Brook, where he has been sojourning with his friend, Billy Chestnut. During the fortnight they were camping out they saw seventeen moose, three deer and one caribou. Mr. Townsend secured the best specimen of the moose, while Mr. Chestnut gathered in the caribou.

The historic Jim Paul is now in the Canaan country with Dr. G. J. Van Vechten, of Oneonta, N. Y. Jim's first patron, Mr. James Mason, of Boston, secured a fair-sized moose. This party saw altogether about forty moose in the Canaan country.

Messrs. H. L. Batterman and H. F. Whitney, of New York, came in Wednesday from a fortnight's hunt in the Rocky Brook country, with Ed Church as guide. They secured one fine moose and two deer. Ed is a converted Maine guide, and a great favorite in this Province. He leaves again to-day for the hunting grounds with Mr. Loomis, of Victor, N. Y.

Mr. B. D. C. Foskett, of New York, would have been one of the happiest of men but for a trifling incident that occurred in the Keswick country. Mr. Foskett secured two deer and had his chance for moose, but on the momentous occasion when his bull hove in sight and Mr. Foskett had fastened the ivory bead on his shoulder there was no cartridge in the barrel, and the hammer came down harmlessly. Mr. Foskett takes his medicine like a man, and blames no one but himself. He thinks it was the only half-hour on the whole trip when his rifle wasn't ready. In November he will go in after that big bull again, and there will be nothing the matter with his gun.

Mr. E. S. Steinam, of New York, arrived to-day and goes into the Keswick country with Rainsford Allen as guide. With Adam Moore, in the Nictor country, are now Mr. and Mrs. A. C. Tower and Mr. Drear, of New York; Mr. L. Biddell and J. Biddell, of Philadelphia, and H. R. Hatfield, of Boston. Adam has a way of accommodating a good many guests at a time and making all hands happy.

An unusually larger number of sportsmen are going up the Nor'-West Miramichi by way of Newcastle. These include Whitney Smith and C. J. McIlrain, Jr., of Philadelphia; Fred B. Rice, J. Schenkelberger, E. W. Grew, Theodore Hoague, E. A. Pease, Dr. F. Boyden and Harry Pitman, of Boston; I. W. Morton and daughter, of St. Louis; Wiliam Crawford and W. G. Peckham, of New York.

Mr. J. H. Graham, of Boston, who has been moose hunting upon the Miramichi, with Henry Braithwaite as guide, arrived this afternoon. Mr. Graham got a fine moose head, and states that he saw seventeen moose upon the trip. Mr. Fowle, who was hunting with him, will remain in the woods another week.

Mr. Percy N. Graham, of Godalming, England, who hunted with Braithwaite last year, arrived to-day for another moose hunt with the accomplished woodsman.

Messrs. L. G. Loomis and S. W. Hill, of Victor, N. Y., left to-day for the Miramichi hunting grounds with Ed Church as guide.

Messrs. H. M. Neale, of Upper Lehigh, Pa., and John Neale, of Norwich, Conn., came in upon the Canada Eastern train this afternoon from a moose hunt on Cain's River. They had Chipman Bartlett, of Doaktown, as guide, captured a large moose and say that they will return for another next year.

Visiting sportsmen are not obliged to give a $100 bond as in former years. It is still in the law, but the Government is not enforcing it this year.

All American sportsmen wishing to hunt in New Brunswick should buy the FOREST AND STREAM's sporting map of this Province. It shows at a glance where the big game is to be found.

FRANK H. RISTEEN.

FREDERICTON, N. B., Sept. 23.

CHICAGO AND THE WEST.

The Minnesota Expedition.

CHICAGO, Sept. 22.—By the time this number of the FOREST AND STREAM is in the hands of its readers there will have started from the city of Chicago, bound for northern Minnesota, the most remarkable expedition of discovery which has ever assailed the head waters of the Mississippi since the time of strong-legged Zebulon Pike. Honest Zebulon had somewhat the advantage of these modern explorers, though much of his journey lay through a land of wild rice, wild pine and wild Indians, and he had no railway to whisk him along. All Minnesota was then a wilderness, and not even Zebulon could give a coherent account of all the features of the paradise he had seen. To-day we have changed much of that. We have farmed and logged most of Minnesota. Yet this expedition, which goes by rail directly into the country which honest Zebulon penetrated on foot or by boat only after the utmost hardships, will present to the eyes of this expedition very much the same aspect that it did to the hardy early explorers. There are parts of the Cass Lake and Leech Lake region which are to-day primeval. The lumberman has not yet reached them, and not even the hunter and the fisher have yet made them common. The members of Congress going now to see in person the region to which an earlier Congress sent Lieut. Pike for the purpose of spying out the land, will observe it to-day as then, a goodly land to look upon. It is the earnest hope of very many men and very many States that these members of Congress will set the seal of their approval upon this region and keep it forever as it was when Zebulon crossed it wearily by snowshoe and paddle.

This is too glorious a part of America to throw away. The lumbermen want the pine and it has been fate that they should have it. The ways of commerce are not to be denied. Yet it would not establish the lumbering interests one whit further nor settle the question of supply one whit more definitely were the lumbermen to include this last million acres of land with the other hundreds of millions of land that they have denuded of the timber. We are all hoping that the lumbermen will say to each other, and that the Congressmen will say to the lumberman: "Come, now, let us keep this last bit of the virgin forest as it was when the agent of the United States found it when he first went there and pulled down the flags of foreigners and put up over all the trading posts the Stars and Stripes! Let us leave this wilderness forever under the protection of the Stars and Stripes!"

That this expedition will be a success is to-day a foregone conclusion. At 9 o'clock this morning there were thirty-six acceptances from Congressmen on hand at the office of the recording secretary, Col. Cooper. There were twenty-two States represented. A large number of Congressmen have not yet been heard from; indeed, but little more than a hundred replies have been received. It seems likely that there may be fifty Congressmen who will make the trip, and possibly this number may be exceeded. Should there be only twenty-five or thirty there would be plenty to accomplish every purpose of the expedition. The acceptances come from pretty much all parts of the Union, from Vermont to Montana. The South is also well represented, and there will be members from Kentucky, Tennessee, Missouri, Mississippi, Maryland, North and South Carolina. In addition to the members of Congress there will be a limited number of men distinguished in public affairs and scientific attainments. There will be a small number of newspaper men admitted, and a few persons will go for the purpose of assisting in making the party comfortable for whatever stay they may make in camp. Out of courtesy to the Minnesota members of the association the Chicago delegation will be but small. Invitations are in the greatest demand, and the trouble is now rather that the party will be too large than that it will be too small.

There will be a general *rodeo* of Congressmen and other members of the party in Chicago, Sept. 28. These gentlemen will be the guests during Thursday of the Chicago Athletic Association, and in the evening the start will be made by special train over the Chicago, Burlington & Quincy Railroad to the city of St. Paul. The first stop after St. Paul will be made at Walker, Minn. On Sunday, Oct. 1, the party will be on the shores of Leech Lake. They will be asked to take boats to a small island, in which island there is a beautiful little lake, which has as yet received no name. On the shores of this lake amid surroundings impressive and beautiful, divine services will be held by Archbishop Ireland, of Minnesota. This programme ought hardly to be announced, as it has not been arranged fully, but it will be in process of carrying out, no doubt, at the time FOREST AND STREAM for the week current is on the street.

The early part of the first week of October will be spent, it is hoped, by many members of Congress in the sport of shooting and fishing, for which such grand opportunity will be at hand. Unless present intentions should be changed, the party will pass through the cities of Duluth and Grand Rapids without making any stop. It is conceded by both of these cities that the "compromise site" for the National Park will meet the approval of Congress and that the proposition will go through without any

serious fight. Mr. Gilbert Hartley and Senator Page Morris, of Duluth, both agree that the measure will go through, and the Hon. D. M. Gunn, of Grand Rapids, has withdrawn his opposition. This compromise site covers the Indian lands known as Winnebigoshish, Cass Lake, Leech Lake and Chippewa reservations. The title to the standing timber on these lands can be attained by Congress simply and at comparatively little expense. It is not to be doubted that if the Indians are paid for their timber they would rather see it left standing than to see it cut down.

These Indians are not to be left out of the calculations by the entertainment committees. At Walker the white men and red men will join in the welcome. There will be Indian ceremonials and dances and the occasion will be one far out of the ordinary. In short, it will be an unlucky Congressman who is not of this party.

There is no doubt that this expedition would have attained very great and perhaps impossible proportions had it not fallen at the time it does. At this season we are having Dewey receptions in New York, the preparations for a big yacht race and arrangements for a fall festival in Chicago. Still more significant is the fact that many members of Congres are kept at home by duties of the fall campaign. A great many regrets come which mention this duty as the reason for not being able to join the expedition. The corresponding secretary has letters from the President of the United States, the members of the Cabinet, from many public men whose names are very familiar to all, and from many men of thought and science. It is a graceful act on the part of the secretary which suggests that these documents shall ultimately, on the disbandment of the association, become the property of President James J. Hill, of the Great Northern Railway, without whose bold initiative and princely support this enterprise could never have gotten beyond its first inception.

To-day I went up to Col. Cooper's law office, and there behind his big table sat a very happy gentleman. A cigar was as usual screwed into the corner of his mouth, and as usual his knee was dancing up and down with nervous energy as he sat at his desk. Six feet tall, broad shouldered and clean built as a soldier, with light hair a little gray, a blue eye which needs glasses now and then, and a smooth-shaven face which this morning was beaming with happiness—there you had Col. Cooper, the responsible originator of this movement, and to-day the happiest lawyer in all Chicago. He was happy because he could see that this movement was already a success, whether or not the reservation shall ultimately be set aside. I confess I gloried in his success, for if one stops to think of it, it is a very great thing which he has done, to start this thing and thus push it forward to such prominence and magnitude. It is a work which has taken a great deal more time and energy than would ever appear upon the surface. I personally know that Col. Cooper has given up his entire summer to this work, and he has brought to bear upon it so large a grasp upon affairs, so thorough an acquaintance with public men, and above all so unflagging and unselfish an enthuiasm, that he has been literally a host in himself. He has met discouragements and hindrances, but has brushed them aside with unconcern. I think I never saw a better instance of a man getting what he wanted because he really wanted it. Others have helped him generously, nobly, but we should place credit for this enterprise where credit belongs, with this blue-eyed enthusiast, Col. John S. Cooper, of Chicago. This city has always been able to produce a big man when occasion demanded it, and Col. Cooper has been big enough for this enterprise. He was a happy man to-day and I am sure all his friends share in his happiness. This expedition is a success before it turns a wheel.

It Still Grows.

Later.—Sept. 23.—At 11 o'clock this morning there were forty-one acceptances from members of Congress received at the office of the corresponding sercetary of the association. Less than 150 members have been heard from, and should all receive and answer their invitations it would seem that at this ratio the party would surpass in numbers all anticipations of even the most sanguine sort. It is settled that the affair will be a success.

To-day I talked with Mr. H. G. McCartney, of this city, chairman of the camp site committee, and he tells me that one very strange fact makes the actual plans of the committee still somewhat problematical—no one can be found who knows much about that country! It is still too much of a wilderness. "Ask me anything about the Woman Lake region, below there," said Mr. McCartney, "and I can tell you all about it; but I can't find any one who can give chapter and verse on that Turtle River region and the lakes that run out from Cass Lake, either way. All we can promise is that we will go up in there and do the best we can, and we feel sure that we can at least round up enough boats and men to take out thirty or forty men on fishing trips and can give everybody a fish dinner out of doors. As to a big camp, that remains to be looked into. A good many are afraid to risk Congressmen out in camp, for fear that they will not enjoy camping, especially if it should come on bad weather. You must remember that we are going into a country that does not have hotels and guides waiting for visitors. It is all wild and rude. We don't know how many boats we can get. We are sure of two steamers at Cass Lake, one of which can carry a couple of dozen passengers, and the other about seventy-five passengers. These boats can take the party up the lake chain a distance of ten or fifteen miles from the stopping place on Cass Lake. The railroad has only been through there six months, so it is all wild right up to the tracks. Capt Clow is going into camp a couple of days in advance and will try to have some fish hung up by the time we get there."

Capt. Clow was in the commissary department in the Civil War and has fed 15,000 men, so he knows what that means. If the fish don't happen to bite very well, he would better move on up into the woods when he sees the cars coming with the big party, for a hundred hungry men will need a heap of duck and muscallunge. The committee has asked me to go along and help Capt. Clow get the camp supplied with game and fish, but this I cannot do, as I must keep closer to the center of the storm belt. But what a lark it would be to get mixed up with those mallards about now, in the wild rice lakes! I should like to shoot a couple of days for the sake of saving Congress, for I think I could get so many ducks in there that I would surely be elected an honorary member at least.

From the East.

I receive many letters from different parts of the country regarding this Minnesota expedition, but the following from Boston, written by Mr. C. Harry Morse, is of special interest. He writes:

"I have followed with great interest the movement for the establishment of the new forest reservation, and in this week's FOREST AND STREAM I find a new hope for the success of the project. This is no less than the fact that the Old Bay State will be represented on the tour of investigation by one of her very best sportsmen and out-of-doors men. The Hon. John R. Thayer is a lover of the woods and waters; a fox-hunter himself of the most vigorous type, and a persistent, hard worker for anything which he believes in. You are in great good luck to have Mr. Thayer a member of this exploring party. I have sort of jumped at the conclusion that the other Congressmen who have accepted will be equally impressed with the desirability of establishing this reservation, and hope it may turn out so. I know that an honest effort in such a direction, such as I am confident this is, will enlist the sympathy of John R. on the spot. And that means that he will work for it. I know that you are interested in the matter, the same as we all are, and that is my reason for writing."

Movements of Western Sportsmen.

CHICAGO, Ill., Sept. 22.—Hon. Carter H. Harrison, Mayor of Chicago, will to-morrow go on a little snipe shooting trip, making his headquarters at the Maksawba club house, in Indiana. Mayor Harrison is very fond of snipe shooting and never loses an opportunity to indulge in his favorite pastime. He will meet at the club house Mr. W. H. Haskell and other members of the Maksawba Club and will remain there a few days if the shooting should be good. There is a good flight of snipe now in on the marshes of upper Indiana, together with a good many plover and numbers of teal duck, and unless the sudden change of weather to-day should drive the birds away there ought to be some shooting. We are having a very heavy, cold rain to-day in Chicago and vicinity, and what this equinoctial disturbance may mean to the shooters is yet to be seen.

Mr. W. P. Mussey will go to Maksawba Club to-morrow night and may perhaps be joined by Mr. Organ and other friends. There has been good fishing of late in the Kankakee, or in what is left of the Kankakee, and the members have managed to find some sport between the bass and the birds.

Our chicken season is well advanced now, and I presume it is safe to say that most of the big bags have been made. It is pleasant to be able to state that the chicken reports show about as many birds this year as last, and this would seem to indicate that there is gradually growing a better sentiment for game protection in the Western country.

Among the unlucky chicken hunters who went out early in the season from Chicago was Mr. Ernest McGaffey, who hunted in lower Illinois on a screeching hot day and only saw five birds, of which he killed four.

Mr. C. B. Congdon, of this city, has left for Eagle Waters, Wis., for a wrestle with the fiery and untamed muscallunge.

Mr. J. H. Smith, of Milwaukee, is among many others who have gone to try the fishing near Woodruff, Wis.

Four representatives of the glass house of Stewart & Co., of Marion, Ind., left this week for Woodruff and Minocqua, Wis., where they will fish and shoot.

Mr. A. D. Early, of Rockford, Ill., has gone to State Line, Wis., for a shooting and fishing trip this week.

Mr. C. N. Cleveland, of Chicago, leaves this week for a trip to State Line, Wis.

Mr. N. C. Beasley, of Big Timber, Mont., is one of the visiting sportsmen in Chicago this week.

Mr. A. H. Bogardus, Jr., of Springfield, Ill., is in town this week. He is not yet as big a man as his father, but is husky enough.

Mr. E. W. Purser, of San Francisco, Cal., is in Chicago this week with three friends, and the whole party is buying a full line of sporting equipment for their regular fall duck shooting trip, northeast of the Golden Gate.

Mr. W. G. McCarthy, of this city, is back from a chicken shooting trip in Minnesota. He had very good success.

Mr. Chas. P. Frame, of New York city, is among the guests of this season at Kabekona Camp, Minn.

Messrs. J. G. Peppard, Crispin Ogleby, H. P. Wright and J. W. Barney, all of Kansas City, are at this writing at Kabekona Camp.

Messrs. Geo. P. Miller, W. M. Miller and F. R. Bloodgood, of Milwaukee, Wis., are now at Kabekona Camp.

Messrs. Louis A. Ireton and E. W. Wright, of Cincinnati, O., are on the Kabekona register this week.

Messrs. W. C. Gillespie and A. E. Walters, of Chicago, are now at Kabekona Camp.

Mr. Geo. W. Lawrence, of Carthage, Mo., is spending a short time at Kabekona Camp.

At the above resort the duck shooting is reported now as very good on the rice beds, and the muscallunge are biting now and then. Messrs. Gillespie and Walters took two 'lunge, each of 22lbs., on Little Boy Lake last week. Bass fishing is very good. Messrs. Peppard and Ogleby caught 175 bass in five hours. (These fish are reported as returned to the water.)

At Fox Lake, Wis., ducks are coming in fairly well and the boys are having fun with teal. Redheads and bluebills are just beginning to appear and the northern flight is not yet in on Wisconsin waters. At Fox Lake the fall pickerel fishing with spoon hook is always something worth taking into account. This week Dick Newman got thirty-one pickerel on one day and Dick Hoover and Tim Kenney took fifty-eight the same afternoon. Fox Lake is a good deal of an all around sporting place, what with bass, pickerel, ducks, grouse, squirrels, rabbits, etc., and friend Hotchkiss, of the Representative, seems well located.

Messrs. James B. Clow, H. G. McCartney and L. W. Pitcher will leave next Tuesday night for the Leech Lake country, in the capacity of advance agents for the Congressioinal expedition, which will leave Chicago Sept. 28. Capt. Clow will stop at Walker, Minn., and will arrange for boats and guides. Messrs. McCartney and Pitcher will go on into the Turtle River and probably pitch the headquarters camp, which will be reached later by the expedition. Mr. Clow was making purchases of fishing tackle to-day, and I can testify that he is taking in enough spoons, gaffs, swivels, lines, etc., to supply the whole United States Congress if necessary. The State of Minnesota will, if desired, furnish tents, blankets, etc., for the camps.

Mr. Fred Kaempfer, of 88 State street, our modest and most prominent Chicago taxidermist, had the misfortune this week of coming very near to a complete loss of his well stocked store. Fire broke out in the night time, and it was only by great efforts that the birds and animals were rescued alive. The policemen and firemen were busy in carrying out parrots, monkeys, ferrets, squirrels and other portions of the interesting live stock which makes this place one of the features of State street. I am glad to be able to say that but few of the little creatures were lost, and the damage is less than was at first expected. When one stops to think of it, there is nothing much more horrible than the thought of creatures doubly imprisoned and left to perish in a city fire. I remember that my friend John McGovern in one of his novels speaks of the burning of a bird store in the great Chicago fire. The description is a good bit of writing, and I recalled it when I heard of the fire at Mr. Kaempfer's.

Western Game Prospects.

We are now just at the natural shooting season of the year, and some interest centers on the game supply. This is without doubt or question an era of non-resident shooting, and never in the history of the West has there been so much non-resident traffic as there has been this fall. Happily, this seems to be a good game year, the times being good in this respect, as in all business ways. As I have noted before, the chicken crop does not seem to be below the average of the last couple of years. The pinnated grouse is a doomed bird and is gradually passing away, but on the other hand the sharp-tailed grouse is not yet so closely shot down and there are still a good many sections of the country where there can be found pretty sharp-tailed shooting. The flight of ducks this fall, I should say from all available information, is not below that of last year. We have had a little rain in September and the birds seem to be coming in over this part of the West in numbers fully as great as at any time during the past few years. As to the flight of the wild fowl, however, it is very difficult to make prognostications. The Northern flight comes down in waves, and sometimes the first one is the heaviest of the season. We should logically expect better duck shooting thirty days later, but what it will be at that time cannot now be told. As to snipe in the Western country, that is another problem. A good many birds have come down now, but the fall flight of the jacks is always even more irregular and erratic than it is in the spring. Quail in all parts of the Middle West are a splendid crop this year. Illinois, Indiana and lower Michigan are alive with them. Ruffed grouse shooting in the West is much as it is in the East, a thing tantalizingly delightsome, now with abundant reward and now with hope deferred. I hear more of ruffed grouse shooting in this part of the Western country than formerly, though I am inclined to think that is because more men are taking to that form of shooting. The bird itself probably holds its own in the settled or semi-settled parts of the Middle West. It is very abundant in upper Wisconsin, and many thousands of these birds are killed each fall in that State and shipped to Chicago. These birds are usually killed in the pine woods country by shooters who tree them with dogs and shoot them from the tree. I think the ruffed grouse is growing in value in the eyes of sportsmen in the States of Wisconsin and Michigan.

E. HOUGH.

180 CAXTON BUILDING, Chicago, Ill.

Maine Forest Fires.

BOSTON, Sept. 23.—The forest fires are out, and the great danger to the hunting regions of New England is over. The abundant rains that have fallen, beginning on the 20th, have set aside all immediate danger, and with the ordinary rainfall of autumn all danger for the season. The timber regions have suffered greatly in Maine, and the suspense that has hung over camp owners, hotel men, and above all, timber land owners, has been great. Fires have been burning for weeks in many sections, and it has been only through watching day and night, and often tremendous effort, that they have been kept from spreading. A dangerous fire has been raging for nearly a week on the lower easterly shore of Moosehead Lake, claimed to have been set by the carelessness of sportsmen. Many acres have been burned over, and a great deal of game destroyed; to say nothing of the loss to the timber owners. A Bangor dispatch last evening says that the fire is entirely out. Great fires have been raging in the Chesuncook region, and hunters have been driven out of the woods. These fires are also out. In many sections in Aroostook county fires have been raging, and timber land owners have not been slow to accuse hunters of setting these fires. It is reported that they will make an effort at the next Legislature to have more stringent laws passed in regard to employing guides and the kindling of fires. It is even threatened to urge the passage of laws preventing all hunting during September and October. It will be remembered that this is the first season of the law permitting the hunting of deer in September by buying a license, and the timber land owners are down on this law, and will ask for its repeal.

BOSTON, Sept. 25.—Albert N. Burnham, of Haverhill, started out early in September. There were three others in the party; George. E. Fletcher, of Melrose; John Blount, of Everett, and Horace Aldrich, of Melrose. Their purpose was big game—deer, and possibly moose Their destination was Third Lake, in the northeast corner of the State, and less than forty miles from the headwaters of the St. Croix. Between Third Lake and that river is a watershed particularly smampy and covered with a dense forest of evergreen trees. Mr. Burnham left camp and his companions in pursuit of a moose, which an Indian had promised the day before to help him hunt. He lost his way; not findig either the Indian or the moose. Failing to get back to camp, he traveled for seven days through swamp and underbrush, all the time keeping

a course by his compass which should bring him out. He slept on the ground, without fire, and protected by the hide of a deer he had killed. On the meat of this deer he subsisted, his rations only varied by the raw breast of a partridge he had killed. He traveled on by daylight, camping at night, till his shoes were soleless and his clothing in tatters. He was in the woods alone for seven days, suffering the most terrible suspense, till at last, when about ready to die, he came to a clearing in the vicinity of Wesley, and was saved.

Protests are heard from every direction where there are timber lands of any value. A report from Bangor and Aroostook lumbermen says that the Fish and Game Commissioners will be asked by the united lumber dealers not to issue any licenses to hunt deer in September next year, since the Legislature does not convene till the winter of 1900, and hence there will not be a chance to ask that body to repeal the law till after another season of danger from forest fires.

A few good bags of partridges are being taken by Boston gunners in Maine. S. J. Jones, Fred Wilson and A. T. Butler were down in York county the other day, and brought back six partridges. They found no woodcock, though having good dogs for them. Androscoggin county gunners are still finding few birds. From the Rangeley region come reports of some good bird shooting. The Megantic region is also reported as panning out well for the partridge gunners. Club members are pleased with the better shooting than last year. Boston local gunners are getting a few partridges in Reading and in Essex county, but they say that it requires the best of dogs and great skill to bag them. At almost every point they appear very wild and as though they had been hunted for a month at least. SPECIAL.

Wild Rice Planting.

WE would be glad to have reports of experience with planting wild rice, for the information of others who contemplate engaging in the enterprise for attracting wildfowl.

Mr. R. C. Haarse, of Wisconsin, writes: "About four years ago several hunters, with myself, bought five bushels of wild rice and planted it in Beaver Dam Lake, in this State; but the water receded during the year, so that most of the places planted were dry by fall, and we supposed that none of the seed took root; but this summer we found quite a lot in bloom and seed where the water did not get too low, so it seems to take about three to four years before results show. A year ago we planted about fifty bushels in the same lake in 2 to 4ft. of water and expect good results in about two years. I will be thankful to learn what experience others have had."

Another correspondent—Mr. John H. Tennent, of Missouri—writes: "I regret to say that the wild rice which we sowed in our lakes was not a success. I believe the trouble was that we got it in too late. Our lakes froze up in November, and we did not get the rice in until January, as it was frozen up from November to January. It was very fine rice, and certainly should have grown; but we do not see any sign of it in the lakes at all."

G. A. L. is informed that wild rice may be purchased from Mr. Chas. A. Gilchrist, Port Hope, Ont.

Game in Orange County, N. Y.

MIDDLETOWN, N. Y., Sept. 22.—The outlook for sportsmen in this section is very good. Woodcock shooting was better than it has been in several years. Partridges and quail are plenty. The unusual dry weather during the laying and incubating season was exremely favorable for hatching and rearing the young birds. It is generally believed that game is growing scarcer and scarcer in this section, but there is still enough left to furnish good sport for the gunners who visit this section. There are always plenty of rabbits, and it is said that the killing off of the foxes by the fox hunters and dogs is causing a considerable increase in the number of rabbits, and of course it saves some quail, woodcock and partridges.

T. H. G.

Dog.

Beneath this turf, that formerly he pressed
With agile feet, a Dog is laid to rest.
Him, as he sleeps, no well-known sound shall stir,
The rabbit's patter or the pheasant's whirr;
The keeper's "Over!"—far, but well defined,
That speeds the startled partridge down the wind;
The whistled warning, as the winged ones rise
Large and more large upon our straining eyes,
Till with a swoop, while every nerve is tense,
The chattering covey hurtles o'er the fence;
The double crack of every lifted gun;
The dinting thud of birds whose course is done.
These sounds, that to his listening ear were dear,
He heeds no longer, for he cannot hear.
None stancher, till the drive was done, defied
Temptation, rooted to his master's side.
None swifter, when his master gave the word,
Leapt forth to track the wounded running bird,
And bore it back—ah, many a time and oft!—
His nose as faultless as his mouth was soft.
How consciously, how proudly, unconcerned,
Straight to his master's side he then returned,
Wagged a glad tail and deemed himself repaid,
As in that master's hand the bird he laid,
If, while a word of praise was duly said,
The hand should stroke his smooth and honest head.
Through spring and summer, in the sportless days,
Cheerful he lived a life of simpler ways;
Chose, since official dogs at times unbend,
The household cat for confidante and friend;
With children, friendly but untaught to fawn,
Romped through the walks and rollicked on the lawn;
Rejoiced, if one the frequent ball should throw,
To fetch it, scampering gayly to and fro,
Content through every change of sportive mood
If one dear voice, one only, called him good.

Such was my Dog, who now without my aid
Hunts through the shadowland, himself a shade;
Or, couched intent before some ghostly gate,
Waits for my step, as here he used to wait.

—Punch.

New York League and National Park.

MR. C. W. SMITH, of Syracuse, President of the New York State League, has taken a lively interest in the Minnesota national park project. "We are all interested in such things," he writes, "because they give the people outing places in the wilderness for hunting and fishing. Upon the impulse given me last month on reading the first article in the FOREST AND STREAM, I wrote to Col. John S. Cooper, of Chicago, Secretary of the Association endeavoring to create the park, stating my official position, my personal sympathy with them, my individual desire and willingness to aid them in any way in my power, and asking that I, individually, be elected a member of their Association, and that the New York State League be recognized as in full accord with them. To-day I have received official notice that each and every member of each and every club composing the New York State League has been duly elected a member of said Association, without dues.

"This makes it binding upon us individually to do all we can in our power to obtain the aid and assistance of our members of Congress to put the thing through Congress this winter."

President Smith has been invited to go as one of the committee's guests on the excursion to inspect the country, but has been compelled by his business in the courts to decline.

North Carolina Fish and Game.

NEW INLET, N. C., Sept. 21.—*Editor Forest and Stream:* The finest salt-water fishing I ever had in all my thirty years of fishing was with Capt. J. H. Wescott, of New Inlet Life Saving Station, to-day. All one has to do is to walk 90yds. from the house and capture large trout and bluefish as fast as they can be reeled in.

The recent storm of Aug. 16 has played havoc with the coast here. The New Inlet Hunting Club's property is almost a total wreck.

Plover and bay bird shooting I find excellent all the way from Nag's Head to Hatteras, where I had fine sport last week. I stopped while at Hatteras with W. H. Gaskins, who can take good care of a few sportsmen at any season, and is an excellent guide. The brant shooting is good there in December, January and February, and there is also good redhead shooting to be had in batteries.

Non-resident shooting is allowed afloat by paying a license tax of $25. MORE ANON.

Virginia Quail.

SOUTH BOSTON, Va., Sept. 22.—*Editor Forest and Stream:* On the 15th of next month our quail season will open in all of its glory. For never in years has the bird crop been so plentiful as it is this year. And if we can keep out the market-hunters we bid fair to have a-plenty in the future. If Mr. Chas. J. Mean wishes to have some good sport this fall let him drop in here and I will guarantee him all the sport he is looking for, and we might even stir up a deer hunt in his honor. Turkey are comparatively scarce, as also are squirrel, as the negro and his dog make it rather warm for him.

H. P. WILDER.

Birds in Arkansas.

ALMA, Ark.—The people of this vicinity, as if by common consent, obey to the letter the game law, and never in the history of the country have quail been as plentiful as now, and when the open season begins, Oct. 1, there will be grand sport. I am informed that along the line of the Kansas & Arkansas Valley Railroad, between Vian and McKee, a distance of five miles, the roadmaster and a friend riding on an engine counted thirteen coveys of quail, and this is in the Indian Territory, where the birds are not protected by law. J. E. L.

Sea and River Fishing.

ANGLING NOTES.

Trout for Planting.

LAST year I was in the baggage car of an express train with several cans of yearling trout on my way to plant them in an Adirondack lake, when a gentleman came into the car to make some inquiries about his baggage, and noticing the fish cans he asked, "Are you taking another lot of minnow trout to feed bigger fish up in the lakes?" The phraseology of his question showed that he was not particularly familiar with the subject of fish planting; but I replied that they were yearling trout, and while some might be eaten by large fish I thought most of them would survive their enemies in the water. I would not like to quote all that he said, but he denounced the whole system of fish planting, saying it was a waste of time and money. He remained in the car until the cans reached their destination and were taken from the car, and then he got down on the ground and looked into one of the cans, and when he saw that the trout were from 7 to over 9in. long—a lot of selected fish—he expressed a desire to go out to the water where they were to be planted and fish for them at once; so if there are objections to planting trout fry there are also objections to planting trout that are above the legal size for catching.

A State official obtained and planted a lot of yearling trout in the streams near his home, and the next year I asked him if he wished to plant more of the same kind of trout, and he replied, very abruptly: "No; last year men followed the wagons to the streams, and were fishing for the trout before the water was clear after turning in the contents of the cans."

I have measured yearling trout reared by the Fisheries Game and Forest Commission of New York that were 10¼in. long, and trout that were 8in. long that were seven and a half months old, but of course these were exceptional fish. There is a vast difference in the size of a lot of fish of same age reared under similar conditions, for some grow faster than others, as the most vigorous fish get the most food and grow more rapidly. A catalogue and price list from a Scotch fishery, just received, gives the average of yearlings from the establishment as from 2½ to 5in. long, and worth $50 per 1,000. If selected, from 4 to 5in., $62.50 per 1,000, and if from 4 to 6in., $75 per 1,000, and in Scotland this price is at the hatchery, as it is a private establishment, furnishing fish for private waters.

It is doubtful if New York anglers fully appreciate the benefits the waters of the State derive from the annual plants now made by the Fisheries, Game and Forest Commission of upward of one and one-half million of fingerling and yearling trout, and about seven or eight millions of fry, and all the fish are delivered by the State free of expense at the railroad station nearest to the home of the person making the application. If the State of New York was permitted to sell trout, and could obtain Scotch prices, the yearlings would bring nearly twice as much as is expended annually by the Fisheries, Game and Forest Commission for fish propagation and distribution, salaries, labor and clerk hire, and the 200,000,000 of other fishes hatched by the Commission would be clear profit. Naturally fingerling and yearling trout are more desirable for planting than fry just after they have commenced to feed through the mouth; but unfortunately all the trout hatched by the Fish Commission cannot be reared to the fingerling stage, for lack of room, water, and often the expense is so considerable that it becomes an important factor in the rearing of trout. People who have had the good fortunate to obtain fingerling or older fish for planting are given to looking with disfavor upon trout fry for the same purpose, but trout fry properly planted will give good results; but properly planted means a lot of work and trouble. However, if anything is worth doing it is worth doing well, and here is a case in point: A friend had applied for trout to plant some streams in the neighborhood where he lived and had been assigned a reasonable number of fingerlings and a much greater number of trout fry. The former pleased him and the latter did not, but I explained to him that it was utterly impossible for the State Commission to rear all of the trout it hatched to fingerlings, and the fry would stock the streams if planted as they should be. He asked me to assist him when the fry were sent, and to direct the planting, and this I did, but a short time previous to the shipment I went to the streams and examined them to their very sources. When the fry came the team was driven as near the sources of the streams as any road would permit, and then fences were taken down and the horses were driven through fields until they could go no further, and then the cans were carried one at a time to small tributary streams, with threads of water flowing from living springs, and the fry were planted a few in a place, so that bunching would not exhaust the food supply, and they were so far from the main stream that none of the fish that it contained could prey upon the fry, and there they were left to work out their own salvation. That they did this a period of three years proved, but not once in a hundred times is so much trouble taken to properly plant trout fry, for as a rule they are turned into a stream where other and larger fish prey upon them instead of placing them at the fountain head, away from other fish, and distributing them so that they will all get a fair supply of the food supplied by the stream. The fry that were planted as I have described stocked the streams quite as well as the fingerling fish, a less number, to be sure, stocked another stream, as time proved. Even fingerling or yearling trout should not be turned into a stream where larger fish abound. It may be more trouble to haul the fish to headwaters of a stream, where the volume of water is suited to their size, but if applicants are not willing to go to some trouble in planting the fish whch the State assigns to them they should not expect good results from fish planted at hazard. A British fish breeder of long experience adheres to the belief that the most economical method of stocking waters with trout is by putting down eyed eggs in artificial spawning beds, but that is more work and more trouble than to properly plant fry, and economical in the sense that is used abroad means that it is cheaper than to buy fry or order fish, and therefore the system does not come into competition with fish furnished free by a State or National fish commission.

Trout Perch.

Late one evening this week my physician came in to see me socially and talk about fish and fishing. Incidentally he mentioned that he had sent his man that day to get minnows for black bass bait, and upon his return he had found in the bait bucket a minnow, the like of which he had never seen before. As he was leaving he said: "I will send one of those minnows to you in the morning to have you see what it is." The next morning his man left a bottle with water containing a live fish, and at a glance I saw that it was a trout perch, the first that I had ever seen in this part of the State; in fact, I have not seen to exceed three or four in any part of New York. At one of the State hatcheries a trout perch was kept in alcohol for a long time as a curiosity, and when the State began the work of destroying the lake lamprey in Cayuga Lake by netting them as they ran up stream in the spring to spawn a single trout perch was taken one morning while I was there. Dr. Henning, in describing the fish to me, said it looked as though it might be a cross between a yellow perch and a sunfish. It has a head not unlike a pike-perch, except that it is a trifle more blunt. It has a silvery stripe along the lateral line, with round dusky spots above it. The tail is forked, and all the fins are transparent; but the one fin which will separate it from other "minnows" is an adipose fin, the same as the trout has, but smaller and transparent like the other fins. Jordan says it is a relic of some earlier fauna. It is a small fish, growing to a maximum length of 6in., and its distribution is given: "Kansas and northward; very abundant in the Great Lakes; in all streams tributary to Hudson Bay, Red River of the North and found by Dr. Eigenmann in the Saskatchewan as far as Medicine Hat; rare in streams south of Lake Erie." Dr. Bean does not mention the trout perch in his "Fishes of New

York," as it had not come under his observation when his list of fishes of the State was last printed.

Man Versus Woman.

A friend writing me this morning concludes his letter thus: "We spent two weeks at Charleston Lake; had good weather and a fine time. I especially enjoyed myself watching my wife fight the black bass. One day we took fourteen small-mouths, and my share was one small one. The total score for two weeks showed two to one against me." I was on one occasion fishing for perch with a lady, and we were fishing for perch because the wind was too strong to hold anchor on black bass ground, and we had taken refuge behind an island, which was near the shore. The lady was in the stern seat, the guide was on the middle seat and I was in the bow. The lady caught a yellow perch, and continued to catch one after another, until she had caught over 100 fish. All this time the guide and I were fishing without a single bite. Really, I ought to stop there and not relate the rest of the story, and I would were it not to show how peculiar a school of perch may be.

After a time the guide began to catch perch, and the lady's score began to fall below "one as soon as the baited hook was in the water." After a still longer time, the perch deigned to notice my hook, although the guide was taking the greatest number of any one. At the end I alone was taking perch, and the other occupants of the boat were sitting with hands idle. The school of perch where we anchored happened to be so that the edge of it was reached by the fair angler in the stern of the boat, and they gradually moved from the stern toward the bow.

Nevertheless, I have contended for years that angling was particularly fitted to be a pastime for women, and when one practices angling and becomes interested in it she becomes expert. This year I saw a lady depart on several occasions from a summer hotel on fishing bent, and I saw her fish on her return. That particular hotel boasted of some of the best anglers within or without the State—men who devoted nearly every week day to fishing, and who had everything that long purses could buy to aid them in their sport, but the lady caught the largest black bass taken by any one from the hotel up to the time I left there, and it was the largest bass of the season from the lake, and about as large as they grow there, judging from what have been taken during the past twenty-five years; but it was not alone in a single large fish that she excelled, for she caught many large ones, and except for her maid and the boatman, she fished alone as a rule; but one evening she returned, and her husband was with her, and when I asked him of her success, he smiled and replied that his wife caught the fish and he looked on.

Never do I talk or write of women anglers but a picture comes to my mind of what I once saw on a Maine lake. At a camp not far from Parmachenee Lake I met a lady whose husband was away in some back camp, and from this fact I assumed that she did not fish, and it seemed to be a most lonesome sort of place for her under the circumstances. I asked her if she would like to go in my boat one day when I was to fish the lake near the camp, and she said yes, but she would only be in the way, and she knew men did not care to have women about when they were fishing, and my flies might catch in her gown and I would wish her further away than the camp. She was so thoughtful about the comforts of others that I wished to make some return for her courtesies, and actually offered to teach her to cast the fly, but she said she would not impose upon me. I can say now, after the lapse of many years, that I would have been glad to take her fishing, and I did not feel that she would have been in the way, and I did not have a selfish feeling when I offered to take her for lessons in fly-casting. Well, one day I was returning to camp, and as the guide pulled around a point, I saw in the distance a woman standing up alone in a boat casting a fly so artistically as to make the picture that I referred to earlier in this note. Left alone in the camp, she had tired of reading, and had gone out alone in a boat to fish, and there was no more graceful caster in the camp than that lady. She said she did not pretend to fish, and was out more for exercise than for fishing, but she could cast and catch fish far better than some men I have seen, and yet fearing she would be in the way, she hesitated about going out to fish regularly at some of the good places more removed from the camp, and was cheerful and contented to remain at camp and do up smashed fingers and furnish tar oil to the unfortunates who had used up their own supply.

Photograph on Fish.

A gentleman writes me from Macon, Ga., as follows: "My interest in all things piscatorial, and a recent reading of some New York official reports, in which you have some artilles, is my reason for writing you.

"I note with interest observations of yours touching the changing hues of black bass, in which you seem to hold that the changing is a matter of will with the fish. Some years ago in a novel of mine, 'Sons and Fathers,' Gerald, a character, is made to photograph a picture upon the whitish side of a bass taken from deep water, and the statement is made that these fish, covered with a thin gelatine, are sensitive plates, so to say, and that exposed to the sunlight they darken quickly; which accounts for the fact that the back (top) of these, and probably all fish, is the darkest surface. Is it not possible that the final reduction to one hue of the many colored and barred fish observed by you in the tub of a boat was caused by the action of light upon the gelatine? The matter is not one of great importance, perhaps, but I should be glad to have your views upon it. It may be true that the degree of lightness in the hue of every family of fish is determined by the ability of the waters they inhabit to transmit light, and that the variation in localities is explained by the fact."

Mr. Edwards raised a novel question and a most interesting one. The mucous covering ("gelatine") of a fish comes from the pores along the lateral line, and it serves as a protection to the scales and skin. Once this mucous is removed, fungus sets in and death follows. This much we know, but what the chemical properties of this gelatine may be has not, so far as I know, been determined, nor has there been, until now, any need of a chemical analysis to determine it. The variable hues of fish I charge to a wise provision of nature, which enables the fish to put on a coloring similar to its environment, and thus be more secure from observation of its enemies. That this change is brought about by the chemical composition of its enveloping mucus is possible, and the subject is well worth investigating. The bass that I wrote about and to which Mr. Edwards refers were caught of various hues, and when confined alive in the well of the boat they all assumed the same hue. The well was dark and the fish were dark when taken out. This was the first time that I observed that black bass had the power to change external coloring and take on the color of their immediate surroundings, although I had often observed it in the brook trout, even in a more marked degree than in the case of the black bass. The next step in this matter will be to obtain a chemical analysis of the mucus covering fishes, and see if it is in the nature of a sensitive plate, as Mr. Edwards suggests that it may be, and until that is done, mere opinions on the subject will be valueless.

Trout with Extra Fin.

In a former note of perhaps a year or so ago, I had something to say about the monster hunt by Dr. C. G. Seligmann, of St. Thomas' Hospital, London, but his monster hunt was not of the kind that our newspapers refer to, as he is making a study of monsters in the salmon family. His work was interrupted by a trip to New Guinea, from which he recently returned, and now sends me a paper with an illustration of a brown trout with an extra fin. In a letter, Dr. Seligmann tells me the trout was caught by Mr. Frederic M. Halford, and the fin stands erect just back of the head and on a line with the dorsal. This extra fin has ten soft rays, and all the other fins of the trout are present and normal. In the illustration the extra fin has the appearance of a plume or cockade, and the doctor states that no similar malformation has been met with.

A. N. Cheney.

White Perch of Deep Water Lakes.

Among the game fish of this country the white perch is but rarely mentioned. However, under the right circumstances he shows good fighting qualities and makes a great battle.

While these fish are caught in rivers, small ponds and lakes where the waters are brackish, yet in these localities they rarely attain much weight and size, and being rather small are not sought after. In the places mentioned the early morning is the best fishing time. Shrimps are the best bait, if they can be obtained. Next in value are worms, pieces of fish or small strings of pork. Ascertain where the fish are rising; then get as near to the spot as possible, and without a sinker, save perhaps one small split shot, make repeated casts and strike quickly. Use a light rod and reel and a single gut hook of a medium size. If any of the small fry of live bait can be procured, the fish will take them readily. Late in the afternoon is also a good time for fishing.

In the large lakes the white perch are found in deep water, and are large, strong and full of fight. While a few are taken on a trolling spinner, only large numbers are taken when still fishing. A small sinker is placed on the line a little above the gut of the hook, the line allowed to reach bottom, when it is reeled in about a foot or pulled up this distance if a hand line is made use of. Then the fisherman, keeping his bait moving a little, waits for a bite.

Live bait, minnows, chubs, etc., rank first as lures; next is a good fat worm.

During the latter part of August of this year I was bass fishing in one of the large Maine lakes, having with me my son, a lad of fourteen. I used flies almost entirely, while the boy tried the spinner worm and live bait—the little chubs found in salt or brackish water—tough little chaps, tenacious of life, easily transported, but rather dark as regards their coloring. Good catches of bass had been taken, but always the majority, gently detached from the hook, were thrown again into the lake to grow larger and later to furnish sport to other followers of Walton.

While resting on one of the charming bits of green and rocks that give beauty to the waters, waiting for the fish to be done to a turn, I noticed in a little pool a tiny fish darting gracefully about.

Success came to me and I captured this specimen, a bright silver spark of life not known to me. The guide said it was an alewife and added that just at this season plenty of them could be found at certain hours of the day in the eel pots at the other end of the lake, just below the dam. Never had I seen such a sparkling bait or one that should be so readily taken—an ideal bait, except for the extreme tenderness and being very hard to keep alive. However, the next day before starting out, quite a number were secured. Many died in spite of my efforts to aerate and freshen the water in which they were placed.

We rowed directly to a favorite ground and selected a good position. It was 11 o'clock; there were clear skies and a gentle breeze was stirring the surface of the lake.

The lad used a light rod and reel and single hook. My rod weighed about 6oz. and I had a fairly light reel, a strong single leader and three single gut hooks in place of the usual flies. The live bait was hooked directly through the head, just in front of the eyes.

Many ripples about the boat made by fish breaking were noticed. The baits hardly touched the water before they were well taken. Each time I secured three fish, striking the first one well and allowing him to swim about until the remaining hooks held a fish. The lad was kept hard at work, securing a fish at each cast. Several boats were near us. I gave some of the dead alewives to a fisherman in the nearest boat, and out of the lot we were the only ones that luck smiled upon. Soon the little silvery baits were used, but now the perch were in a good biting mood, and worms, pieces of fish or pork, etc., were taken well, while the large body of fish seemed to keep between the boats, where the bait, I believe, truly had held them.

The fisherman to whom I had given all I could spare of the alewives, being the proprietor of a large hotel nearby, said he could use every fish I was willing to let him have. This being the case, we kept on fishing, and glorious sport it was.

The lad and myself took 267 white perch with rod and reel in the manner I have mentioned; also some ten or twelve bass, the largest one weighing an even 4lbs.

Every fish taken was immediately killed. This, in my opinion, should always be done, as it saves any possible suffering, keeps the fish in better condition and saves getting ugly, ill-healing scratches from the fins, particularly with white perch, for a prick from their fins seems rather poisonous.

The white perch are most delicious eating, and can be cooked in a variety of ways.

The only excuse offered for this article is simply this: That with light tackle, rod, reel, leader and hooks, live bait, especially a shining one like the little alewives, most excellent sport can be obtained, and that the white perch usually found in the deep waters of the large lakes can be lured to the surface and tempted into sharp biting moods. And with the remembrance of that morning and of its exciting sport, I would plead for him that his name be added to the list of game fishes, as his strong rushes for liberty, his sharp biting and his good fighting on a light tackle surely make him worthy of recognition; also with the hope that to my fellow sportsmen this description of method of capture may be of some value and interest and will at a future time give them pleasure in a trial in which I wish them all "Good luck."

F. M. Johnson.

Boston, Sept. 21.

Fishing Up and Down the Potomac.

The Seven Locks.

A little more than a mile above where Cabin John's Run enters the Potomac, two others come in opposite each other—Rocky Run on the Maryland side and Dead Run in Virginia; neither is large or long. Locks Nos. 8 to 14 on the Chesapeake & Ohio Canal, which runs close beside the river here, are so near together that the bunch has been long known as the Seven Locks. Comparatively easy to reach, yet away from the usual run of picnics and what our English friends call "trippers," this locality has been much fished, but like all the waters between Great Falls and tidewater has few record catches to its credit. Just why, no one seems able to guess. Perhaps the crowding into it of the sea fish which run up here in the spring and some of which may be found here at all seasons, may interfere with the spawning and rearing of the bass.

From Stubblefield Falls, a mile and a half above, to the breaks at Cabin John's is a long, level stretch of mostly deep water with muddy bottoms and rocky sides.

A day or two since we drove up, for our first trip this year, most of the way in an early morning rain, but we had that infallible fisherman's proverb for our consolation and hope: "If it rains before 7 'twill quit before 11." Besides, the weather bureau had promised fair weather for the next two days. As well admit here, it rained on us all the way home that night.

We reached the waterside before 7 and put up at Lock No. 10, the usual stopping place at this point, where visitors are expected and cared for. It was still raining, but we strolled about over a bare field where the soldiers had camped during the Civil War, when for months the bulletins read: "All quiet on the Potomac."

Nothing had grown here since but ragged pines and vagrant weeds, and in a gravelly gulch of reddish clay one of the party picked up, half-buried in the sand, a gold dollar, dated 1862.

It was a curious find, more likely a relic of the war than of any recent loss, for the little coin was no doubt more familiar then in this locality than it has ever been since.

A little later the clouds cleared away and we started for the river. The water was very low, the cove at the mouth of Rocky Run, where we find Bob's boats, is shallow, the rocks are many and it is a devious way the heavy punts must take to get to fishing water. Before we reach it we see breaks everywhere, principally carp, showing a great yellow broadside, a few bass and several ½lb. striped bass or rock fish, which seem to stay here all summer. At the first likely spot, a group of rocks out from the cove, a small-mouth black bass something over 1lb. snaps the No. 4 crow fly and makes a game fight, never showing till he quits at the net. A little way up the river is Plummer's Island, willow fringed, that feeds our hopes with promise of good sport, and above this a cataract from a canal waste that runs through Cat Hole, where the local fishermen get all their minnows; here, too, we are sure to find plenty of fish, but, alas for human hopes, especially the angler's, another shower starts, and such a rain! For an hour it poured and we could do nothing but sit huddled under a great plane tree covered with the Virginia creeper, wrapped in a mackintosh, and take our drenching. The tree was first-rate shelter until it became full and took to leaking, and then it was worse than the open. The drops which fell from it were each a spoonful, and where they struck the water, bubbles as large as a baseball floated for a few seconds, until they were exploded by another drop, which left a new bubble in place of the old.

At last the clouds break again, but that's more than the fish do all day. A rise in the river begins to show on the edges; there is a yellow streak creeping down the Virginia shore from Difficult Run, and warned by many experiences that it is useless to coax the bass to the surface under such conditions, the rod is abandoned for the camera. There are a half-dozen boats out, and they do not turn in till 6 o'clock, but there is only one other fish brought in, and that too was taken with the fly. Still-fishers had not a fish to their credit. Our experience is without a break, though of course others may have fared differently, that swelling water sends the bass to the deeps, and 1½ft. flood was on when the boats came in.

What can be the reason of this? The water was not muddy, its condition was easily 30in.; it may be it was muddy at the bottom, or that muddy water behind was pushing it down, but the surface water was not yet bad. Whether the fish in fright hunt their holes or lose their appetites, or whether the fresh flood brings them slathers of food from the overflowed margins of the little streams, which is daintier than anything we offer, is one of those things no fellow can find out; at least we cannot, and none of the books we have seen tell of it. In fact, the salmon seems to be differently affected, for a fresh "spate" is prime fishing on some salmon streams, but it is not so with bass in such streams and pools as we have had opportunity of trying, and rule No. 1 in Potomac bass fishing, so far as a half-dozen anglers may establish a rule, is that when the water comes up the bass go down, and on the first intimation of a freshet, one may as well up line and away. This,

of course, has reference to that part of the river above tidewater.

The sunfish is not so easily frightened, and will continue to rise as long as the water is clear enough for him to see a fly dropped in his lair, but he is very local in his habit in the up-river, not living in colonies as in the creek mouths of tidewater, where hundreds may be taken from a gravel bed. Above, a pair, at most a half-dozen, will be found under a willow or near a big rock, or in a shallow eddy at the foot of a little fall, and they are as quick as the bass to seize a fly far too large for them; it is a matter of admiration how often they hook themselves on a fly intended for a fish twenty-five times their size. They are mostly returned to the water, for they furnish lots of food for the bass, though one of our local fishermen cannot be persuaded they do not eat all the bass spawn, and it is part of his angling creed to religiously kill every poor sunny that comes his way.

It is growing a matter of wonder why the rock bass which have been several times planted in the Potomac—and indeed stragglers come with nearly all consignments of black bass from the West—are not more in evidence. With a mouth as large as the small-mouth bass, and a disposition much like the sunfish, he ought to be giving an account of himself. The waters of the Upper Potomac with its rocks and rapids would seem to be just suited for him, and he will prove when he comes to be to the fly-fisherman what the crappie is to the still-fisher—a welcome addition to his preserve and his basket. Of course, there are exceptions to any opinion on the subject of fish, and just as some trout fishers despise grayling that St. Ambrose eulogized, so some bass fishers have nothing for the rock bass but dispraise.

Rowland Robinson, who is always interesting—for he writes what he sees and believes, and we love these best even when we disagree—in Lippincott for 1882 (vol. 30, p. 13); writing of bass fishing, has his boatman say: "A cossed leetly rock bass. Put a wamm on de hook and ketch 'im off de water," and the author continues: "But the smallest minnow in the pail captures him, and the miserable, bony, greedy, big-mouthed, little thief is hauled forth without ceremony. How any one can praise him for anything but his moderate beauty—the only virtue he has—is a wonder to me. The despised sunfish is handsomer, a better table fish and as great a nuisance, yet nobody praises him."

What would J. Harrington Keene and Maurice Thompson et al. say to this? Both have said nice things of the sunfish, as have many others, and Thompson includes the rock bass in his praises for the pan fish and the skill which can take them.

The rock bass has a good deal of mouth, but not too much. His active habit gives him a firm enough flesh that "watery" does not fairly describe, and his skeleton shows no more bones than the other perches and basses, so that "bony" fits him less aptly than it might if his shoulders were not broader than the average. He is a daring, dashing, beautiful fish with a bad eye, and is only disappointing when after a struggle that promises better things, he shows up at less than a pound. He does not fight so long as the black bass, but is very interesting while he lasts, at least in some waters.

As we take our homeward way the flood is tearing down over the feeder dam, and from there to the foot of Little Falls the river is white with foam in striking contrast to the black waters above and below that lie dead in the gathering shadows of evening, the hills and the rain clouds. It ought to be a dismal drive for us through the pelting rain, but somehow is not, and one of our consolations is that a dayton is better shelter than a bicycle, of which there are many, whose bedraggled riders or pushers are pictures of misery.

To our shame, much of our comfort in this world of relation comes of the knowledge that somebody is worse off, and so discomfort for the other fellow, of which we can stand a good deal, scatters a certain amount of satisfaction, for, unconsciously perhaps, it awakens a realization of our better estate. On a sunshiny day these bicyclers would have laughed our vehicle and gait to scorn, but this was not their turn to laugh. HENRY TALBOTT.

A Sleeping Water.

THREE men of Passaic county, all of whom have had considerable experience in natural history, went to Hank's pond a few days ago, more for the purpose of watching certain phenomena there than in quest of sport. It has frequently been asserted that years of poverty follow years of plenty in all the realms of nature, and it has been said of late that Hank's pond at present constitutes a fine example of this. For a number of years there was no better fishing place in the State than Hank's pond. This sheet of water is located in West Milford township, within half a mile of Clinton reservoir. There are no habitations along its shores and as it is difficult of access it was fished very little. Its rocky bottom and bold shores almost preclude the possiblity of using a net. For all these reasons people have assumed that Hank's pond ought to afford good fishing at all times. But it has been stated that the pond at present contains very few fish. For the purpose of ascertaining this fact and inquiring into its causes the visit of the three men was made.

A conviction that Hank's pond is at present nearly barren of fish, despite all its manifest advantages, was arrived at in short order. Methods, both sportsmanlike and otherwise, were resorted to for the purpose of luring fish. The weather was all that could be desired and the water could not have been in better condition; but the fish taken were so few that it was soon apparent that the truth had been told when it was said that Hank's pond was barren. Even the murderous clothespin bait was resorted to and trolling it about the lake several times in the most alluring fashion resulted in only one small bass being taken.

A close examination of the water showed that it contained no small fish, on which the larger feed. Drawing the net was productive of bait only at the upper end, near a little lagoon, and at this place the only fish of any size were taken. It was apparent that the large fish had cooped the small fish all in the lagoon and were feeding on them. The cause of the absence of large fish was explained by the absence of food. The absence of the latter was explained by the absence of all vegetation in the main part of the lake. Acres and acres of arid bottom were passed over where formerly there was abundant vegetation; the latter had afforded food for the bait-fish, and with the disappearance of the plankton—by which is meant all the vegetable and insect life which supports the small fish—the bait fish had disappeared. The chain of facts was perfect. But what had caused the disappearance of the vegetation? That is more than the investigators could ascertain. The double curtain of water and mud precluded the possibility of any further investigation.

The aborigines frequently referred to waters as sleeping and the term has been generally misunderstood. It was applied by the Indians to different waters at different times, and it was not a permanent appellation. They denominated waters as sleeping where fish life had become almost extinct. They knew that in the course of a few years there would be a change and consequently they believed that the water was merely sleeping in order to gain rest. Hank's pond will probably awake some of these days; the vegetation will re-appear and then in the natural course of events the larger fish will be found there again.

Persons who are in the habit of roaming about Passaic county and skimming the open book of nature have remarked that Hank's pond has not "purged" or "worked" for some time. The process denominated as either purging or working is a phenomenon noticeable in all waters which sustain fish life. It is generally presumed that the process means the throwing off of objectionable vegetable matter by the water, but it is far from being anything of the kind. On the bottom of most waters there grow a number of so-called weeds, merely vegetable productions which require both earth and water in plenty to make them thrive. This vegetation ripens every year, and when it does so its upper part separates from the lower and the upper ascends to the surface of the water. In this upper part are to be found the seeds, and these are ripened by the sun. Some of these seeds and their pods are green, others white; the former predominate. This process of ripening the seeds is known as purging or working. The seeds when they are ripe fall to the bottom and bring forth new vegetation the following year. This vegetation and the numerous forms of insect life on it form the food for the small shellfish and other fish on which the larger fish feed. Consequently it will be seen that the process known as working and falsely denominated as purging is absolutely necessary to the well-being of every sheet of water. Because of the lack of vegetation and its consequent working, Hank's pond is not a good pond at present; it is only sleeping, however.—Chas. A. Shriner in Paterson (N. J.) Chronicle.

Angling in Lapland.

ENTHUSIASTS in the gentle art of angling will be interested in the records of a recent expedition to Lapland. It is an uncomfortable and expensive voyage, and the entire absence of any proper food in the country renders it necessary to take everything which the ordinary civilized being may require. But in these days of condensed nourishment of all kinds that is not a very formidable matter. On arriving at their destination the party of two rods and their followers found the river frozen so that they had to sit down patiently on the banks and wait for a thaw. When that came there was too much water, and fishing was an impossibility. But *"tout vient a qui sait attendre,"* and when the river got into condition they had grand sport. They fished for eleven days, and during that time the two rods got a total of 282 salmon and 155 grilse, in all weighing nearly 5,000lbs. The best day's catch for one rod was thirty-three salmon and twenty-two grilse, weighing 553lbs. in all. Still, fishing in those quarters is not all violets. Last year, for instance, the party took out some sheep, so as to be sure of fresh meat. Those gentle creatures were all devoured by wolves, so this year no live stock was taken. Friends suggested that such a course was imprudent, as the wolves would be sure to be waiting for the expedition in the hope of a good feed, and failing sheep they might go for the rods. However, their enterprise or their appetite did not go so far as that, and the party returned, happy in their catch of 5,000lbs. weight of fish in eleven days.—London Telegraph.

Santa Catalina Tuna Club.

THE Tuna Club has decided that the great interest shown in the recent tournament of the club justifies another in 1900. A large committee has been appointed, represented by members in Pasadena, Los Angeles, Cleveland, New York and San Francisco. The tournament will extend from the beginning of the white sea bass season, May 1, to Sept. 1, and to have the annual banquet on Aug. 15. The following cups and medals will be fished for: The Tuna Club cup, held by C. F. Holder, 1898, 183lb. fish, and by Col. C. P. Morehouse, in 1899, 251lb. fish. The Tufts-Lyon Company cup for black sea bass, held in 1898 by F. V. Rider, 327lbs., and in 1899 by T. S. Manning, 330lbs. The Van Nuys cup for largest yellowtail, F. V. Rider, 1899. The Tuna Club gold medal, for largest tuna, C. F. Holder, 1898, 183lbs.; C. P. Morehouse, 1899, 251lbs. The Rider-Macomber medal, for largest black sea bass, F. V. Rider, 1898, 327lbs.; T. S. Manning, 1899, 330lbs. The John F. Francis medal for largest yellowtail of the season, F. S. Garrish, 37lbs. Besides these there will be handsome rods, reels, gaffs, etc., all intended and devised to induce the anglers of the world to fish scientifically and use rod and reel.

New officers elected are: E. L. Doran, Vice-President; F. V. Rider, Secretary, and T. S. Manning, Franklin S. Schenck, C. P. Morehouse, R. A. Eddy, F. V. Rider, Charles F. Holder, Dr. H. K. Macomber, directors.

The King of the River.

[M. O. Lownsdale in Portland Oregonian.]

The ramping of waves o'er the glinting bar,
The champing of bits in the leaping tide,
The crool of the sea as, in wild devoir,
He drools o'er the lip of his river bride.
Call in the white heroes—call in—call on—
Call in spectral forms, in resplendent guise;
And up the foam-rift, till his quest be won,
The glittering king of the river plies.

The fast-running tide sweeps the phantom schools,
In scurrying lilt, thro' the river's port.
They glide into deep, opalescent pools,
Where militant knights, holding regal court,
Snatch life from the loveliness they behold;
And racing away from the hoarse sea-cries,
On Love's fretful pilgrimage, lo! the bold
Impetuous king of the river flies.

He leads a fair queen up the vine-clad runs,
Thro' cañons, o'er shallows, 'mid elkweed dank,
Where bear idly wallow, 'neath languid suns,
And flitting mergansers, from oziers rank,
Fling stridulous shrieks to the ech'ing firs,
Past crag and past scaur, ever on he flies;
Dim, perilous sluice-ways, thro' riven spurs,
The silver-mailed king of the stream defies.

In vain all the lures of the rustic churl;
In vain will the sweets of the morn beguile;
A myriad midges unheeded whirl
And dip to the wave in enticing wile,
When drowsily day, o'er the brawling bars
And ripples, reels faint and forsakes the skies,
Then Dian may see and the argent stars
The radiant king of the river rise.

Then sibilant larches, august of mien,
Breathe tremulant welcome, as west winds blow;
Breathe welcome and warning to king and queen—
"Beware, river lovers, of the firefly's glow!"
The ruffle of brake where the shy deer clings,
As herons and low-swooping eagles rise,
The fish-hawk aloft, flapping sunlit wings,
The vigilant king of the river spies.

He loiters where amnian sprites wage war
And, rioting wild over velvet meads,
Spring forth at new gorges and shout afar,
"All hail, Rainbow King! Rainbow Queen, Love speeds!"
But upward, still upward, the phantom holds;
And onward, still onward, with eager eyes,
Until his fair vision of love unfolds,
The siren-led king of the river hies.

Just out of the swirl of the veering stream,
In niches encaverned 'neath moss-fringed shelves,
Like gossamer floating in idle dream,
In weirdest haunt hewn by the river-elves,
A castle of crystal, whose turrets old
And battlements rugged like outworks rise,
In vesture of brilliants, of azure and gold,
The indolent king of the river lies.

He rides at his ease, while his lang'rous mate
Swings heavily down to the pool's low marge;
And faint from their far run, in listless state,
They dream o'er that desperate passion-charge.
White pines and red maples swoon low—swoon wide—
To veil the blue cheek and the Naiad eyes
So witchingly limned in the restless tide,
These palpitant chiefs of the river prize.

A dainty creation of gentle art
O'er royalty wantonly spreads her charms,
An iridal gleam! A mad thrill! A start!
He surges away, flashing dull alarms,
And strains at the rein like a wheeling steed,
Contemptuous, grim, with defiant eyes,
For Telephus' arm, Atalanta's speed,
The shimmering king of the river sighs.

He flaunts from the pool like a flying lance—
He spurns the rude steel in his armored guard—
A plunge! a wild reel! to his queen a glance!
A sweep of the net! and he stains the sward.
For goals may be won, yet Love glides away.
Sweet queen, hearken not to his life's faint sighs!
A gurgle! a quiver! Alas the day!
The masterful king of the river dies.

Female Nimrods.

Lady Hopetoun, wife of the Lord Chamberlain, is one of the cleverest of a galaxy of femals Nimrods, which includes Lady Sandhurst, Lady Beaumont and the Duchess of Bedford, and she can bring down anything from a partridge to a stag as skillfully as can most men. In Australia she used to practice regularly at the rifle range, and her score of "bulls" was the envy of many men shooters. Deer stalking is her favorite relaxation, and many a fine buck has fallen to her gun.

The Kennel.

Fixtures.

BENCH SHOWS.

Oct. 2-6.—Dallas, Tex.—Texas Kennel Club's second annual bench show. Sydney Smith, Sec'y.
Oct. 3-6.—Danbury, Conn.—Danbury Agricultural Society's eighteenth annual show. G. M. Rundle, Sec'y.
Oct. 10-13.—Providence, R. I.—Rhode Island State Fair Association. E. M. Oldham, Supt.
Nov. 15-18.—Philadelphia, Pa.—The Philadelphia Dog Show Association's first annual bench show. Marcel A. Viti, Sec'y.
Nov. 29-Dec. 1.—New York.—American Pet Dog Club's show. S. C. Hodge, Supt.

FIELD TRIALS.

Oct. 23.—National Beagle Club's tenth annual trials. G. Mifflin Wharton, Sec'y.
Oct. 25.—Hampton, Conn.—Connecticut field trials. John E. Bassett, Sec'y, New Haven.
Oct. 31.—Greene Co., Pa.—The Monongahela Valley Game and Fish Protective Association's fifth annual field trial. A. C. Peterson Sec'y.
Nov. 7.—Washington C. H., O.—Ohio Field Trial Club's trials. C. E. Baughn, Sec'y.
Nov. 8-9.—Lakeview, Mich.—Michigan Field Trials Association's second annual trials. E. Rice, Sec'y.
Nov. 12.—Bicknell Ind.—Independent Field Trial Club's first annual trials. George D. Maxfield, Sec'y.
Nov. 14.—Chatham, Ont.—International Field Trial Club's tenth annual trials. W. B. Wells, Hon. Sec'y.
Nov. 14-17.—Carmichaels, Pa.—Central Beagle Club's fourth annual trials. J. W. Simpson, Sec'y.
Nov. 17.—Newton, N. C.—Eastern Field Trial Club's twenty-first annual trials. Simon C. Bradley, Sec'y.
Nov. 21.—Lawrenceville, Ill.—Illinois Field Trial Association's inaugural trials. O. W. Ferguson, Sec'y.
Nov. 28.— ——, Mo.—Missouri Field Trial Association's third annual trials. L. S. Eddins, Sec'y.
Dec. 8.—Newton, N. C.—Continental Field Trial Club's trials. Thos. Sturges, Sec'y.

1900.

Jan. 22.—West Point, Miss.—United States Field Trial Club's annual trials. W. B. Stafford, Sec'y.
Feb. 5.—Greenville, Ala.—Alabama Field Trial Club's fourth annual trials. T. H. Spencer, Sec'y.

American Kennel Club Meeting.

THE regular quarterly meeting of the American Kennel Club was held at the club's offices, 55 Liberty street, New York, on Thursday, Sept. 21. In the absence of the president, vice-president and president of the associate members, Mr. A. P. Vredenburgh was elected chairman. There were present: Associate members—A. C. Wilmerding and H. K. Bloodgood; American Pet Dog Club, S. C. Hodge; American Fox Terrier Club, H. H. Hunnewell, Jr.; American Dachshund Club, Dr. C. Motschenbacher; Boston Terrier Club, C. F. Clarkson; Butterfly Bench Show Association, Dr. E. Waters; Cleveland K. C., C. M. Munhall; Collie Club of America, Jas. Watson; M. A. A. C. Rod and Gun Club, Wm. F. Hobbie; Metropolitan K. C., Jas. Mortimer; Pacific Mastiff Club, S. S. Mastick; Philadelphia Dog Show Association, L. A. Biddle; San Francisco K. C., C. B. Knocker; American Spaniel Club, M. A. Viti; Pointer Club of America, Geo. Jarvis.

The Vermont K. C., of Rutland, Vt., and the Georgia State Agricultural Society were duly admitted to membership. The credentials of Louis A. Biddle, filed by the Philadelphia Dog Show Association, and Col. J. Ruppert, Jr., from the St. Bernard Club of America, were approved and accepted.

The secretary's report showed that there had been received two applications for admission to membership; the credentials from one club of a delegate to the A. K. C.; the applications for the registration of nine kennel names; requests for the transfer of two kennel names; appeals from J. R. Thompson, Vassar, Mich., and J. Fred Rommell, Chicago, Ill., for reinstatement.

He reported the following cases now pending before the executive board: T. A. Howard vs. Geo. W. Clayton; A. H. Nelson vs. D. E. Rose; H. T. Cousins vs. W. S. McClintock; A. K. C. vs. G. H. Blackman; A. K. C. vs. Geo. S. Thomas; A. K. C. vs. G. N. Phelps.

Fred P. Kirby, as agent for Walter D. Griscom, has filed a complaint to the effect that the National Greyhound Club has failed to pay to him the medals won by his dogs at the Westminster K. C. show in 1898 and 1899. The rules hold the National Greyhound Club responsible for the former and the Westwinster K. C. responsible for the latter.

The secretary's report was accepted and filed for consideration later.

The treasurer's report showed the following conditions of the club's finances:

Balance on hand Jan. 1, 1899	$5,411.73
Receipts from Jan. 1 to date	7,611.43
	$13,023.16
Disbursements since Jan. 1	$7,529.68
	$5,493.48

The report of the executive board was accepted, as published in the June Gazette.

The Pacific advisory board reported that they had held a meeting on Aug. 1, at San Francisco, there being present Messrs. De Ruyter, chairman; Carlton and Norman. The committee nominated Dr. E. N. Lowry to the A. K. C. for membership in the P. A. C., vice G. W. N. Grey, resigned. It was resolved that the membership of the committee be reduced to five, in view of the difficulty of assembling a quorum. The resignations of Dr. W. R. Cluness and C. A. Haight were accepted. The report was accepted and placed on file.

Mr. Viti, of the Stud Book committee, reported that Mr. Schellhass, secretary of the committee, was suddenly taken ill on the morning of the meeting, and the report of the committee could not be read, as Mr. Schellhass had the papers. Mr. Viti reported on such business as he could from recollection. He reported that the committee had passed upon the list of prefixes, that it had sustained Mr. Blossom in his protest against the registration of a Gordon setter pup, applied for by Mr. Reynolds, which Mr. Blossom claimed as his property by the terms of the breeding contract.

The following kennel names were granted: Endcliffe, Geo. S. Thomas; Falmouth, H. P. Duval; Hastings, A. D. Cochran; Hazelhurst, J. X. Santree; International, Chas. N. Daly; Montebello, T. D. M. Cardeza; Niola, E. H. Ingwersen; North Fork, R. T. Judd; Prospect Park, H. C. Winther; Rock Ridge, W. G. Rockefeller; Westchester, J. A. Montgomery. The report was accepted and placed on file.

The disqualification of J. Fred Rommel, of Chicago, was removed. It was voted to suspend the officers of the National Greyhound Club until the medals were paid to Mr. Walter B. Griscom. The request of the Harvard College Library for a complete set of the Stud Book was granted.

The following are the amended rules proposed by the committee on rules, and accepted after a long and very full discussion.

Rule II.—Every dog shown under these rules must either be registered or listed with the American Kennel Club previous to being exhibited.

Rule V.—Striking out the words "together with a list of all prizes won by the dog" and adding a new paragraph "The name of a registered dog cannot be changed after having been published in the Stud Book."

Classes.

1. The puppy class shall be for all dogs over six months and under twelve months of age, and no entry can be made of one under six months or whose date of birth, breeder, sire and dam are unknown.

3. The limit class shall be for all dogs never having won four first prizes in said class at any recognized show, but no dog having acquired the title of champion shall be eligible to this class.

5. The winners' class shall be open only to the winners of first prizes at any show giving at least three of the before-mentioned classes, one of which must be the open class, and the winner of ten points in this class will thereby become a champion of record, be so registered by the American Kennel Club upon the application, and if registered in the Stud Book will be entitled to an American Kennel Club champion medal. Before awarding "reserve" in this class, the dog or dogs having been placed second to the winner on any of the regular classes must be brought before the judge for competition with the remaining dogs in said winners' class. No class winner can be withdrawn, or withheld from competition in the winners' class, and no entry fee shall be charged for said competition in this class. A dog that prior to Dec. 31, 1899, has won once in the winners' class shall qualify as a champion by two additional wins, and a dog that has won twice qualifies with one win in any winners' class. The winners' class can be divided by sex, provided the required three classes announced in the premium list are also divided by sex.

Cancellation for Violation of Rules.

When a puppy is entered, being under six months of age, or his date of birth, breeder, sire and dam unknown.

When a dog is entered in the limit class, having previously won four or more first prizes in said class.

When a dog has been improperly transferred by the show officials.

Rules Governing Clubs.

IX. No entry shall be accepted of any puppy under six months of age, or marked "date of birth, breeder, sire and dam unknown," either for competition or exhibition.

X. Striking out the first paragraph.

XI. Striking out the words, "together with a copy of the dog show rules and such other regulations as were announced in the premium list."

Penalties for Violations.

For accepting entries for puppy classes under six months of age, or marked "date of birth, breeder, sire and dam unknown," $5.

For failure to file with the American Kennel Club a marked catalogue certified to by the secretary or superintendent, making a return of all listings and fees for same within seven days after the closing of the show, $1.

XVII. Adding the words "governing clubs holding shows."

Sec. 4. Striking out the words "executive committee" and substituting the word "association."

Adoption of New Rules.

Puppies may be permanently removed from a show at any time after their classes have been judged, whatever those classes may be, provided, however, that puppies may be so removed only after the close of show in any evening.

A dog which has won a championship at a show under English Kennel Club rules cannot be exhibited in the novice class.

Standing Resolutions.

The following scale of points was adopted to regulate the values of winners' classes at A. K. C. shows; all shows to be rated upon the actual number of dogs entered, not including local classes: 1,250 dogs or over, 5 points; 750 dogs and under 1,250, 4 points; 500 dogs and under 750, 3 points; 250 dogs and under 500, 2 points; under 250 dogs, 1 point.

On the Pacific Coast.

Four hundreds dogs or over, 5 points; 250 dogs and under 400, 3 points; under 250 dogs, 1 point.

Specialty clubs holding shows confined to their own breed, 4 points.

New clubs holding inaugural shows, having no previous record, shall be rated 1 point as a minimum.

The secretary shall publish in the Gazette for December of each year the ratings of shows for the following year.

The report of the committee on rules proposing an amendment to compel superintendents of shows to bench all dogs of a breed together failed to pass.

On motoin of Mr. Mortimer it was resolved to create a winners' class for cocker spaniels other than black, to take effect after Jan. 1, 1900.

Dr. Foote's motion to refer to the committee on rules the matter of bench show committees offering money to exhibitors to induce them to show their dogs was carried, also Dr. Motchenbacher's, to provide two winners' classes for dachshunde, one for black and tans and another for any other class.

Dr. Foote's motion that a dog acquiring the title of champion shall be entered with that title on the entry and that it shall so appear in the catalogue was referred to the committee on rules.

Dr. Foote's motion that the matter of division of winners' classes be referred to a committee of three to be appointed by the chairman was carried.

It was declared that the rules amended at the meeting shall go into effect on Jan. 1, 1900.

Facts and Fallacies About Dogs.

ALTHOUGH the dog is very much legislated for nowadays and is generally kept under surroundings far different from those of a hundred years ago, he is undoubtedly better for the care bestowed upon him and the interest taken in his behalf. He is seldom treated badly now, though our police court reports every now and then go to prove that cases of cruelty to dogs are not altogether unknown. In most cases, however, the punishment dealt upon the offender is sufficiently stern to prevent a repetition of the offense. The "gentleman" who the other day kicked an unoffending three months old puppy and broke its thigh was justly sentenced to three weeks' hard labor; he ultimately gave notice of appeal, and even if successful in having his punishment mitigated to a fine will have received a shock which must be a lesson to him. And all our tendencies toward the dog have of recent years been to behave to him more kindly than was our wont. An old wooden cask turned on end and placed in the back yard was once good enough for his dormitory; now he must have a properly constructed kennel, with wooden floors and benching, a corrugated iron roof, and all other appliances for his comfort. That is, if he is not even more cozily kept in the house or in the empty stall next the pony in the stable.

With the increased and still increasing value of the dog, more is known about him in every way; his health is a matter of consideration, and when he seems out of sorts a veterinary surgeon is called in, or his owner in other ways seeks to have his favorite made well. Then most of the idiotic fallacies with regard to him have gradually been removed. The man of average intelligence does not believe that the shortening of his dog's tail gives increased strength to the back and loins; nor does he consider that a similar operation, by which a sinew is drawn out from the stern and called "worming," is a specific against distemper and rabies. But such ideas were quite recently prevalent among numbers of people. Some believed that the tail of the male pug was curled over the right or left side of the back, as the case might be, while the caudal appendage of the female was always carried on the opposite side, and so the sex might be determined by the carriage of the stern. The choicest puppy of the newly born litter could always be told by holding the little creature up by the tail. The best was supposed to stretch its legs in a peculiar way, and not to cry out, while the worst of the lot would just yell, and do nothing else. Then other clever dog fanciers would select as the most valuable puppy that which the dam was fondest of. To prove this the youngsters were taken from their beds and placed in another part of the room; then the dam was let go, and her favorite and therefore the best (?) puppy was that which she first took up in her mouth and returned to its old bed. Other fallacious ideas were that the puppy earliest born was the best, and that the one which first opened its eyes would be the champion, and so on, and so on. In my young days the terrier which had not a black roof to its mouth was supposed to be of plebeian parentage and ill-bred, while a similar slur was cast upon that which had dew claws on its hindlegs. A truly pedigreed water spaniel was thought only to be perfect when its toes were joined by a web like that of a duck or other water fowl, but whether this was a local or general idea I can scarcely tell. Some thirty years ago I was the owner of an old-fashioned, intelligent-looking liver-colored spaniel—not a show dog, but a worker, and as sensible and clever as they could be made. Dash was following at my heels one day, when a fine old fellow—a good sportsman in his day—came up to me. He was nearly ninety at that time, and died just after, "Eh, Mr. L!" he said, "you've a grand auld dog thear; I'll be bound it's web-footed. My father had yan just like it, and his was!" The poor man seemed quite disappointed when Dash's feet were examined and found to be exactly like those of any ordinary dog. But I could not persuade him that no strain or variety of the dog, spaniel or otherwise, had "webbed feet." A much more modern fad was that all St. Bernards should have double dew claws on both their hindlegs, it being considered by some persons that these deformities or excrescences—they are both—prevent the great dog from sinking in the snow when searching for lost travelers on the mountains of Switzerland. This idea, I fancy, is even still in vogue, and I know that in the earlier tabulated descriptions of the St. Bernard from five to ten points were allowed for dew claws on the hindlegs. Instead of being useful to these dogs when engaged in their errands of mercy, a more common-sense idea is that they are much in the way. In the earlier days of the popularity of the St. Bernard it was always interesting to observe the judge "looking for dew claws," and it need scarcely be said here that the exhibitor who had a dog which possessed them considered they were much in the dog's favor, while the owner whose dog did not bear the excrescences believed they were deformities and his opponent should be handicapped accordingly. Wiser counsels now prevail, and our St. Bernard club of to-day does not allow points for dew claws. And why at a time when such things were believed to be a sign of bad breeding in other dogs it should have been considered consistent with purity and blue blood in the St. Bernard is more than any one can understand.

For what reason the ears of pug and Dalmatian dogs were cropped in the old days is not quite apparent, though, with regard to the former, it has been said that the operation was performed for appearance alone, viz., to make the head seem more like a clenched fist than would be the case when the ears were on. The operation was conducive to deafness, and certainly did not add to the beauty of the creatures. Possibly the Dalmatian was originally deprived of his ears to make him match certain of his master's carriage horses, which at one period were, by the edicts of cruel fashion, treated in a similar manner. The barbarity of either custom need scarcely be

dilated upon here, and in the case of the dog cannot have led to anything but mischievous results, for, running at the horse's heels under his master's carriage, he could not avoid having mud and filth splashed or kicked into his ears, which would engender disease and deafness. Possibly the latter may account for the fallacy that the Dalmatian was one of the most stupid of the canine race—he was often very hard of hearing. That these dogs were originally cropped to prevent them having canker in the ear, as has been suggested, is one of the most grievious fallacies. Canker is internal, and more likely to appear in a dog with cropped ears than not; but of course the ears being cropped there can be no outer sores which are produced by shaking the head, and so flapping the ears and by scratching with the hindfeet. Bull terriers were doubtless cropped because in fighting dogs, which they originally were, the removal of the ears prevented an antagonist seizing them and thereby attacking a vulnerable part. When the show dog was made distinct from the fighting dog, a so-called "fashionable crop" was introduced to the former, the ears being in part cut off and treated "artificially and skillfully" to make them stand smartly erect—almost like a blunted needle at the point. A similar operation was performed on Black and Tan, or Manchester, terriers, upon English white terriers, and to a less extent upon Yorkshire terriers and upon Irish terriers. This barbarity continued in operation until quite recently (in 1895), when, following a conviction for cropping, the Kennel Club suddenly came to the conclusion—which the Irish Terrier Club had, to its credit, done years before—that the operation was useless and cruel, and they framed a rule which has led to its discontinuance. No greater fallacy ever existed than the belief that cropping the ears of dogs was to their advantage, either as a beauty mark or as a preventive of disease. The poor shepherd or farmer generations ago had some excuse for shortening the tail of the dog which assisted him with his flocks and herds, for by so doing he became exempt from taxation, so far as that identical animal was concerned. Hence we have a reason for the once common name of "cur" as applied to the sheepdog—a corruption of the word curtail, which in this connection "is a dog lawed or mutilated according to the Forest Laws, and is therefore prevented from coursing." Maybe therefrom we have the origin of the still existent docking of our terriers—not to keep them from coursing, for when used for this purpose their tails are left entire—but the countryman tried to escape the stringent tax by operating upon the dog which he kept to keep down vermin in a similar manner to that he employed upon his shepherd's dog. Perhaps some day our humanitarians will succeed in causing a general discontinuance even of this custom, which, though comparatively painless when performed in the right way and at the proper time, has been ruled to be illegal.

There are other silly notions as to dogs, notably where their howling is believed to be prophetic of death in the family to which the dog belongs. Then it must not be forgotten that until very lately it was commonly believed that dogs were more liable to madness at a certain period of the year than at any other. This was supposed to be between the end of July and September, when Sirius, the dog star, rises and sets with the sun. These were the so-called "dog days," when local magnates who considered the canine breed obnoxious would order a muzzling order within their jurisdiction until the supposed dangerous period had passed by. Such matetrs are, however, better ordained to-day, for the muzzling of dogs is only ordered when a case of madness has been known to occur, and instead of being discontinued by a certain sign in the constellation, is not withdrawn until all danger of the spread of the disease has passed away.—London Field.

Yachting.

Fixtures.

SEPTEMBER.

27. Taunton, ladies' day, Taunton, Mass.
30. Corinthian, knockabout, Essington, Delaware River.

OCTOBER.

3-5-7. New York, America Cup matches, Sandy Hook.

THE question of properly patrolling the course for the America Cup races was the subject of a meeting of the Cabinet at the White House on Sept. 20. President McKinley was in conference with Acting Secretary of the Navy, Allen, Acting Secretary of the Treasury Spaulding and Secretary of War Root. A fleet of torpedo boats and revenue cutters, under the command of Capt. R. D. Evans, U. S. N., will be detailed to patrol the course.

An indefinite rumor is current to the effect that Mr. Iselin and Sir Thomas Lipton have agreed, in the event of any interference, to start the race at some unknown time very early in the morning.

DURING the past week Columbia has been at Bristol trying different sails, under way whenever necessary, and receiving the final preparations. On Saturday she left for New Rochelle, arriving on Monday in tow of her tender. It is stated positively by various authorities that she will haul out on the Bristol railway for cleaning; that she will go into one of the drydocks at the Brooklyn Navy Yard on Thursday, and also that she will, on the same day, be docked with Shamrock at the Erie Basin Drydock, South Brooklyn. The first report is plainly incorrect, but up to the time of going to press on Tuesday it is uncertain which of the Brooklyn docks will be honored by her.

Mr. Will Fife was at the Erie Basin on Monday for several hours, and Shamrock will certainly be docked there on Thursday morning. It is stated that no attempt will be made to exclude the public.

On Sept. 24 Defender was placed out of commission at City Island. She left New London at 6:30 A. M. that day, and anchored off City Island before 1 P. M., her time for the eighty-four nautical miles being 6h. 30m., or a speed of thirteen knots.

Virginia, steam yacht, designed by G. L. Watson for Isaac Stern, of New York, was launched at the Bath Iron Works, Bath, Me., on Sept. 19

The Course for the Cup Races.

NEXT week, for a few brief days, the great affairs of the world will be set aside and sport will reign supreme; the "Ramapo Steal," the Presidential nominations for 1900, Captain Dreyfus and Jules Guerin, Oom Paul and the Uitlanders, and even Admiral Dewey, will be forgotten; and for the moment the attention of a great part of the world will be concentrated on the attempt of Sir Thomas J. Lipton to "lift" the America Cup.

The locality of this contest is practically the same as that of all previous races for the Cup as an international trophy, the waters about Sandy Hook and the Port of New York; but in every contest from 1870 to and including 1887 at least one race has been sailed over the inside course of the New York Y. C., of which the Sandy Hook Lightship is the outer mark, the inner being above the Narrows near the city; this year, as in 1893 and 1895, the course will be wholly outside Sandy Hook and on the open sea. The terms of the match call for courses of thirty nautical miles each, the first to be to windward if possible; if not, to leeward, a distance of fifteen miles and return; the second to be a triangle of ten miles to a side, the first leg to windward if possible. The accompanying chart shows the courses that can be laid out from the starting point, the Sandy Hook Lightship.

As the story of the races will be read by many who have never visited the beautiful harbor of New York, it may be well to give some details of the locality.

The city of New York is located at the joining of the Hudson or North River, and the short channel connecting New York Bay and Long Island Sound, and known as the East River. Until two years ago the city included practically only the long, narrow peninsula between these two rivers, but now it includes Brooklyn, Staten Island and even the shore of the Sound to the north as far as City Island, the well-known yacht station. The extreme lower end of the peninsula of New York, known as the Battery, marks the northern limit of the Upper Bay, and just six miles south of the Battery is the strait known as the Narrows, barely seven-eighths of a mile wide, between Fort Hamilton, on the Brooklyn shore, to the east, and Fort Wadsworth, on Staten Island, to the west. Between the Narrows and Sandy Hook is the Lower Bay, roughly about twelve miles by seven in extent, cut off from the sea by extensive sand shoals. Through Raritan Bay on the west the Raritan River enters, and through Sandy Hook Bay on the south the Shrewsbury and Navesink rivers. Much of the Lower Bay is very shoal, though the main channels are deep.

From the Narrows there are three ways to the open sea, first by the East Channel, now very little used, but which it is proposed to dredge in the course of the next two or three years to a depth which will make it the main approach to the city. Next, to the west, is the Swash Channel, used by all small vessels and the river and coasting steamers, the quickest and most direct way from the Battery to the lightship. Still further to the west is the Main Channel, now barely deep enough for the largest of the Atlantic liners, and with a sharp elbow, the Southwest Spit, for them to turn as best they may. The Main and Swash channels practically cross just off the point of Sandy Hook, the former continuing with a slight bend to the south, under the name of the Gedney Channel, and the latter, in a straight line, forming the South Channel. The Sandy Hook Lightship lies in the axis of the Gedney Channel, and four and three-quarter miles distance from the entrance buoy, while it is seven and one-half miles from the point of Sandy Hook. The Scotland Lightship, named from the wreck of the liner Scotland, over which it was located many years ago, lies in the axis of the South Channel, one mile from the entrance buoy and two and one-half miles from the Gedney Channel buoy. The Scotland Lightship is four miles from the point of the Hook, and two and three-quarter miles from the shore at the nearest point; the Sandy Hook Lightship is distant four and one-eighth miles from the Scotland, the bearing being W.S.W.15-16W. The distance from the Battery to the Sandy Hook Lightship by the Main Channel is twenty-four miles, and by the Swash Channel twenty-one and one-quarter miles.

The steamers which follow the races start from one to two miles above the Battery, on the North or East river, which distance must be added to these just given. Pier 1, North River, from which the New York Y. C. and various other steamers start, or where they stop for psssengers, is practically at the Battery. All the smaller steamers follow the shorter way through the Swash Channel out and in, regardless of tide, but some of the largest will have to take the longer way, by the Main Channel. With a start off the Sandy Hook Lightship at 11 A. M., it will be necessary to leave the city but little after 9 o'clock, in order to be at the line in season to obtain a place in the big fleet, and to observe the canvasing of the two yachts, the course signals, etc., so as to understand fully the meneuvering for the start. It has been frequently the case in the past that even steamers managed by the yacht clubs have been so delayed in leaving their pier that they have entirely missed the start of the race. On some of the public boats it is the custom to wait as long as possible, putting back to the pier after starting, and resorting to other similar tricks to catch the dollars of a few tardy ones who have missed the more punctual boats, so that those on board who may have been at the pier by 9 o'clock go down the Bay finally at the tail of the fleet, and arrive at the line after the yachts have started. A similar trick of waiting for a few more has been worked in the case of boats advertised to start at noon or 1 o'clock, for the convenience of those unable to get away from business for the entire day, but who desire to see the finish. By this system of delay the steamer is held so long that the fleet is returning after the race before she passed the Hook. It is well to remember that after the fare, of from $3 to $6, is once paid at the pier on boarding a steamer, the passenger has practically no redress if the steamer men are disposed to act dishonestly.

The waters outside Sandy Hook are admirably adapted for racing courses, being deep, comparatively free from currents, with a mean rise and fall of tide of but 4.70ft. The courses are almost entirely outside the ten-fathom curve, the depth varying from twelve to thirty fathoms, with no sandbars to disturb the tidal flow and no obstructions of any kind except the well-known Shrewsbury Rocks, just below Seabright, and extending about a mile from shore. The Navesink Highlands, just inside Sandy Hook, is a bold promontory nearly 200ft. high, but except for it the land is low, the hook itself is a mere sand spit almost level with the water, and the whole Jersey beach is low, the bluffs at Long Branch being only 30ft. high, while at a couple of miles inland the elevation is but 60 to 100ft. The Long Island shore is also made up of a succession of low beaches with a moderate rise to the center of the island.

The chart shows the largest sector of a circle which can be laid off from the Sandy Hook Lightship as a center with a radius of fifteen miles, also the slightly larger sector for a radius of ten miles, as required for the triangular races. The range of courses possible for the windward and return races is from E.N.E.½E., which would bring the mark close in to the Long Island shore near the Jones Inlet; to S.W. by S.½S., on the Jersey shore just above Asbury Park. If necessary, the windward leg for the triangular course can be laid a little outside of either of these points. With the wind anywhere from N. of E. to almost S.W., a good course can be laid off to windward, and with a N.W. wind a start to leeward can be made, as has frequently been done; the worst of the probable winds being N.E., in which case a fifteen mile course to windward or leeward cannot be laid out, and there is little to spare for a ten-mile leg to windward and no room for it too leeward. At times the start has been made from the Scotland, but very little is to be gained by the change. In many of the previous races the course has been either the extreme northerly one, the wind drawing along the Long Island shore, or the westerly one, parallel with the Jersey beach. In some cases the yachts have run straight off first before a N.W. wind, beating home. The following extracts from the almanac may prove useful for reference:

The time of high water at the Battery is about forty-six minutes later than Sandy Hook.

The new moon falls on Oct. 4.

The Interlake Y. R. A.

THE following report was sent to us for publication, and we believe that the matter with which it chiefly deals is one that should be made public in the interests of the sport. We can well appreciate the spirit which has impelled the writer to take up a difficult and distasteful task, which is sure to bring him much ill will and condemnation. The question is one which comes up at almost all large gatherings, the rights of the great majority of decent, gentlemanly sportsmen as opposed to a small but active hoodlum elevent. While no true friend of yachting or canoeing desires to publish to the world at large the dark side of the meets, the question constantly comes up, as we know from experience, whether the time has not come for a bold and open denunciation of an evil that is too great to be longer overlooked.

In a case like the present it is much easier to go quietly out of office, leaving all responsibility on one's successor, than to inaugurate a crusade on general principles. We hope that Com. Bliss' remarks will be read by all yachtsmen.

To the Members of the Interlake Yachting Association:

Gentlemen—While it has not been customary for the commodore of this Association to render any report concerning our annual meets, it seems to me to be necessary, from the fact that the office of commodore is only held for a year, and consequently faults are overlooked from year to year, and never corrected.

Our yachting etiquette is an almost unknown quantity. It is not followed up by individual clubs, consequently, when we have our meets, very few know enough to salute, when joining the squadron, report to the officer in command, observe the color-gun morning and evening or be prepared to receive the officers on inspection. On these points and many others we are absurdly weak, and our members should post themselves on yachting etiquette during the coming winter.

Another matter that is much more serious is our behavior at Put-in-Bay during the times set apart for our meets. From year to year this has improved, but there is room for so much more improvement that the writer almost dreads the task of detailing it.

In making the following complaints, it is not the writer's intention to give the impression that he is altogether free from having errors charged against him, and while making this admission he asks all to seriously consider the many small errors committed by them, before reading the following chapter of rowdyism and malicious mischief which at last developed into crime:

Unfortunately, those who behave themselves at our meets, though in the majority, are never heard of. The low-minded bumming element always is, and therefore the yachtsmen who attend our meets are all in the shadow cast by a lot of hoodlums.

The troubles have been laid to hired crews; to yachtsmen new in the sport, who imagine that drunkenness and all manner of lawlessness is part of the sport, and to those who are naturally loafers and "no good." In the writer's opinion the whole trouble starts in the individual clubs. We are all anxious to swell our membership, and the consequence is that care in the selection of material is partly lost sight of, and before it is realized a loud-mouthed, disorderly element has crept in that is difficult to be rid of. Though this element is small, still it is just enough to poison the sport and cause our most reputable people to look on all yachtsmen with a little suspicion.

This rowdy element usually has no steady employment, consequently when we have our meets they are ready to go and always disgrace the Association. If our individual clubs would only have the grit to drop those few yacht owners and crews whose boats are used for various questionable purposes, our meets would be improved. It should be the pride of each club to send their best repre

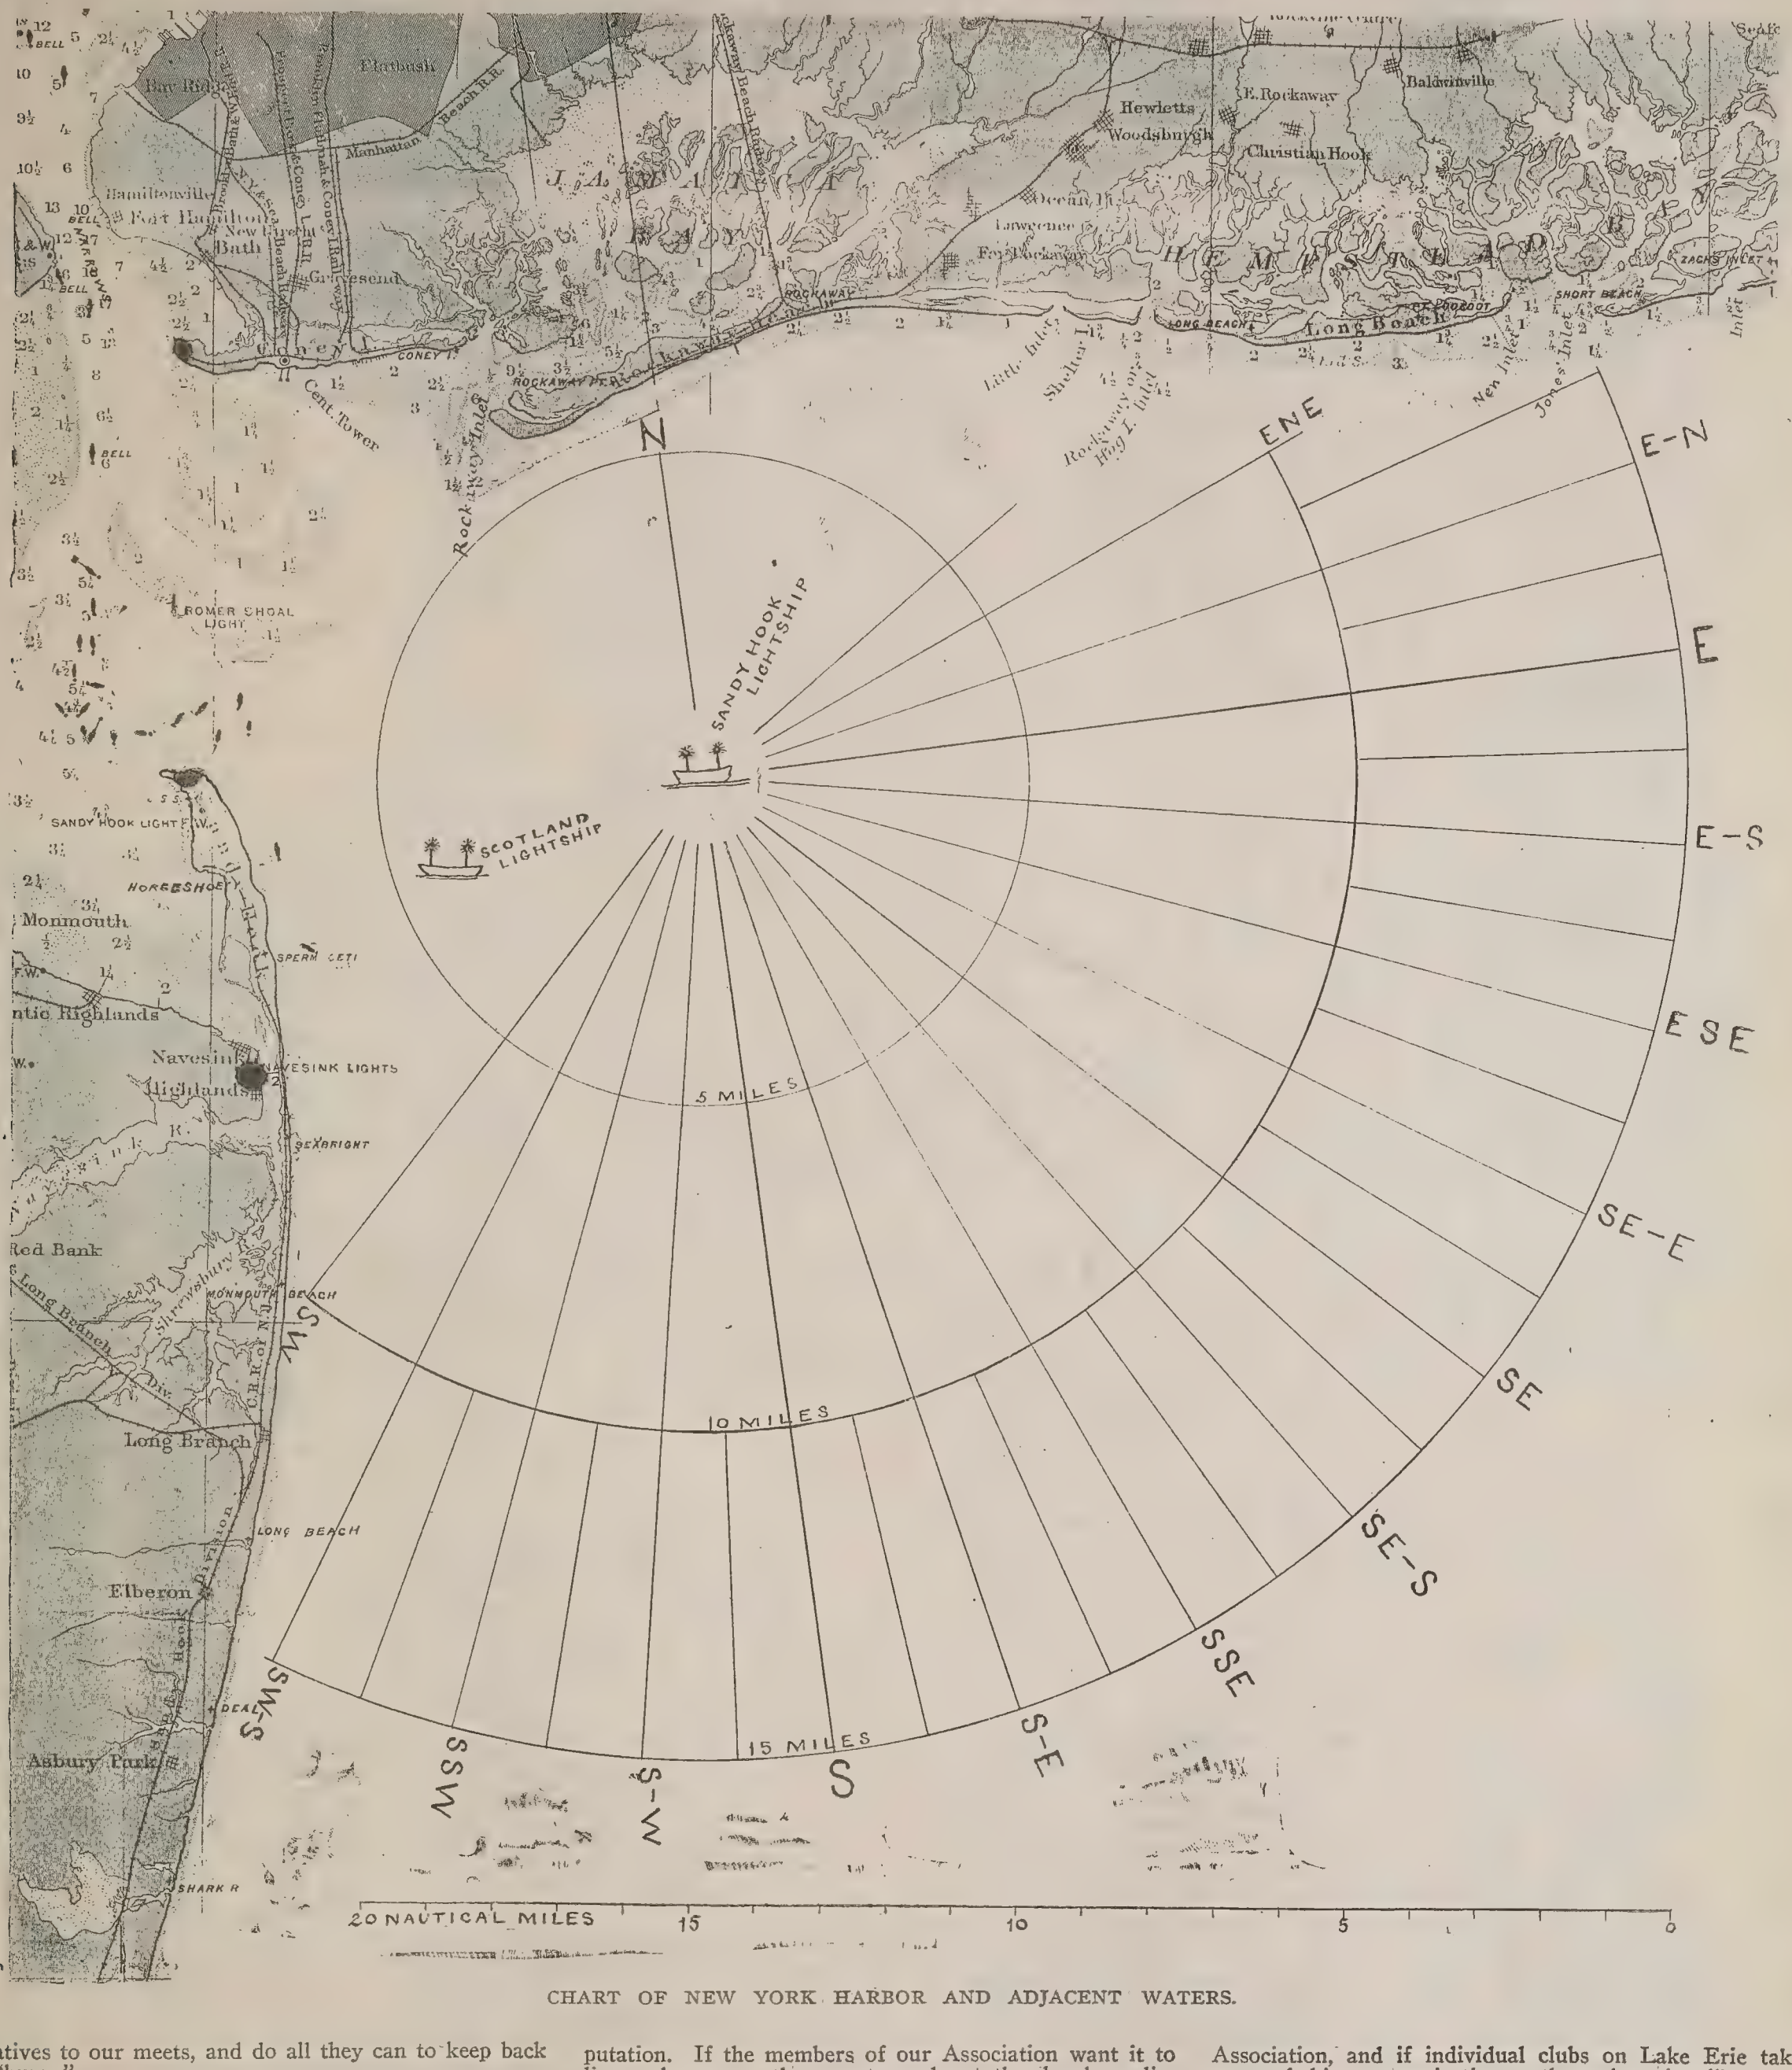

CHART OF NEW YORK HARBOR AND ADJACENT WATERS.

sentatives to our meets, and do all they can to keep back the "bums."

Those who were not at the meet for 1899, and previous ones, may not quite understand what has called forth this communication, and the writer will attempt to give the reasons:

Sunday, Aug. 6, rowdyism began to play its part and continued through the week. Complaints were made to the writer daily, but nothing could be done to stop the usual course of events outside of our programme.

It was reported that early in the morning boats would be seen putting off from yachts, bringing women ashore. Only a very few yachts were implicated, but they were enough to reflect on the entire fleet. During the nights dinghys would be cut adrift from yachts and they would be blown on the beach and rocks. Oars were stolen, rudders were stolen, flags were stolen, drunken crews were coming and going, shouting all the vile language they thought of. If ladies came aboard any of the yachts they were looked upon by the crews of some neighboring yachts as the butt of rowdy jokes, and at nearly all times the anchorage was uncomfortable for ladies to be near.

After a few days of stealing, drunkenness, running around with questionable company, and doing all they could to give our Association a bad name, the climax was reached by a report of the attempted outrage of two girls. The writer tried to get some information on the subject as to who the men were. This could not be stated positively, but "two yachtsmen" were blamed for it, and the Interlake Yachting Association has to stand the imputation. If the members of our Association want it to live and prosper, they must weed out the drunken, disorderly element in their clubs, and so keep that element away from our meets. If yacht owners must have hired crews, get decent ones. Set the example to them for good behavior and all will go well. If possible, yacht owners should make up crews of their friends, and in this way a part of the low element might be eliminated. The writer does not lay all our trouble to hired crews by any means. Owners of steam yachts and large sailing yachts who used to attend our meets have ceased doing so, on account of the vile actions and language of the crews on a few of our yachts near which they were anchored. All true friends of our Association should take this matter up. Of course the rowdy element will object, but before it is too late each club should do their utmost to get rid of the few who each year disgrace them and the Interlake Yachting Association.

In your minds, run over the members of your clubs and you will have no trouble in settling on the few disturbers at all of our meets. These disturbers should be made to realize the fact that they are being watched by their clubs and criticised by the public, and it is hoped that before the meet in 1900 they and their "bum boats" will have dropped out of sight.

It is hoped that this communication will start a storm of criticism from all members of the Association, and so aid in bringing our small rowdy element into a prominent and most unenviable position. This excitement will certainly be for the lasting good of the Interlake Yachting Association, and if individual clubs on Lake Erie take parts of this communication to themselves, it will not be regretted by our hundreds of true, clean yachtsmen.

Before closing, the writer wishes to thank the officers of the Association, the secretary, and members of the different committees for the effectual work they did in making our meet for 1899 a success, and suggests, to insure smoother committee work, that different clubs be given entire committees. For example: Let Toledo have the regatta committee, Detroit the entertainment committee, etc.

GEO. T. BLISS, Com. I. L. Y. A., 1899.

Jamaica Bay Y. C.

ROCKAWAY—JAMAICA BAY.

Saturday, Sept. 16.

THE Jamaica Bay Y. C. closed its racing season on Sept. 16 with a special race for catboats in a light S.E. breeze, the times being:

Glencairn I.

[*Concluded from page* 256, *Sept.* 23.]

The construction of Glencairn I. is so plainly shown in the accompanying illustrations as to require little explanation. Unlike the majority of designers, Mr. Duggan gives to the builder a construction plan showing every detail, and lettered and figured in a way that leaves little opportunity for error. Instead of the then usual construction, on a rabbeted keel, Glencairn has no keel proper, but a strake of planking in the center of the same thickness as the garboards, this being reinforced by the wide; very light, but adding greatly to the rigidity of the structure, when properly placed. These are used under the deck, being gained down into the deck beams and effectively stiffening it.

The water-tight, self-draining cockpit was used in Glencairn, as shown in the plans, in place of the open slatted floor of Spruce and Ethelwynn. The two travelers were of thin bicycle tubing, set in bronze casting at the ends. The rudder stock was of light steel bicycle tubing, ¾in. diameter, with a single blade of light steel plate. The rudder was far lighter than those used at the time on the American boats. The planking was of ⅜in. white cedar, ship-lapped, without ribbands inside

centerboard, one side of which is carried as far fore and aft as possible, with a short keelson on each end. On the fore end an apron is worked, in place of the usual stem knee. As proved by the many 15 and 20 footers built at Dorval, this construction is amply strong when properly backed up by a system of diagonal braces, as shown, and with adequate provision to take the very heavy downward thrust of the mast. In the present case the two frames forward and abaft the mast are sawn from knees and well braced from the bilge to the partner piece at the deck, the mast step being in part supported by four bolts from this partner piece. A similar construction is employed for the frame at station 7, carrying the runner plate. There are no solid chainplates, but steel wire rope is used instead, set in a groove in the outer face of the frame, the lower end reaching to the keel, where it is turned over and secured by riveted staples. The upper end of the wire, just above the deck, has a plain thimble eye turned in.

At the time that the first Canadian 15-footers were building there were none of the small fittings known as "canoe jewelry" to be had in Canada, and there was a sentimental objection to importing from the States such fittings as were made there for canoes and the small racing yachts. The work of supplying this need was taken up by Mr. Poe, an old canoeist, and manager of the Linotype Company of Montreal, with a shop fitted for the highest class of machine work on typewriters and the Linotype machine for setting type. The result was the assortment of blocks and other fittings which have since borne the name of Glencairn, light, strong and beautifully proportioned, and made of steel, aluminum, and aluminum and phosphor bronzes, according to the requirements of each case. A great deal of time was spent in learning how to make a small, light block that would stand the strain and carry a fine wire halyard without cutting or jamming, and other essential details also called for much study and experiment. So much time was devoted to the blocks, gaff and yard jaws, steel tube travelers, sister hooks, rudder head fittings, deck leaders, etc., that when it came to the turnbuckles it was decided to abandon them and use the plain thimble eyes in the wire "chainplate" and shroud, with a lanyard. This was done in the 15-footers, and answered so well that it was continued in the 20-footers, and even the big 35ft. Toronto of this year was rigged in the same way. With the number of novel and excellent fittings of the Duggan boats, there is to-day no sign of a turnbuckle about any of them.

In all of the early boats the "fishtail" type of rudder, as used on Spruce IIII., Sorceress and other English boats, was followed, though by degrees this has been abandoned for the peculiar shape, deep, narrow at the top, and broad at the bottom, shown in the plans of Dominion. The tiller is of the "dog's leg" type, first introduced in canoes about 1884, a light handle about 2ft. long being pivoted by a bolt to the upper side of the main tiller, thus allowing the helmsman to sit well out to windward and yet to reach the tiller easily. This same device, carried on all the 20-footers, was also employed on Toronto.

One feature of the construction is the liberal use of diagonal braces of ⅜ or ½in. white pine or cedar 2 to 3in. the laps. The spars were all hollow, made by the Yacht Company of Canada, the mast being but 3½in. diameter at the deck.

Royal St. Lawrence Y. C.

There was a very large attendance at a special meeting of the Royal St. Lawrence Y. C., held at the Windsor Hotel, on Sept. 20, to consider the advisability of rearranging the rules governing the races for the Seawanhaka Corinthian Y. C. cup. Mr. J. J. Riley, Jr., presided, and the meeting was a very enthusiastic and satisfactory one from beginning to end. The proposed changes caused much discussion, and were favored by every one, so that next year should see a better type of boat in the fight for the Seawanhaka cup.

This morning Mr. Duggan spoke very favorably of the change, and thought that next year there would be more interest taken in yachting than has been the case during the last two or three years.

At the meeting it was decided to leave the matter to the sailing committee. An early meeting will be called, when a special sub-committee will be appointed to consider the question, and to have full power to deal with the rules and all matters pertaining to the Seawanhaka international challenge cup races.

The discussion brought out the fact that the present rule taxes the sail area and the L.W.L. of the hull. It was pointed out that the taxing of the L.W.L. of the hull simply caused designers to make all sorts of mis-shapen boats, which would float on the least possible waterline, and yet give them as big a boat as they could design.

The meeting also appeared to be unanimous upon the point that a stronger boat was required. The question as to what thickness the planking should be, aroused much discussion, and ¾in. plank, with corresponding ribs, seemed to meet with much approval. Half-inch planking was the least any member suggested. After having the opinion of the general meeting, these matters were left to the special committee, which will discuss the matter.

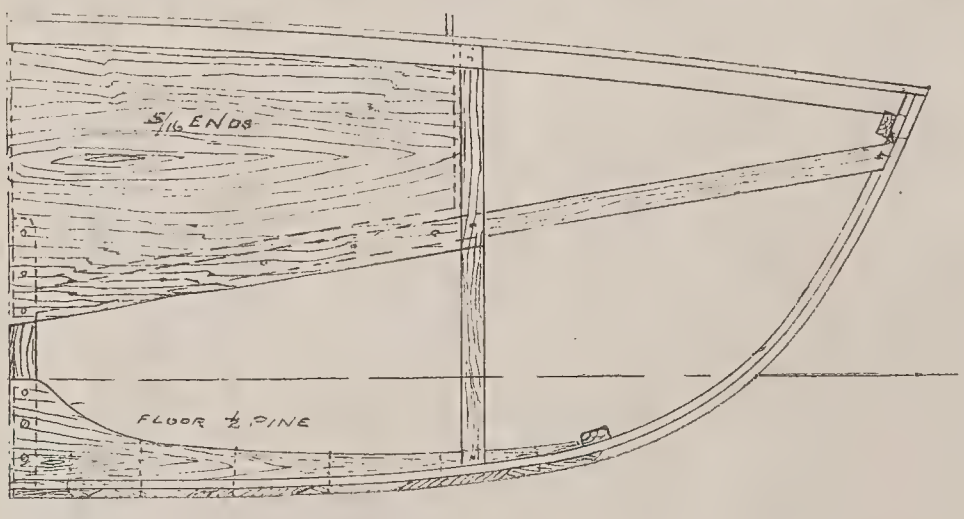
Another point brought out was that, as in the old days, racing was not entirely centered at Dorval, and that, therefore, the club, in order to make itself of more use to the whole of the Lake St. Louis interests, should hold some of its races at the various points up the lake, and also over the international race course.

Mr. Walter Kavanagh spoke of the advisability of having a sub-station at some point on the upper part of the lake.

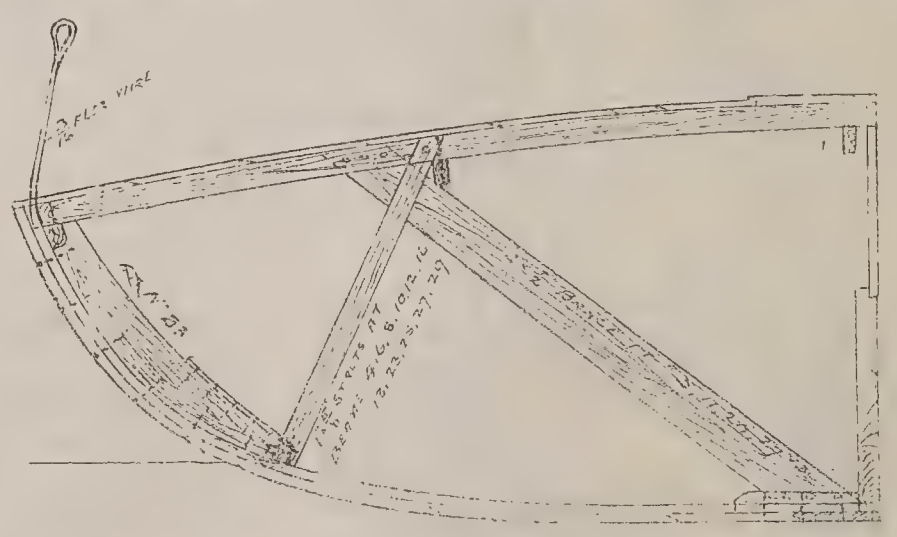
This suggestion was approved, and a special sub-committee consisting of the following gentlemen was appointed to look into the matter and make a full report at an early meeting: Mr. W. Kavanagh, chairman; ex-Com. R. R. Stevenson, and Mr. Boulton, Pointe Claire; Mr. J. Paton, Lakeside, and Mr. R. A. Mainwaring.

The discussion on this point brought out the further question of the advisability of having a steam launch for the use of the club. If the fleet is to be towed up to the various points, or the yachts which come down to Dorval after the races, some boat is necessary. This need has been long felt and the question has been one which has come up at every general annual meeting. For several years past committees have been formed to look into the question, but the financial part has been too much for the club to cope with.

An important matter mentioned last night was that several years ago when it became necessary to build new boats, there was practically no one in the vicinity who would undertake the work. Notices were sent out to the members asking that a company be formed. Somehow or other, however, the members did not then realize the necessity of the matter, and the scheme fell through.



Certain gentlemen then thought that it was absolutely necessary to do something, and took over the yacht shed on a lease, from the yacht club, and boat building was done there. There now rises the question of getting up a company with sufficient capital to run the proposed launch. The matter was explained to the meeting, who realized its value. It was decided to form a company with $5,000 capital, and $1,100 was immediately subscribed at $10 per share. A sub-committee was appointed to get out a prospectus, and every effort will be made to make the affair a success.

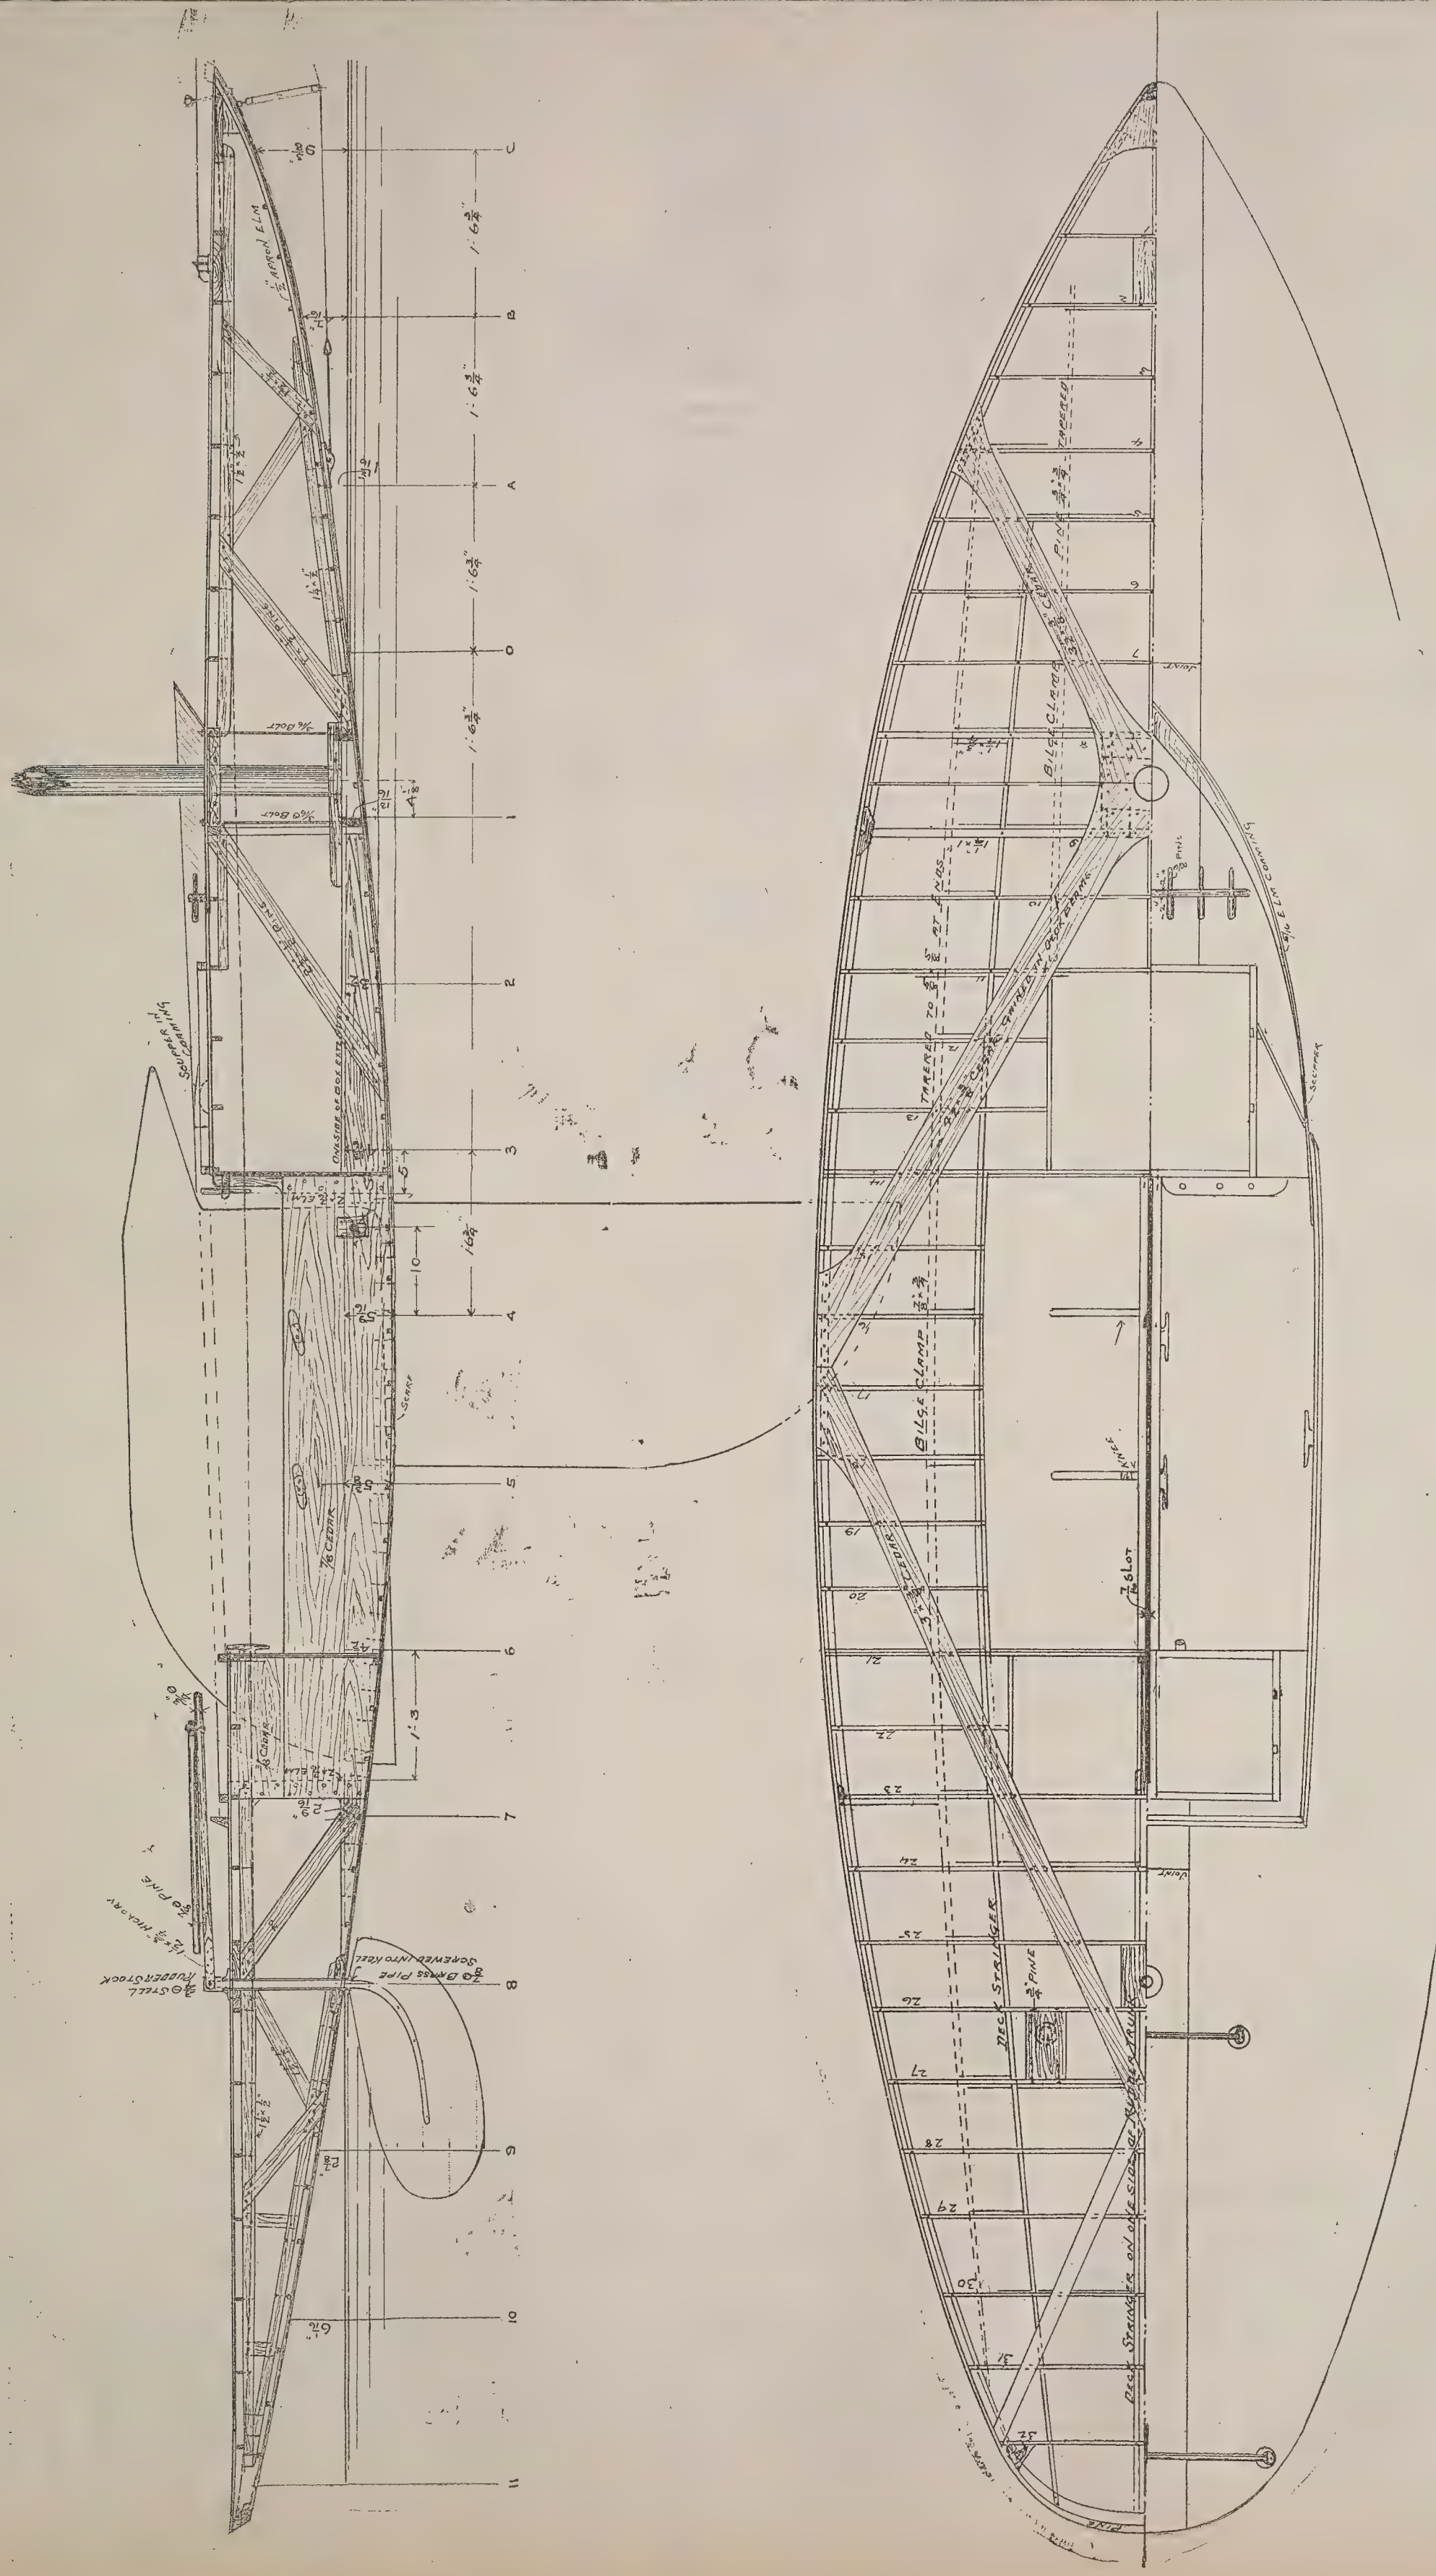


As a great many of the club members do not follow yachting, it was decided to make some arrangements for having golf links in conection with the club, and a special committee was struck to make a report on the matter.

An important notice of motion was made by Prof. Capper. It was to the effect that in future membership should consist of junior, intermediate and senior members, all members between 21 and 25 years of age being eligible for intermediate membership, for which the entrance fee would be $3 and the subscription $5.

As it was gtting late, notice was given to adjourn until Oct. 16.

The matter of the steam launch will be properly discussed at the annual meeting.—Montreal Witness.



Shamrock.

During the past week Shamrock has been out four times, on three days doing a trial spin outside the Hook, while on one day she was compelled to return shortly after starting, as her bobstay proved defective. On Monday, as told last week, she sailed a windward and leeward course of thirty nautical miles in 3h. 39m. On Tuesday the weather was clear with smooth water, the wind being S. by E., about six to seven knots. The yacht started from the Scotland Lightship at 11:40, the Lawrence having been sent off S.S.E. ten miles. The wind fell from about seven knots to five as she went down the beach, and when off Seabright at 12:50 the club topsail was sent down and a larger one set. The wind backed a little, so that it was a short and long leg to the mark, which was turned at 1:18:30, or 1:37:33 from the start. The second leg was ten and one-half miles, to the Sandy Hook Lightship, a broad reach; and a big balloon jib topsail was set. The wind worked to the east and freshened to about twelve knots, and at 2:22:10 she was timed at the lightship, making 44m. 37s. for the ten and one-half miles. The last short leg was a close reach, the finish being timed at 2:44:15, making 22m. 5s. for the four and one-eighth miles. The time for the whole course, twenty-four and five-eighths nautical miles, was 3h. 4m. 15s.

After a rainstorm during the night, Wednesday morning was clear, with very little wind. Erin, with Sir Thomas Lipton on board, ran up to Staten Island, where the warship New York was lying, and took on board Rear-Admiral Sampson and Captain Chadwick. Shamrock's topmast had been housed during the storm, but it was set up in the morning, and when Erin returned after noon the two went out to the Scotland Lightship with a very light easterly breeze. By good luck it freshened to nearly ten

knots, and the yacht sailed about for a time, but no time trial was made.

On Thursday morning there was wind in plenty, over fifteen knots, but with rain, and the yacht did not leave her mooring. The westerly wind was still blowing fresh on Friday morning, and Shamrock got under way early, but as she went out by the Hook it was discovered that something was wrong with her bobstay, and she was towed in to her moorings, where the bobstay was unshipped and repaired.

The best work yet done was on Saturday, when in a fifteen-knot breeze she covered a course of thirty miles in 2h. 20m. 20s. The course was fifteen nautical miles due south from the Scotland Lightship, laid off by the tug Lawrence. The wind was E. by N., about fifteen knots, with a light sea. The start was made off the Scotland Lightship, at 11:55, Shamrock carrying a second club topsail and setting a large jib topsail. She soon left the press tug astern, and after a lively run turned the outer mark at 1:03:30, making 1h. 8m. 30s. for the fifteen miles, a speed of 13.13 knots. With the wind now forward of the beam and her baby jib topsail set, she covered the return course in 1h. 11m. 50s., finishing at 2:15:20, her speed average being 12.55 knots. After this she beat out toward Sandy Hook Lightship, and then returned. The wind was falling in this last trial, and she did not move as fast. On Monday she did not get under way, but it was proposed to make a final trial on Tuesday.

Riverside Y. C.

RIVERSIDE—LONG ISLAND SOUND.

Saturday, Sept. 23.

THE Riverside Y. C. held a special race on Sept. 23, with a good fleet of starters, but the wind, though fresh at noon, fell before the finish. The times were:

Yawls—43ft. Class—Start, 1:35.

	Finish.	Elapsed.
Albicore, S. J. Hyde	5 17 31	3 42 31
Sultan, C. S. Somerville	5 17 58	3 39 36
Consuelo, A. W. Cabot	Did not finish.	

Cutters and Sloops—36ft. Class—Start, 1:35.

Vorant II., G. G. Tyson	5 18 46	3 43 46
Bonnie Bairn, M. Graham	Did not finish.	
Memory, E. H. Norton	Did not finish.	

Cabin Cats—30ft. Class—Start, 1:40.

Windora, W. L. Ward	5 18 04	3 38 01
Volsung, De Forest Brothers	5 33 19	3 53 09
Kit, T. H. McDonald	5 39 15	3 59 15
Dot, C. T. Pierce	Did not finish.	

Sloops—30ft. Class—Start, 1:40.

Marguerite, J. F. Dingee	5 20 54	3 40 54
Alerion, A. H. Alker	5 19 00	3 36 45
Lorelei, A. Peats	5 55 51	4 11 57
Alice, W. D. Hennean	5 34 21	3 45 36

Knockabouts—21ft. Class.

Robin Hood, G. Gartland	Did not finish.	
Spindrift, S. C. Pirie	5 49 07	4 04 07
Indianola, L. R. Alberger	3 27 22	3 52 52
Kittie, Hazen Morse	5 50 22	4 05 22
Murmur, B. Ward	Did not finish.	

Prior to the start Marguerite protested Alerion as being below the scantling limitations, but Alerion was instructed by the committee to start, pending a subsequent decision of the protest.

Knickerbocker Y. C. Ladies' Day.

COLLEGE POINT—LONG ISLAND SOUND.

Saturday, Sept. 16.

THE Knickerbocker Y. C. sailed the last race of the season, a ladies' race, on Sept. 16. The times were:

46ft. Class—Start, 3:50.

	Finish.
Nautilus, J. J. McCue	5 10 34
Tempus, J. D. Billard, Jr.	5 19 24

Sloops—30ft. Class—Start, 3:50.

Porgie, J. J. Heney	5 20 35
Ouananiche, Rodman Sands	5 08 40

Open Sloops.

Flora, F. G. Panly	Walkover.

Cabin Catboats—30ft. Class.

Leisure, F. B. Myrick	Walkover.

Cabin Catboats—25ft. Class.

Kite, R. M. and S. H. Goddard	Walkover.

Special Lark Class.

Guess, H. De Witt Smith	Walkover.

Lark Class—Start, 4:00.

Gloria, C. W. Allen	4 51 39
T. W., W. B. I. Sands	4 56 58
Echo, P. R. Allen	4 49 36

The winners were: 45ft. class, Nautilus; 34ft. class, Ouananiche; open sloops, Flora; cabin catboats, Leisure; special lark class, Guess; lark class, Echo.

Northport Y. C.

NORTHPORT—HUNTINGTON BAY.

Saturday, Sept. 17.

THE Northport Y. C. sailed a race on Sept. 17, the times being:

Sloops.

	Elapsed.	Corrected.
Rowena, J. W. Hiltman	2 59 26	2 59 26
Zaloma, W. W. Wood	2 45 20	2 38 00

Jib and Mainsail.

Osseo, M. P. Nash	Withdrew.	
Ranger, J. D. Cockcroft	3 18 32	3 18 32

35ft. Catboats.

Carita, G. R. Rogers	2 37 38	2 37 38
Bertha, A. B. Gildersleeve	2 57 43	2 55 10

25ft. Catboats.

Kathleen, Ackerly Brothers	3 05 11	3 05 11
Dandy, Temple Prime	2 44 32	2 44 32
Lassie, J. B. Morrell	2 53 42	2 50 58
Elberta, Elbert Arthur	2 44 40	2 39 13
Marjory, D. P. Morse	3 15 18	3 07 48
Curlew, C. A. Van Idestine	Withdrew.	

YACHTING NEWS NOTES.

On Sept. 21 the steam yacht White Ladye and Erl King arrived at New York for the Cup races. Both of these yachts were here in 1895, though under different owners. White Ladye, then owned by Mrs. Langtry and under charter to the late Ogden Goelet, is now owned by Mr. John Lawson Johnstone, who earned a limited amount of fame as the purchaser of Britannia from the Prince of Wales. Erl King is now owned by Mr. A. J. Moxham, of Louisville, Ky., an Englishman and a British subject. Both yachts are under the British flag.

Niagara II., steam yacht, Howard Gould, arrived at New York on Sept. 19 after a cruise of five months in European waters. Mr. Hugh C. Kelly, Hon. Sec'y of the Royal Ulster Y. C., was a passenger on the yacht from Ireland.

It is reported from Southampton that Capt. Ben Parker, skipper of Meteor II., sailed for New York last Saturday by the American Line, presumably to sail on Shamrock.

Canoeing.

Amendments to the A. C. A. Rules.

WITH the beginning of next week the newly elected officers of the American Canoe Association assume office, and in the course of another month the annual meeting of the Executive Committee will be held. As we have frequently pointed out, all proposals for the amendment of the rules must be published at least two weeks prior to the annual meeting in order that they may be legally voted on. The following proposals for the amendment of the constitution, by-laws and racing rules have been sent to us for publication. We hope that they will meet with that consideration and criticism which they deserve from the racing men, and further that other similar amendments may be proposed in season. We shall be glad to give all necessary space for the thorough discussion of the subject.

Proposed Amendments to Constitution and By-Laws of the American Canoe Association.

CONSTITUTION.

Article VII.—Paragraph 3.—Amend by leaving out the words "A regatta committee of three members for the annual camp of the A. C. A." after the word "appoint."

Article VI.—Add "Section 9" as follows: "Racing Board. Each division in its proper turn, at its annual meeting shall elect in the same manner as its regular officers one member of that division, to serve on the Racing Board of the Association for a term of five years, or until his successor is elected."

For duties of Racing Board see Chapter 9 of By-Laws.

BY-LAWS.

Chapter IX.—Amend Paragraph 1 by adding the words "Racing Board and division" between the words "Duties of" and "Committee" in the title, making it read as follows: "Duties of Racing Board and Division Regatta Committee."

Further amend Paragraph 1 by substituting the words "Racing Board" for "Regatta Committee" as the last words of the paragraph.

Amend Paragraph 2 by substituting the words "Racing Board" for "Regatta Committee" wherever they occur.

Amend Paragraph 2 by leaving out the word "and" between the words "paddling" and "trophy" on the third line, and insert the word "sailing" after the word "club" on the third line, making this part read as follows: "Including the sailing and paddling trophy races, the three record races, the club sailing race," and insert after the words "Club sailing race" at the end of the third line the following: "The paddling races for one, two and four men, with single blades, and the paddling races for one and two men with double blades, and the relay race for teams of three men each, with double blades."

Insert after the words "three record races" on the third line the words "the free-for-all sailing race."

Proposed Amendments to Racing Regulations of the American Canoe Association.

Amend by substituting the words "Racing Board" for "Regatta Committee" wherever they occur.

Rule II.—Paragraph 2.—Amend by leaving out the first and third sentences beginning "No canoe shall be," etc., and "Members must paddle," etc., respectively.

Paragraph 3.—Amend by leaving out the whole of the first sentence, beginning "A canoe which is," etc.

Rule V.—Amend the first paragraph to read as follows: "Prizes shall be given as follows: A first prize in each race and a second prize in each regular event where more than two finish."

Amend Paragraphs 2 and 3 by leaving out these two paragraphs entirely and substituting the following: "Prizes shall consist of shields or some lasting memento, with the event, the letters A. C. A., the year expressed in four figures, the place of the meet and the words "first prize" or "second prize," expressed thereon. The prizes for any one meet shall be uniform in shape and design. Prizes donated for special races or competitions may be accepted at the discretion of the Racing Board. No prizes of money shall be raced for."

Rule V.—Amend paragraphs entitled "Races" as follows: Substitute the words "free-for-all" for the words "special trial race" in last paragraph.

Add the following at the end of the last paragraph: "There shall be a 'free-for-all' sailing race, with conditions as follows:" (See old year books for conditions of "unlimited sailing," except that the present limited sail area condition shall stand), "from which starters for the 'trophy sailing race' shall be selected as above."

Add the following: "There shall be paddling races with single blades, for one, two and four men in a canoe, and with double blades for one and two men in a canoe, and a relay race for teams of three men each, with double blades, one man in a canoe."

Rule IX.—Paragraph 2.—Substitute the words "that of a majority of the Racing Board present" for the word "unanimous" after the word "if" in the fourth line. Leave out all of Paragraph 2 after the word "final" on the fourth line.

Rule IX.—Add to last paragraph of Rule IX. the sentence following: "No man shall contest in any race until he has been two days in camp, excepting in war canoe races."

Rule X.—Substitute the words "fire a gun" in place of the words "say 'Go!'" on second line.

Add the sentence "In case of a misfire he shall say 'Go.'"

In the sentence beginning "The combined paddling and sailing race," etc., leave out all after the word "manner."

Rule XI.—Add a sentence at the end of the rule as follows: "All paddling races shall be straight away."

BROOKLYN, N. Y., Sept. 21.—*Editor Forest and Stream:* In accordance with Article XII. of the Constitution, notice is hereby given that at the next meeting of the Executive Committee of the American Canoe Association the following amendments will be offered to the Constitution of said Association:

Article VI., Section 4.—Change in line four the word "four" to "three," and at the end add "but in case of tie he shall not vote."

Article VI., Section 5.—In line eight strike out "regatta or."

Article VII.—In Twenty-first line before the word "accounts," insert "and Board of Governors."

ROBERT J. WILKIN, A. C. A., No. 47.

Trapshooting.

Fixtures.

Sept. 26.—New Haven, Conn.—New Haven Gun Club's all-day tournament; open to all; $15 added. J. B. Savage, Sec'y.

Sept. 26-27.—Squaw Creek Park, between Niles and Girard, Trumbull County, O.—Tournament of the Rummell-Gaston Gun Club. Dr. James E. Gaston, Sec'y, Mineral Ridge, O.

Sept. 26-27.—Muncie, Ind.—Magic Gun Club's tournament.

Sept. 27-28.—Oswego, N. Y.—First annual tournament of the Riverside Gun Club. Robert Oligshaut, Sec'y.

Sept. 28-29.—Tyrone, Pa.—Tyrone Gun Club's target tournament. D. D. Stine, Sec'y.

Sept. 28-29.—Alton, Ill.—Third annual open tournament of the Piasa Gun Club. F. C. Riehl, Sec'y.

Sept. 30.—New Brunswick, N. J.—Ten-men team contest; four teams; teams of Brunswick Gun Club and Reservoir Gun Club against teams of Climax Gun Club and Dunellen Gun Club.

Oct. 3.—Kansas City, Mo.—J. A. R. Elliott, holder, against W. R. Crosby, challenger, for Review cup.

Oct. 4.—Kansas City, Mo.—J. A. R. Elliott, holder, against W. R. Crosby, challenger, for Republic cup.

Oct. 6-7.—Pawling, N. Y.—Tournament of Pawling Rod and Gun Club; targets and live birds.

Oct. 10-13.—Newark, N. J.—Smith Brothers' grounds. Live birds and targets.

Oct. 11-12.—Reading, Pa.—Live-bird and target tournament of the Independent Gun Club.

Oct. 11-12.—Paris, Ky.—Hill Top Gun Club's two-day tournament. John L. Bosley, Sec'y.

Oct. 11-12.—Newark, N. J.—On Smith Brothers' grounds; two days' tournament of the New Jersey State League.

Oct. 12-14.—Louisville, Ky.—Tournament under the auspices of the Kentucky Gun Club. Emile Pragoff, Sec'y.

Oct. 13.—Batavia, N. Y.—E C cup target championship contest between Mr. W. R. Crosby, holder, and Mr. R. O. Heikes, challenger. Match begins at 3 o'clock.

Oct. 16-19.—Du Pont Park, St. Louis, Mo.—Fall tournament; three days at targets; one day at live birds; $300 to $500 added money. J. A. Corry, Manager.

Oct. 17-19.—Baltimore, Md.—Sixth annual fall tournament of the Baltimore Shooting Association. J. R. Malone, Manager.

Oct. 21.—Wissinoming, Pa.—Philadelphia Trapshooters' League.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $750 added. W. R. Elliston, Sec'y.

Oct. 31-Nov. 3.—Cincinnati, O.—Tournament of the Cincinnati Gun Club; two days at live birds; two days at targets. Arthur Gambell, Sec'y.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

Brooklyn Gun Club.—Third Saturday of each month. Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

Watson's Park.—Burnside Crossing, Ill.—Medal contest the first and third Fridays of each month.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. E. S. Rice, Pres.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

The vicissitudes of time are more apparent in the affairs of the trap world than in those of any other. To many shooters of the present day, a mention of the Ridgefield, N. J., Gun Club would have no special significance in respect to the doings of the present, yet in its time it was a leader in its locality. The death of J. Remsen Beam, one of its members, who passed away at Newport, R. I., last month, has stirred the members to action to do honor to the memory of their dead friend. He was of prepossessing appearance, quiet and gentlemanly in deportment, and of such amiable character that he won the esteem and friendship of all his associates. As a shot he rated as a leader. When the club was first organized, about fifteen years ago, it was active in all competition, and it furnished a team for many matches. Its regular team members were Messrs. Frank Hall, captain; G. S. McAlpin, H. R. Goesser, A. B. Gladwin, J. M. Baker, John H. Sloan (substitute) and J. Remsen Beam. The latter was acknowledged to be one of the best shots of the State. Of late years, owing to ill health, he has given up participation in matters pertaining to shooting.

The programme of the shoots under the auspices of the Kentucky Gun Club, at Louisville, Ky., Oct. 12-14, can now be obtained of the secretary, Emile Pragoff, Louisville. The latter desires that shooters will inform him of their intention to be present, so that a sufficient number of pigeons will be secured for the handicap. Special rates to shooters at the headquarters hotel, the Galt House. On the first day there are twelve target events, four at 10 targets, $1 entrance; eight at 15 targets, $1.50. On the second day there is one event at 7 live birds, $3 entrance, birds extra; high guns. The second event is the Kentucky handicap, 15 live birds, $10 entrance, birds extra; purses divided among the four high guns, 40, 30, 20 and 10 per cent.; handicaps 25 to 30yds. On Oct. 14 is the Kentucky State championship, open to residents of Kentucky only; 25 live birds, $10 entrance, birds extra; for championship of the State and solid silver cup, which becomes the absolute property of the winner. This event will be class shooting; purses divided 35, 25, 20 and 10 per cent., and 10 per cent. to the club. Shooting commences at 9 o'clock each day.

Under date of Sept. 22 Miskay, with that delicacy of sterling ladylike character for which she is esteemed by all, enters a disclaimer to the high scores credited to her in the report of the Worcester Sportsmen's Club tournament, published in our issue of last week. She says: "I was present at neither shoot. The score in all its pristine glory and strength, should sufficiently attest to the unreliability of performance, but I feel it necessary to more surely negative my agency in the matter." We regret the error, but we cannot agree for a moment that the score is beyond the compass of Miskay's skill. We have a recollection in particular of the Interstate tournament at Haverhill, Mass., last year, where, on the second day, she scored an even 90 per cent., and in a field of forty-two shooters on that day she was beaten only by three by a narrow margin, as follows: Banks .923 per cent., Fanning and Dickey, each .912 per cent., and Miskay came next with an even 90 per cent. On reference to the copy we found that the name was Dickey.

In the conteest for the E C cup and the championship of the State of New Jersey, which appertains to it, Mr. Harold Money, the holder, defended it successfully against Mr. Chris Wright, challenger, by the score of 45 to 44, at Ridgewood, N. J., on Saturday of last week. There was quite a crowd present to witness the contest. After the conclusion of the race, Mr. C. W. Feigenspan, of Newark, N. J., challenged, and his challenge had an immediate acceptance. Morfey's grounds, at Lyndhurst, N. J., were fixed upon as the place, but the date was left over for future determination.

The grounds of the Interstate Park Association are progressing with astonishing expedition in the preliminary work. The grass, newly sown, is springing up thriftily on over half of it, giving it a most delicate green tinge, while the grass seed is sown in a large part of the remainder. There was on Friday of last week but two or three days' more work required to finish the taking away of crops, the plowing and sowing of the ground, and then all the preliminary work of that kind would be finished. With all the crops removed, the level stretch, free from all trees or obstructions of any kind, is a sight to fill the heart of any trapshooter with delight. Outlying on every side are the homes of thrifty farmers and townspeople, and noble trees, among which the homes nestle and which adorn also other parts of the landscape, give a most pleasing and picturesque setting to the grounds. Work on the fences and buildings will begin in the near future. The safety of the investment, with the special advantages which are offered in the way of interest, has brought out a most gratifying financial support.

The Junction Park Gun Club's programme for its one-day live-pigeon tournament, with optional sweepstakes, is fixed for Sept. 30. The shooting and handicap committee are Messrs. F. L. Williams, chairman; H. W. Nair, J. M. Aiken, Geo. E. Woodruff and W. M. Boyle, with Mr. W. J. Mac Crickart assistant. Shooting commences at 10 o'clock. Pigeons 25 cents. Lunch served on the grounds. Take Rochester & Beaver Falls Electric Company's cars direct to the grounds. The programme is as follows: Junction Park Club Introductory, 5 pigeons, $3 entrance, all at 28yds. rise; four high guns. Geo. E. Woodruff sweepstake, 7 birds, $5; all at 30yds., four high guns. Club challenge cup handicap, 15 birds, $7 entrance, 25 to 33yds. rise, four high guns. Bogardus sweepstake, 3 double rises, $3, all at 25yds, four high guns. Consolation handicap, 7 birds, $5 entrance; winners of money handicapped from 1 to 2yds. extra; four high guns. Miss-and-out, $1, birds extra; all at 28yds. rise. Miss-and-out, $1, birds extra; consolation handicap.

The trapshooters of Kentucky should repudiate the article which appeared in a Richmond, Ky., newspaper under date of Sept. 20, in so far as it relates to the killing of swallows from the traps. It states: "The sport was to be varied, clay pigeons, live swallows and live pigeons, all to the number of 2,000 or 3,000 having been generously provided," etc., and then relates how the swallows were shot. Section 8 of the Kentucky game laws, which any shooter can find on reference to the Game Laws in Brief and Woodcraft Magazine, enjoins that no person shall at any time kill any thrush, meadowlark, finch, martin, swallow, woodpecker, flicker, oriole, redbird, tanager, catbird, bluebird, or other song or insectivorous bird, except where the same shall be destructive to the fruit or grain crops. We prefer to believe that the press account of the shoot is erroneous.

There will be a live-bird and target shoot at Alexandria, La., on Oct. 24 and 25, under the auspices of the Alexandria Rod and Gun Club, in connection with the Rapides Fair and Racing Association, Limited. The management sets forth the deplorable announcement and more deplorable apathy in respect to sportsmanship in the following: "The Association desires this shoot to be one that will be long remembered in sporting circles, and will endeavor to furnish quail for the live-bird events, and hopes to secure a sufficient number of quail for a very large crowd; in case of failure to get sufficient quail, will use live pigeons."

At John Parker's tournament, on the first day, Sept. 19, Crosby was first with .926 per cent., 162 breaks out of 175 targets shot at. On the second day Heikes was first with 142 out of 150 targets shot at, .946 per cent., while Crosby was only 1 behind this score. On the third day Gilbert was first with a score of 166 out of 175 shot at, an average of .948 per cent. In the totals for the three days Crosby was first with an average of .934, Gilbert second with .916, Heikes third with .908; McMurchy .891, Budd .888.

Under date of Sept. 20 Mr. Horatio Nelson, Dover Plains, New York, writes us as follows: "The Pawling Rod and Gun Club was unable to get grounds suitable for live birds, and we were compelled to fall back on targets for both days, Oct. 6 and 7; but I am happy to say that the club is taking steps to procure grounds near the station which will enable them to fit out for both live birds and targets. Then we propose giving a house warming to our friends which will be worth their while to attend."

Mr. A. R. Berry, assistant secretary to the Smokeless Powder & Ammunition Company, of London, Eng., arrived in New York on Friday evening last, Sept. 22. Mr. Berry has been for the past few weeks in the Dominion of Canada, having crossed the Atlantic to look after his company's interests during the annual meeting of the Dominion Rifle Association. He is now on his way back to England, but intends to stay long enough in this city to see Dewey and take in the first race of the series between the Columbia and the Shamrock.

The Carteret Gun Club, of Garden City, L. I., has bought the team of retrievers which was in use at Elkwood Park, Long Branch, when the historic grounds there devoted to the sport of trapshooting were given up for other purposes. The Interstate Park Association, with its many advantages and assured success, no doubt had much to do with the abandonment of trapshooting at Elkwood Park.

While we concede to no man a greater admiration for Admiral Dewey than we possess, for he is of the best stuff of which heroes are made—and his deeds bear this statement out—we are sure that he could get on a pigeon match with any pigeon shooter about New York, 100 birds, $100, 30yds. rise, if he will use the 13in. guns which created so much havoc at Manila. Sir use the 13in. guns which created so much havoc at Manila.

Mr. John S. Wright, the efficient manager of the Brooklyn Gun Club, has decided to offer a fine prize of some kind, probably a diamond of $50 value, to be set in any form which pleases the fancy of the shooter who is so fortunate as to win it. It is to be competed for by the shooters within a radius of twenty-five miles of his club grounds as a center, and to have a handicap qualification in the series of contests which will be arranged for its competition.

We learn that Mr. C. McL. Clark (Chase), of St. Louis, Mo., arrived in New York on Monday of this week, and will remain in this hamlet till after the Dewey celebration and the yacht races. Incidentally, he has brought his shotgun along, and will do some shooting before he departs for the West. He has been doing some shooting of late which ranks as high class amateur performance.

Keep in mind the shoot of the Pawling Gun Club, Pawling, N. Y., on Oct. 6 and 7. The Brooklyn Gun Club has promised to send a large delegation thitherward on the evening before the shoot. There is every indication that it will be a great success. Whoever attends will be assured of a good shoot and a pleasant time.

In the contest for the cast iron car wheel between Messrs. J. A. R. Elliott and C. Zwerlein, at Yardville, N. J., Sept. 21, the former won by the score of 95 to 81, one less than the record of the grounds, 96, held by Capt. A. W. Money. Elliott let his first bird get off the reservation, and then shot in great form to the finish.

Mr. L. Harrison, of Minneapolis, was in evidence in the gun district last week, and mentioned that he would be an active participant in the shooting events about New York in the near future. This will be pleasing information to all the shooters about New York, for there is no one more popular.

A very fine lot of newly imported guns, works of art in design and fine finish, with a "balance" so nicely determined that the most fastidious cannot be otherwise than pleased, is one of the many attractions to be now seen at the great store of Messrs. Schoverling, Daly & Gales, 302 Broadway.

The Fowler Gun Wad Co., of Moodus, Conn., sets forth in our advertising columns the advantages of its line of gun wads, which our readers would do well to read.

BERNARD WATERS.

IN NEW JERSEY.

New Jersey State Championship.

Sept. 23.—The contest for the E C cup, emblematic of the championship of the State of New Jersey, attracted quite a gathering of spectators to witness it. The weather was exceedingly pleasant and favorable for good scores, the light being good and no wind blowing to cause interference with saucers. On the whole, the targets were rather easy to negotiate, and while the scores made in the contest are good they are not remarkably high. The match was shot just outside of Ridgewood, N. J. Mr. Harold B. Money was the holder of the cup, Mr. Chris Wright the challenger. The race was close, Mr. Money winning by 1 target—45 to 44.

Mr. C. W. Feigenspan, of Newark, N. J., challenged the winner when the contest was concluded, and Morley's grounds at Lyndhurst, N. J., were fixed upon as the place for the next contest.

A number of sweepstakes were shot before the race began.

Mr. Edward Banks was trap puller. Mr. C. W. Dudley was judge for Harold B. Money; Mr. Arthur Bunn filled the like office for Mr. Chris Wright, and Mr. Geo. H. Piercy was referee. The scores:

C Wright	1111111110111111111010101	21
	1111111111110110111111111	23—44

	1101111101111101111111111	22—45

ON LONG ISLAND.

Brookly nGun Club.

Sept. 23. The event of the day was the third contest of the series for the free entry in the Grand American Handicap. Five scored the limit, namely: Dr. Webber, R. Woods, Tuttle, G. Remsen and Smith. Lane was the only one who scored 49. The weather was pleasant and favorable for good scores. The handicap event was No. 4 of the programme, and the scores follow:

F A Thompson	1110111010111111111111101	21
	0111111111110111110101110	20— 5—46

Pawling Rod and Gun Club.

PAWLING, N. Y., Sept. 24.—Herewith are the scores of our monthly shoot, which we held yesterday instead of the 29th on account of Dewey Day.

It was a perfect day for targets—no wind and good light. The attendance was not what it should have been, but I can't blame the boys for wanting a crack at the "real thing" instead of asphalts. We are preparing a royal welcome for all who attend our shoot on Oct. 6 and 7, and only regret that we are compelled to disappoint some by making a change from live birds to targets on the second day. However, we hope to entertain our friends on new, well-appointed grounds, where we can have live birds as well as targets without let or hindrance.

Club cup, 50 targets, 50 cents entrance:

		Points.
Tallman, 2	0110111111110111111111110—21

WESTERN TRAPS.

Chicago Shooting Park.

CHICAGO, Ill., Sept. 23.—The movement for a big Chicago shooting park is so far along that it may now be said to be a certainty that the park will be established. There are ninety shares sold at $100 each, of which more than three-fourths were taken up by parties resident outside of Chicago. The rest of the first 100 shares are so certain to be taken that arrangements are quietly going on for the securing of the grounds, it being considered that $10,000 will insure the project of fulfillment.

The grounds chosen for this park are located at Burnside, within a quarter of a mile of Watson's Park, a little nearer to the station and on the east side of the railway tracks, on the high knoll which rises up from the flat meadow, just across from the station of Burnside. There could not be a better site found around Chicago than this one, and it is understood that it can be leased or bought of the railroad, the Illinois Central, the idea now being to lease. John Watson has taken three shares of the stock, or rather he and his sons have done so, only one share being allowed to any one individual. It is thought that the local management will be offered to him. A meeting of the stockholders of the park project will be called for an early date, perhaps next week, after which the public part of the work will be begun. There is talk of golf and that sort of thing at or near the new park, where there is considerable open country.

Garfield of Chicago.

There were sixteen members and one visitor at Garfield Club grounds this afternoon, the visitor being Mr. F. Clark, of Marshall Field's wholesale house, this city, who shot in with the others as a novice in the game. The weather to-day was warm enough to be pleasant, and very much better than it was yesterday in the rain and mud. The wind was very light and the targets flew well, though a heavy smoke bank toward the city made the background none of the best. Four ladies came out to see the fun to-day, among these Mrs. Shaw, who as usual acquitted herself well at the score. This is the closing month of the target work in Garfield Club, and there will be only two more shoots. On Oct. 14 the club will begin its regular series of live-bird shoots, which will be kept up, alternating weeks, all through the winter season. This standard club was never in better condition for either summer or winter work.

It appears that Dr. Shaw has put his lasso permanently on the high season average medal, Class A. In his ten qualifying shoots he has run respectively 22, 22, 22, 23, 23, 23, 23, 24, 24, 25, or 231 out of 250—92 2-5 per cent.

To-day in the Class A medal shooting, Dr. Shaw, R. Kuss and C. P. Richards were tied on 22. They shot at 25 birds in the tie, and Richards retiring at the 15 hole with 14, Dr. Shaw went out with 23 in the tie. Mr. Kuss went into a trance and broke 25 straight, winning the pretty trophy for the week. In Class B Dr. J. W. Meek, the big and good-natured secretary, won with 19. In Class C Hellman won with 19. Following are the scores of the day:

Trophy shoot:

Dr Shaw	1111111111011111101101111—22

Audubon of Chicago.

Audubon Club, of Chicago, held its regular monthly medal contest this week at Watson's, the field consisting of H. B. Foss and J. Amberg, H. Levi shooting as a visitor. In a little practice scoring Amberg killed 9 and Foss 8, but in the medal contest Foss led out and retired 3 birds to the better of his opponent. Both stood at 30yds., Foss having 2 birds handicap and Amberg 1. The wind was strong, and the birds followed it briskly to the right quarter.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Eureka Gun Club.

CHICAGO, Sept. 23.—This was almost a perfect day for target shooting—no wind and fair light. In the trophy shoot Steck won Class A, R. B. Mack won Class C, Mrs. Carson won Class D. Mr. Lovell did the best shooting, for him, of the season, scoring 23 in the trophy, and winning the Mussey cup on 23 out of 31.

In the team race the scores were:

Ed Steck 13, Dunbar 12, Mrs. Carson 12; total 37.

Cunnyngham 17, Lovell 14, J. L. Jones 11; total 42.

Trophy contest, 25 targets:

R B Mack	1111111111000111111001101—19

Monett Gun Club.

MONETT, Mo., Sept. 15.—The first target tournament of the Monett Gun Club, held at the Driving Park in Monett, Aug. 24, proved a decided success. Visiting shooters from St. Louis, Springfield, Billings, Marionville, Verona, Stott City, Carthage and Fort Smith took part in the affair and kindly overlooked the little annoyances inseparable from a first shoot.

A jollier, better natured crowd of shooters never faced the traps. Messrs. J. M. Blythe, of the Simmons Hardware Co., and Herbert Taylor, of the Du Pont and Hazard Powder companies, were present and aided the management materially. The shooters of Monett feel very kindly toward these gentlemen.

The dinner served on the grounds by the ladies of the Episcopal Church was a most enjoyable feature of the day. A magautrap was used, and barring some trouble from loose connection in the wires worked well. The Rose system of division governed. Eight events, $5 added to each, was the programme. Scores herewith:

Events:	1	2	3	4	5	6	7	8

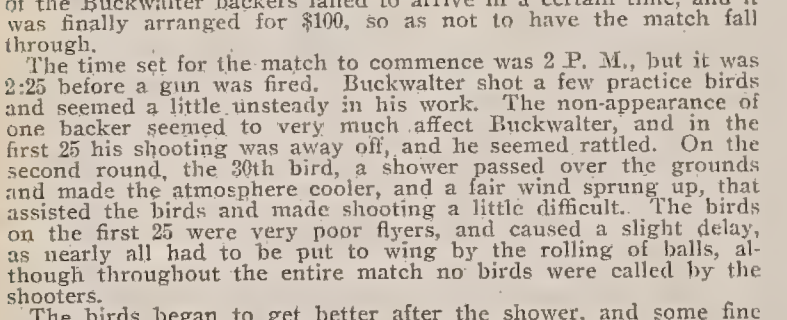
Elliott—Buckwalter Match.

PHILADELPHIA, Pa., Sept. 19.—Harry E. Buckwalter, of Royerford, Pa., recently issued an open challenge to shoot a live-bird match, 100 live birds, for $100 or $200 a side, with James A. R. Elliott, of Kansas City, Mo., who is at present in the East, preferred, with a clause that the match must be shot on the Keystone League grounds, at Holmesburg, Philadelphia, Pa.

Mr. Elliott, who had been spending a week on the Elliott farm in Maryland, at once accepted, and to-day these two well-known wingshots met in a live-bird match for $100 a side and loser to pay expenses of the birds.

The match really was to have been for $200 a side, but one of the Buckwalter backers failed to arrive in a certain time, and it was finally arranged for $100, so as not to have the match fall through.

The time set for the match to commence was 2 P. M., but it was 2:25 before a gun was fired. Buckwalter shot a few practice birds and seemed a little unsteady in his work. The non-appearance of one backer seemed to very much affect Buckwalter, and in the first 25 his shooting was away off, and he seemed rattled. On the second round, the 30th bird, a shower passed over the grounds and made the atmosphere cooler, and a fair wind sprung up, that assisted the birds and made shooting a little difficult. The birds on the first 25 were very poor flyers, and caused a slight delay, as nearly all had to be put to wing by the rolling of balls, although throughout the entire match no birds were called by the shooters.



The birds began to get better after the shower, and some fine shooting was done by both men. The birds on the average were a fair lot.

Capt. A. W. Money, of New York, officiated as referee. In all Buckwalter had 4 dead out of bounds and Elliott 2, while Capt. Money called 3 "no birds" on Buckwalter and 2 on Elliott.

Buckwalter used a Parker gun and U. M. C. Smokeless shells loaded with 3¼-3½ Dupont, 1¼oz. No. 7 shot. Elliott used a Winchester "take-down" gun, with factory-loaded Leader shells, with 45 grains of Hazard Blue Ribbon, 1¼oz. No. 7 chilled shot.

The scores follow:

Trap score type—Copyright, 1899, by Forest and Stream Pub. Co.

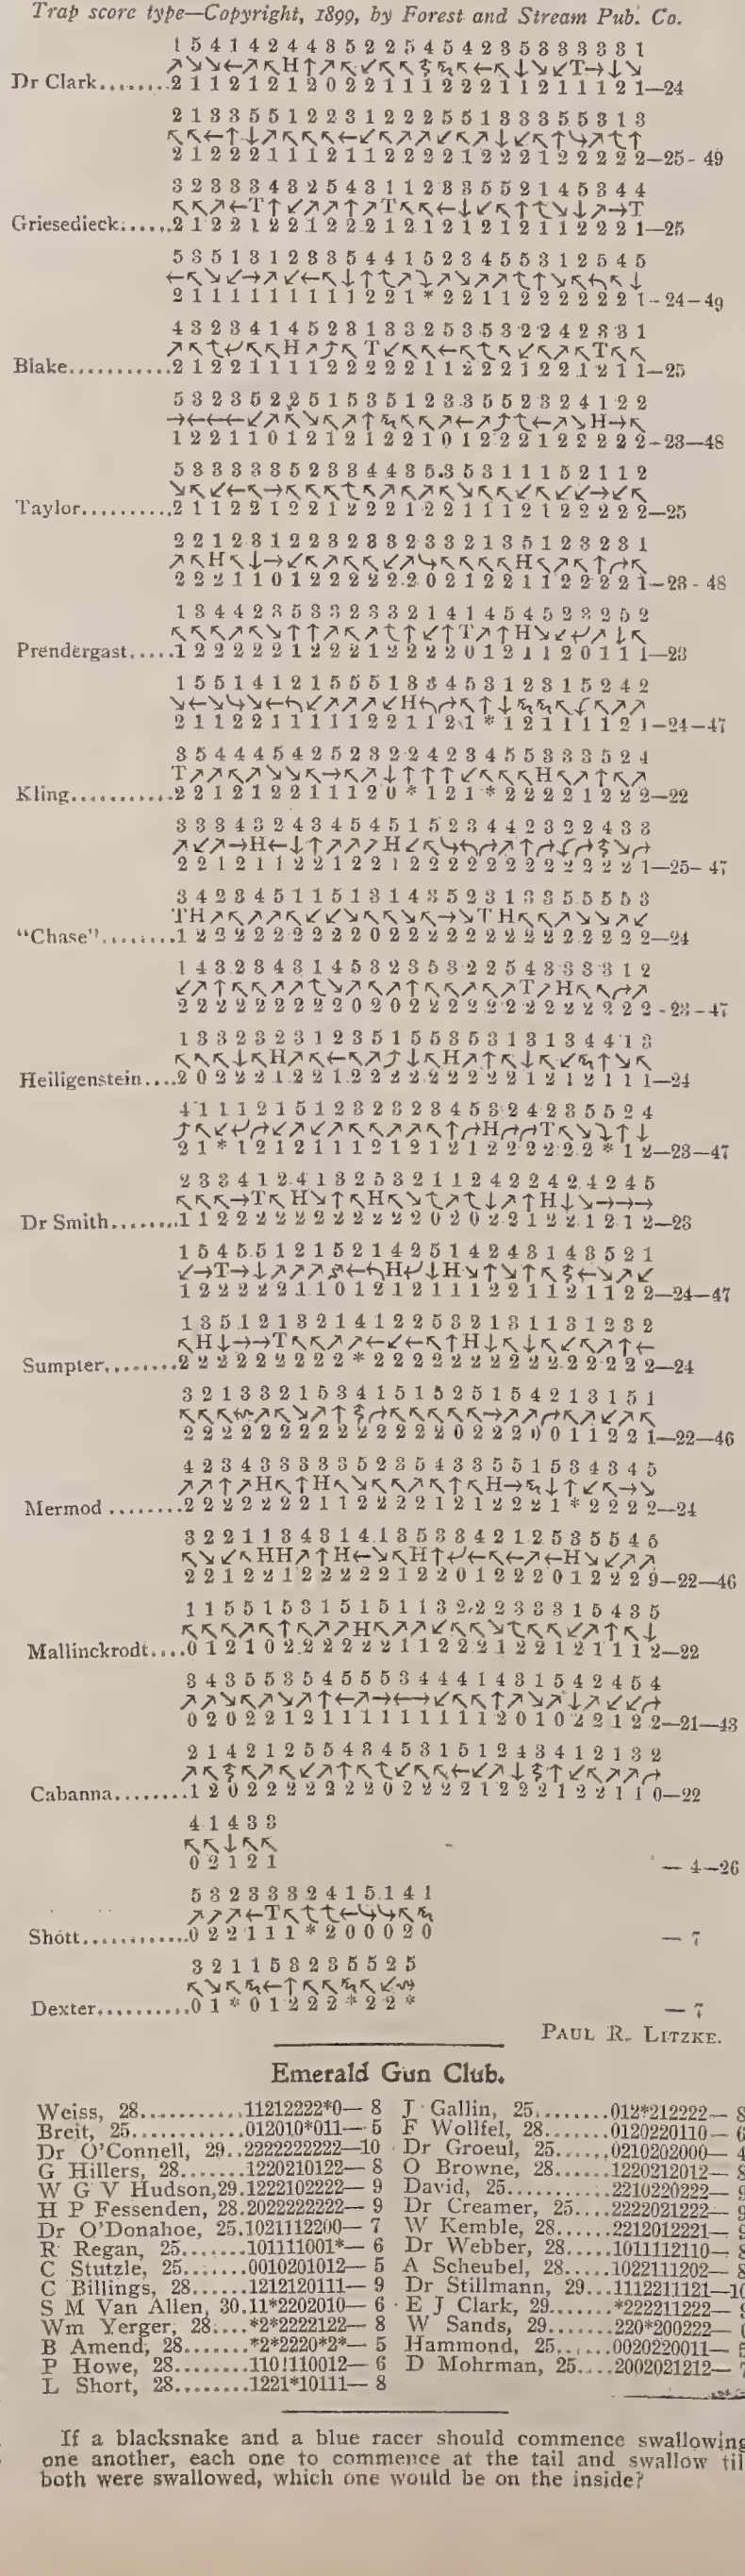
St. Louis Doings.

ST. LOUIS, Mo., Sept. 17.—The largest affair in the nature of a live-bird shoot which was purely of a local character was concluded here to-day and clearly demonstrates that St. Louis can muster its quota of shooters who are willing to hazard a good sum of money in a contest of majestic proportions. This is just what the event of to-day must be termed, for it seldom occurs that any city can show fifteen entries in a 50-bird shoot where there are to be but three moneys, and such were the conditions of to-day's events. The entrance was $25, birds included, three moneys—50, 30 and 20 per cent.—class shooting, birds 20 cents apiece.

The contest was scheduled to begin at 1 P. M., but it was all of 2:30 before the first man was called to the score, so dilatory were the principals in putting in an appearance. Under the circumstances it was impossible to finish the event, and therefore it had to be carried over to the following day.

When operations were suspended, each contestant had shot at 30 birds, with the exception of Shott and Dexter, who withdrew, as they concluded there was no chance of them finishing in the money. Of the others who were still in the race, Griesedieck, Collins and Taylor had straight scores, while Dr. Burnett, Mermod, Sumpter and Chase had lost but 1. Prendergast, Dr. Smith and Heiligenstein had dropped 2, Kling 3 and Cabanna and Mallinckrodt had lost 4 and 5 respectively.

The finish on the final day changed matters somewhat, for all of the straight men met with reverses and only one of them—Griesedieck—finished in first money. This shooter failed to go straight only by the hardest kind of luck, for the bird he lost apparently had all the life knocked out of it, but by a final effort it revived and through stupidity on the part of the boy it was permitted to struggle over the dead line before it collapsed. The shooting of Griesedieck was clean and timely, and at all times he appeared to have perfect control of himself. In his present form he is well nigh invincible, and those who are at present matched with him will realize this before they have successfully disposed of him. His average on the last 500 birds must be a trifle over 97 per cent.



Dr. Burnett, who shared first money with Griesedieck, proved the dark horse and the surprise of the race, as he remarked prior to the event that he was going to participate simply to get the experience a race of this character would develop. In this instance it proved a very lucrative and pleasing experience, as he had the satisfaction to show his heels to shooters of much larger experience, as the Doctor's trapshooting career dates back scarcely six months.

The showing of Collins was very gratifying to every one interested, as it was entirely through his efforts that the event came about. He shot in snappy style on the first day, but on the second showed very ragged form, though the first bird that he lost was one of the best trapped. The 2 birds that Taylor lost were very ordinary ones, and should have easily been killed, though again some others that he scored had practically a license to escape.

First money amounted to $112.50. Thus Griesedieck and Dr. Burnett received $56.25. Second money was $67.50 and netted Collins and Taylor $33.75. Third money was $45, and thereby Prendergast, Kling, Chase, Dr. Smith and Heiligenstein each received $9. Altogether nine of the fifteen entries shared in a division of the purse. The birds were only an ordinary lot, so that but now and then an occasional one showed activity or vigor. The weather conditions were not favorable to them, and they were thrown on their own resources to outwit the shooter.

A. D. Mermod, of Cañon City, Colo., and Christ. Heiligenstein, of Freeburg, Ill., were the out-of-town principals engaged.

If a blacksnake and a blue racer should commence swallowing one another, each one to commence at the tail and swallow till both were swallowed, which one would be on the inside?

Trenton Trap.

TRENTON, N. J., Sept. 21.—The Walsrode Gun Club's shoot at Hutchinson's Mills yesterday proved an event of exceptional interest. The electric trap, from which all birds were thrown, proved to be much superior to the ordinary devices.

Widmann won the gold badge with 15 strong. Woolverton won the silver badge with the same score.

Conditions: Unknown angles, 30 targets per man, first 15 for place; those breaking 10 qualified for the first class, those breaking less than that number shot for the silver medal. The scores follow:

Practice, 10 birds:

Taylor	0000001101— 3	Petitt	0111010110— 6
Woolverton	0011111111— 8	Mickel	1110111111— 9

GEORGE N. THOMAS, Sec'y.

Trap Around Reading.

READING, Pa., Sept. 16.—At the seventeenth target shoot of a series of twenty for a fine Parker gun on the grounds of the Mt. Penn Gun Club, of this city, shot to-day, Gilbert won by a total score of 25. The conditions were 25 targets per man, with added targets to the number broke as a handicap. The score follows: Yeager, scratch, 18; Ball, scratch, 16; Gilbert, handicap 7, 25; Rhoads, scratch, 19; Lawrence, scratch, 15.

Sept. 21.—The eighteenth and last of the series of shoots for the gun was shot to-day on the Mt. Penn Gun Club's grounds, this city. Alfred B. Yeager won the gun, although only eighteen shoots were held, as Yeager had too large a lead over the other entries. In all twenty shoots were to be held, but as the result is already decided these events will be discontinued. The score of to-day's events is: Yeager, handicap 6, 25; Dietrich, scratch, 22; Gilbert, scratch, 18; Rhoades, handicap 6, 22; Lawrence, scratch, 18; Ball, handicap, 5, 24; Osberne, scratch, 20.

The averages of the shooters in the eighteen contests follow: Alfred B. Yeager 88, George Rhoads, 85½, Harry Ball 84½, Cyrus Coleman 83 2-3, Charles Dietrich 83, Archibald Lawrence 82, Harry Gilbert 81½, Joseph Osberne 81, Abner S. Laird 76, William Hunsberger 73, Frank Boyle 52.

West Chester, Pa., Sept. 23.—Gill to-day won the challenge cup of the West Chester Gun Club, of this place, by breaking 23 out of 25 targets. The score: Gill 23, Peters 20, Henry 20, Hoar 19, Davis 19, Monere 18, Charles 17, Hooper 13, Jackson 13.

Sinking Spring, Pa., Sept. 23.—The sweepstake target shoot of the Independent Gun Club, of this place, held to-day at Hainly's Hotel, was a grand success. A number of out-of-town shooters were present, among them Brey, of Zionsville; Sullivan, of Harrisburg; Showalter, of Pottstown; Miller, of Phœnixville; Shaaber, Dietrich, Goodman, Yeager, Ball, of Reading, and Wertz, of Temple. Arthur A. Fink, of Reading, managed the shoot. The scores follow:

DUSTER.

Fort Smith Gun Club

FORT SMITH, Ark. Sept. 16.—The regular weekly shoot of the Fort Smith Gun Club took place at the Fair Grounds Thursday.

There has been no shooting for a week or two past on account of absence of the secretary and other members of the club.

The club had for a guest Mr. Kirkpatrick, an enthusiastic devotee of the sport and a member of the Monett Gun Club, of Monett, Mo. Mr. Kirkpatrick is a new hand at the game, but handles a gun and conducts himself like an old-timer. He promises to bring down a good delegation to the regular tenth annual tournament of the Arkansas State Sportsmen's Association to be held at Fort Smith some time next July. He and other visiting sportsmen to said tournament will find that the Arkansas boys shoot for fun all the time. The money is a side issue.

Mr. Frank Coffey was the bright particular star of the occasion, and if his shells had not given out he would probably have broken Charlie Young's record of 211 straight. Frank broke 15 straight in the last event and was running all over the ground trying to get shells so that he could keep on until he missed, but unfortunately all the ammunition had been exhausted and another opportunity to break the world's record was lost forever.

The shooting on the whole was very yellow. Strange guns and No. 6s and 4s play the wild with averages.

There will be one more shoot at the grounds on next Saturday, which will terminate the trapshooting for the season in this city. Fall has come and ushered in new business cares, and the festive quail, prairie chicken and duck must have some little attention.

Following are the scores. Event No. 1 is 25 birds for the medals. The others are sweeps of 15 and 10 birds respectively. Coffey and Matthews tied on average, both breaking 76 per cent.; but as Coffey shot at 90 birds, as against 75 for Matthews, the former is fairly entitled to the honor of the day.

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	25	15	10	15	10	15	10	Targets:	25	15	10	15	10	15	10
Coffey	19	12	7	10	5	15	..	Kirkpatrick	17	11	6	11	7	12	..
Matthews	20	..	..	11	7	11	6	Durden	17	7	6	9	5	..	..
Leach	18	10	7	11	7	10	8	Webber	14	10	5	..	..	..	..
Trobridge	18	..	..	..	..	..	..								

Matthews won Class A, Trobridge Class B medal.

Jack Parker's Tournament.

DETROIT, Mich., Sept. 23.—Jack Parker's eighth annual tournament, to which the Peters Cartridge Company generously added $500 in cash and trophies to the value of $300, was attractive enough to draw a big delegation of shooters from many parts of the United States and Canada. Sportsmen were present from Texas, Arkansas, Tennessee, Kentucky, Missouri, Illinois, Indiana, Iowa, Ohio, Minnesota, Wisconsin, New York, Connecticut, as well as Canada, so that the attendance can well be looked upon as a representative one. Also the caliber and character of the principals were of the highest standard in every respect. Much of this can be attributed to Mr. Parker's large acquaintance and personal popularity, which, if such a thing were possible, will only be enhanced as a result of this tournament.

Mr. Parker always had the reputation of being able to spring on the shooters something new at his tournaments, and the present shoot proved no exception to the rule, while, as on former occasions, it was indeed a difficult game to master by those who were forced to pit their skill against it. Then it inaugurated a style of shooting that should become decidedly popular, and doubtless will be so, as the shooters become more familiar with it. When targets are shot under this system it is possible to watch the shooting with some interest, and that tiresome and monotonous grind, grind is obviated to a marked degree; and doubtless the general public could witness a tournament conducted on these lines with the same interest as they now do ball games. I believe this style of shooting merits additional trial and careful consideration.

This system consists of five traps. Two of them, which are numbered 1 and 2, are placed at the regulation distance, 16yds. rise, while Nos. 3 and 4 are placed directly in front of Nos. 1 and 5 score, though 21yds. away. All of these traps throw outgoing targets. No. 5 trap is set out in the field 45yds. from No. 3 score, and this throws an incomer. The shooter always gets a bird from the trap numbered to correspond with the shooting position he occupies, but all the traps throw unknown angles, though of course the shooter always knows the trap. In case that a target breaks in trapping, the shooter must wait until it has been reloaded, which naturally occasions some delay, though this could be considerably obviated by arranging three traps on the Sergeant system, and having it understood that when the shooter is at either No. 1 or 2 score he will get a bird from either of these traps. Again, when the shooter is at either No. 3 or No. 4 score he could call for a target from the trap that corresponds with his score; but if the target is broken he could at once swing his gun over the other trap, which is the same distance. By this method the breakage would be practically confined to No. 5 trap, and there would be but little delay.

The chief feature of this system is that it diversifies the shooting and also makes it more difficult, thereby requiring a greater amount of skill and developing the shooting to a higher standard, the principal object for which tournaments should be conducted.

The tournament was held on what is known as the Rusch House grounds, where several of the local clubs shoot. Here two sets of traps were in position, one set arranged as above described and the others on the Sergeant system, from which bluerock targets were thrown. The experts shot all but the open events over the five traps, and the amateurs shot most over the Sergeant system traps, though occasionally they were called to shoot an event over the traps arranged for the experts; but then they only shot over the two traps set at 16yds. rise. In this manner the programme was shot out.

The background was fairly good, though to the right of the Sergeant system traps there was an orchard, the trees of which caused the contestants some trouble whenever they drew a target that took that course. The expert shooters, too, had their troubles, and these consisted of a cornfield that was located to the left of their traps. When a target from either No. 3 or No. 5 trap was thrown in this direction it was all the harder to score, as it flew among the stacks of cornstalks.

The live birds were shot in an adpoining field, where a set of Fulford traps were located, though these did not embody the underground system of trapping. These traps, as is usually the case, added not a little to the quality of the birds. There were several small buildings and several large tents with plenty of chairs, so that the contestants were well taken care of.

Mr. Walter Buck was cashier, and handled everything in his department with accuracy and dispatch. He was capable, courteous and obliging. Mr. Paul Weise had assigned to himself the unenviable task of squad hustler and general utility man, and that all for the love of Jack Parker, which of itself is a guarantee that his part of the work was well done. Dinner was served every day at the Rusch House, the proprietor of which is none other than Mr. Jake Kline, a sportsman well known to the shooters of Michigan and adjoining States.

The shooting grounds are quite a way from the city, though they are located by electric cars in about forty minutes' ride.

The trade was strongly represented, there being present at some time during the shoot the following representatives: John J. Hallowell, U. M. C. Company; Ralph Trimble, Winchester Arms Company; W. F. Parker, W. H. Lyon and A. W. du Bray, Parker Gun Company; E. S. Rice, Ed Bingham and Fred Gilbert, Du Pont Powder Company; Mr. Porter, Marlin Arms Company; Harvey McMurchy, Hunter Arms Company; Jack Fanning, Gold Dust Powder Company; Paul North, Chamberlin Target Company; R. O. Heikes, U. M. C. Company and American E. C. & Schultze Powder Company; Herman Hirschy, Hazard Powder Company; W. R. Crosby, Baker Gun Company; Col. A. G. Courtney, Remington Arms Company; Chas. Budd, U. M. C. Company, Hazard Powder Company and Parker Gun; John H. Mackie, Fred Tuttle, Harry King, Milt Lindsley, Frank See and Jack Parker, all of the Peters Cartridge and King Powder Company; D. M. Lefever, Lefever Arms Company.

Other visiting shooters were Dr. A. W. Williams, Hot Springs, Ark.; Chas. McL. Clark (Chase), St. Louis, Mo.; W. R. Elliston, Nashville, Tenn.; W. H. Haggard, Dallas, Tex.; A. D. Mumma, Dayton, O.; Tom Donly, St. Thomas, Can.; W. Schuler, Cincinnati, O.; J. Chamberlin, Dundee, Mich.; S. B. Kitchel, Coldwater, Mich.; W. R. Smith, Jackson, Mich.; H. Waruf, Kalamazoo, Mich.; W. J. Smith, Huntington, Ind.; Andy Lockie, Manteno, Ill.; C. D. Moon (Kid), J. A. Smith (Blossom) and Dan R. Scammon (Yank), Eau Claire, Wis.; D. Carpenter, Battle Creek, Mich.; S. A. Crowell, Hastings, Mich.; Kit Shepardson, La Grange, Ind.; Mr. Ayers, Hartford City, Ind.; C. J. Dalley, Baldwinsville, N. Y.; H. R. Glass, Napoleon, O.; Dr. R. B. Miller, Chicago, Ill.; Dr. D. A. Allen, A. Heitzman and H. H. Hess, Toledo; H. Sconce, Sidell, Ill.; Mr. Vivian, Columbia, Mo.; Dr. J. E. Gaston and Mr. Rummel, Mineral Ridge, O.

The contest for the Schmelzer cup was abandoned at the request of the shooters present, as it would have had to take place on live-bird day, and none of the shooters present cared to shoot targets on this day.

An effort will be made to have this contest take place at Belle Meade if the sanction of the donor can be obtained.

First Day, Tuesday, Sept. 19.

As in former years, Jack Parker's new game that he sprung on the experts on this occasion proved a most difficult one, and a hard one to solve successfully. This is evidenced by the returns, for in the six events where the crackerjacks were compelled to contest under these new conditions but one straight score was made, and this by McMurchy in the very last event, and then only a 15-bird race. Of the fourteen experts present to-day only one could make 90 per cent. Mr. W. R. Crosby, a gentleman from Batavia, N. Y., with a Baker gun, E. C. powder and Leader shells, is in the van with an average of .926. Gilbert, the Spirit Lake Indian, is second with .891, and McMurchy third, .886. Then comes Blake, who proved to be the best amateur in the bunch, and was largely in the shoot in many ways. In event No. 5, which was for the Individual International target trophy, he was the only one to go straight, which netted him the trophy and $22.20, first money. In this event experts and amateurs were on equal footing, all shooting from the regulation mark. Aside from this, on two other occasions he also landed first money without a divide, so that he was quite a few shekels to the good after his day's work. He has the longest straight run to his credit—something over 50.

Dr. Allen was another of the fortunate, as he made but one straight, but this came at an opportune time, and thereby he was well compensated.

Harry King made the only straight in event No. 2, though on this occasion he was only shooting for birds.

The weather conditions were of a most adverse nature—the light was bad, as it was cloudy and dark, while there was a gusty wind, that chilled and penetrated, as well as made the targets do many funny things. Toward evening a light rain fell, while it rapidly grew dark, so that it was impossible to finish the programme, and some of the amateurs did not get to shoot Nos. 9 and 10, but shot these the first thing next morning.

Events Nos. 1, 3, 5 and 8 were the open events; in all others the experts were compelled to shoot under entirely new conditions. Fifty-two shooters participated.

Second Day, Wednesday, Sept. 20.

A day's experience with Parker's new system has been very beneficial to the experts, and resulted in a corresponding increase in the averages of this class, so that these approach somewhat nearer their accustomed high mark. The first 20 straight of the tournament under this system was made by Gilbert in event No. 6, and later on this was duplicated by Heikes. Budd developed a great stride along toward the close of the day, as he finished with 56 straight, 35 of which were made on the expert set of traps. To Shepardson, however, belongs the distinction of making the longest consecutive straight run, as he succeeded in gathering 63 in this fashion, 25 of these being made in the team race, which was really event No. 5 on the programme, though not shown in the table, as it is not to be included in the team race. This permits Heikes to head the list with a single break, which is the margin he excels Crosby by, who is second. Sconce is third and is the best amateur of the day. Budd is fourth and McMurchy fifth.

The team race was the feature of the day, and proved to be quite a contest, though it was won by Crosby and Bingham without a tie on 49 out of 50, Bingham dropping 1 bird. Sconce and Blake were second with 48, each scoring the same—24. Shepardson and Trimble are third with 47, which must be attributed to Shepardson's straight. Fourth money went to McMurchy and Heikes and Fanning and Hallowell with 46. Budd and Gilbert got fifth on 45.

There were more shooters present, and the aggregate entry foots up sixty-two, but everything moved along nicely, and the events were promptly disposed of.

The weather continued unfavorable, it being cold and dreary, with a chilling wind, while in the fore part of the day a drizzling rain fell. There were no scoops recorded, and the financial returns were not very large. The only places that paid anything were straights and occasionally a fifth money.

Events Nos. 1, 3 and 7 and the team race were the open events. In the others the experts performed over five traps at varying distances.

Events:	1	2	3	4	5	6	7	8	9	Shot at	Broke.	Av.
Targets:	15	15	20	15	15	20	15	20	15

Fanning	23	Jack Parker	20
Hallowell	23—46	Mackie	16—36
Gilbert	24		
Budd	21—45		

Third Day, Thursday, Sept. 21.

That the acme of America's shooting talent is capable of mastering any system is demonstrated by the scores of to-day, for a glance at these will show that the shooting experts are nearly up to as high a standard as when the conditions are not nearly so difficult. Gilbert was the star performer of the day; he started off with a run of 77 straight, and made clean scores in six of the ten shoots, losing but 9 targets all day and having an average of .948. Rolla Heikes did nearly as well, for he skipped but 10 targets, though singularly enough he got but one straight score, while his average is .942. Crosby is third; he too started well, as he ran 56 straight before he missed one. Kid is fourth, and the only amateur to score 90 per cent., while 25 of to-day's targets were shot over the expert traps by this class.

The individual expert championship trophy proved to be the competition of the day, in which the showing of Kid was much admired. This youngster and that old veteran Heikes tied in this event on a score of 24, and in the shoot-off at the original number of birds the veteran won out by scoring 23 to his opponent's 21. Thus Heikes broke 47 to Kid's 45, a capital score for either, and a creditable piece of shooting. The younger shooter showed plenty of pluck and nerve in the shoot-off, but this style of shooting is not easily mastered, and especially by those who have practiced it but little. This of itself practically assured the success of the elder principal.

Shoot-off of tie between Heikes and Kid for expert trophy:

Heikes .....11110111111111111101111111—23
Kid .....11111111001011111111101111—21

This was the first nice day of the tournament, and the sunshine was very agreeable, while the wind that prevailed affected the flight of the targets but little, so that from a shooter's standpoint the conditions were all that one could ask.

More shooters participated to-day than on either of the previous ones, as there are 64 names on the entry book.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at	Broke.	Av.

General Average.

A purse of $100 was offered as average money, to be divided 30, 25, 20, 15 and 10 per cent., which was won as follows: Crosby first, Gilbert second, Heikes third, McMurchy fourth, and Budd fifth.

Only nine shot through the entire programme, which is rather light, in view of the number of principals who took part. This, however, was brought about by the fact that the live birds were also included, if one wished to get an average.

Thirty-seven live birds constituted the pigeon programme.

	1st Day.	2d Day.	3d Day.	4th Day.	Shot at.	Broke.	Av.

Fourth Day, Friday, Sept. 22—Pigeons.

This, the last day of the tournament, was devoted to live birds exclusively, of which there were four events run off—a 5, a 7, a 10 and a 15. The latter was to have been a 25-bird race, but owing to the lateness of starting it, and the number of entries it became necessary to cut it down to 15 birds in order to finish it that day.

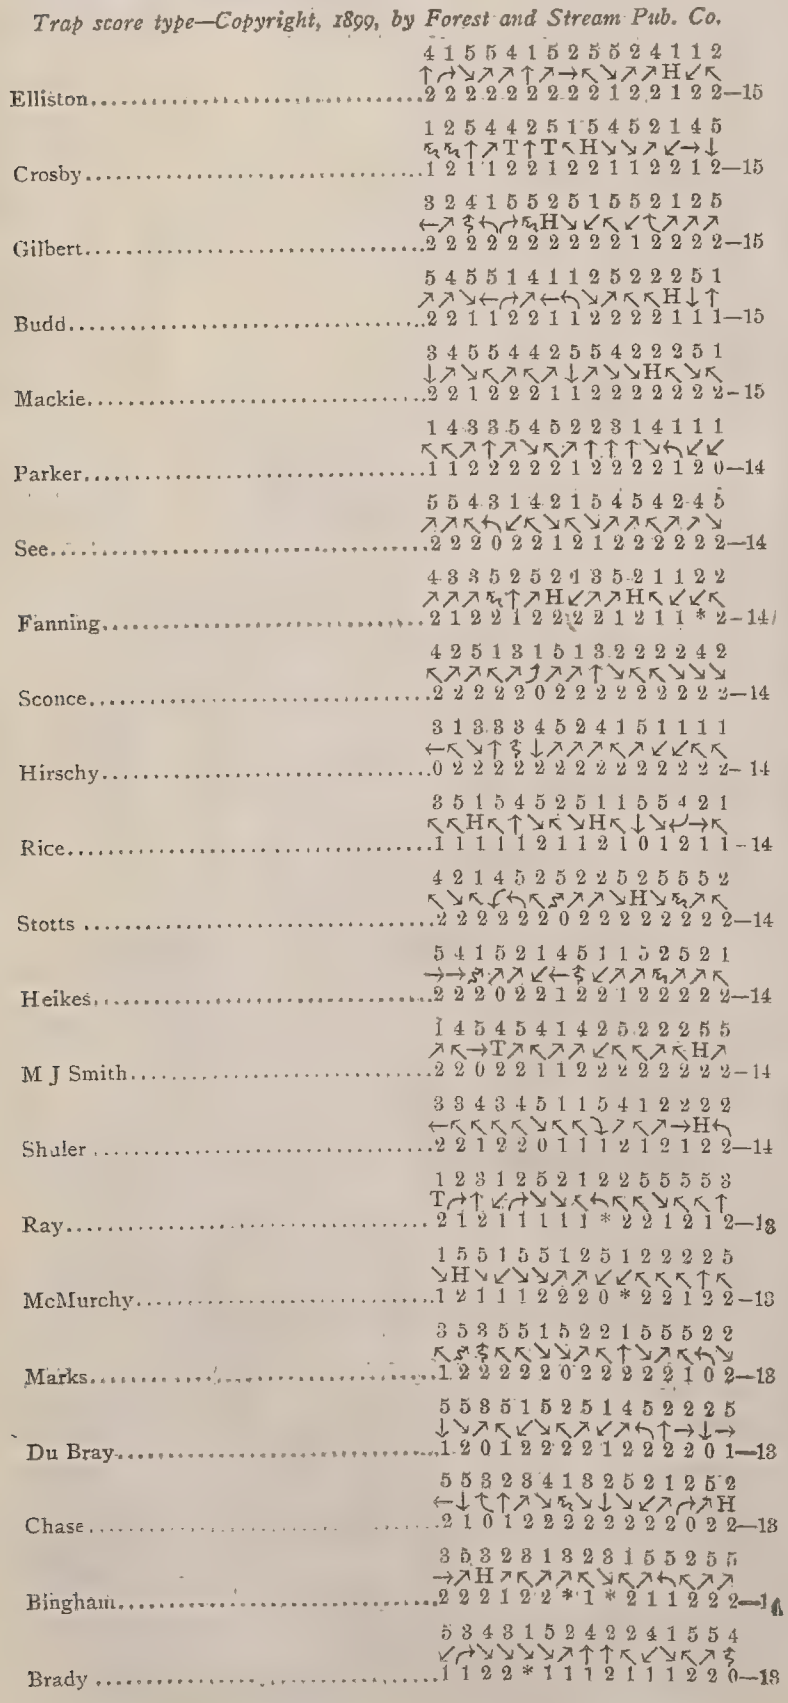
The entrance in this event was $25 and the score sheet showed twenty-eight entries, of which two shot for birds only, and these were not allowed to complete their scores when it became evident that it was impossible to finish the same as originally scheduled. Those who shot for birds only could but win the medal, so after they lost a bird there was nothing to continue for.

At the end of the 15th round it was found that five—Elliston, Crosby, Gilbert, Budd and Mackie—had accounted for all their birds, so they at once began to shoot off for the medal, miss-and-out. It was already quite dark, and really too late to shoot, but the management was determined to reach

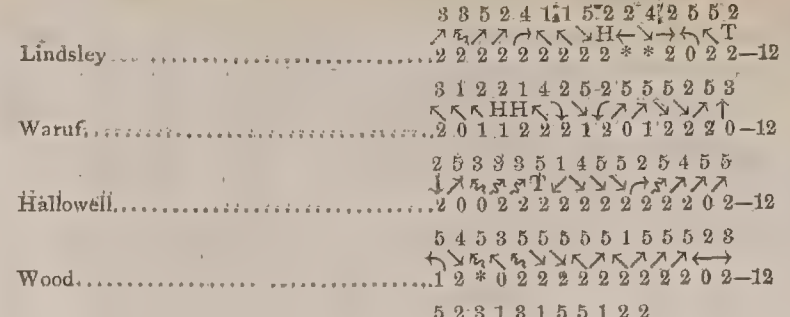
turned and flew toward the shooter, who in the meantime had fired his first barrel; but his second, usually so effective, proved worthless this time, and the big owl of a bird flew away unharmed. Elliston had now only to kill to win; but would he prove equal to the occasion in the darkness, when one could only dimly distinguish the traps? He stepped calmly to the score, and after carefully adjusting his gun, gave the word, "Pull," which liberated a dark bird that started straightaway, flying quite low for some distance; when it gradually rose. During all this time the shooter stood at the score, holding his fire, and when he perceived the bird he squatted low, so as to enable him to more plainly distinguish it against the horizon, and when the same was nearly 60yds. away he fired, at which the bird collapsed, and the victory was won. Thus ended the most remarkable shoot-off that it has been my good fortune to witness.

There was $100 added to this event, so that the purse amounted to considerable. This was to have been divided 30, 25, 20, 15 and 10 per cent., but as 12 was the lowest score this was changed to four moneys, and the following divisions: 32½, 27½, 22½, and 17½ per cent.

There were two sets of traps in operation, one of the Fulford pattern and one of the old style ground trap. The main event was shot over the Fulford traps, while one or two of the sweeps were shot over the other set.



The birds trapped in the trophy contest were good, and there was some wind to aid them, though this did not come from the most favorable direction, as it blew diagonally across the grounds toward the score. The weather was threatening, cold and raw.



The scores made in the sweeps are shown in tabulated form, which also include the main event. Elliston and Crosby scored 59 out of 60 birds shot at during the day. Crosby ran his straight until he lost that one in the shoot-off, while he also lost one in the 7-bird sweep. None of the other shooters shot at as many birds as these two, though Gilbert did nearly as well.

Items Strayed.

Blake, winner of the Peters Cartridge Company's International Individual Target Trophy, is a well-known Indiana shooter, who for obvious reasons does not care to have his real name mentioned in connection with his win. He shot a Smith gun, Smokeless shells and Hazard powder.

Capt. du Bray is still shooting his hammer Parker, and on the second day made a straight score on targets at the expert set of traps. The Captain frankly admits that this is not his forte, but it is evident that you can't keep a good man down. This gun is a marvel for beauty, artistic finish and workmanship, and attracted much attention.

Billy Crosby told me that he had only lost two pigeons out of his last 198, and that he never was in better form. From this he very likely will give a good account of himself in his coming matches with Elliott. His winning of first average at this tournament is the result of consistent performance. In his hands the Baker gun, Leader shells and E. C. powder are a winning combination, and that cannot be withstood.

John Mackie made a most remarkable kill of a pigeon in the championship race. This bird was by far the very best trapped during the entire shoot, and was off like a flash when liberated. The first barrel only brought a puff of feathers from it, but the second killed it stone dead in the air, not far from the straightaway boundary. The shot drew rounds of applause from the spectators. Mackie is developing very fast, and to-day is apt to make any of the experts look to his laurels.

Mr. W. T. Lyon, manager for Parker Brothers, came West on a little trip of recreation and incidentally stopped here for the tournament. Mr. W. F. Parker accompanied him. Mr. Lyon tried his hand at the expert traps, with very satisfactory results.

Milt Lindsley was present on live-bird day, but this is all the time he could spare. So great is the demand for King's Smokeless that it is difficult for him to leave the works.

This was Ralph Trimble's first tournament in some time, and the lack of training was very evident, especially when shooting over the expert traps. Consequently his shooting was not up to its accustomed high standard. Mr. Trimble now represents the Winchester Arms Company in this section of the country.

Harry King is another shooter who shows steady progress, and is now capable of some very good scores. In his very first trial he broke a straight.

Col. Courtney is much elated over Roll Heikes' victory in the expert championship race, as Heikes used a Remington gun, which the Colonel represents.

C. D. Moon (Kid), the youngster from Eau Claire, who tied with Roll Heikes for the expert trophy, did not appear the least bit perturbed in the shoot-off, and bore himself like a seasoned veteran. His score of 45 out of 50 is an excellent piece of shooting under such severe conditions. All of the Eau Claire contingent shot Winchester guns and Leader shells.

The International Championship Contest was first inaugurated in 1891, and since that time there have been nine contests for the trophy, and each has brought out a new winner. In 1891 Louis Duryea won it; in 1892 A. H. King, of Pittsburg, captured it; in 1893 Roll Heikes annexed it. Then in 1894 Richard Merrill showed up as the winner. All these contests took place on Des Chree Shos Ka Island, and were at live birds. After the shooting grounds on the island were abandoned, the tournaments were in Michigan, and it was illegal up to the present time to shoot live birds in this State, so all of the contests had to be on targets. The race was 25 targets, expert rules, five traps, 21yds. rise, unknown angles. The first of these contests took place in 1895, and J. H. Bosthe was the winner. Then in 1896 Thos. W. Latham won it; Tom Graham took it in 1897; Jake Klein in 1898 and in January of this year it was contested for at Tom Donley's shoot in St. Thomas, Can., on pigeons. On this occasion Bob Emslie, the well-known baseball umpire, won it.

In all these contests none of the winners were compelled to shoot so good a score as Elliston, the present winner, did. Dick Merrill came within 3 birds of it, as he scored 35 straight before he could dispose of Jack Parker, who had tied him on 25 straight.

Elliston's great shooting in that nerve-trying championship contest stamps him as one of the very best amateur pigeon shots of the country. His self-control and great judgment are mainly responsible for his victory. In this race he shot a Greener gun, Trap shells and Du Pont powder.

Paul North was present only for a day. The enormous demand for magautraps and bluerocks precluded the possibility of his staying any longer.

Fred Gilbert rounded to on the last day, and the stride he set for the others was just too rapid for them to maintain, though Pop Heikes came within 1 of it.

Mr. E. S. Rice reports nice progress on the projected Chicago shooting park, and that ere long the site selected would be made public.

A large delegation of visiting and local shooters accepted Mr. Jack Parker's invitation for a trip to St. Claire Flats on the steam yacht Roberta. This was a fitting finale to the great shoot.

Mr. Harvey Sconce, of Sidell, Ill., showed that he is capable of traveling in fast company. He finished just 4 birds behind Charley Budd, who won fifth in general average. Sconce shoots a Parker Gun, King's Smokeless and Peters' Victor shells.

Jack Fanning was singularly unfortunate at this shoot. He was just a bird or two shy in all the trophy contests, and on several occasions lost his last bird. This is not Jack's form, and ere long he will be at himself once more.

The moneys in the big live-bird event paid as follows: 15s, $42.40; 14s, $16.30; 13s, $24.45, and 12s, $28.50—another most forcible illustration of the working of the percentage system. Most of the 14-men were aware that by killing their last birds they were depriving themselves of dollars and cents; yet none of them was unscrupulous enough to drop a bird, nor did any of the other principals resort to this trick. The temptation was very great for some one to go in the 11 hole, which would have netted $65, as there were to be five moneys in this event, but as there were only four classes it had to be changed accordingly.

Uncle Dan Lefever wanted to mingle with the boys once. He says it is hard to realize that one is getting old. However, the old man is by no means a "has been," and as yet is quite handy with the gun.

Of course Harvey McMurchy was on hand, as he has never yet missed one of Jack Parker's shoots. Mac says that he is not out for business, as their factory is now simply taxed beyond its capacity.

Mr. Fred Tuttle, treasurer of the Peters Cartridge and King Powder Company, was on hand during the entire shoot. This is Mr. Tuttle's first tournament, as never before has he attended a modern shoot. He participated some, and did fairly well for a novice. Mr. Tuttle created a most favorable impression among the shooters.

PAUL R. LITZKE.

Elliott vs. Zwerlein.

SEPT. 21.—Mr. J. A. R. Elliott again successfully defended the cast iron trophy in the contest with Mr. Charles Zwerlein, on the grounds of the latter to-day at Yardville, N. J. The morning was very unpropitious in respect to weather conditions. A heavily darkly clouded sky, with more or less rainfall, made promise of a rainy, gloomy day, but before noon the rain clouds passed away and the sun broke forth bright and cheery. However, the large crowd which was expected was effectually deterred from coming although there was a good representation from Philadelphia and a good local turnout to witness the contest.

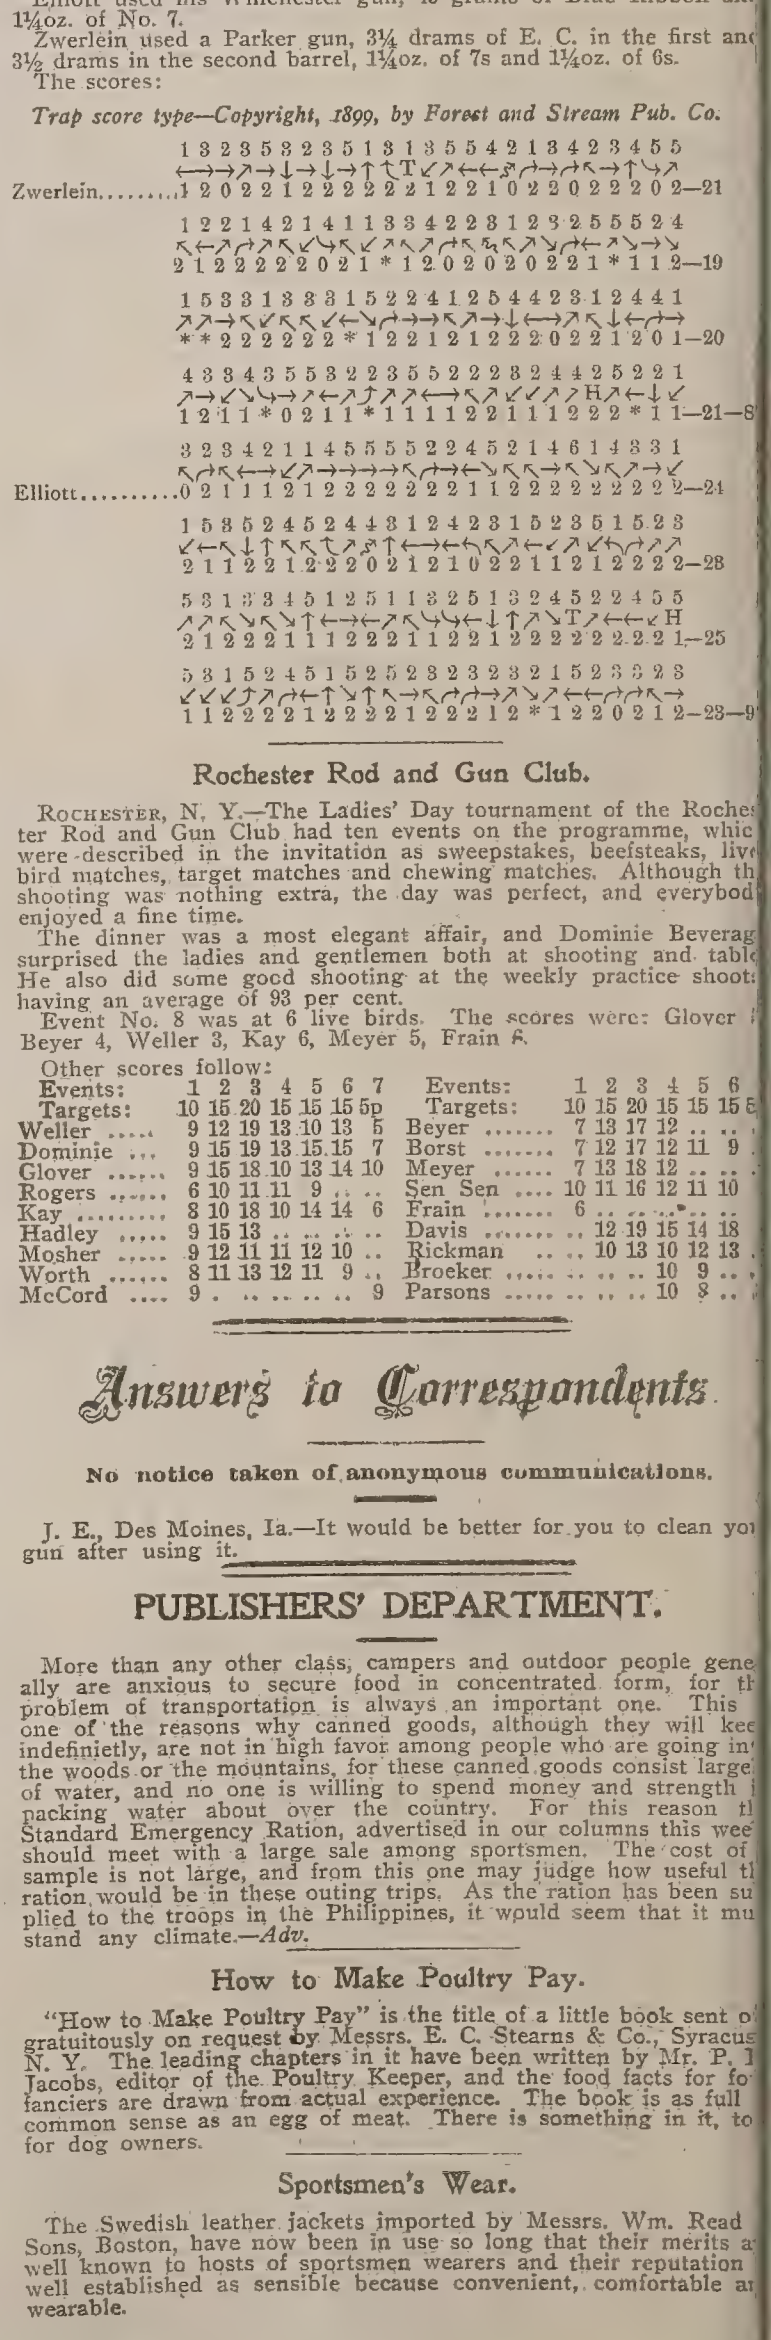
The grounds were all that could be desired—level, with a good background and pleasant surroundings. Capt. A. W. Money officiated as referee, and Mr. Jacob Pentz officiated as scorer.

The contest could not be called close at any stage of the game after the first 2 or 3 birds had been shot, Elliott losing his first, according to the precedents in such cases made and provided by previous contests. This miss—the first—was not chargeable to error in aiming. There was some faulty manipulation in throwing the action to reload, and this prevented the second shot. Elliott shot in much the better time and placed his load better, as he centered his birds very accurately and drew steadily away, adding constantly to his lead, finishing with 95 to Zwerlein's 81.

The birds were a very mixed lot. The greater part were easy birds, but once in a while a first-class bird would be sprung, and there were a number of sensational kills made on such. Elliott had much the greater luck in the draw through the first half of the race, but whenever he got a fast, strong bird he negotiated it in as good time and precision as if it were an ordinary bird. In fact, he shot the race from beginning to end in a most finished manner.

There was a fairly good breeze blowing from left to right across the traps. The race began at 2:15. It was 2:40 when each had finished 25; 3:08 at the end of the 50th round; 3:34 at the end of the 75th and the race was finished at 4:02.

Had it not been for the faulty manipulation of his gun he undoubtedly would have gotten his first bird with the second shot. His 35th was a fast blue bird, which was missed with the first barrel and the second almost instantly followed and struck the ground to the right of the traps, and far under the bird. His 40th was hit with the first barrel, but there was no sign of a hit with the second. He than ran 52 straight, losing his 93d, just out. This bird was hard hit, and it was a piece of ill luck in losing this bird. His 97th was a fast blue, which was missed clean.



The retrieving was done by dogs.

Elliott used his Winchester gun, 45 grains of Blue Ribbon and 1¼oz. of No. 7.

Zwerlein used a Parker gun, 3¼ drams of E. C. in the first and 3½ drams in the second barrel, 1¼oz. of 7s and 1¼oz. of 6s.

The scores:

Trap score type—Copyright, 1899, by Forest and Stream Pub. Co.

Rochester Rod and Gun Club.

ROCHESTER, N. Y.—The Ladies' Day tournament of the Rochester Rod and Gun Club had ten events on the programme, which were described in the invitation as sweepstakes, beefsteaks, live bird matches, target matches and chewing matches. Although the shooting was nothing extra, the day was perfect, and everybody enjoyed a fine time.

The dinner was a most elegant affair, and Dominie Beverage surprised the ladies and gentlemen both at shooting and table. He also did some good shooting at the weekly practice shoots, having an average of 93 per cent.

Event No. 8 was at 6 live birds. The scores were: Glover 5, Beyer 4, Weller 3, Kay 6, Meyer 5, Frain 6.

Other scores follow:

J. E., Des Moines, Ia.—It would be better for you to clean your gun after using it.

PUBLISHERS' DEPARTMENT.

More than any other class, campers and outdoor people generally are anxious to secure food in concentrated form, for the problem of transportation is always an important one. This is one of the reasons why canned goods, although they will keep indefinietly, are not in high favor among people who are going into the woods or the mountains, for these canned goods consist largely of water, and no one is willing to spend money and strength in packing water about over the country. For this reason the Standard Emergency Ration, advertised in our columns this week, should meet with a large sale among sportsmen. The cost of a sample is not large, and from this one may judge how useful the ration would be in these outing trips. As the ration has been supplied to the troops in the Philippines, it would seem that it must stand any climate.—*Adv.*

How to Make Poultry Pay.

"How to Make Poultry Pay" is the title of a little book sent out gratuitously on request by Messrs. E. C. Stearns & Co., Syracuse N. Y. The leading chapters in it have been written by Mr. P. H. Jacobs, editor of the Poultry Keeper, and the food facts for fowl fanciers are drawn from actual experience. The book is as full of common sense as an egg of meat. There is something in it, too, for dog owners.

Sportsmen's Wear.

The Swedish leather jackets imported by Messrs. Wm. Read & Sons, Boston, have now been in use so long that their merits are well known to hosts of sportsmen wearers and their reputation is well established as sensible because convenient, comfortable and wearable.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iv.

THE WASHINGTON SALE LAW.

WE noted the other day that the State of Washington in its new game law had adopted the principle of the prohibition of the sale of game; and the sportsmen of that State have been much elated over the new rule, anticipating from its working substantial advantage in the effective conservation of the game supply. A Spokane correspondent writes in comment on what was said in our issue of Sept. 23, that the satisfaction over the enactment of the law has been short lived because of an opinion given by the deputy prosecuting attorney as to the scope of the anti-sale provision. The prohibition, this official decides, applies only to the game of the State and not to game imported from other States; and our correspondent asks what steps may be taken to secure the purposes designed by the enactment of the law.

It is clear that the opinion of the deputy prosecuting attorney is erroneous and would not stand the test of the courts. The text of the statute reads:

"Laws 1899, p. 278.—Section 3. Every person who shall offer for sale, or market, or sell or barter any moose, elk, caribou, killed in this State, antelope, mountain sheep or goat, deer, or the hide or skin of any moose, elk, deer or caribou, or any grouse, pheasant, ptarmigan, partridge, sage hen, prairie chicken or quail, at any time of the year, shall be deemed guilty of a misdemeanor."

While the prohibition of selling moose, elk and caribou is clearly restricted to game killed in the State, the law in its application to antelope, mountain sheep or goat, deer and the game birds specified has no such limitation and covers all game of the several species, whether killed within the State or imported from elsewhere. This is the interpretation given to all statutes of like character in other States, and there is no question whatever that if put to legal test the Washington courts would rule that the law applied to all game, whether native or foreign.

The sufficient reason for making such statutes cover imported game is found in the long experience which has demonstrated beyond questioning the fact that unless the law shall be comprehensive in its scope the game of the State will inevitably be marketed with that which comes in from outside. An open game market will draw its supplies from all available sources. This has been shown, for instance, in New York. A law which permitted the sale of game killed outside of the State was under consideration by the Legislature a year or two ago. Deputy State Comptroller Gilman, speaking in behalf of the game dealers, told the Assembly committee that the New York city commission men never handled any game killed out of season in the State, but drew all their supplies from outside. He was confronted and his statement, impudent in its falseness, was refuted by documentary evidence produced on the spot by the game commission, showing by express receipts and sundry other vouchers, that game was killed in New York and shipped by a roundabout way to the city dealers, and it was notorious that this illicit marketing was continuous and of large proportions. The one only way to stop the killing of Washington game for Washington markets is to prohibit altogether the traffic in game without regard to the source of supply.

This is no new thing; the principle has long been recognized and acted upon; and the validity of statutes embodying it has repeatedly been upheld by the courts; one case in point is that of Phelps vs. Racey in New York. It is to be hoped that the sportsmen of Spokane may take early action to secure in the courts an interpretation of the new law.

There is added reason for solicitude as to the interpretation of this law with respect to quail, because three years ago the Spokane shooters imported a lot of live quail from Kansas. The birds were put out among the farmers, and have multiplied and established themselves. There is a law on them running to Oct. 1, 1901, but now that the markets are supplied with quail, it is of course impossible to determine whether the birds come from Nebraska or Kansas, or are some of these Washington quail introduced at the expense of sportsmen.

THE BLACKTAIL.

WHEN the snows have begun to whiten the tops of the tall mountains, and the keen frost is biting the ripened leaves of the mountain maple, turning them from vivid crimson to plain brown, the blacktail takes his slow way from the higher mountains toward the lowlands. He is loath to leave these upland meadows, where summer has been spent, where the grass is tender and juicy and flies and mosquitoes are little troublesome, but as the yellowing leaves of the aspens loose their hold on the stems and slowly twirl toward the earth, and the thickets where he has couched become bare, he feels that it is time to go.

Yet he does not hasten, and indeed he is in no condition for speed, for he is fat, round, heavy and lazy, though his muscles now are as strong as ever, and he is as well able to race through the timber and to climb the rocks. Yet he picks his way slowly down the hillside, ever letting the snow go a little before him, and making curious twisting paths over the white mantle which covers the ground, as he wanders from tuft of grass to bush, and again to thicket, and at last to the bare spot beneath the mountain cedar, where he makes his bed.

By this time his winter coat is thick and warm; not so long, to be sure, as it will be later, yet past the blue, and underlaid everywhere by a warmer covering of wool, which, if you had enough of it, you could spin into yarn.

Little cares the blacktail for snow or rain or mist or wind. He is one of the hardiest of our mountaineers, and may be found abroad in all weathers. And so, as you travel through the high mountains in the late autumn and early winter, you will see him—if your eyes are sharp—taking his deliberate way along the hillside, or may jump him from under the trees where he rests at mid-day, or may view him as he crosses some river on his way to his winter range. Sometimes he is a great buck with massive horns, followed at a respectful distance by two or three younger ones, who prance and play and hold mimic battles, with sharp clash of horns, which the senior gravely watches. Or he may have with him an old doe almost as large as he, but hornless, and following her will be the well-grown fawns, no longer spotted now, but gray like their parents.

Once the blacktail was simple and gentle, as all our game animals have been; and we recall the time when a friend walked up to a sleeping doe, so close that he could have put his hand on her; but like the rest of our great game, though more slowly than some, the species has learned to know man as its bitterest enemy, and to-day there are few or no places where he can be found in his old-time tameness.

The picture which we present to-day shows buck and doe in autumn, traveling along the hillside on the way to the winter range.

DOG LICENSES.

THE paper written by Mrs. Sarah K. Bolton, of Cleveland, and printed on another page, contains many valuable data as to the relations of the dog to the community. To many of the recommendations advanced, owners of dogs will assent. There is a growing tendency to regard the dog as property for the protection of which the law should provide sufficient security. The destruction of valuable animals through spite or by virtue of unrighteous laws is of altogether too common occurrence, and there is much room for improvement here.

On the other hand, it should be remembered that the evils connected with the enforcement of dog licensing systems are abuses and do not necessarily belong to the license system itself. We cannot agree with Mrs. Bolton in her proposition that there should be no repression of the supply of dogs. It must be remembered that while the individual dog is a possession valued by the individual owner, dogs in general may be, and often are, decided nuisances in the community; and whatever may be said of a particular system adopted, its purpose, which is the limitation of the number of dogs maintained, is a commendable one. Doubtless the law which refers to a society the right to collect the dog tax and to take up and destroy animals which are unlicensed is unconstitutional, inasmuch as it gives to other than public officials authority to destroy property; and for this reason, even though the end sought to be attained is a just one, such a system should not prevail. On the other hand, it is to be said for the Society for the Prevention of Cruelty to Animals in this city, that its administration of the work of reclaiming strays and destroying dogs which are without owners has resulted in decided good to the community. No one who recalls the old times when the streets were overrun with vagrant curs, and contrasts the conditions then prevailing with those which now hold, could wish to have the old rule restored; and because the society does its work so well, we presume that no intelligent person aware of the conditions would wish to interrupt the present system.

There are sections of the country where the supply of dogs is so great as to be a serious drawback to agricultural interests. This is true particularly in some of the Southern States, which now support tens of thousands of worthless curs, in whose place there should be flocks of sheep. Probably the cost of these dogs means a million dollars a year when computed by the useful stock which might take their places. This is a subject which has been discussed in the press and in legislatures for a half-century, but some States like the Carolinas and Georgia are as far from rational settlement now as ever. In the last session of the Georgia Legislature a bill was introduced to levy a tax of $1 on dogs over six months old, and it was urged by the advocates of the bill that this would not only exterminate thousands of worthless dogs but would add a hundred thousand dollars to the public revenue. The measure provoked decided opposition; one amendment was that each family in the State should be allowed to own one dog exempt from taxation, and another representative of the dog districts proposed to amend the amendment by allowing each family to have two dogs free. One of the members, Mr. Hardin, in the course of the discussion showed that he had a lively appreciation of the sentiment of his constituents, when he closed the peroration of an eloquent speech in opposition to the measure, with the warning, "The dog war is actually on! The next gale that sweeps the deck of the grand old empire ship of the South will waft to your ears the wail of the statesman minus a job!" The bill was defeated, and Georgia maintains her dogs.

SNAP SHOTS.

Some uncertainty prevails respecting the lawfulness of caribou hunting in Maine this year. Prior to the revision by the Legislature of 1899, owing to an unintentional omission by the framers of the statute, no close season whatever was prescribed. The law as amended in 1899 and now in force provides with respect to caribou that "no person shall, within six years from October fifteenth, A. D. 1899, in any manner, hunt, chase, catch, kill, or have in possession any caribou or parts thereof." Beyond this clause, there is no reference whatever to a close season for caribou; and the manifest interpretation then is that the game may be killed at any time prior to Oct. 15. The prescribed close season will begin with that date. The Maine authorities, as Commissioner Carleton advises us, hold the view that caribou may not be killed prior to Oct. 15 of the present year, but we are unable to discover any ground for that theory in the text of the statute.

The Adirondack wolf supply this year has been a plentiful one in the stories which have come from the Northern Wilderness, and the reports have been marked by a wealth of detail which appeared to leave no ground for reasonable incredulity. For instance, it was said that Mr. Charles E. Moore, of Trenton Falls, had killed a wolf in the vicinity of Jock's Lake, in Herkimer county, and that he had preserved the skin as a trophy. Some years ago an Adirondack wolf skin sent to the FOREST AND STREAM for identification proved to be the pelt of a dog. Assuming that Mr. Moore's specimen might belong to the same class, we wrote to him the other day, and in response he says: "There is no truth in the report of my shooting a wolf. I have not been in the woods in twenty years. I do not know who started the hoax, nor where it originated." This is the usual result of investigations into the Adirondack wolf tales. If they have any foundation whatever, the fact will probably prove to be that the deer killing wolves are domestic dogs hunting alone or accompanied by their owners.

The Sportsman Tourist.

Old Boats.

PROWLING along the level shores of meadow, pasture and woodland, I sometimes come upon an old boat that, having outlived its usefulness, has been abandoned by its owner, apparently with as little sentiment and regard for what it has been as that with which a worn-out garment is cast aside. When it was hauled ashore for the last time at its accustomed landing by its master, who beached it with no securer fastening, the next spring or autumn flood crept up and dragged it away, to drift forlorn and unguided but by the caprice of wind and current.

Whoever chooses may appropriate it to whatever use he can find for it. Stranded or afloat, lonely, lifeless, it becomes the familiar of all wild creatures, who learn to be as fearless of it as of any other inert bit of driftwood. Muskrats board the water-logged derelict, and wild ducks swim as its consort.

After blowing hither and yon on many idle voyages, bumping its prow on various inhospitable steep shores, and scraping its sides against insulated trees till, beached far up on the flooded lands, it found a resting place at last among floodwood and driftweeds.

One knows at first sight that the poor craft is no truant, brought to a chance port without help of paddle, oar or sail, but that it came to such haphazard stranding through slow neglect and final abandonment, apparent enough in its worn and faded paint, in its rents and patches that have grown clumsier and more careless year by year, in seams that gape too wide for pitch and oakum to mend.

One feels a kind of pity as he contemplates these forsaken wrecks that once played their part in the life of men, and gave their share in some measure to its work or pastime. Each bears some plainly written fragments of its history whereof imagination may fill out the chapters.

Lying broadside to, among the driftwood of which she is a part, and a little below the lighter line of driftweed that hems the green meadow with a band of faded drab, is an ancient scow of primitive pattern. The straight lines of her battered, unpainted sides are not relieved by the slightest curve from bow to stern, from gunwale to bottom; the rigid inch and a half pine plank would not have yielded to such frivolity if her builder had demanded it, which he, of as plain stuff and angular mould, certainly never did. The flat bottom slants upward at the same angles to the broad, square bow and stern, which can only be distinguished from one another now by a hole for a jackstaff in the short forward deck and various cinder marks upon it—scars received in nocturnal warfare against the fishes. The thwarts are gone, one clumsy rowlock has been wrenched off, the other remains with the stump of its one wooden tholepin, that once held an awkward oar in place by a wooden loop. One of the crosswise bottom boards is gone, and in its place a parallelogram of green herbage is growing, wild grasses and English grasses, with groundnut vines binding them together and a sprawl of five-fingers holding up a humble offering of yellow blossoms. All the gaping seams are calked with spires of grass, and moss is gathering on the heel marks of the owners, who long since made their last voyage in this craft.

In the days of her life she was busy and useful. She assisted in the building of timber rafts and then towed them to the saw mills; voyaged to the grist mills with her owner's grain; cruised along shore, gathering driftwood for his kitchen fire; made trips to the lake for sand and on many another useful voyage pursued her slow course to the rhythmic thump, creak and splash of oars and heaved long sighs as her broad prow breasted the waters.

Parties of hay-makers took passage on her in droughty seasons, when the upland grass was scant, to mow the rank marsh growth. This they carried on poles and piled in stacks stilted above the autumnal overflow to await hauling by teams in winter. These marsh stacks loomed up on the flat, shorn expanse like mammoth muskrat houses. You may still find among the driftwood the shoes, worn smoother by long attrition than their first rude fashioning left them.

The sober craft indulged in occasional playspells, yet carried into them something of the staid and business-like character of her everyday life. In windless spring nights, when the marshes were flooded and fish swam where the haymakers plodded in September, she cruised over the same ground, her way lighted by a flaring jack, fullfed with fat pine. Behind her stood the spearman, his intent face illuminated by the red glare, his weapon in hand ready to spring to the deadly poise. Behind, in shifting light and shadow, sat or stood the paddler or poleman, steadily plying his chosen implement, to whose strokes the heavy boat moved steadily forward.

Frightened water fowl sprang to flight before it, brightly illuminated for an instant, then flashed out like sparks quenched in the darkness. A dazed muskrat floated motionless in the full glare of the torch, then dived with a sudden resounding splash that startled spearman and paddler from their silence.

Lighting the broad, glittering water circle, whose edge was gnawed at and bitten by reaching shadows, it crept along the shore, here naked, there fringed with unleaved trees that materialized in gaunt specters out of the mystery of darkness. Thus the old boat made her wandering voyage and gathered her various fare; then with light quenched went into the darkened homeward way.

In showery summer days, when thrifty housewives said it rained too hard for men to work out doors, and they could go fishing, the scow was moored, bow and stern, to stakes alongside the channel, where the crew angled in moist discomfort and a dreary monotony of sound, the steady tinkle of raindrops on the black water, the thin bass of the bullfrogs, the purr of rain on distant woods, among which the monosyllabic discourse of the anglers and the splash of their sinkers fell at intervals without jarring the dull concord, while the sharp metallic clatter of a kingfisher berated them for their misuse of his favorite perches, the fishing stakes.

In halves of broken hay days, during treacherous dog-day weather, the scow went trolling for pickerel, the channel's length from the falls to the broad blue bay of the lake, or with seine and elm bark ropes folded and coiled in a great heap on her wide stern, took chief part in seine hauling at the sandbar.

A staunch craft she has been, returning with resounding stroke and uncompromising bow the buffets of Champlain's white-capped waves. Now all her days of work and pastime are spent. A forlorn vagabond, she is no one's boat—any one's driftwood. Some further reaching spring flood than that which stranded her here may

A Relic of the Past.

set her afloat again to wallow gunwale deep through the troubled waters, and be beached on some other shore or cast piecemeal, here and there, in unrecognizable fragments. Wherever she voyages she will have no navigators but the idle winds and waves and currents.

In the shade of shore-lining trees that annually bathe ankle deep in the spring floods, when the pickerel swim among their bolls and the painted plumage of the wood drake floats double beside their gray reflections, one stumbles upon the half-stripped bones of an old trapping skiff. Though of almost as primitive mould, she is of very different pattern from the scow. Short and narrow, sharp at both ends, her sides of three-lapped streaks fastened to a few knees of natural crook, she was as cranky as the other was steady, and more heavily burdened with one person than the other with as many as

"In Shade of Trees."

could find room in her. Yet the trapper, standing upright, a little abaft midships, adroitly humored her cranky tricks, as with his long setting pole he drove her over submerged logs and coaxed her through intricate passages of the flooded wood, or with sturdy axe-strokes chopped notches for his traps, or set them as he squatted by log, feed-bed and house. Cruising within shot of a muskrat, duck or pickerel, he stooped and snatched his ready gun from the hooks that, with the leather flap that covered the lock, still hold their places.

In memory I follow him as I saw him on his solitary voyage fifty years ago. Now he coasted along a low, naked shore; now circumnavigated a low shaggy island of button bush, now thridded the flooded woods, always alert for promising places to set trap in, now stopping to set one, now to lift one aboard with its drowned victim,

"In Memory I Follow Him."

and then to reset it. His course was marked by the inconspicuous crotched tally sticks that an eye less practiced than his would scarcely notice. Now he braves the rapid water of the broad marsh and channel that the season of floods has merged in a lakelike expanse. He lands on a further shore in some warm nook, where the April sunshine comes and the keen April north wind does not. Here he skins his furry cargo, while the expectant crows, watching from safe tree tops, await their repast, and the thronging blackbirds gurgle above him, and the basking frogs croak a lazy chorus around him. Perhaps, as broken and useless as his stranded craft, he yet lingers somewhere on these earthly shores; perhaps has drifted to the unknown coast, from whence no returning voyager brings us tidings.

With the same surroundings, I find the decaying hulk of one of the most primitive of water craft embedded in alluvial mould and bed-embowered in royal ferns. Quite at one with the unwrought logs of driftwood that lie around it, is a log canoe. So clumsily made was she an Indian might have fashioned a neater one with fire and stone tools, though the maker of this had an axe, adze and gouge of steel, in proof whereof their marks still endure.

The butt log of a great pine, out of which a saw mill could have sliced material for a whole fleet of small craft, went to the wasteful construction of this one boat. When there was an end of chopping, hewing and gouging, the pile of chips was of greater bulk than the boat.

In spite of her crankiness and her troughlike model, it could be said in her praise that she was a solid, seamless shell, needing neither oakum nor pitch to make her water-tight, and the wholesome odor of the freshly hewn pine, sweating turpentine at every pore, was a pleasanter smell than that of paint. Her sort were the commonest craft on our waters when I was a boy, yet I do not remember one so new that it had not taken on the weather-beaten gray of age, so scarce and precious had suitable trees for making them become.

I recollect their accustomed navigators as men also bearing marks of age and long service—old men who were uncles to all younger generations. They were not fishing for sport, but engaging in it as a serious business of life, befitting their bent forms and intent faces.

"Ef you want tu ketch fish, you must bait your hook wi' necessity," Uncle Stafford would inform us as we gazed enviously over his gunwale at the fare of great pike lying thick on the canoe bottom. He used a lure composed of pork rind and red flannel, but no doubt necessity sharpened his wits to a proper judgment of the length of line and regulation of the speed of the canoe. This he paddled so noiselessly that the wary bittern was undisturbed by its passage. In autumn he prowled as silently over the same course, and the canoe, nosing her way along the same watery path, stole upon great flocks of ducks. Then, after a long aim, the iron-bound relic of 1812 belched out its palm's breadth of powder, shot and tow, and a roar that shook the shores with slow rebounding echoes. The old gunner shot for the greatest count with the least expenditure of ammunition, and rarely spent half a dozen charges in a day. He was a pot-hunter, but an abundant supply of game would have outlasted many generations of his kind. Happy he to depart while it still endured, with no guilt of its extermination on his soul.

Like him, her last voyage ended, his old canoe rests at peace with all things. In springtime the muskrat fearlessly boards her, the wood duck perches on her gunwale, the spawning pike and pickerel bask beside her, and now, when the thin autumnal shade blotches her weather-beaten gray with darker patches, the grouse drums on the moss-grown bow, the mink makes his runway along the rotting bottom, and the fox prowls near the shell of crumbling wood, unscared by the taint of recent human touch. Amid such sylvan solitude as the trees she was wrought from, made its slow growth, the old craft molders to the dust of earth, to live again in the lusty life of other trees.

ROWLAND E. ROBINSON.

River Rambles in Florida.

There is a tempering for distempered lives
On the raw terms that nature has to give
To those who seek her meat.
Braving her harsher tempers one survives.
And keeps the terms of the life primitive,
To seek, to slay and eat.

IF one starts to wander about the half-settled regions of Florida he should be communicative and friendly with the natives he may meet, and these acquaintances will impart to him all the recipes, precautions and stratagems that appertain to his present state of life. The recipes are perhaps the most important, because neither reason nor instinct tells a man how to turn to best account and touch the keynote of the flavor of turtle, bird, fish or quadruped, while he is a dullard who cannot find out how to outwit his prey.

If you meet one of these gentlemen on the St. Johns River with a spider, a chunk of salt bacon, a little coffee and flour, and a tomatoe can, used for boiling and making coffee, you may know that here is a hunter or a fisherman out to stay. In case of rain the cracker keeps his flour dry with a palmetto leaf, and does not mind being wet himself. He is of a caste above that of the chronicler, and as I find there is no end to what a boat will carry I am constantly seduced by new thought of conveniences.

Instead of a palmetto fan to protect my flour merely I affect a tabernacle adapted as a canvas roof to the boat, so that I may be housed somewhat like Noah when the windows of heaven are open or the doors of day are shut. Drawn over supports and ridgepole this buttons about the gunwale and keeps out rain, mosquitoes and snakes. Ventilation is provided for by means of flaps of mosquito netting, which are tied back to protect from tearing before the tent cover, as it may be called, is taken down and stowed in the morning.

The stern of my 14ft. flat-bottomed boat affords good sleeping room. The bed adopted consists of a few light pieces of board cut to fit between the two rear thwarts, making a movable deck over the contents of the boat, upon which the bed is spread. To counterbalance the sleeper the cooking irons and other heavy articles are loaded forward. This is also a convenient ballasting for sailing when the navigator sits astern.

A sail is one of those indispensable things which once taken you will never be without. It is the true water horse, and having tried his service you feel ever after a deep-seated discontent when you are tugging for many miles at a pair of oars.

My mast unsteps at pleasure, and together with the sail and fishing rods is laid on the shore at night to be out of the way.

In May last I started on a cruise on the upper St. Johns—that is to say, above Sanford, which is the terminus of navigation for steamboats. The month is a most favorable time for good sailing winds.

I write in the singular, the word "I" not always being an egotistical word, but sometimes merely a lonely word.

The St. Johns River maintaining for the most part a north and south course, has a deflection above Sanford lying east and west for twenty-seven miles between Lake Monroe and Lake Harney. I started out, therefore, going east.

IN OLD NEW ENGLAND.

It is a fine segment of the river, giving a last review of the hammocks, meadows, cypress swamps and graceful groups of palmettos before the bottoms or prairies are reached beyond Harney. A few good locations for houses accommodate cottagers or cracker gardeners. The current has cut the bank in many places and undermined the outskirts of the groves, so that scraggy wrecks of live oaks and bare columns of palmettos fall away into the deep holes of the river. Here are favorite perches for the great blue heron, the water turkey and the osprey, and here in the deepest bends of the river are great places for speckled perch fishing in the winter and spring. They are also called goggle-eyes and calico bass—a large kind of bream, handsomely mottled and adorned with large and showy fins.

A businesslike breeze which kept my leg-o'-mutton a-walking induced me to keep sailing all day, as the best sport in sight, but I kept a spoon behind for any ready mouth that had an active tail behind it. The only strike, however, was from a long-billed garfish, which is the largest of the three species here. It is not often that a hook becomes securely set in the bony mouth of a gar, but this one in his first flirt to get rid of the spoon wound the line about his snout, which catching on the hooks made a good noose. The accidental arrangement held perfectly, and after rather unceremonious leading I hauled him into the boat. Though of no value, the beauty of his long armor-plated body of shining steel laid claim to my admiration. It proved to be a half-grown one, weighing 18lbs.

Arriving at the lower bar of Lake Harney rather late, I turned east into Deep Creek, which joins the St. Johns just below the lake, and camped upon a beautiful wooded piece of ground a quarter of a mile up the stream.

I had nearly come to cross fish off from my bill of fare for the first day; but just before I left the river a nice 2lb. bass took the spoon, and presently I proceeded to cook it by lantern light.

My arrival had scared away a limpkin, whose expostulating voice I could hear for some time a little way up the creek. The limpkin, bearing the aspect of a kingrail magnified to the size of a chicken, has a certain provincial stubbornness about asserting his personal rights, and I expected to see this particular bird come back again in the morning and raise his peculiar voice in criticism of my presence.

After supper I threw myself down for a smoke, fatigued, and yet with a deep-breathing refreshment and freedom. Who that has camped out has not observed that the first night in the open is imbued more than the later ones with the dominating pulse and the reverie of nature? She strokes your face as certain savages are said to do by way of welcome, and your countenance becomes molded to her, and from it is smoothed the knitting of the brow. As I reclined there in the first warm hour of dark I felt as if gently caught under a sumptuous net of trees and stars. To get up and erect the tent cover over the boat, and undress and go to bed seemed like a benighted concession to the besotted plans I had previously formed. The lantern sitting a few feet from me attracted a few kinds of little moths, and these, when all was quiet, attracted a circle of small toads, which came hopping up in deliberate conservative stages from all sides. They began leaping about the globe like ghoulish fairies, gluttonously lapping up the dusty moths. Often they missed them by reason of aiming unduly long and at last jumping only at the spot where the moth had been. They were a little dazzled by the light, maybe. It seemed like a dance of innocents, all unconscious of the moccasin that might in turn come and make a meal of happy toad. It was a mesmeric and confidential touch, such as the housed man contemplating the vast outdoors cannot comprehend, and in order to yield ungrudgingly to the influence I got my quilt and lay down on the ground again. I remembered having once killed a moccasin hereabouts, but that only made it less likely that there might be one here now.

A large barred owl alighted near me and began sonorously burring to its mate. Then, staring at me a moment, abruptly departed, as if conscience-smitten on finding that it was keeping some one awake.

In the morning my limpkin came back again and soon had exchanged the unmodulated notes he had inherited for gentle murmurings in the pot.

In the meantime I angled for a mudfish. I had long entertained the intention of taking plaster molds of the St. Johns fishes from which to make impressions at home, but this was the first time I had started out prepared, having sacrificed room in the boat to a tub of plaster paris. Deep Creek is the home of the mudfish. It may be mentioned that the many fishes of the St. Johns are subject to a certain system of distribution—certain kinds in certain localities. You have to know which pocket your uncle, the river, keeps your fish in if you are after a particular sort.

The fish pole was set out of the back of the boat, while I applied my main attention to sundry Delmonican arts. In the course of half an hour two mudfishes were caught, weighing about 3lbs. each. They are great pullers and like several other of the baser sorts of fishes very tenacious of life. They are batteries of vigor even after landing, so that it is impossible to hold even a small one with one hand while unhooking. The mudfish has sharp teeth and a wolfish head, set with two short filaments on the nose. Like a bass, it spreads its gills ferociously

when caught, and only lacks ignivorous powers to appear as terrible as it seems to wish.

The mechanical art of plaster molding is so simple and the results are so accurate and beautiful that it is strange anglers do not generally preserve mementoes of their record catches in this way. They would be valuable in illustrating our fish stories, which when related to the unworthy are so often discredited.

As I was immortalizing one of my mudfishes a large alligator drifting down the creek stopped and watched me coolly for a few minutes—the first big fellow I had seen on the trip.

A few hours later found me in the middle of Lake Harney, a promising breeze having failed, and my boat lying as idle as a painted ship. And the sun had set in the sense of sitting rather emphatically on the landscape and occupying the whole seat. I therefore pulled for the west shore and selected a shady place in which to make bread and wait for wind.

The lake is seven miles long and five wide, uniformly surrounded by sandy beach and fine hammock, and here and there is to be seen a garden and a house belonging to a native or a camp occupied by seine fishermen.

A book whiled away the time until the wind sprang up, and I then sailed to the mouth of the Econlockhatchee, three or four miles above the lake, and moored for the night.

I had now reached the upriver prairies, occupied by great numbers of cattle and also hogs turned out on the range. In years gone by there were large brakes of small canes on these bottoms, but many fires having surged over this country most of the canes were destroyed and gave place to several species of long and short grasses. The "Prare," as the crackers call it, is six to ten miles wide, overflowed in very rainy times, and the channel of the stream forming a ribbon only 60 or 70ft. wide, though extremely winding, keeps about the middle of the expanse. There are some scattered elevations bearing palmettos, like islands on the grassy sea, but only one, called Bear Bluff, on the river itself for a distance of fifty miles or more.

The shed boots and stems of palmetto, which furnish good fuel below, are no longer available, and the boat wanderer must carry light wood or an oil stove, the latter always a treasure to the camper.

Perceiving a school of mullet on the bar of Econlockhatchee, I took two of them with my cast net. Stewed for ten minutes under cover in a very little water and then seasoned, this rich-fleshed fish is better than if fried, and is a pleasant change from the usual fried fish of camp life.

In the fresh hours of the next morning the prairies were enlivened by a ceaseless chorus of the cheerful notes of meadowlark and redwing, and here were the black-necked stilts hovering anxiously, with their complaining outcry and dangling coral legs. The latter are the most characteristic birds of the prairies, where they make their home. Their superlative length of leg would naturally raise them above other birds of their dimensions, if they were only gifted with a little more deportment and dignity, but they are a little unfortunate in having a nervous and flurried temperament.

Water turkeys, Florida ducks, ibises, limpkins and a dozen kinds of herons were henceforth more plentiful, though all these birds are scarcer than they used to be.

Fringes of cane which have escaped being burnt out by the fires extend along the river just above Puzzle Lake, a small sheet which I passed through soon after starting onward. These accommodate colonies of boat-tailed grackles, whose handsoms basket-work nests are placed near together at an equal height, like a row of tenements. The little brown wives seem to do all the sitting, while the purple-black males, gallant and swelling, and twice the size of their mates, keep up a robust song, a mixture of harsh and rich notes, but a remarkable performance for any bird so much resembling a crow or jackdaw, although they have an inconsequent way of clattering the bill like a pair of bones at the end of the song. They are fond of periwinkles, and hunt about the banks for them, carefully carrying their long tails above the mud.

There are times when the bass fishing is extremely good along these brankes, but high water and a strong current prevailing at this time were unfavorable conditions.

Several days that followed turned out to be very hot weather, such as may or may not occur here in May. Heat is easily borne in Florida generally, but when all the birds are flying about with their bills open the thoughts turn to shade. Aside from this consideration I desired the trees for their own sake, having missed their character, their harmony and their air of hospitality out on the levels. I decided to go up the famous Snake Creek, where I could encamp over Sunday upon a shell-mound, under old hickory trees, even now in sight in the distance. The spot is a little way from the bass waters of Snake Creek, and accessible by means of a narrow channel or cutoff, which carries part of the water of the creek into the river at a point several miles below the real mouth.

This camping ground was the site of an Indian village of old, the shell mounds being the relic and the proof of the resting places of the aborigines. Their broken pottery lying about as thick as stones in a Northern field furnished me with props for leveling the feet of my spider.

Interest has led me to try the periwinkles, which constituted such an important item in the diet of the red people that they formed mounds acres in extent about every camping place composed of the refuse shells. Simply boiled, I found them flat and unenticing. I kept a few in vinegar several days and thought them slightly better, though they hardly fairly represented the primitive article.

There were evidences that turtles, both hard-shelled and soft-shelled, were making a nesting ground of the shell mound—many heads of both species came above water to observe me, the tracks were all over the shore, and there were places where raccoons had been digging up the eggs.

Great numbers of the latter animals find their living about and upon the prairies. During some of the hot days of late I had seen the raccoons sallying out of the switch grass to refresh themselves in the water. Their eyesight did not seem to be very sharp, as I could walk up within 15 or 20ft. of them while they were wallowing in shallow places and lapping the water. When they finally took the hint, however, their short legs moved like hummingbirds' wings.

I threw out a line to catch a softshell, though I saw that I would have to wait their pleasure, as all were shy of coming near.

The hardshell or coudah is graniverous, and does not bite a hook.

After I had supper, and with the moon shining overhead, I heard my fish pole rattle in the boat, and on laying hold of it found I had hooked a fine turtle. If it had been wise enough to pull straight off it could have parted my line, but its tactics were all spent in trying to get rid of the hook. Swimming round and round, it would try to release itself from the taut line with a claw, now and then plunging down under water when my presence seemed too obvious to it. The semi-obscurity of the moonlight rendered the situation a little difficult and interesting, but the tussle went more and more in my favor, and at last I drew the heavy creature, 25lbs. in weight, to land and decapitated it. Sunday being a feast day, I was now prepared to celebrate the morrow.

The softshell is the most edible looking of all turtles. Its smooth form is covered with skin as soft as kid, and as white as ivory on the underside. A skirt of leathery or gristle-like tissue about the bony structure of the carapace gives the turtle its name.

If roughly dressed and boiled the flesh becomes tough, and you get nothing but the soup, but if the meat is chopped up small it has a perfectly tender texture. It needs to cook but thirty minutes, and then, seasoned and thickened with flour, it is a dish for a Sydney Smith, who surely would have remarked after eating it, "I have dined to-day."

On Sundays, as on other days, I arise at the first sign of day, which seems a natural habit in the open. Then all the wild creatures that love light are moved by a touch of exhuberance, which has been interpreted as the overflow of their natures in praise-giving to the Creator. Their movements and sounds indicate that they are laying hold of the life of a new day with a zest quite apart from the urgencies of a precarious existence.

Even such saturnine creatures as the turkey buzzards perform marvelous geometrical quadrilles, circling exultingly above their roosts of the night before. This Sunday morning I witnessed a complex evolution of three of these sedate birds that was surpassingly pleasing to the eye. There were dozens of buzzards overhead, but this group earned the palm for grace and harmony of motion. At certain times they would fly all in one circle, with equal spaces between them; then with a military change each would strike a smaller circle of its own, and they would begin describing an interlocking design like a trefoil. For a time each bird maintained precisely the same relative place in its orbit as the others. Spread two fingers and a thumb into a tripod, and then rotate the hand, and this will illustrate. With another marvelous change, involving a slight interval before the second bird followed the example of the first, and the third that of the second, they adopted a kaleidoscopic movement, intertwining their orbits and swinging unceasingly about one another. It was beautifully animated, notwithstanding the stately soaring flight of the buzzards.

Later I took a walk to increase my acquaintance with this tongue of woods, of which the shell mound was the tip. I was prevented from going in one direction by a thick black bull with a double-ended anvil for a headpiece. The prairie bulls are seldom aggressive, but this one would bellow at the highest pitch of his voice the moment he caught sight of me, so that I concluded that he was a character. I took the other direction, and considered it glory enough when I captured a poor coudah and took it along for the sake of its handsome shell. I located the feeding place of a few Florida ducks, so I was primed for a little hunt on Monday morning, Sunday being a particularly favorable day for attending to such details.

Sometimes Snake Creek is probably one of the best places in the United States to look for the large-mouthed black bass, but I now found that they were not biting. During a two days' stay I caught but a solitary haggard individual with a long lean frame that would report better by the foot than by the pound. It seemed like a ghost from a vanished race, but I knew better than to believe the race had departed. Catfish were more easily caught, and furnished capital chowder. I was long among the despisers of this hulking fish, but that is one of the matters in which Floridian intelligence has converted me. The belly of the fish should always be cut away, but the rest of the flesh cooked into dry chowder is a dish that requires no apologies.

My wanderings included a visit to Luffman's Lake, on Snake Creek, and a visit to Cane Lake, still further up the St. Johns, before I began to descend the river. On the way down I found bass that would take the spoon, as if they were more willing to take the trouble of striking down stream than they had been going up against the current. I ran down to Lake Harney with an excellent breeze, and saw many more 'gators than I would have done if I had been rowing with my back turned and the oars telling the tale of my boat's approach long beforehand. I startled some from the banks, where they were sunning themselves, and was surprised several times by the leaps these short-legged beasts could make when they found my gliding boat close upon them. One alligator about 6ft. in length made a clean jump over a little sand reef and dove into the river like an acrobat, having cleared its own length or more. During my trip I obtained another item new to me concerning the habits of alligators. Awakened one morning by gruff bellowing, I looked out through the mosquito netting at the stern of the boat and saw a full-grown one 10 or 12ft. long lolling on top of the water and sounding his bull-like salute. I had formerly supposed that this was a land performance.

Going and returning, I passed a colony of water turkeys near Bear Bluff, there being seven or eight nests in a bunch of large willow bushes. Some of the birds dropped into the river, and observed me by thrusting their spike-like heads only above water, while the others took wing and soared high overhead. Unlike ducks, water turkeys become wet in water, and it may be that the portion of these that flew up were those that were sitting, to whom, for the sake of their eggs, wetness was an undesirable condition.

I followed the east shore of Harney on my return, and there I found more bass than I had in the river. The sandy shallows are frequented by innumerable bullhead minnows, one of the best baits for bass. The bass themselves could be seen rushing inshore to feed on the minnows. Generally they swam in small troups, the members of which would all strike at once, making one sound, but many simultaneous swirls in the water, and then immediately retreating from the shore again.

I did not wish to kill many bass, not having such an awful greed for fishes as Pharoah had for bricks, but I remained there for two days, and had very good sport.

There were two crews of seiners on the lake, with their usual following of fishhawks. The fishermen habitually throw back the useless gizzard shad when sorting the fish in the bags of their nets, and as many of these swim gasping on top of the water in an exhausted condition the ospreys find them an easy prey, and are quite heedless of the men in coming alongside to seize them.

My curiosity was piqued at seeing large birds sitting bodily in shallow water with only half the body out. I moved my boat toward one of them and found it to be an osprey, which apparently enjoyed soaking itself in this way.

At length, having spent three weeks on my excursion, I set sail for home. The winds were remarkably favoring throughout the cruise, so that I had rowed little in the course of 200 miles. I carried back a dozen molds as a beginning to my series of the St. Johns River fishes.

BENJAMIN MORTIMER.

Between Man and Man.

Editor Forest and Stream:

I am among the large number of readers of your valued journal who appreciate it not only for its interesting forest sketches and lore of the woods, but for its high moral standards and influence. Along this line there is one phase of influence which deserves special mention, because, not always recognized. I refer to the relation between true sportsmanship and sociology. There is a direct tendency in the first to promote true views of the second. The very communion with nature, which, to the real sportsman, is far more than the taking of game or fish, does mellow his heart and tone up his being so that his sympathies are broader and truer for the experience. Then in the familiar intercourse of woods life, a man's a man if he be manly whether the opulent "sport" or the poor but noble guide. Aristocracy cannot live long in the woods. They are the natural home of democracy. The two can no more flourish together than trout and pickerel, and in the woods democracy is always the stronger. Hence, the sportsman worthy the name must always return from his outing with deeper feeling and higher regard for manliness wherever seen and however situated. From this point it is but a short distance to the clear recognition of human brotherhood, and the trail is not only well "blazed" but well trodden. So is prepared a kindlier feeling and truer relation between man and man, between employer and employed, whether in the forest, on the farm, in a factory, or in some other commercial line. For the guides, as a class, are as keen, true observers, as appreciative of true manhood, and as responsive to right treatment as any class of men on earth. The effect of their association with sportsmen is always natural and reciprocal, whether for good or evil, and it is generally good.

Since these things are so, there is cause for gratulation in the larger and growing attention given to forest sports in our country. They help to the abolition of class distinctions, and to a better understanding between labor and capital. In many ways they can modify social questions, and FOREST AND STREAM is *facile princeps* for their discussion on this line.

JUVENAL.

In Old New England.

THE elm is so closely associated with the homes of New England as to make it a part of them. Even the photograph of an old New England homestead seems unattractive without a background of arching elms. The farmhouse never seems abandoned while the avenue of elms leads up from the road to the front porch. One of the chief attractions of the Eastern States are the avenues of elms with their branches forming a Gothic arch over the path beneath. No tree is better adapted for such a purpose, with its graceful habit of growth, clean trunks and arching limbs. While affording sufficient shade, it still leaves a wide and unobstructed view along the way it shadows, and produces at all seasons an architectural effect of permanent beauty by the arched interlacings of the great bending boughs.

A writer in Garden and Forest described these old avenues of elms as one of the characteristic features of New England landscape.

"In all the older villages of New England these rows of elms glorify the village street and strike the stranger as singularly beautiful. Sometimes there is a double row with a wide, grassed space between, making even a more imposing and cathedral-like effect, as of a vast nave flanked by columns supporting a groined and vaulted roof. The tender wreathings of small branches and leaves about the massive trunks still further suggest the fanciful carvings of the Gothic architect, and indicate the source that inspired his fertile fancy. Nothing can be more pleasing and playful than the way nature fantastically weaves about the rugged and shaggy stems this graceful garniture of fluttering leaves and clustering twigs, which give the last touch of perfection to the beautiful picture. The openness of the foliage permits glimpses of the sky, while flecks of sunshine, straying through the leaves, encourage the growth of grass and flowers up to the roots of the trees. In the picture the nodding heads of dandelions gone to seed are seen, and along the pathway the sunlight emphasizes the dancing shadows of the lightly moving leaves above.

"An avenue of elms is never somber, however cool and shadowy it may be. It does not shut out the light and

r, but merely tempers them. In winter the intricate acery of twigs is revealed, and is of itself a beautiful ght. The massive shaft bursts into a sheaf of springing oughs, which again break into a shower of branches, with spray of twigs. The tree suggests a fountain in its anner of growth, particularly when swathed and dripng with snow or ice, and the aspect of one of these aisles a glittering, frosty morning is of fantastic loveliness.

"Who is there of New England birth to whom the elmaded way is not a vivid memory? As the wanderer turns to his home the first sight of the village street, ith its leafy canopy, thrills him with its familiar charm. owever simple the dwellings that border it, the sight of at accustomed way is beautiful, and dear the roof-tree r which he has longed during his pilgrimage, and to it e returns with a deep and satisfied sense of unchanged auty. Experience and travel dwarf many things to the ature eye, so that a home-coming, after a far journey, is t without its shadow of disappointment; but, wherever e may roam, whatever visions may have satiated his e, the sight of the elm-shaded paths of New England n never disappoint one of her returning children."

Forest Fire Destruction.

ditor Forest and Stream:

Your publication, in a recent number, of the "Campire Rules," as fixed by New York Commissioners, leads e to infer that the prevention of fires is the principal recaution taken in that State to obviate destruction by rest fires. It may be, however, that other measures e also practiced by the authorities.

California has laws prohibiting the setting out of fires, d I think some arrests have been made for the offenses acted against by the lawmakers, but this has not prented, and does not prevent, the destruction of a vast ount of timber in the mountains each year by forest s.

Conditions on the Pacific Coast doubtless differ marially from those of the Atlantic, but a State as old in perience as New York must have learned that mere gislation against either intentional or careless setting t of fires does not protect forests from fires. On the ntrary, if the preservation of timber or property is e fundamental object in view, the prevention of the dicious firing of forest undergrowth, at proper seasons, ill not protect, but will most certainly hazard both rests and settlements in them. To permit the accumulaon of trash in the forests year by year is not a rational y to protect them.

In so far as applies to the region of northern California, e subject is one with which all observant mountaineers e familiar; but, as far as any practical effort is made, it ould seem that legislators never conceive of any method forest protection other than the enactment of laws probiting about the only protection to California forests that possible. As a matter of unmistakable fact, the only actical protection for mountain forests is to keep down e accumulation of débris and undergrowth. The longer e is prevented the more complete is the destruction entually. Fire is the only preventive of wholesale conagration in extensive scopes of forest. It is the natural gulator of the wilderness, and the more necessary where w mills and settlements have changed natural conditions. It is about as reasonable to permit the accumulation jungle, trash and tinder in the forest districts as it is would be to pile the alleyways of a city with similar od for flames. Destruction might be guarded against r a time, but the longer the trash is permitted to inease the more complete the destruction that continually reatens and eventually results.

It has been particularly noticeable in the California erras that undergrowth and shrubbery of various kinds ave invariably and rapidly thickened about settlements. many localities where the country was open and covered ith tall grass, before pioneer settlement, it is now, herever uncultivated, covered by dense thickets of brush d vines. Where before settlement there was only large mber, or scattering trees, the thickets of chaparral, anzanita and dead underbrush are often impenetrable r long distances. This is accounted for by the pasturing browsing herds that denuded the land of grass after ttlement, and by the prevention of fires that the Indians e said to have formerly set out to facilitate the taking game.

In mountain timber, in addition to the accumulation om other causes, the process of cutting timber and mbering supplies large areas with inflammable trash, ineases and protects the undergrowth, affording here d there in almost every forest region a guarantee that a rge area of forest will be destroyed whenever a spark applied. Probably as much, or more, timber has been us burned by lumbermen than has been utilized.

In the Sierras of California, after four, or perhaps six onths, when not a drop of rain has fallen, there are ndreds of chances for fires to start, and no amount of gilance or legislation can prevent them ultimately. I ave recently seen about a thousand acres of heavy mber in an isolated mountain locality that was burned a uple of years ago. In this instance there had been no mbering, and the result was from the accumulation of ash and undergrowth fired by a hunter or camper in the yest season of the year. There were thousands of the nest of pines, firs and cedars piled in half-burned heaps, left standing, charred beyond recovery. Scarcely a tree the acre remained alive. A conservative estimate would that 30,000,000ft. of first-class timber was destroyed this one fire, and it was only a small blaze for a alifornia forest fire. No summer passes but such, and rger, fires occur, often obscuring the landscape and vering half the State with smoke for many weeks. The ly preventive to this wholesale and continued destruon has been the enactment of laws that there are not tectives enough on the coast to enforce.

The only rational system of forest protection for the acific Coast that would be practicable and efficient is prevent conflagrations by a systematic and judicious ring of thickets and trash accumulations at the right mes and seasons. To supervise this would require the ivision of the forests into districts to which efficient ardens or commissioners should be appointed. The alue destroyed by a single forest fire would employ a mall army of patrolmen for many years. As the case stands, the State has property of almost inestimable value, for the protection of which it does not expend as much as a small town would for a couple of fire engines and their crews, or a dozen policemen to guard its shops containing insignificant values.

CHARLES L. PAIGE.

CALIFORNIA, September, 1899.

Yukon Notes.

(*Continued from page* 242.)

ACCORDING to Dawson, the distance from Rink Rapids to the Little Salmon, while only twenty-seven and one-half miles as the crow flies, is fifty-three miles by the river. By the ice trail the distance was considerably greater than the last mentioned figures, and it required four days of hard work to cover it. We reached the Little Salmon four hours after nightfall on Jan. 11, and were much impressed after our lonely trip by the sight of two log buildings with light streaming from the windows, and a flagstaff, from which trailed a blood-red Union Jack.

Leaving our sleds on the ice, we hurried forward and entered the largest of the cabins. Seated around a table in the center, strewed with books, cards and papers, and illuminated by lamps burning kerosene, were several clean-cut, well matured and well groomed men of a distinctly official type.

They rose to greet us, and we were made acquainted with Inspector C. Starnes, of the Northwest Mounted Police; Hon. Mr. Justice McGuire, and Mr. F. C. Wade, Crown Prosecutor. Later we met Messrs. Bowles and Weinburg, of Seattle, who were traveling in company with the police at the time their partner, Freeman, was drowned. Besides these, a Mr. and Mrs. Jory were wintering at the Little Salmon, and there were three other men in the police party, making a total of eleven persons at this point. The river closed here Nov. 27, ten days later than at Fort Selkirk.

After a short conversation, we were given the freedom of the cook house and a good stove, and prepared ourselves a bountiful supper from our supplies. That night we slept in a heated apartment for the first time during the winter, rolling our blankets on the floor of the living room. We did not enjoy the experience. For a long time we were too hot to sleep, and rolled around like polar bears in a city zoo in summer. At length, however, tired nature got the upper hand, and we passed into a state of troubled dreams, and all too soon the post was astir, and it was time to get up. How unsatisfactory such nights are! Just when one really begins to rest, he finds that he must get about the day's business again, and he does not feel as if he had slept at all. One cause of our discomfort was due to the fact that our blankets thawed out and became saturated with water from the melted ice.

We breakfasted with the police party by Inspector Starnes' invitation, and a fine set of men we found them to be. Mr. Wade was an old Toronto University man (not very old either; his age was thirty-five), and he and Mac were soon deep in a discussion of memories of their Alma Mater. The Crown Prosecutor had been editor of the Winnipeg Press.

Judge McGuire was a man who was for some reason or other connected with decisions at the time of the Riel Rebellion, decidedly unpopular with the Indian and half-breed scouts accompanying the police. He had the reputation of being a stern and unyielding judge, but socially he was an extremely pleasant man.

Judge McGuire had been actuated by a fine sense of duty when he accepted the position of first judge of the Provincial District of the Yukon. Though well past middle age, he was the youngest available judge for the new district. A man was wanted at a time when, for parliamentary reasons, none could be appointed from outside the existing bench, and accordingly Judge McGuire left his comfortable home in Prince Albert, and his systematized routine of work, and faced the hardships of a new country at a time when the arctic winter was just settling down.

There was no possible recompense to him for the sacrifice he had made, yet he made it cheerfully, and was entering on his new duties with an interest that indicated how thoroughly the work would be performed.

After breakfast, when we left on our way up river, Judge McGuire accompanied us for a distance of several miles, and at hard places on the ice trail he boosted on the sleds with no uncertain hand. He was taking his morning constitutional. The Judge was a great walker, and on several occasions had traveled ten or twelve miles on these after breakfast spins.

The Day it Blew.

We were three days in making the distance from the Little Salmon to the Big Salmon. The distance, according to the map, is thirty-four miles.

The second day out we encountered a terrific wind which blew the trail full of snow and completely obliterated it. No traveling parties had passed for a week, and with a track to break, we missed them more than ever. Mac and I took half-hour turns at leading, and when the time was up we would fall back to the rear position pretty well exhausted.

An hour before sunset we saw on the opposite bank of the river a wooden door in the side of a mound of earth that looked like some of the vaults in Greenwood Cemetery. The place had a familiar appearance, and Mac and I called to mind how from our boats the previous fall we had looked at this same dugout and watched its solitary occupant standing in the doorway. The man, whoever he was, had been a taciturn individual with little to say in answer to our questions. Now we could see that he had gone and the place was deserted. A fresh wolf's track crossing to the very door was the only sign that life other than ours existed. Mac suggested taking up our quarters in the place for the night, but I had a prejudice against dugouts, and very foolishly refused, arguing that we had not made our full quota of miles for the day.

The hills were beautifully wooded just here, but further along they gave place to a bleak, open country, with only occasional strips of scanty timber, and at sundown we found ourselves bucking against a piercing gale, with no suitable camping place in sight.

Though we did not consult our thermometer, the temperature must suddenly have taken a considerable drop, for now the wind seemed to stop the flow of the blood and to harden and stiffen the muscles at the very time when we were exerting ourselves to the utmost. The sensation was terrifying, for it plainly indicated that a further increase in the cold or a lessening of our vital powers would result in death by freezing. We each felt the danger equally, and slipping from our sled harness, we set off in search of a spot where we might find fuel and a shelter from the wind. At first we were unsuccessful, and after twenty minutes' search we returned to the sleds, colder, if anything, than before, though we had been running all the time. On ahead the cut bank at the river's edge attained a height of 30 to 50ft., with no suitable break for getting up the sleds. Near at hand, however, there was a sag in the bank, and though the place appeared to be unprotected from the wind and barren of firewood, we determined to investigate it more closely. Behind, and only a short distance away, was a steep, stone-fronted mountain, and the prospect certainly was not encouraging.

As good luck would have it, however, there was a swamp hole between the river and the base of the mountain, and in the center of this, among the deciduous brush, we found a fairly thick growth of stunted evergreens. The snow was more than waist deep, but it felt warm compared with the air, as we made our way through it, occasionally tripping and falling. We broke a trail to the spot and hauled our sleds there, and then, a hundred yards further to the right, we found some dead trees, and cut them down for our fire.

By the time we got this wood to our camping spot we were pretty well used up with the cold and tire, and for the first and only time reduced to crawling as a means of making our way from place to place.

Soon, however, we had the fire going, and by the time its blaze illuminated the black, wildly swaying tops of the spruces we were ourselves again. The great volumes of wind passed over our heads, and in our hole in the snow, protected by our bough windbreak, we felt snug and comfortable once more.

Captain Ambrose.

The next day we lunched with Captain Ambrose. The fact that we had only eaten our own lunch an hour before did not prevent our doing full credit to the feast of bacon and biscuit which was set before us. We paid $13 for the meal and a few pounds of dog biscuit which our host graciously permitted us to purchase, and afterward we felt so strengthened and refreshed that we resolved to make the Big Salmon that night, a distance of twelve Alaskan miles.

Captain Ambrose was living with one companion in a nice little log cabin at the place where four of the police boats went to smash in an ice jam. A part of the cargoes had been rescued, and he was stationed here in charge of the goods. He was a very gentlemanly and affable man, and later we were surprised to learn that he was an uneducated half-breed Indian, who couldn't write his name or tell a single one of the letters of the alphabet.

Captain Ambrose, so they said, had discovered a gold mine at Rat Portage and sold out for a handsome figure in cold cash. With a fat bank account to his credit, he determined to gratify the great ambition of his life and become a steamboat captain. He accordingly bought a steamboat and installed himself as her first officer, and cruised around at random for a while, enjoying his new title. If he had been content with the steamboat, he might have been a *de facto* captain still, but he aspired to more, and became a high roller, with the result that he woke up one fine day to find himself just where he had been before he discovered the gold mine. That was about the time the Klondike began to be talked of. Ambrose had a superstition that he was a lucky man to find gold, and he thought if he could get to the Klondike he would soon have his steamboat and all the rest back again, so he applied to Major Walsh for a position with the police force that was being sent to Dawson. The Major heard that he was a captain, and engaged him in the capacity of boatman. When they came to embark on the lakes, Ambrose was put in charge of one of the boats, but a gale soon knocked out of his head any conceit that might have remained, and he went to his commanding officer and begged to be made a cook, or dish washer, or anything else than boatman, solemnly affirming that he knew nothing whatever of navigation, and was not and never had been a "water captain."

From Fifteen to Forty Below.

We had another uncomfortable experience with the cold before reaching the Big Salmon. Night overtook us before we had covered one-third the distance, and again the thermometer proved unstable.

Sunset came about 3 P. M., according to our time, and the night was very dark by 4 o'clock. The trail was fresh broken ahead of us, however, and we had little difficulty in following it.

The day had been very mild and still, but along about 9 in the evening there was a sighing sound in the neighboring treetops, and a tinkling of the brash ice on the river as the wind caught up the loose snow and swept it along, and simultaneously we felt the cold.

We were so sure we were near the temporary police post that we did not at first stop to put on our coats and sweaters, which were tied to the sleds, and then it was too late. The buckskin part of my gauntlets was worn thin at the ends of the fingers, and I could feel the frost nip through, and the right hand, which held the gee pole, becoming numb. Mac's hands were in the same condition. To get on our coats and sweaters necessitated taking off the bulky gauntlets, and it seemed certain our hands would freeze in the operation. Then too we did not feel like standing still long enough to change, nor were we sure that it could be accomplished with numbed hands, so we buckled down to work and made the best time possible for the post.

Some time before 10, six hours after nightfall, we sighted a boat turned bottom upward on the bank, and behind it several mounds of snow-covered dirt. Slipping out of our harness, we ran up on the bank and threaded our way among the caches of food and unlighted dugouts, whose occupants were either asleep or away, till at the very end of the gopher settlement we spied a light over the door of a dug-out, whose chimney was spurting a young volcano of sparks into the night air.

We entered, and were received in a hospitable way by the miner who sat smoking at one side of the fire. His partners, he said, were visiting at the police post, quarter of a mile further on. He offered us accommodation for the night, but Mac and I had a letter for Governor Walsh, and as the miner said travelers were accustomed to stop with the police, we decided to push on.

First, however, we thawed out a little by the fire. In the first stages of heat, we felt colder than ever, but before long the circulation was restored, and aside from the soles of our feet and tips of our fingers, which were slightly frosted, we were soon all right again.

Quarter of an hour later we were at the collection of tents that marked the site of the headquarters of the first Governor of the Klondike. We presented our letter, and listened to Governor Walsh's brother discoursing with Captain Bliss the vagaries of the Yukon weather. "At 8 o'clock to-night," he was saying, "the thermometer stood at 15 below, and now it's 40 below. To-morrow we may have a Chinook wind and a thaw." Mr. Walsh was joking, however, for afterward, in conversation with us, he said that he and every one else at the post was delighted with the climate, and that sudden changes like the one recorded were fortunately very uncommon. Governor Walsh called for Fiddler, one of the Indian scouts, and we were shown a tent, and by midnight we had cooked and eaten our supper and were ready for a well-earned rest.

Some Advice and a Banquet.

The following morning, after we had breakfasted and were ready to start, we were informed that Governor Walsh wanted to see us. We went to his tent, and the Governor said, rather briskly, "You fellows are going to have some rough traveling along the Thirty-Mile River, and will have to climb over hills several hundred feet high. I would advise you to throw away one of your sleds and cut down on your outfit as far as possible. It will pay you in the end." Neither Mac nor I disputed the point, and the Governor continued: "It is nearly 250 miles from here to the coast, but at the foot of Lake Lebarge and at Tagish Post, on the way, we have abundant supplies. We have not as much here as we want. Now I propose that you leave with me all your supplies over and above an amount sufficient to carry you to Lake Lebarge, and in return I will give you an order on that post, or the one at White Horse Rapids, or at Tagish, for an equivalent amount. This will give you depots of supplies along the way, and save you drawing the coast end of your grub over this part of your journey. Do you see the point?" The language was certainly plain enough, and Mac and I jumped at the opportunity of lightening our loads. When we had told the Governor we would take him at his word, he said:

"It will probably take you the best part of the morning to make your arrangements and have your papers attested. We have dinner at 12; I should be glad to have you dine with us." We accepted the invitation, and in company with Captain Bliss set out to make our inventory and separate our stores.

Later we sat down to a bountiful repast, which included besides pork, beans, dried fruits and the other stables, a large platter of fried eggs. The most sumptuous entertainer bent on dazzling his guests could not have provided anything more wonderful. Cleopatra's dissolved pearls were nothing very remarkable compared with those eggs, from our point of view. At Dawson two eggs and a slice of ham brought $5 in the restaurants, and elsewhere their weight in gold could not have procured them.

When the Governor came to help us a second time to the eggs, and we protested, he told us the story of the eggs, how the speculator who was conveying them through to Dawson was wrecked in the Thirty-Mile, and how, after having rescued a part of his cargo, he had persisted in trying to get on to Dawson over the ice. The man had no supplies to carry him through, and the order prohibiting any one from going down river with less than 600lbs. of food had already been promulgated, and accordingly he was stopped at the Big Salmon. The police had already spent hundreds of dollars providing for starving men in the interior, and they could not afford to care for more. It ended by the egg man persuading the officers at the post to buy him out. He received a fair valuation for his eggs, difficulties of transportation considered, and afterward he left for the coast to invest in a new cargo.

Governor Walsh.

The Governor of the Klondike was at that time fifty-five years of age. He was an erect, military looking man, without a superfluous ounce of flesh on his person. He had never known what it was to be very sick. In his boyhood he had been an athlete, and since then a good part of his life had been passed in the open air or under canvas, and physically he was sound as a two-year-old and fit for hardships of any kind.

On the side of experience, he had seen service in the three military departments—artillery, cavalry and infantry. His cavalry training was received in the Thirteenth Hussars, under Colonel Jennings, one of the heroes of Balaklava, who was afterward Deputy Adjutant General of the English Army.

The experience stood him in good stead, for when the Northwest Mounted Police, which is in reality a cavalry regiment, came into being in 1873, Major Walsh was its virtual organizer. During the years he was at the head of the Mounted Police, the fame of the organization spread over the world. With a mere handful of men he policed a country half as large as the United States, and policed it so well that the turbulent and savage element of the population never caused any very serious trouble.

Major Walsh turned back Sitting Bull and his braves into the United States when they had crossed the line after the Custer massacre, solely by the power of moral persuasion, and though a keen fighter, he has never used force when other means would avail.

This is one reason of his great power over the Indians. Some of the first Indian murderers captured by the police were taken by Major Walsh alone and unarmed.

Constable Barnes, at Lake Lebarge, tells of the day years ago when the young officer with half a dozen men passed out from the shelter of the cottonwoods on an Indian camp within whose confines were two desperate homicides. A council was held as to the best plan of action. The man with more discretion than valor advised a retreat, arguing that their force was too small, and saying that if they attempted the capture of the Indians none of them would leave the place alive.

"You are not in favor of going?" asked the young officer. The men nodded. "Then by the powers you shall not go," he said. "One man's enough for the job anyhow."

And with that he unbuckled his cartridge belt and revolver and threw them on the ground and started alone for the Indian camp. The men wanted to follow him, but he sent them all back to the cottonwoods, and half an hour later they saw him returning with the murderers, though how he persuaded them to come has never been explained.

Like the immortal hero, he "seen" his duty and he "done" it, and the *modus operandi* is immaterial.

Shooting Rapids in a Hurry.

"Major Walsh is a hustler and no mistake," said the constable at White Horse. "'E worked us twenty hours at a stretch crossing the lakes, and when we come to the cañon, 'e didn't waste as much wind as would start a cigar drawing, talking up the situation. 'E just jumped out of his boat and took a squint at the channel and then 'e come back and said, 'Are you ready, boys?' We says 'Yes,' though we didn't know at all what 'e was up to. 'Well, then, follow me,' says 'e, and with that 'e jumped into 'is boat and took the steering oar 'imself and shoved off, and three minutes later by my watch we was out in the open air again below that well hole, having shot the cañon as easy as falling off a log.

"Instead of running ashore and spending half a day figuring it out, 'e just kept right on below the cañon, till 'e came to the point with all the blooming flags on above White Horse, and then 'e run 'is boat inshore and we done the same.

"'Now, boys,' 'e says, 'out with the cargoes.' Well, sir, we had them boats unloaded in no time and the stuff up on the bank.

"'Cut 'em loose,' says 'e, and we cut and let 'em go, though we never expected to see 'em again. But blame if 'e 'adn't made 'is arrangements before, and when we got to the foot of the rapids there was men that 'ad been there and picked 'em up, and the boats was all drawed up on the bank ready for their cargoes."

In 1883 Major Walsh retired from the police and entered on a business career. He became interested in coal mining in Pennsylvania, and also at Roche Percé, in Northwest Territory, six miles from the Dakota border. Here on a great sandstone rock are written the names of Custer's scouts of 1871-72. Like Judge McGuire, Major Walsh had sacrificed personal interests at the call of his country. His great power as an organizer and long experience on the frontier made him the man best fitted in all Canada to bring order out of chaos in the Klondike.

The Last of the Buffalo.

"As late as 1877," says Major Walsh, "I traveled on horseback three days through a solid herd of buffalo, and never saw the outside. They just cleared our trail as we moved along, and every rise as far as the eye could see was black with their bodies. I had some half-breeds make a calculation of the number in the area between the Missouri River and a line fifty miles north of the international boundary, and between Fort Walsh on the west in the Cypress Mountains and a police post in the Wood Mountains on the east—a distance of 200 miles east and west. They estimated the number to the acre at various points in this territory, and from their figures I calculated that in the whole region there were over 350,000 head of buffalo. Inside of seven years they were all gone.

"Of course, they were pursued mercilessly and slaughtered, but from my observation I should say that the sudden annihilation was due in part to natural death, and that its first causes dated back before 1877. In other words, I do not believe all those 350,000 buffalo I had counted were killed by the hunters.

"As near as we could estimate, in 1877 only 30 per cent. of the herd were cows. The remainder were males. Bulls were never killed for meat if cows could be had, and the skin hunters had little use for them, as their robe after two years of age becomes coarse. The cow was furred all over, but the bull was shaggy on the neck, and consequently it was the robe from the female animal that was in demand. Of course the bull skins were used to a certain extent, but chiefly stripped of their fur for parchment, moccasin soles and the like.

"The demand of commerce was for the cow buffalo. The males in many instances wandered off and died. It was the cows that were exterminated by the hunters."

J. B. BURNHAM.

October Ducks.

O! the wind is fierce as it seeks to pierce
  This old frayed coat in vain;
And it cuts and stings as the drops it flings
  Of the first autumnal rain.

Though the plover tries, yet he cannot rise
  To breast so strong a gale,
For its slight form tossed in the clouds is lost
  And naught comes back but its wail

And the whitecaps chase in a mad, mad race
  O'er a stretch of wind-whipped lake;
As a flock of teal with a graceful wheel
  Decoy with a mallard drake.

It is royal game and it's all the same,
  If a teal or drake should drop;
For it's as you will—for they both take skill
  Or a teal or drake to stop.

CULPEPPER.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Keyser.

IT has always been a wonder to me why Mauritius has never been given credit with a visit from St. Patrick, as it is a well-known zoological fact that a snake has never been found on the island. This was very forcibly brought under my notice during my residence in Durban, Natal, South Africa, where I made my headquarters while engaged in collecting living specimens of the fauna of that country. I sold some pythons to the captain of a small trading vessel bound for Port Louis, and on his return was compelled to take them back, as he informed me that the customs authorities refused to allow them to be landed, as there was a special law enacted many years ago forbidding the importation of serpents of any description whatever.

Some years subsequently I determined to go to Australia for wild animals for the Zoological Society of Philadelphia. Of course I took some Cape specimens with me for exchange with the zoological collections in Adelaide, Melbourne, Sydney and Brisbane. Very naturally, there were some pythons among them, and as the vessel in which I engaged passage was to touch at Port Louis to take in a cargo of sugar I got my agents to write to their correspondents at that port to see the collector and inform him that I was coming with the snakes, knowing that it was contrary to law, but that it was a scientific venture, not a commercial one, and if possible I did not wish to land the serpents, but would try to arrange to keep them on board while the cargo was being shipped. If this could not be done I would take them outside the harbor and sink them, sooner than cause any trouble. On the voyage I found out from the captain that he had been a blockade runner during our Civil War, and his vessel had been destroyed by the United States cruisers off the port of Wilmington; consequently Yankees did not stand very high in his estimation.

We anchored off the bell buoy at the entrance of Port Louis Harbor during the night, and the next morning, when the pilot came on board, so soon as he caught sight of my cages stored under the longboat amidships, he exclaimed, "You have Mr. Thompson on board, and the collector wants to see him just as soon as he lands." Luckily, the captain did not hear him, and I busied myself looking after my live stock until the arrival of the port doctor, who duplicated the pilot's assertion as soon as he saw my animals. Unfortunately the captain was present, and immediately wished to know the reason of the collector's great desire to interview me. I immediately acknowledged that I had shipped the pythons, knowing them to be contraband, but trusted that my notification would serve so as to prevent any trouble, so far as the vessel was concerned; whereupon the skipper boiled over and read the "riot act" to me in the roughest kind of language. Fortunately the doctor espoused my cause, and finally persuaded him to wait and see what action would be taken by the customs authorities. In the meantime the tug had made fast to us, and we were quickly towed up into the harbor and made fast to the chain cables which serve instead of anchors for the purpose of securing the vessels while lying in the harbor. Of course I accompanied the captain to the Custom House, and just as we were about to enter requested him to say nothing to the officials about the snakes, but allow me to bring the matter to their notice. He reluctantly consented, with the wish that I had entered Tophet before taking passage with him. I kept in the background until he had finished making his entry, when I asked permission to interview the collector. The clerk passed into an adjoining room, and quickly returned and requested me to follow him. I found myself facing that official in his private office. On mentioning my name he instantly produced a key from his desk, and handing it to me said: "Your case, Mr. Thompson, was immediately decided on the receipt of your notification. You did exactly right in acting as you did, and here is a key to a room in this building, which I have caused to be emptied for your convenience, and should it be necessary to land the snakes while the vessel is receiving her cargo bring them here, and if any one finds fault with you for so doing refer them to me." Making due acknowledgments for his kindness, I turned to leave the room, when I found myself facing the captain, who had followed and heard the conversation. His countenance was a study, and fearing the scene, I quickly passed him and succeeded in getting outside before he overtook me, when he exclaimed, "You cursed Yankees can best the world beating against a head wind, and I take back all that I said. Come along, I want to introduce you to another one of your breed who has managed to wander to this out-of-the-way port."

Following him to the head of the quay, we passed into a large building, the lower floor of which was used for a dining room, bar and billiard hall, and pressing through a throng of customers, reached the bar, in front of which stood a short, thick-set individual holding forth in French—the lingo of the island—to a knot of his acquaintances. Instantly recognizing the captain, he greeted him cordially, and when I was introduced to Mr. Keyser as a fellow countryman he immediately order the barkeeper to set up the champagne. Taking us into his private office, he opened a box of Manila cheroots and insisted on filling our pockets with them. So soon as he found out that I had resided in New York city he fairly confounded me with inquiries as to the changes which had taken place since his departure.

Sauntering out among the billiard tables, he continued his inquiries, and on discovering that I had formerly belonged to the old Volunteer Fire Department, he suddenly seized me and attempted to hoist me up on one of the tables, shouting, "Say, you fellers wouldn't believe me when I told you 'bout how we chaps used to fight de fires in New York. Now, here's a cove as what did the same t'ing, and I wants you to look on to him." It required a strong effort on my part to avoid being lifted up and put on exhibition as he wished. More champagne was opened, and I finally managed to get away by promising to dine daily with Keyser during my stay in port. The next afternoon I learned that he had left a butcher shop in the Bowery and shipped on an East Indian clipper which was dismasted in a hurricane off Mauritius, and on being towed into Port Louis the ves-

sel was condemned and torn into pieces. Keyser secured work in the shipyard, and soon afterward got a couple of clerks to go his security for two casks of ale, with which he commenced business in a shanty standing on a corner of the lot, which was finally entirely covered by his establishment. The next day, meeting him at his door, dim recollections of Chanfrau, as Mose, "I kills for Keyser and fights for Liza," floated across my memory, and after dining I accompanied him to the race track just back of town, where they were preparing for their annual meet. There he explained to me a singular custom that was followed, different from any I ever met in my travels. The entire frontal of the outer side of the quarter tract is put up at auction at so much per foot, the highest bidder choosing his location, and the number of front feet he wishes to occupy, and the next highest bidder following the first bidder, and so on until the whole frontal has been sold. On the different allotments were erected such temporary accommodations as the lessee chose to build. Keyser's portion was one of the largest, and situated just at the winning post. A corps of carpenters were busy erecting quite a pretentious structure, which was intended to accommodate all of the owner's friends who might call on him during the races; and judging from its size, in comparison with the others, I concluded that he was one of the most popular citizens of Port Louis.

A few days after, meeting the collector in the street, he said: "Mr. Thompson, I wish to ask a favor of you. My children never having seen a snake, haven't the slightest idea of the appearance of one. Would it be asking too much if I were to request the privilege of taking them on board some day so that you could let them have a look at the reptiles?" I instantly assured him that nothing would give me more pleasure than to give an exhibition of snake charming for the special gratification of his progeny. I straightway bent my steps toward Keyser's hostelry, where I was so fortunate as to encounter the skipper, who naturally saw a chance to please his friends, and therefore entered into the scheme, with the understanding that he should have the privilege of inviting his acquaintances. Keyser overheard the conversation, and he also expressed a desire to enter into the transaction by furnishing a collation in the ship's cabin for the friends of the collector and the captain, provided that the public generally should be allowed a view of the performance after the invited guests had finished their survey. The affair was finally arranged by naming the time for the invited guests an hour ahead of the public exhibition, so that they would not be annoyed by the crowd. Keyser promised to have a notice in the daily papers inviting the general public.

The affair was soon noised abroad, and I found myself attracting close attention wherever I appeared. On the morning of the date fixed, I found that the skipper had cleared and scrubbed the decks, built a special ladder for the convenience of the visitors, taken off the main hatch and built a temporary rail around its combing, and it only remained for me to shift the cases containing the snakes immediately under the hatchway, so that every one would be able to get a fair view of them when taken out. So soon as the first boat load of invited guests arrived alongside, I descended into the hold, drawing the ladder down after me to prevent any venturesome visitor from getting down beside me. On removing the lids of the cases, I found that I would have my hands full in order to prevent an escape, as my pets had been closely confined for so long that they felt very much like slipping away when they were lifted up and allowed to coil around my body and limbs. No one except those who have undergone the experience can surmise what a dead, heavy weight there is to all the larger species of boas, therefore I shall be forced to leave to the imagination of my readers the strain I had to undergo for several hours, confined in a very small space, where the heat was suffocating, without the possibilty of getting a breath of fresh air. Almost exhausted, I determined to ask for an intermission, and was stooping to close the lid of a case, in order to do so, when my nose came in contact with a pint bottle of claret, suspended by a string. Instantly seizing it, I threw my head back and commenced drinking down its contents, when I caught sight of the collector's smiling face at the upper end of the line. Waving my hand at him in acknowledgment of his kindness. I emptied the bottle without removing my lips. Feeling much refreshed, I again opened the cases and continued the performance, until I was about completely exhausted, when I caught the sound of Keyser's voice, shouting, "Come! Get a move on you, *Passez.* Hurry up. Hustle, *Vite.* Push on, or I'll git after you wid a club." On glancing upward, I saw that the entire circumference of the hatchway was packed with the faces of a host of Chinese, Malagasys, Hindoos, Malays, Arabs, Singhalese, Kaffirs, etc. With the exception of Singapore, Port Louis has the most thoroughly mixed population that I ever saw. This was more than I bargained for, and losing all patience, the boxes were suddenly closed, ladder placed against the combings and I mounted on deck, in order to give Keyser a "blowing up," but he did not give me the opportunity, for he dropped into one of the fleet of boats alongside, and as he was being rapidly pulled away, called out, "Go down into the cabin. You's wanted there." I went down and found that a special collation had been set aside for my especial gratification.

The next day was the beginning of the races, which lasted only two days, and I found that Keyser had fitted up a portion of his stand for my individual accommodation, when I was expected to receive all who chose to call. Keyser was kept busy a greater portion of his time introducing me to a host of visitors, who appeared anxious to become acquainted with me, whom they seemed to think surpassed Van Amburgh in his palmiest days. On the second afternoon, at the close of the meet, Keyser came into my den with a bundle of newspapers and pointed out several articles describing my exploits with the pythons in terms which would even put "yellow journalism" to the blush, and announcing that I would be happy to receive the public generally during the racing meet at Keyser's stand. A few days after the vessel finished taking in her cargo of crude sugar and was towed out of the harbor for a departure for Adelaide, South Australia. Of course, Keyser was on board to see us off. When the tug prepared to cast us off, he wished me *bon voyage,* and I caught my last glimpse of Keyser standing on the paddle box of the fast receding steamer, hat in hand, waving adieux to his old brother "fire laddie." FRANK J. THOMPSON.

Natural History.

In a Seaside Pool.

IN a summer day's ramble on the seashore we discover among the rocks and pebbles a number of pools which have been left by the outgoing tide. Most of these are of small size, and they gradually leach away as the water recedes; but others, larger and deeper, and inclosed by solid ledges, remain until the tide again returns. Usually they are somewhat barren of animal or vegetable life, but often they teem with both, and thus furnish to the naturalist easily accessible and valuable facilities for observation and study.

It was at the edge of one of these larger pools that I paused in my stroll upon the strand and scrutinized the limpid water of the diminutive lakelet. The pool was perhaps 4 or 5yds. in width, and its greatest depth was not over 1ft. I had, therefore, a good opportunity to examine the water and the creatures it contained.

Its rocky edges were covered with a growth of algæ of most beautiful forms and colors, their red, purple, golden and green giving it the semblance of a gay parterre of flowers to which the translucent water added a charming effect. The bottom of the pool was covered with sand and small pebbles through which sprang up here and there a wavy mass of green and purple kelp and sea grass.

It was a beautiful pool, a charming ocean gem encased in its rocky setting, and I soon found that it furnished an attractive home for a variety of interesting creatures, for, as I scanned the quiet water, I discovered in a fissure of the rock a magnificent specimen of the rose sea anemone, one of the handsomest of the *actinæ,* which was unfolding and opening its tentacles like the petals of a huge flower in the sunshine. For a few moments I stood and gazed upon the beautiful sea flower and watched the movements of the tentacles until they were fully expanded, and then drawing close to the creature, I seated myself on a nearby boulder and awaited developments.

The anemone was now ready for its lunch, which it receives with the tentacles I have mentioned; it is gifted with a most insatiable appetite, and in its gluttony it seizes every living thing that comes within its reach.

The tentacles were alternately extended and contracted, then for a brief period they remained motionless, and then they were given a slight circular wave, which created a whirl in the water and swept it toward the anemone's mouth. For a while I watched these movements, but nothing approached the beautiful but treacherous creature.

At length a number of minnows emerged from their lurking place in the algæ and darted about in sportive pursuit of each other. Here and there they circled, sometimes in a compact body, then in little detached groups. All over the pool they wandered in their erratic movements, until finally they approached the anemone, and soon were swimming above and around it. It was a dangerous proximity for them, and to one it proved to be fatal, for as the little fish darted in pursuit of the others it incautiously touched a quivering tentacle; the response was instantaneous, for like a flash the fish was seized, the other tentacles were closed upon it and the unlucky minnow was engulfed.

It was "a touch and a go" for the fish, for there is but little chance for escape for any creature that the anemone can hold with its tentacles and swallow; it seems to possess the faculty of paralyzing its victims. Naturalists have released small fishes as soon as they were seized, but they had died a soon as they had come in contact with the detroyer. It has been proved that if the tentacles are touched in the water by the naked hand a burning, stinging sensation is felt, and this must have a powerful effect on small creatures.

Its diet is not limited to small fishes and custaceans, for it devours every living thing that it can overcome, and an instance is on record of one of these large anemones having eaten in less than an hour a mussel and a good sized crab. Of course the shells are not digested, but when the edible parts are assimilated the residue is ejected in a very simply way; the anemone turns its stomach inside out!

For a while I sat watching the beautiful rose-colored creature, hoping that it would again expand its tentacles, but it remained motionless; it was evidently enjoying the lunch it had so successfully captured, and for a while its appetite would not call for more.

As I again examined the pool I noticed that a spray of kelp was vibrating, and in a few moments a large crab emerged from beneath the plant and began to move about over the sand and gravel, evidently in search of food. While thus engaged it did not discover the approach of another of the same species which had left its lurking place beneath a bit of shale, and a challenge to fight was the first notice it received of the presence of the other.

The response was instantaneous, for no animal is more ready for a combat than one of these crustaceans. With pincer claws erect, they came together, and then ensued a battle, which, although of the most savage character, was ludicrous in no small degree to witness. Sidling around each other with astonishing celerity of movement and with pincers all the time open and extended, they danced and fought all over the pool; they were pretty evenly matched, both in size and in dexterity of attack, and the victory to one or the other would depend, evidently, on chance.

Back and forth they moved, then sideways, and then over each other they leaped in the water in their effort to seize each other in their powerful jaws. Now and then they stood erect on their hinder feet, regarding each other with intense yet comical malice.

It was a queer duel, but one of short duration, for with a sudden rush, one of the combatants penetrated the guard of the other and seized it by one of its legs, which it tore from the body with a dexterous wrench.

"To the victor belong the spoils," I thought as the crabs separated, the defeated one retiring to the further end of the pool, where it quickly buried itself in the sand, while the other returned to its lurking plac beneath the kelp and feasted at its leisure on the prize it had won.

I did not waste much sympathy on the cripple, for I knew that its leg would soon be replaced, for like the lobsters, who also have their battles, the crabs have the faculty of growing a new member if one is lost by accident. And this provision by nature is a wise one, for with their pugnacious habits these crustaceans would without such a means of replacing lost members soon be exterminated. They are always ready for battle, and no mercy is asked or given. It has been well said of them that "They are the marauders of the ocean community, merciless brigands, ready to do anything to secure their prey. They fight in deadly combat not only with their enemies or their prey, but with each other, and frequently without any pretext, save only for the love of battle."

When they have shed their hard shells to acquire larger ones, however, they are helpless, and woe betide them if an enemy overtakes them in their soft and tender mantle. At this stage their pugnacity leaves them and they retire to as secure a hiding place as they can find, and there remain until their armor is replaced.

The crabs in the pool before me were the species called the common rock crab, so termed because they seem to prefer a rocky shore; they do not limit their habitat to such localities, however, but are often found on sandy or gravelly bottoms. This species is found all along our coast, and is common even as far north as Labrador. Although it is sold in many of our markets, generally in a hard shell condition, it is not in great demand, the "blue sheddar" or soft shell crab being by far the greater favorite among epicures. That species is also found along our shore, from Massachusetts to Florida, but it is not at all common north of Cape Cod.

The duel between the crabs had hardly ended when my attention was attracted to a large starfish, which, emerging from the weeds in the pool, crawled over the smooth rock before me.

"There is a variety of life here, surely," I thought, as I lifted the starfish from the water and laid it on its back beside me. "And here is another destroyer, although one would hardly imagine that such a creature could do much harm."

It was a perfect specimen, and judging from its plumpness, it had recently made a hearty meal. The starfishes work terrible havoc among the oysters and other shell fish and mollusks, and by oystermen are regarded as the greatest of pests, the injury done by them aggregating millions of dollars annually.

It seems almost incredible that a creature with a mouth no larger than that of the starfish can destroy a shell-encased oyster, but that it does so is a fact too well established.

On finding an oyster, the starfish coolly proceeds to embrace the unfortunate bivalve with its arms, fastening itself firmly to it with the little sucking disks with which the underside of its body is covered; it then, after the oyster is securely imprisoned, begins to turn its stomach inside out, and soon the victim is completely enveloped by the protruding stomach. It has been stated that a poisonous secretion now exudes from the pores of the membrane which causes the muscle of the oyster to relax and the shells or valves to open, and in a short time the flesh of the helpless creature is sucked out by the starfish.

When the oyster is completely devoured, the stomach of the marauder is again swallowed, its arms relax from around the valves and the starfish proceeds on its way in search of other victims. If these rapacious creatures were few in numbers, the injury they do would be comparatively insignificant, but unfortunately they are very abundant, and as before stated, they are among the worst pests oyster growers have to contend with. A dredging device for catching them has been invented, however, and it has proved a valuable implement for keeping their numbers reduced. One can form some idea of their abundance when I state that one dredging steamer, working on beds near New Haven, Conn., and at Bayside, captured in eight weeks over 5,000 bushels.

The mission of the starfishes is not entirely a destructive one, however, for they are valuable animals in a certain way; they are among the scavengers of the sea, and they feed on all kinds of dead fish and other small creatures. The good they do in keeping the water pure is not at all insignificant. Although they have five eyes—one on the end of each arm—it is believed that they discover their prey by the sense of smell rather than by that of vision. The havoc wrought by the starfishes on the oyster beds is in some localities equaled by the injury done by the "drill"; in fact, some oyster growers dread this pest as much as they do the starfish. There are a number of species, but the *Urosalpinx cinerea* is the worst of all. They belong to the snail family, but are in the various species of different forms and characteristics. When one of these pirates finds an oyster it fastens its foot or creeping pad, the fleshy disk we see in the opening of the shell, firmly upon its victim, and then the point of the tongue, called the lingual ribbon, which is armed with three rows of sharp teeth, is brought to bear on the valve or shell of its prey, and with this, which is rotated back and forth in nearly a circle, a hole is soon drilled through the hard substance and the body of the oyster is reached. The drill now withdraws its boring appaaratus, and inserts its sucking tube into the hole, and the luscious flesh of the unfortunate bivalve is leisurely devoured. It does not limit its depredations to the oyster, but any shell fish, even its own species, is not unacceptable as a prey, specimens often being found with the tell-tale hole in their shells. It prefers the oyster, however, and so destructive has it been that it has actually depopulated entire beds in some localities, or forced the owners of the beds to transplant them on bottoms which were free from the pests. There is another and larger sea snail, called the conch, which also preys on the oyster. It is not armed with the toothed tongue of the drill, and in fact such an accessory is unnecessary to this marauder, for it plants the concave underside of its foot firmly on

the valve of the oyster, and by the exercise of a wonderful muscular power it simply crushes the shell to pieces. Fancy a snail strong enough to smash the hard valves of an oyster!

So we can see that the oyster has pretty hard times; it is surrounded by enemies at all stages of its existence, and were it less prolific that it is the race would soon be exterminated. Fortunately its reproductive powers are very great, the yield of eggs of a single good-sized one being, according to the estimate of scientists, upward of 60,000,000. With such a prodigious yield as that one would imagine that there is no danger of the depletion of the waters, but only a small proportion of the eggs become mature oysters. After they are floated out by the female, and later become the "fry" or larval oyster, they are constantly preyed upon by various fishes and mollusks. If they escape these numerous foes they are carried here and there by the currents of the water and by their own movements, for they have in that stage of existence the power of swimming in a slight degree until they assume the so-called "spat" form, when the shape and character of their valvular covering change. They then affix themselves to some object, and there remain during the remainder of their lives.

The growth of the little oyster is now very rapid, specimens ten days old measuring ¼in.; those forty-eight days measuring about an inch, and when eighty-two days old they are about two inches in length. Subsequently the growth continues with greater or less rapidity, according to the abundance of food, but generally a marketable size is attained in about three years. The table qualities of the oyster depend on the abundance of certain kinds of food, and that which is obtained in certain localities give special flavors and degrees of excellence. As all our oysters on the Eastern coast are of the same species, the Saddle Rocks, Shrewsburys, Providence Rivers, etc., would, if bedded in any given locality, be gastronomically alike; but it is the special food that is furnished in certain localities which give special varieties their degrees of excellence.

In this connection a brief sketch of the anatomy of the oyster will be of interest here.

As every one knows, the succulent mass of flesh is encased in two shells called valves. The deep or concave valve is ordinarily the under one when the oyster is in its natural element, and it is called the left valve, while the other or flat one is called the right valve. These are bound together by an exceedingly strong muscle, called the adductor muscle, and it is at the hinge end of the shell that the mouth is located. Now, if we lay an oyster on its left side and thrust a sharp knife between the valves, carrying it back carefully, so that the flesh will not be torn nor crushed, until the adductor muscle is reached, and cut, we find, on lifting the flat valve, that the soft body reposes motionless in the deep shell. On examining this, we discover a thin mantle or membrane, which covers the surface of the body and hangs over its edges. Lifting this mantle and cutting it entirely away with a pair of scissors we expose to view the oyster's gills, which are four in number, and which extend nearly around the body. These are covered with cilia, or hairs, arranged in rows, and these are constantly in motion, sweeping a current of water with its contents of food, etc., through the gills and water tubes into the mouth.

The gills are also the organs by which the blood of the oyster is aerated. Between the gills and the hinges are four flaps, called the lips; these are arranged, two on the right and two on the left side of the body, and between them, near the hinge, is the mouth. Now, if the delicate membranes which cover the internal organs are cut still further away the digestive appartaus—heart, etc.—may be examined, and the pulsations of the latter noted; these are not rapid, but they may be plainly seen.

The food of the oyster consists of infusoria and diatoms, and other minute forms of vegetable life; these are diffused through the water more or less plentifully, and they are, as I before stated, swept by the vibrations of the cilia of the gills into the mouth and thence to the digestive organs.

It is by transplanting the bivalves into waters which teem with the greatest abundance of this microscopic food that culturists are enabled to produce the most merchantable oysters. There is a period, however, when, no matter how abundant the food may be, they are not in proper condition for the table. At the times of spawning and immediately after it the body of the oyster becomes thin and transparent, while the reproductive organs increase in size and become developed to a corresponding degree; this occurs in the summer months. Unlike the European species, which is a hermaphrodite, the American oyster is of the two sexes.

In closing this brief sketch of the oyster and its enemies I must not fail to mention that destructive little creature called the "boring sponge." When young it attaches itself to the shell of the oyster or mussel and soon penetrates the outer coating; it then gradually forms a series of burrows or galleries, which in course of time completely honeycomb the shell, and finally cause the death of the victim. It is a common species on our coast from Cape Cod to South Carolina, and it sometimes increases in size until it attains a diameter of 6 or 8in., and a foot in length. One can form some idea of its burrowing capacity, when I state that pieces of submerged marble have been riddled by it.

This sponge is not merchantable—in fact, but few species on our coast are of much value, and those are found only around Florida. The most valuable varieties come from the Mediterranean, and there are over 300 species known to science. Some of these are of exquisite form, such as the "feather" sponge, the trumpet, peacock's tail, Neptune's glove and Venus' flower basket. Although they are generally attached to rocks at the bottom of the sea, they often affix themselves to marine plants, and even to various kinds of mollusks.

If we examine a sponge with a magnifying glass we find that it is a mass of fine flexible fibers, in which there are numerous orifices and pores, which communicate with each other by canals of various sizes or diameters. This tissue is filled with little spicules or spines, which are of a great variety of form, and which are often very beautiful as microscopic objects. The fibrous skeleton is surrounded by mucous matter, which is furnished with numerous cilia, by the agency of which a current of water which contains the food of the sponge is continually being carried through the canals in every direction. The water seems to be drawn in through the smaller orifices called "pores," and is expelled in continuous jets through the larger ones, termed "oscules." EDWARD A. SAMUELS.

Crime in Brutes.

Editor Forest and Stream:

I have read with deep interest what your correspondents have recently had to say regarding the mental capacity of brutes, and concede that the evidence advanced amounts to a demonstration. At the same time, I think I can detect a selfish motive in the writing which would seek to involve these creatures in that moral responsibility by which mankind is held accountable for his "original sin," according to the theologians. There can be no doubt of the innate cruelty of the brutes in nearly all classes and orders of quadrupeds, birds, fishes and insects; and cruelty implies crime. Crime presupposes plan and premeditation. Inadvertence is not penalized, under the law. Our word "brutal" is synonymous with vice, wickedness and cruelty, and no more opprobious epithet can be applied to a man than to call him brutal. It is easy, therefore, to see how men and brutes stand relatively. The latter suffer much by comparison in the general arraignment; the animals have the greater obloquy. Indeed, a learned English biologist of the past generation named H. G. Torre, has incriminated them far beyond the scope of the decalogue: for he convicts them of no less than eighteen distinct crimes. The enumeration is interesting. They are, as stated:

Murder.—Practiced and inculcated by all creatures classed as carnivorous.

Parricide.—Young buffaloes destroying the old bulls; redbreasts destroying the old birds, etc.

Fatricide.—Cuckoos killing their brothers and sisters as soon as they are strong enough. Collies killing their cognates of the same litter.

Suicide.—Scorpions, snakes and lizards stinging themselves to death.

Theft.—Cats, dogs, magpies, ravens and crows steal and hide stolen goods.

Kidnapping.—Rooks and jays steal eggs and young from nests.

Highway Robbery.—Big dogs take food from small ones. Eagles rob ospreys of fish.

Cruelty.—Cats playing with mice, etc.

Drunkenness.—Instanced in dogs, hogs and monkeys.

Deceit and Simultation.—Hedgehogs, opossums, foxes, beetles, spiders, toads, etc., pretend to be dead. Partridges and other birds feign to be wounded.

Idleness.—Cuckoos, which will not make nests, nor provide for their offspring.

Polygamy and Incest.—All creatures which do not pair together.

Gluttony.—Hogs, buzzards and vultures, et al.

Selfishness.—Animals refuse to share with each other. Dog in manger, etc.

War and Fighting.—Constant among all animals.

Oppression and Ill-Treatment.—Storks, dogs, stags and other creatures which mistreat and kill the sick, feeble and wounded.

The foregoing enumerated traits and practices are sufficient in themselves to show that the brutes have a sense higher than mere instinct, and if they are not accountable with men for crimes which they have in common, it would seem as if they ought to be. If not, why not?

CHARLES HALLOCK.

Man, Snake and Toad.

WHILE indulging in one of my frequent spells of meditation evidences of man's fallacy crowded upon my mind. One was of the way people determine right and wrong in dumb animals.

Many, no doubt, will criticise my assertion, but upon considering the following reminiscence, they—perhaps—will call to mind many incidences of a like character wherein they appeared magnanimous, but in reality were they so? On a country road one day I heard a very peculiar sound, which directed my attention to a slight movement in the grass. I found a large garter snake holding fast to a strugglging toad, which was very slowly, but surely, disappearing into the snake's widely expanded mouth. Now, as it was, that snake was only partaking of an honestly earned, straight, legitimate meal; but against him my ire was aroused, and my sympathy was for the toad, which needed assistance then if ever. As a preserver, I struck the snake in twain, allowing the toad to go free, while the severed parts of the snake were writhing at my feet, beaten out of its meal, also out of its life; beaten out of what nature destined it should live on.

The poetry of my rescue of the distressed was lost when within a week I shot partridges and ate of them, thus doing just what I had killed the snake for doing.

There are comparatively few people who have never taken a life for a reason much similar to that narrated above, and have then dined on animal flesh the same day.

Surely it is hard for us to constrain ourselves to unconcernedly witness the stronger prey upon the weaker, but our trained emotion is not stirred when we are the aggressors; thus we appear in a false light to ourselves.

Nature is wonderful and pleasing to study, for something new is constantly presented for consideration.

CHAS. H. SMODELL.

STILLWATER, N. Y.

Creatures that Eat the Tortoise.

LAKE NEBAGOMAIN, Wis.—*Editor Forest and Stream:* In reply to one of the paragraphs of J. P. T. in your issue of Sept 23, I will say that the raccoon eats both the painted and the spotted tortoises, the little "skillypots" which live in the ponds and streams of the eastern United States. Where Coony is frequent and these pond turtles abound he will find many empty shells with the meat taken out in a clever manner with little or no injury to the shell. The scattering of the bones of neck, tail and legs and the tracks in the mud are evidence that Ole Mister Coon did the work, for if the tortoise had died and flesh flies, scavenger beetles and ants had emptied the shell the bones would not be scattered, partly chewed nor missing, and the "tenderloin," as epicures call those strips of flesh which lie between the ribs and the shell, would not be present, fresh and intact, as I have found them. No, "the destructive small boy" does not do all the killing of these two species of shellbacks, and it is possible that other animals prey upon them.

I have taken small ones, the size of a quarter of a dollar, from the stomachs of black bass, and even of brook trout. Their shells are very soft then, merely cartilage, and can be digested by a fish. I have found empty shells of the box tortoise, but all the bones were inside the shell, denoting that the animal had died and nature's scavengers had taken care of the flesh.

The question of J. C. T. brings up others in this line. Does any animal eat the smallest of our turtles, the little "stink-pot" or "musk turtle," *A. odoratus?* Then there are larger fresh water species than those named—the various "sliders," as those more southern red and yellow-bellied terrapins are called, which grow to be 8 or 10in. long and are sent to Northern markets, where the fish dealer sells them to the honest caterer, who mingles their flesh with that of the diamond-back terrapin for which he has paid $60 to $100 per dozen, and while "coons" may look alike, the slider takes on a terrapin flavor which only an expert may distinguish, and when it reaches New York, Baltimore or Philadelphia markets it is safe from the coon. This is the apotheosis of the slider.

For years I have wondered if there is now or has been on this continent before the advent of the white man any animal except man that can kill a snapping turtle after it gets to be 8in. long. I have seen brave dogs essay it, but they always lowered their colors and retired before an enemy so formidably entrenched and so powerfully armed.

FRED MATHER.

The Linnaean Society of New York.

REGULAR meetings of the Society will be held in the American Museum of Natural History, on Tuesday evenings, Oct. 10 and 24, at 8 o'clock.

Oct. 10.—Frank M. Chapman, "Bird Studies with a Camera." Illustrated with numerous lantern slides.

Informal discussion of notes made by members during the past summer.

Oct. 24.—Jonathan Dwight, Jr., "Canadian Birds of August."

WALTER W. GRANGER, Sec'y.

Game Bag and Gun.

The Minnesota Congressional Expedition.

ST. PAUL, Minn., Sept. 29.—The movement for the Minnesota National Park, which was begun early last spring, and whose progress during the summer has been reported in these columns, reached its critical stage yesterday at Chicago. The enemies of the project were hoping that it would prove a fiasco. The friends of the enterprise hoped that it would be a success. By 9 o'clock of yesterday morning it was seen that the friends had won. The enterprise at this writing may be called an unqualified success in respect of all its definite purposes. It was never the intention of the Minnesota National Park and Forestry Association to attempt to dictate either to the people of Minnesota or to the Congress of the United States what should be done in regard to setting apart from settlement a larger body of land in Minnesota. It has been all along the avowed intention of this Association merely to take out into the region in question an adequate representation of Congress and of public men. After that, the duty of the Association was in its conception done. Further action was to be left to the members of Congress themselves. Yesterday morning at 9 o'clock it was proved beyond peradventure that this adequate representation was secured. Col. Cooper received and deserved the congratulations of his friends. Personally, he said, "I fought through the civil war, and I have been in many battles, and I have been glad to get out alive, and with success. I have had to do with some private affairs in which I was glad to be successful. But I want to tell you that never in all my life have I felt so relieved, so glad and so proud as I do to-day."

This enterprise needed some such enthusiast as Col. Cooper to plan, to hope and to dare for it. It is very likely that he himself did not know how big a matter he had undertaken. It is very likely that there has not been at any time in recent years so large a number of Congressmen assembled in any part of the country upon an unofficial occasion, unless it may be at the Dewey celebration in New York this week. Col. Cooper has conducted a successful competition with Admiral Dewey, and that is saying a great deal, as every American citizen knows. Well nigh two dozen members of Congress met at the Chicago Athletic Club in Chicago yesterday, and the number and character of this representation set the seal of approval upon the enterprise.

During the day the gentlemen of the party were entertained by the Chicago Athletic Association, and spent their time in the pleasant rooms of that club or in making purchases at the sporting goods stores. It was early apparent that the sportsman instinct of the average American extends also to the men highest in American affairs. There is hardly a gentleman along who is not a shooter or a fisher. We have men who were in the West in the buffalo days; men who followed the Sioux trail across Dakota when the Sioux had no reverence for persons; men who shoot quail in the South, or fish for trout in good old New England. The great North American Congressman himself, as viewed from the standpoint of this expedition, is not a solemn, august and forbidding personage, but simply a splendid, human fellow, like to us all and equal to us all in his liking for the outdoor air. These men who are going up into Minnesota are men who will love and understand that which they see. The forest reserve project is safe in their hands, whether they decide for or against it. They will see for themselves, and tell their associates in Congress of that which they have seen.

The Start West.

The start West was made at 6:25 yesterday evening. Mr. P. S. Eustis, General Passenger Agent of the Chicago, Burlington & Quincy road, had provided with royal hospitality, free of charge, one of the most beautiful trains ever pulled out over that splendid road. There were four cars, sleepers, buffet car, etc., etc., all lighted by electricity, and each an edition de luxe of the highest railroad art. Mr. Eustis himself went with the party, and the best of care was taken of everybody in every respect. Mr. T. P. Shonts, president of the Indiana, Illinois & Iowa road, was master of transportation for the party, and all the details of baggage, etc., went on without a hitch. Nobody was left, and everybody had his dunnage on board when the smart special rolled out of the Chicago union station.

Personnel of the Party.

After the start was made, and after Col. Cooper had been reduced to a state of semi-tranquillity, a general count of noses was made and the personnel of the party was discovered to be as below: Hon. Jos. G. Cannon, of Danville, Ill.; Hon. James R. Mann, of Chicago; Hon. J. D. Bowersock, Kansas; Hon. Oscar Turner, Louisville, Ky.; Hon. Roswell P. Bishop, Ludington, Mich.; Hon. J. W. Fordney, Saginaw, Mich.; Hon. Wm. S. Mesick, of Mancelona, Mich.; Hon. James A. Tawney, of Winona, Minn.; Hon. Chas. F. Cochran, of St. Joseph, Mo.; Hon. John M. Allen, Tupelo, Miss.; Hon. Frank G. Clark, of Peterboro, New Hampshire; Hon. Fremont O. Phillips, Medina, O.; Hon. Athelston Gaston, Meadville, Pa.; Hon. Wm. H. Graham, Allegheny, Pa.; Hon. Theobold Otjen, Milwaukee, Wis.; Hon. James H. Davidson, Oshkosh, Wis. A number of Members of Congress will join the party at St. Paul. The following are other members of the party, and complete the entire list of those actually present upon the train:

W. F. Snyder, W. H. Synder, Sidney L. Wright, Eugene S. Pike, H. C. Robinson, Fred N. Stephenson, C. L. Bailey, R. P. Bishop, George A. Schilling, Henry White, Elbert Hubbard, H. P. Williams, Everett Sisson, J. A. Campbell, Theo. P. Shonts, Henry O. Fitch, L. W. Pitcher, Col. John S. Cooper, P. S. Eustis, D. K. Clink, John E. Williams, Dr. C. A. Schenck; K. T. Harris, Record; F. N. Wood, Tribune; John S. Spargo, Times-Herald; E. Hough, FOREST AND STREAM.

En Route.

The evening—and indeed one might add part of the morning—en route on the Burlington, was spent by the party in very pleasant fashion. It was an easily discoverable fact that the great North American Congressman is not only a splendid fellow, but also a splendid story-teller. It was no ordinary assemblage of minds which met on this train, and it was very much a privilege to be present. When the entire party is evidently out for pleasure, and no one is above a laugh and a joke, there is no triviality or flippancy in the general tone, and one may hear a great many things he is apt to remember. One of the best story-tellers of Congress is Hon. John M. Allen, of Mississippi, otherwise known as "private Allen," who in his long career in public life has never been known to be without a story, nor ever been known to repeat himself. The venerable Mr. Cannon, of Illinois, is one of the most respected members of the party. Hon Athelston Gaston, of Pennsylvania, is another gentleman well on in years. Hon. Chas. F. Cochran, of St. Joseph, Mo., may be called a Westerner or a Southerner, as you like, for he was born in Missouri and has spent his life in the West. Mr. Cochran saw Kansas in the "bleeding" days, and needs no one to tell him about the Western frontier. Mr. Cochran was formerly a newspaper man, and by this reason alone might be called not only great, but good. Minnesota is not new for him, for he has fished all of Iowa and Minnesota, including Spirit Lake in Iowa, the Alexandria chain in Minnesota, etc., etc. He is a shooter as well as fisher, a man of experience in the better sporting regions of the West. To show the stuff of which sportsmen are sometimes made, I might cite one instance in Mr. Cochran's life. He was thrown from a buggy at one time, far out in a prairie country, and distant from any surgical help. His leg was fractured in three different places, and the splintered bone protruded through the flesh, plowing into the ground where he fell. Mr. Cochran called for some water, sat up, and himself washed the ends of the bone clean, occupying himself in this way for fifteen minutes until he could be put into a wagon. Four times the doctors made ready to amputate the limb, but his own first aid to the injured had been so efficient that the wound healed, the limb was saved, and is to-day nearly as good as new.

Dr. C. A. Schenck, supervisor of the Vanderbilt forests, of Biltmore, North Carolina, is an interesting character. A German of fine family and of finished scientific education, he is by instinct and education not only a sportsman, but a lover of the woods for their own sake. As we strolled about the rooms of the Athletic Club in Chicago yesterday, Dr. Schenck would run his hand lovingly up and down the great oak panels, looking with absolute love upon the great planks of oak in the wainscoting. "I have told Mr. Vanderbilt," he said, "to use all the hardwood he could in his house, and to have all the carving done that he could. You Americans do not know how priceless is this wood, which you waste. In twenty years you will not be able to cut any such great slabs of wood as you see here. Your forests are passing away. In fifty years these panels, these carvings will have a priceless value." In person, Dr. Schenck is tall and slender, with European polish of manner and an open affability which is cosmopolitan. The party has a little fun with him now and then, because the Doctor thinks we ought to have a monarchial form of government here, where everything else is so nearly quite what it ought to be.

Col. Cooper and his friend Mr. Henry Fitch, of Chicago, kept an interested crowd convulsed with story-telling until a most disreputable hour this morning. I am quite sure that we should all be there yet had not the chief actors grown too hoarse to talk. The actual hours of rest were somewhat brief, for the Burlington special made no stops, and we ran into St. Paul about 7 o'clock this morning.

At St. Paul.

The party was met at the train by a large reception committee of St. Paul gentlemen, who went into charge with pleasant authority. The Merchants' Hotel was made headquarters, and after breakfast the reception committee took out all the visitors for a carriage tour of this beautiful city. There is a touch of fall in the air here in St. Paul, but the clear, cool atmosphere is like wine in its effect. This Minnesota country is a healthy land. It is a land of reserved power. The men here are hearty and strong looking, and you feel that they are able to accomplish, and accomplish without strain or effort. Of all cities in America, Chicago is the highest geared. Business life there goes on at higher pressure than it does at any point in the world. The streets of Chicago are filled with men hurrying, almost running, and their faces are strained, anxious, nervous. Here in St. Paul the streets are not so full; the men do not gallop, their faces do not look troubled. Yet as you meet them you feel sure that if they have not arrived they will do so. As to St. Paul itself, it has arrived distinctly.

This afternoon the Congressional party will be entertained in divers fashions. Among the features of the day will be a visit to the quarters of the Women's Federation, to which organization there must be given credit for the actual inception of the movement for a Minnesota forest reserve. It was something like ten years ago that the Federation of Women's Clubs of Minnesota filed their petition for such a reserve in the State of Minnesota. More rapidly than they dreamed there has grown the necessity for some such great playground and health-ground in our middle Western country. The best place for such a reserve—indeed the only place for such a reserve, unless we go into the abandoned and ruined pineries which the loggers have left behind them—is this region around Cass and Leech lakes. Now we are going up there to look at that country. I doubt not it will seem very beautiful to all who see it. Let us all hope that something may be done which will keep it forever beautiful, unhurt, unspoiled.

There will be a banquet here in St. Paul extended to the party this evening, and it seems likely that more than one hundred persons will be seated at table. Here we shall see the great North American Congressman in a different light, and one in which he shows to advantage, not only at table, but after table, and on his feet.

It is the intention to keep everything as informal as possible, and to cling closely to the idea rather of a pleasure expedition than of a public function. After the banquet the party will start north, at about midnight, and will reach Walker to-morrow morning.

Mr. F. I. Whitney, General Passenger Agent of the Great Northern Railway, will in his turn take charge in person of the special train which will carry the party north over the Great Northern. He tells me that there will be at least thirty or forty additions to the party at this city. We should reach the lake country something like seventy-five strong. This will mean that the expedition will not be unwieldy, and will yet be large enough to be successful.

Boats.

Word has been received from Mr. H. G. McCartney, advance agent of the expedition, now at Cass Lake, stating that twenty-five or thirty boats can be obtained. The largest steamer on that lake cannot run up the Turtle River, but the smaller can. There will be oarsmen enough to take out all the boats. Mr. L. W. Pitcher, of the camp committee, says that all the supplies are now on the ground at Walker.

The Weather.

One very important factor in the pleasure of this expedition will be of course the condition of the weather. To-day at St. Paul the sun is shining brightly and the weather may be called simply delightful for the purposes of this trip. Mr. McCartney wires that there was 2in. of snow at Cass Lake yesterday, but this blizzard which crossed Dakota and Minnesota earlier this week has now passed on rapidly to the east. It is very likely that by the time we reach Walker the weather conditions will be all that can be asked.

Plans at Walker.

Among the plans for the entertainment of the party will be a gathering of the population, white and red, at Walker to-morrow. There will be outdoor festivities, Indian dances, etc., etc., and it is certain everything will go merry as several marriage bells.

From Duluth.

The party is joined at St. Paul this morning by Hon. Page Morris and Mr. Gilbert Hartley, of Duluth, two of the most formidable enemies which this forest reserve enterprise has had. The general impression is that we have taken both these gentlemen into camp; and whether we have done that or not, they are both pleasant enough to take into the car and to classify as very worthy members of the expedition. At present it is thought there will be no stop made at Duluth or at Grand Rapids.

Friends of the Enterprise.

At the last moment there came, of course, word from several gentlemen who had earlier signified their acceptance of the invitation, stating that urgent business prevented their attending. FOREST AND STREAM in an earlier issue printed the names of a few gentlemen who had accepted their invitations.

The Afternoon in St. Paul.

During the afternoon at St. Paul, the Commercial Club took the entire party in charge and entertained them royally. The spacious club rooms were thrown open for a reception at 2 P. M., and the ladies of the Century Club, the Women's Federation and the Civic League acted as hostesses. A number of addresses were made by ladies prominent in these organizations, and here was had a history of the very earliest movement for this forest reserve. Suitable responses were made by members of the touring party, and adjournment was had late in the afternoon. Many of the parties scattered about the Twin Cities, and some visited Fort Snelling and other points of interest.

The Banquet at St. Paul.

At the banquet this evening at the Merchants' Hotel, St. Paul, over 150 persons sat at table, many of the most prominent men of the Northwest being present. The occasion was rather informal, as first planned. There is no better test of public opinion than the drift of thought on an occasion like this. It would appear that the adverse elements have been largely reconciled. Even Duluth, mollified by the concessions offered in the compromise site for the National Park, is essaying to clamber into the band wagon, which seems to be attaining an ominous and omnibus size.

At mid-banquet Mr. George Schrieber, of St. Paul, rose and proposed a toast to Admiral Dewey, which was drunk standing and with riotous applause.

Judge J. C. Flandreau, of St. Paul, was in the chair this evening, and he proposed the toasts most felicitously. Among others who responded were the following: Hon. Jos. G. Cannon, Illinois; Hon. John Allen ("Private John Allen," of Mississippi); Hon. C. F. Cochran, of Missouri; Alderman Henry S. Fitch, of Chicago; Hon. John S. Cooper; Emerson Hough, of Chicago, representing the FOREST AND STREAM; Congressman James R. Mann, of Chicago, and Frank G. Clark, of New Hampshire; Henry White, of New York, and George A. Schilling, representing the Knights of Labor; Rt. Rev. Archbishop Ireland and Rt. Rev. Bishop Gilbert, of St. Paul; Governor John Lind, of Minnesota; Mayor A. R. Kiefer, of St. Paul; Congressman Fred C. Stevens; Judge Page Morris and Judge Walter Sanborn, of the Court of Appeals.

Paddy Doran, of Duluth, a tenor of fine timbre, sang patriotic airs. Mr. Cannon spoke of Minnesota as the "ideal commonwealth." Archbishop Ireland, of St. Paul, made an eloquent address, instancing the greatness of America in all ways of world-thought. Mr. John M. Allen, of Mississippi, was received with tumultuous applause, and made a witty and characteristic address. Hon. C. F. Cochran, of St. Joseph, Mo., spoke on the American habit of wastefulness of resources, and the vast change. Mr. George A. Schilling, of the Knights of Labor, was introduced as an able controverter of the erroneous first impression that the movement for a forest reserve in Minnesota was a rich man's movement, and not one in which the poor man had had any part. He spoke on governmental and labor problems. Col. John S. Cooper, of Chicago, was given an ovation, and spoke eloquently of the origin of the reserve and its development. He said that the Members of Congress came here with free minds. He would ask nothing of them. He was glad the party was here to see for itself. It was not the intention to injure any private interests.

Gov. John Lind, of Minnesota, expressed his confidence in the success of the enterprise in all good ways. He approved a modest beginning, but a large eye for the future, and hoped to see eventually a large reserve. In this same country he had seen many deer, had caught many fish. He wished the party equal success. Gov. Lind's address closed the addresses of the evening and the hospitality of St. Paul, with sixteen minutes left to catch the train, northbound special, over the Great Northern.

At 11:38 o'clock the special train, consisting of five sleepers, two dining cars and one buffet and baggage car, left over the Northern Central for Walker, where to-morrow night members of the expedition will be entertained by a banquet.

Sunday and Sunday night will be spent at Walker, and on Monday morning the expedition will arrive at Cass Lake, where a unique entertainment is in store for the visitors. The Pillager Indians, who a year ago rebelled against the authority of the Government and caused a miniature Indian war, will entertain the members of the expedition with war dances, scalp dances and a general powwow.

E. HOUGH.

New Brunswick Notes.

FREDERICTON, N. B., Sept. 30.—A favorite camping site for sportsmen who tarry at Fredericton on their way to the big woods is the Barker House, one of the leading hotels of the Province. Mr. Coleman, the proprietor, is a man of imposing appearance and unique personality. Both Mr. Coleman and his hotel, however, are overshadowed and relegated to the rear in public esteem by a huge frog, which has been Mr. Coleman's playmate for the past twelve years. The frog was discovered at Lake Killarney, Mr. Coleman's summer residence, in the year 1887. It is alleged to have then weighed 9lbs. Mr. Coleman then began to train the frog to respond to his call, and by feeding him a mysterious cornmeal mixture from a pail with a shovel is said to have fattened the frog until he reached the phenomenal weight of 42lbs. Strangers came from far and near to see so great a prodigy. Mr. Coleman had completed all arrangements for shipping the giant frog to the Paris Exposition, when the huge batrachian was found one day this summer floating wrong side up in the lake. The hide of the animal was removed at once and expressed to Mr. Crosby, of Bangor, by whom it was mounted in a most lifelike manner and returned to Mr. Coleman. A bewildered sportsman, who arrived on a late train the other evening, was set upon by half a dozen stalwart coachmen, who shouted at him the names of the various houses they represented. "Gentlemen," said the stranger blandly, "I don't know one hotel from another; take me to the man that has the big frog!"

Just three days' hunting in the Canaan country enabled Dr. J. G. Van Vechten, the genial coroner of Oneonta, N. Y., to make the acquaintance of the biggest moose that has been seen in that region for some years. The Doctor, being licensed to officiate as coroner in the moose woods of this Province, at once proceeded to hold an inquest. By means of a timely combination of Jim Paul's birch horn and a .45-70 rifle the Doctor was able to ascertain that the antlers of the moose contained eighteen points and measured just 52in. across. It has always been the proud boast of Jim that he could call a moose "half a mile furder off" than anybody else. In this declaration he would seem to be quite justified, for the Doctor relates that this moose was so far away that

from his first answering grunt until his arrival at the inquest an hour elapsed.

Only one moose, up to the present time, has been harvested with a spread of over 5ft. This prize fell to the ready rifle of Mr. Guy Saunders, of Woodstock, as the result of a four days' hunt up the left hand branch of the Tobique. The exact measurement of the horns was 5ft. 2in.

There is a very perceptible decline in the use of small-bore rifles by visiting sportsmen this season. Many of those who have used the .30-30 and .30-40 now condemn them because of uneven results, and have gone back to their old standbys, among which the .45-70 seems to have the call. Some of our moose guides will not allow a small-bore rifle to be taken in on their grounds, claiming that during the past two seasons more moose shot with the .30-30 have been maimed and crippled (in some cases wandering off to die a lingering death) than have been killed outright.

Reference was made in last issue to Mr. Foskett's hard luck in meeting his moose when his rifle was not in commission. The fact was omitted by your correspondent that upon the moose starting Mr. Foskett succeeded in shoving in a cartridge and taking a flying shot, which though it drew blood, was thought to have only inflicted a flesh wound. To-day I am in receipt of a note from Dr. Morehouse, of Upper Keswick, who had been in to Grand John Lake for a short trip, during which he found Mr. Foskett's moose. The animal, of course, was badly decayed. The antlers measured 44in.

FRANK H. RISTEEN.

New Zealand Game and Fish.

THE story of stocking New Zealand with the game and fish of Europe and America has been told in our columns by Mr. Wakefield. In a recent issue of the Sydney Referee, which a correspondent sends us from that city, we find an interesting account of the experience of a Sydney sportsman in New Zealand.

The climate of New Zealand, says the Referee, is such that nearly all kinds of game—fur, feather and fish—will thrive. The Government has been for years aware of the fact, and with commendable enterprise has stocked field, forest and stream with the choicest specimens of game and fish, the result being that to-day one can get sport amid British and American game and fish at a price which would make sportsmen in the old land, who pay fabulous prices to rent deer forests and salmon and trout streams, turn green with envy. Mr. C. H. Gorrick, the well-known Sydney sportsman, who recently returned from a six months' tour of the North Island of New Zealand in the Monowai, relates his experiences as follows:

"Fishing in the Makakahi River, in the Forty Mile Bush district, for nearly three weeks (where brown trout abound), with fly only, I caught some baskets of trout that averaged 3lbs., the fish running up to 4lbs. in weight. This river is rather a difficult one to fish, as some of the best ripples and pools are unapproachable, owing to the precipitous banks running down to the water's edge, while in other places the banks are fringed with bushes, which overhang the stream, making it almost impossible to cast a fly without becoming 'hung up' in the bushes.

"Hearing that rainbow trout were to be caught in a stream about twelve miles distant, I hired a trap from the hotel keeper and started out. My first essay at the rainbows was not a success, as the day I chose was far from suitable; rain having fallen the previous night, the river was in slight flood, which kept the fish from feeding. But my next trip, about a week later, proved more fruitful.

"I commenced early in the day, with natural bait in the shape of a cicada (a small species of locust), fished dry—i. e., cast up stream and allowed to float down with the current. This lure proved most deadly, and at almost every cast I was into a rainbow. Never in all my angling experience have I found such game, fighting fish. From the moment he is hooked he commences to take long rushes that make the reel simply screech. At the end of this rush, which generally runs out from 20yds. to 40yds. of your line, he takes a terrific bound out of the water, jumping quite 6ft. in the air. This is generally a moment of intense suspense, as it is now, unless securely hooked, your rod suddenly becomes straight, and you have that sickening feeling that an angler generally experiences when he has lost a good fish; but should the hook be well home and your tackle strong the fight usually continues for upward of thirty minutes without a single moment's cessation. He bores, plunges, rushes, leaps, until at last he wears himself out and is quietly drawn into the landing net. Nothing is gamer than a rainbow trout, and nothing more handsome. Just landed he shows a blood-red bar about 1½in. to 2in. wide, running down his side from head to tail, and gradations of all the colors of the rainbow running off the red streak. By the way, not more than 20 per cent. of the fish that are hooked are landed. The name of this river is the Mangatainoka, and it is without exception about the very best river in the Forty Mile Bush. It is an ideal stream for trout, being composed of a series of deep pools (a sure 'lay' for a rainbow), with lovely ripples in which the fish usually feed and disport themselves. The scenery on this stream surpasses and defies description. Every kind of fern and bush may be found on its banks, and in some places completely shuts out the light, and forming a snug retreat for some old monster trout, who is secure from capture—that is, so long as legitimate lures are used. I am sorry to say, however, that sometimes a charge of dynamite is set in these pools, which kills and maims all the fish for 20yds. around. This is rarely done, however, and then only by some road-maker or other who wants a change of diet. The artificial fly on this river is very killing after sunset or when the water is beginning to clear after a flood.

"While in this district I also fished the Mangahau River. This stream is a much bigger river than either of the two before mentioned, and is heavily stocked with brown trout, which run from 1lb. to 14lbs.; but these leviathans are as a rule too cunning to be captured with artificial bait; but sometimes when extra hungry one is caught, generally on an artificial minnow. I caught some good bags of fish in this stream, my best being twenty-three fish, that weighed 71lbs.; the heaviest weighed 6¾lbs. All these were killed in bright sunshine, between 10 and 2 P. M., on the live grasshopper (fished dry).

"From here I went to Kumeroa and stayed with that prince of anglers, viz., Mr. J. I. N. Mackie. One of the best, if not the best, trout streams in the North Island flows through Mr. Mackie's property. He is a large landholder, and is acknowledged to be the best minnow fisher in New Zealand; but during the last two seasons he has given up minnow fishing and adopted the artificial fly. This lure he finds quite as killing as the deadly white bait minnow. The Manawatu is the name of this excellent river, and one has only to stay in one ripple to fill his creel, the rapids being in some places 200yds. across and the same distance in length, and each rapid is teeming with lusty trout of the brown species, which average 2½lbs. to 3lbs., but a 5-pounder is not unusual to find in one's basket at the end of a day's fishing. The fish here are quite equal to salmon in their sporting and fighting habits. Here I had the best sport.

"When the fishing season closed I moved up to the Wanganui district, for the purpose of having some deer stalking. After purchasing a license (which costs £1, and entitles the holder to kill four stags), a party composed of Messrs. Chavannes, Palmer and myself started out to the Khiwhike Mountains, which lie about twenty miles from Wanganui. We pitched our tent about midday, unpacked our rifles, ammunition and field glasses, and sallied out into the mountains in quest of stags. We all took different directions, and made for high points in the hills, where we could command a good view of the surrounding country and spy out the land.

"At this period of the year the stags are usually on the move all day (this being the rutting season), and their whereabouts are generally discovered by their roaring. I had not been more than ten minutes on my point of vantage, when I heard a stag roaring about 400yds. away from me in a thick patch of bush. I had the wind in my favor, and had not long to wait before his lordship moved his quarters, and started to come in my direction. I kept well out of sight, being hidden in some long grass, and waited breathlessly until he was within about 100yds. of me. At that distance he stopped for a moment to listen, and gave a splendid broadside shot. Aiming at the point of his shoulder, I pulled the trigger; the stag gave a bound in the air, and lay kicking on his back. I found my bullet had gone clean through both his shoulders, smashing his heart to pieces. After sticking him I gralloched him, and cut his head off, with the object of getting it set up. This stag carried a nice head of ten points, but turned out to be the worst head I got, the others being much better (the best carried sixteen points).

"I was shortly joined by Mr. Chavannes, who had been following a fine stag, but was unable to get a shot in before the buck entered some thick bush. We decided to wait on the edge of this manuka scrub on the off chance of the stag coming out the same side as he had entered by. While having a smoke we were suddenly startled to see him standing within 50yds. of us. So astonished were we that we simply stared at him, not for the moment thinking to shoot; but C. pulled himself together sufficiently to have a shot; but when the smoke cleared away the stag was standing in the same spot, apparently untouched. This gave C. a chance to put a fresh cartridge in his rifle, but the movement made in reloading set the stag off at a fast gallop, crashing through everything; but C. instantly had his rifle up, and made the prettiest shot I ever witnessed, putting a bullet from his .303 express right through the buck's head. This without damaging the antlers in any way. This proved to be the best head we got all the trip.

"I could tell you many such adventures, but this is a sample of the sport, and will suffice. We continued shooting in this part of the country for three days. We then had shot all the heads we were entitled to, so packed up and made back to Wanganui. We killed ten stags between us, viz.: Mr. Palmer four, myself four and Mr. Chavannes two, the latter only hunting for two days. We took all the heads into town, and they are now being set up as trophies. We also took in six carcasses of venison, and distributed it among friends.

"A license only entitles a shooter to kill stags, and all must carry a head of not less than four points; this to prevent young bucks from being killed. Does, of course, are perpetually protected—and rightly too. We saw quite 200 head of deer during our visit, and plenty of fine bucks among them.

"In the Wairarapa district license holders have been permitted to kill an unlimited number of stags this season, and over eighty good heads came into Martinborough (a small township) alone to be mounted, which goes to prove that now vast herds of deer are roaming over the back country in New Zealand. Good deer stalking can be had almost anywhere in the North Island of New Zealand, and all for £1, whereas in Scotland the prices paid for a deer forest are something enormous, while the trout fishing in New Zealand is the best in the world (quite a number of English visitors came out to New Zealand for the deer stalking and trout fishing this season).

"The New Zealand Government and Wellington Acclimatization Society deserve all sorts of credit for the way in which they have stocked the country with game. Last year the Government sent an expert to England, America and the Continent of Europe to bring out game of every variety, and fish from the various countries visited. Now the Government has set apart an island to breed the various game imported, and proposes to distribute it all over the province. Several varieties of quail, pheasants, ducks, deer, caribou and wapiti are now arriving, so in a few years New Zealand will be literally teeming with game of every description under the sun. At the present time I know of no place where such excellent sport can be obtained at such small cost. It only requires to be better known for hosts of Australian visitors to go over every season for the sport to be obtained, and this at such small cost.

"A month's fishing and shooting could be had for a nominal sum. The fishing license costs £1 for the season, while a license to shoot pheasants and quail cos but another £1, and as I said before a license to k stags but 20s."

Mr. Gorrick's bag from May 1 to 22 was as follow Quail, 90 brace; pheasants (cocks), 40 brace; pigeons, pair; wild pigs, 7 head; hares, 140 head; stags, 4 hea fish, about 1,000lbs. weight.

Specimens of each were brought over in the co chambers of the Monowai for disaribution among frienc

The quail to be found were in countless thousands so plentiful that few bother to shoot them. With rega to the wild pigs, Mr. Gorrick says that it is poor spo shooting them (with dogs), but if a spear was used, in India, it would be excellent sport and exciting wor

The rivers are stocked with trout, including Lo Leven, rainbow, brown and fontinalis or brook char. experience has proved that the different species do get on well together, each river is stocked with a separa kind. In the Mangatainoka, however, the brown a the rainbow get on together, although the brown speci don't breed.

Down in Maine.

BOSTON, Oct. 2.—The Maine angling season of 18 closed Saturday night. In some respects it was a r markable season. The number of anglers has increase while resorts that were formerly devoted to anglers most altogether have begun to be noted as summer r sorts where angling is indulged in after a fashion, but not the primary object of the summer boarder. Angle are feeling more and more that they are being driv out, and must seek regions more remote from the dr suit and the whistle of the locomotive. The season 1899 has taken more Boston anglers to New Brunswic northern Canada and Nova Scotia than ever befo while some have begun to seek Newfoundland for tro and salmon fishing, and are pleased with the results. is true that certain newspapers, devoted to boomi Maine fishing and hunting resorts, declare that the fis ing has never been better than the season just past; th more and larger trout and salmon have been taken. B a glance at their own files will show that they have sa the same thing every season for many years; hence t fishing must have reached a perfect paradise by the pr ent time, if their assertions are to be believed. A gr many fish have been taken the past season, it is true, the well-known Maine resorts, but the number of angle has been greater, while they have fished more earnes and with all the improved methods and greater skill th the years have been bringing out. If I read aright, t late September catches at the Upper Dam and oth celebrated Rangeley resorts were smaller this year, w smaller fish, than last. There is scarcely a report a trout above 5lbs. for the whole month of Septemb while on other seasons trout of 6, 7, 8, and even up 9 and 10lbs. have been taken.

My friend Wesley C. Hemmenway, of Boston, lov angling as well as the best of them, but he usually sta at home and attends to business while the "boys" the firm go fishing. He says that Mr. A. L. Picket, Nashua, N. H., has recently made a remarkable cat of black bass at Morey Lake, Fairley, Vt. He to thirty-one bass in about five hours' fishing, the larg weighing 4lbs. 2oz. The total weight of the catch w 55lbs. The fishing in that lake has been very much i proved by screening the outlet. Mr. Picket has a go photograph of the fish, that may be seen by broth anglers if they desire.

The full open season on Maine big game has beg Oct. 1 being the opening day, except on bull moo which may not be legally killed till Oct. 15, and on c moose and caribou, which are under a perpetual clo time. There is little doubt that deer are more abunda in that State than a year ago, while concerning b moose reports widely differ. I saw a hunter Saturd who is familiar with the Maine woods, having visit them every season for several years. He says that th are more bull moose in the vicinity of Moosehead, W Branch of the Penobscot and Allegash region than ev before. A bull moose is reported to have been seen the Rangeley section, not far from the carry betwe Rangeley and Mooselucmaguntic lakes. A number a reported in the vicinity of Kennebago Mountain, wh the Seven Ponds region has its usual number or mo Flagstaff Lake boasts several big moose. The Aroo took region has a great many moose, if we can belie the many reports.

Sept. 30.—The shore bird gunners have had a f season thus far, and most of them are at home after t first shooting. The flights of plover and snipe ha generally gone by, and it is still rather early for duc though sheldrake and coot are found in consideral numbers. L. W. De Pass has returned from shooti at his Plum Island camps. He shot thirty-one beet head plover and two curlews. Ducks are beginning bed, a local gunner having secured several black duc C. A. Brown is back from shooting at Chatham. He not work very hard, but secured about thirty "big bird He has a beautiful specimen of winter yellowleg, t result of this fall's shooting, as well as a fine beetle-he plover. He means to secure a mounted specimen every shore bird frequenting our coast.

The partridge gunners are getting only a fair showi of birds. Leonard Chapman, a boy of eighteen, livi with E. M. Gillam, has taken a number of partridges the Reading woods. He has also shot a fish hawk w a spread of 62in. to the wings. Of this he is very prou Gardy Eames, the crack wing shot of eastern Mass chusetts, got six or eight partridges the first day of t open season. Ed Eames, who was hunting at the sa time, secured almost as many. Mr. Hallowell, of Bo ton, got none the first day of the season. C. H. Tarb got five the first time he went out in Byfield, the ope ing day, I believe. He had a new dog, only a pup but he worked splendidly, putting up a flock of ni within a short time. The first barrel brought two bir a very lucky shot, and Tarbox is naturally proud of The other barrel brought one. The dog soon put t birds up again and the hunter took one with each ba rel. Considering this good luck enough for one day, called in the dog and went home. Mr. Foss, of Bost with his son, a boy of 12, is just back from a hunting tr

into the Moosehead region, in Maine. They found the partridge shooting very good indeed, getting all the birds they could want reasonably. But Mr. Foss is more particularly proud of the success of his boy. Last Christmas one of the boy's presents was a rifle, which naturally made him long for his fall trip to Maine. He has shot a fine buck deer. Mrs. Eugene Lynch, of Roxbury, Mass., has recently returned from a hunting and fishing trip in the Rangeley region with her husband. She brought down a deer with a rifle, at a distance that almost staggers Mr. Lynch himself, who is a good marksman. Prof. J. F. Moody, of Auburn, Me., gunning at Hebron, in the same State, last Saturday, secured three partridges. He reports the birds very scarce in that part of the State. Mr. A. G. Bearse, gunning in the same town, has shot only two birds.

Miss Florence Lowell, of Brooklyn, N. Y., has had an experience in attempting to photograph a cow moose. The party was camping on Mud Pond, Chesuncook Lake. Miss Lowell was out in a canoe with a guide, when the monster cow wheeled out of the woods and into the muddy water 3 or 4ft. deep. Here she stopped, evidently willing to be photographed. "Focus for 6ft.," whispered the escort, evidently intending to try for a near picture. The canoe was wheeled around, the lady making one or two snap shots; but before the right distance was reached the moose disappeared up the bank, making the mud fly in every direction. The plates when developed had only a distortion on them. The focusing was too short. Another report says that the cow charged on the canoe, bringing her hoofs down within 18in. of the gunwale before she whirled. But everybody would rather hear that part of the story from Miss Lowell herself than to take a doubtlessly exaggerated report for the truth.

SPECIAL.

CHICAGO AND THE WEST.

Mr. J. D. Ke dall is Alive.

Many years ago, in the times of Eddie Price, and "before the Kankakee was finished," there lived in this neck of woods a gentleman by the name of J. D. Kendall, who was well known and much respected by many of our old-time shooters in this vicinity. In course of time Mr. Kendall moved out West, located at Salt Lake City, and got tangled up with a gold mine which has made him so much money that he burns wet dogs with it instead of fire crackers when he wants to celebrate the Fourth of July. Some of our old-timers remember Mr. Kendall very well, and a while ago Roll Organ, of this city, while in the West, met Mr. Kendall in person and was invited to take a fishing trip to the latter's trout preserve in Oregon. It happened that soon after this time the newspapers printed the account of the death of a Mr. Kendall, of Denver, Colo., and Bill Haskell, another old-timer of this city and a friend of Mr. Kendall, saw this notice and told Mr. Organ that his friend Kendall had passed away. This was denied by Mr. Organ, who said he had just left Mr. Kendall. "Well, I don't care if you did," said Mr. Haskell; "he's dead, for I saw it in the paper." Of course, anybody who knows Bill Haskell knows that it is no use arguing with him when he has once made up his mind. Several days were passed at the Maksawba Club, during which Mr. Organ tried to prove to Mr. Haskell that Mr. Kendall was still living, but it was no use. As a last resort, Mr. Organ wrote to Mr. Kendall himself, asking him to tell Bill Haskell that he was not dead, hoping that this might prove to the latter that he had been mistaken. This morning Mr. Organ received the following communication from Salt Lake City, signed by some of the most prominent sportsmen of that city, and attested by a notary public:

To Old Roll Organ, Fred Taylor, "By Crips" Brown, Bill Haskell, of Chicago, Ill., and others of their ilk: We, the undersigned citizens of good repute, and residents of Mormondom, do hereby declare that the report so industriously circulated at Chicago by the above named and other ill-disposed persons to the effect that "J. D. Kendall, of this place, 'an old sport' who formerly was so careless of his reputation as to associate with them at and about Chicago, is dead," is untrue; and we also certify that he is not only alive, but very much alive, and able to cast a fly or pull a trigger with any old sport that comes along.

S. McDOWALL. [L.S.]
I. M. DART. [L.S.]
W. W. CHISHOLM. [L.S.]
W. C. STAINES. [L.S.]
I. F. WOODMAN. [L.S.]
WM. M. BRADLEY. [L.S.]

State of Utah, County of Salt Lake. } ss.:

Before me, a notary public, appeared the above named affiants, who are personally known to me to be active members in good standing of the Ananias Club, and whose word is usually good if sufficiently corroborated, who state that said J. D. Kendall reports himself as alive, and they don't think it prudent to dispute the word of an athlete. Personally I have my doubts.

[L.S.] HARVEY J. JONES, Notary Public.

It would seem that while the notary public has his doubts about the matter, Mr. Kendall is convinced himself that he is still alive. But will this statement convince Bill Haskell that Mr. Kendall is still alive? Certainly not. Mr. Haskell having made up his mind that Mr. Kendall is no more, the incident in his opinion is to be regarded as closed. I have never met Mr. Kendall myself, and hence hardly feel qualified to express an opinion in this matter; but I have met Mr. William M. Bradley, the Salt Lake attorney whose signature I see appended to the above statement, and hence am inclined to think that Mr. Kendall is correct in his own inference that he is still alive.

Sporting Grounds and Civilization.

Among the great old-time sporting grounds adjacent to Chicago, as every one knows, are those along the Kankakee and Illinois rivers. These marshy lowlands were for years thought irreclaimable, and it certainly took considerable foresight to undertake making of them anything but a feeding ground for ducks and a spawning ground for fish. I have earlier mentioned the work of drainage which has been slowly progressing along the Kankakee Marsh for several years, but now it seems that the work is to be pushed so extensively and by means of such immense ditches that it seems likely the great Kankakee marshes will soon be but a memory. Certain men have long owned great tracts of this marsh ground, where they have pastured great numbers of cattle during dry seasons. It has been feared by some of these men that should the marsh be drained the pastures would be ruined. They have now concluded to reclaim 500,000 acres of this marsh land, and if this be successful we shall soon have little marsh left. Messrs. John Brown, Nelson Morris, B. J. Gifford, J. B. Carmen and others are joining for these operations, which will go on in Lake, Porter, Newton and Jasper counties, in the State of Indiana.

Everybody knows the great drainage ditch by which Chicago is to be connected with the Mississippi, by way of the Desplaines and Illinois River systems. Not liking the idea of the city sewage being turned into the Illinois River, a great many citizens of the Illinois Valley have taken legal steps to prevent the turning in of the water into the canal. A mass meeting of many hundred residents was held the other day at Whitehall, Ill., and a formal appeal has been sent to Governor Tanner and President McKinley, protesting at the completion of the canal and the turning in of the water until after the great Government dams on the Illinois River shall have been removed. It is thought that the sewage would collect in the back water above these dams and cause a prevalence of disease. If the dams are blown out we shall surely have a better waterway for the ascent of fish into our angling waters in northern Illinois, but the question remains whether the Illinois River will be a stream fit for game fish after it begins to receive the Chicago sewage. Thus it is that civilization and sporting grounds prove incompatible.

The same sort of thing comes up in the mooted town site of Cass Lake, Minn., which is located on an Indian reservation. At last accounts Secretary Hitchcock had stopped the eviction of these settlers, and promised the platting and opening for sale of a half-section of land on which the town is located. This is construed to be a further victory for the squatters, for they will have an undertsanding about the prices they will pay for their town lots when the auction begins. Home building, town building and city building man has a very hard heart when it comes to questions of rivers, lakes and forests.

At Johnson City, Tenn., there is a shooting club called the Barn Door Gun Club, whose president is ex-Governor R. L. Taylor, whose sympathies are known to be divided between a shotgun and a fiddle. This unique shooting organization will hold its first tournament on Sept. 4, and it issues an invitation which says: "Nobody is barred unless he is unable to hit a barn door." The worthy president does not state on which side of the barn, the inside or outside, the shooter is to stand while qualifying for admission.

The Fish Commission of Minnesota is having trouble this season with its planting operations. As is well known, the State work includes seining the cut-off pockets in which large numbers of small fry are found each year along the Mississippi River. This fall, just as work was beginning on the pockets, there came a rise in the big river, which flooded the low grounds and made it difficult to get fry in any quantity. Equally hard luck was experienced in the gathering of the wall-eyed pike spawn. The pike spawned in the Pike River this year on the rapids, leaving the customary spawning grounds where they have usually been taken for planting purposes. The best efforts of the Commission in collecting spawners did not meet with the success which they deserved.

The Minnesota Fish Commission has been obliged to put wire netting over some of its tanks, more especially those containing the much prized albino trout, which are the pride of the Commission. The kingfishers have shown a special fondness for the albino trout, which can be seen so clearly in the water that they offer a shining mark.

Game Around Chicago.

Our shooting season at Chicago is under way. The snipe are in, and the early teal and wood duck shooting is developing fairly well. There is not much water in the shrunken Kankakee, but wherever there is some wet marsh there are birds this week. I hear better reports from the Maksawba Club than anywhere else, but a great many parties are going out at the close of this week for the favorite points along the Kankakee. There are some snipe in along the Little Calumet. The fall bass fishing is now about at its best along the Kankakee River, and although I have not heard from the Fox River I think the bass ought to be biting there also now. Reports continue to hold up the original belief of a boom year in quail all over the middle West, especially in Illinois and Indiana. Lower Illinois is alive with quail.

Chicken Country.

Mr. Fred M. Stephenson, of Menominee, Mich., tells me that he found splendid chicken shooting this month in Minnesota along the Roseau ridges, some thirty-five miles northeast of Thief River Falls. He and his brother were in there with a good supply of dogs, and they had good sport. They killed forty birds in two hours and a half one morning, and one day killed even fifty, the legal limit for two guns, without any trouble.

E. HOUGH.

180 CAXTON BUILDING, Chicago, Ill.

Plucky Michigan Game Warden.

HARTFORD, Mich.—Thanks to the pluck and energy of our deputy game warden, we have a promising outlook for quail shooting, and have had a fair supply of the toothsome wood duck.

Wm. Palmer, of Hartford, has the proper grit for a game warden. In August last he heard the frequent discharges of guns in the direction of the Pau Pau River. Thinking the "sooners" were getting in their work on the young wood ducks, he proceeded to the river and found the young ducks flying up and down the river in wild confusion, while every little while some one fired at them from down the stream. Following the sound of the guns a short distance, he found they were on the other side of the river, but he was determined to identify the trespassers. Hastily undressing, he swam the stream and struck out on their track. He could hear them tearing through the bushes, and thought to overtake them, but Billy found that a man clothed only in his complexion was no match in the race through the brush for those clothed in the regulation garb of civilization. But their fright had been effective, and no further menace was offered the defenceless young ducks.

SULLIVAN COOK.

The Opening of the Season in New Hampshire.

AGAIN we can legally kill all the grouse, woodcock and such game that we are able to. The market-shooter still has his way, and is fully aware of it, and to all appearances will keep on as long as he can sell birds enough to pay for the killing.

I started out on the morning of the opening day with the same companion as on the first day of last year. This year our opening day did not resemble as much as last year, a typical, old-fashioned Fourth of July. Still we heard a number of shots in different directions. In one locality, some two miles west from where we were hunting, we heard quite a number of shots. Rowland Robinson, in his description of Granther Hill's comments, when hearing a number of shots, says: "There goes his gun again, but he hain't killed anything I know, by the way his gun sounds." This is about what my companion and I thought, perhaps not so much from the way the gun we heard sounded as from our opinion of the skill of the person we thought was doing the shooting.

I seldom put in a whole day during the early part of the season, and on the opening day this year we were out a little over half a day. We covered a good many miles of ground, and did not find birds at all plenty. Notwithstanding the usual report of "partridges being thick," we started but two broods of grouse—eight in one lot and six in the other—with an occasional single bird here and there. Our bag was exactly the same as last year—eleven grouse—not quite so evenly divided as on the previous time, as I killed seven of the number. The time has been when I would consider seven grouse for half a day rather medium results. To-day I think that number a pretty good bag, and am satisfied with a smaller number.

Our woodcock shooting during the middle of September never amounted to anything in my experience of over twenty years in this section. Occasionally a bird is found, but almost always in some very unlikely looking place.

Last season we had quite a heavy fall of snow much earlier than usual. This snowfall saved the lives of a good many of our grouse—fully one hundred in this immediate vicinity. One well-known market-shooter said to me that "That snow knocked him out of at least one hundred more grouse last season."

Our grouse are pretty wild, and can look after their safety pretty well, but two or three expert market-shooters hunting systematically together will take in many a wary old grouse who would easily escape from a single gunner.

C. M. STARK.

DUNBARTON, N. H., Sept. 26.

Massachusetts Association.

BOSTON, Sept. 26.—*Editor Forest and Stream:* The work of enlightening the general public as to our game laws has been prosecuted vigorously by the Massachusetts Fish and Game Protective Association, and has resulted in many letters being received by the secretary disclosing the existing state of things in the Old Bay State in reference to fish and game protection.

Take for example the following, received yesterday, from S. Dennis: "I address you in behalf of the fish and game of this section of the State. A general lawlessness has prevailed in this neighborhood for years. Quail and other game birds are shot in defiance of law. Smelt are taken with nets. Seines and nets are used for perch. Fykes are set in Bass River and the ponds and streams connected therewith." This is a very clean-cut statement of conditions in one locality, and other letters of similar tenor show that it is not an isolated case. The board of management of the Association have long believed that more vigorous work should be done by the State, not only in the line of prosecutions, but in putting out native quail and stocking streams and ponds.

At a meeting of the board last evening the following resolution was unanimously adopted, viz., "That the Massachusetts Fish and Game Protective Association earnestly desires a more efficient administration of the Department of Fisheries and Game," and the secretary was instructed to inform the Governor of its adoption by the meeting.

It is proposed to call another conference of representatives of sportsmen's and farmers' clubs similar to that of last year within a few weeks.

At the meeting last evening, Mr. A. B. F. Kinney, president of the Worcester County Game Protective Association, made a report of the successful work of that Association in liberating quail, but said in his opinion there would be no game birds in his county five years hence unless more stringent measures were adopted to preserve them. I inclose clippings from the Boston Herald, which may contain items of interest to your readers.

I send under another cover, sample of posters we have sent to postmasters.

H. H. KIMBALL, Sec'y.

Quail in Southern Virginia.

CHASE CITY, Va., Sept. 28.—There seems to be an impression throughout some sections of the North that there is a scarcity of game—especially quail—in Virginia this season, presumably on account of the cold spell of last winter.

I cannot speak in behalf of the entire State, but in this section—Mecklenburg county—there seems to be more than the usual amount of quail. Many coveys were late in hatching, hence they are not fully grown yet, but they will be all O. K. by the opening of the season, Oct. 15.

I saw one of our local hunters, who was out last evening at the request of a lady, who wished him to kill a few on her own farm, and he reports the following result of a hunt of one hour and a half: Flushed from ten to twelve coveys, in which were from twenty to thirty quail each; killed twenty-three birds with twenty-five shells (all he took with him). This is nothing exceptional in the way of a game preserve. The same result could have been obtained in many other fields around here. There is also the usual supply of deer, wild turkeys and smaller game.

W. D. PAXTON.

"I wish we had a horseless carriage," said the farmer's son.
"We have," replied the farmer; "and now that you speak of it, you might as well get it and bring a load of potatoes up to the house."—Christian Register.

The Minnesota Sale Law.

In the Minnesota law one clause provides that wild ducks may not be killed or possessed or sold between Jan. 1 and Sept. 1, and another clause forbids possession or sale between Jan. 1 and April 15. "The discrepancy," Mr. Sam F. Fullerton writes, "happened this way: You remember that fight we had against spring shooting here in Minnesota. Well, the House at first defeated the measure, and as a substitute adopted the language you find in the latter part of Section 10, stopping the sale. The Senate did away with spring shooting, but left the clause in regard to sale, thinking it would do no harm; and when a conference of both houses took place the entire section was adopted, although it is not necessary to have that part of the section relating to sale or shipment between Jan. 1 and April 15, for it is unlawful to have in possession at that time, as at all times between Jan. 1 and Sept. 1.

"The commission men are only beginning to realize what our new law is. You know quail, ruffed grouse and pinnated grouse are all in the list of birds that cannot be sold or shipped. We cannot begin to estimate the good this law is going to do in saving these birds. I believe that if the law is properly enforced Minnesota will always enjoy and have good shooting of these birds, for if we can stop the sale absolutely the problem of game protection is solved.

"Chickens are plentiful, both in Minnesota and Dakota. I had a pleasant shoot as the guest of State Game Warden Bowers, of North Dakota, and never saw grouse and chickens so thick. We got all we wanted without any effort. For three days we averaged thirty each day, and while there were four in the party only two did any shooting; but I am sorry North Dakota did not get its law changed so that the season would open the same as our in Minnesota—Sept. 1. We found lots of coveys too small to shoot, showing that Sept. 1 is the right time for the shooting to commence instead of Aug. 20.

"We like to see Forest and Stream keep up the good work. When you get every State to stop the sale of grouse, then we will have protection."

North Carolina Quail.

Mount Airy, N. C.—*Editor Forest and Stream:* As I am constantly receiving letters of inquiry about birds in this section from gentlemen addicted to the quail shooting habit, and knowing that your paper is read by all sportsmen, I thought I would write you the facts as I know them. During the extreme cold weather of last February, owing to a high range of mountains which encircle four or five hundred square miles of our territory, we did not have over 2½in. of snow, and that entirely disappeared in three or four days. In every other part of this and adjoining States the snow ranged from 12 to 20in. in depth, and covered ground for two to three weeks. Great quantities of small game froze and starved to death. It was not the case here, as a number of gentlemen from Boston and other places who hunted here soon after the cold snap will attest.

The seasons have been most favorable for hatching out, and their increase has been remarkable, and the consequence is, from the most reliable information I have been able to gather, that there are more quail here than has ever been known before. Farmers tell me that the partridges (as they are called here) were more destructive to corn last spring than the crows.

I will be glad to give any information to parties who desire it, if they will take the trouble to write to me.

Geo. R. Quincy.

Hamilton, N. C.—There is more quail and turkey at this place this fall than for many seasons, and no better shooting section in the State than here—but very little posted lands, and all sportsmen welcomed. Good accommodations can be had in the village. Old Leggings.

Buffalo Hunting in 1836.

From the Village School Geography, published at Hartford, Conn., by Reed & Barber, 1836.

"The Indians who roam about over the Territories live by fishing and hunting. * * * When they wish to kill buffaloes they generally mount their swiftest horses and take a bow and arrows. Then they chase the buffaloes until they come near enough to shoot them. The Indians sometimes practice another method, by which they kill a great many at a time. They make them rush over high, steep rocks. One of the swiftest young men puts on a buffalo skin which has ears and horns. Then he goes and stands between a large herd of buffaloes and the steep rocks. Other Indians go behind them and yell, to frighten the buffaloes. There is no way for them to run but toward the Indian who has on the skin, and whom they suppose to be a buffalo. He runs on and they follow. When he arrives at the top of the rock he slips into a little crevice which he prepared beforehand. But the buffaloes that are in front are crowded on by those behind, and down they tumble over the tops of the rocks on the rocks and stones below. After an occurrence like this, wolves and greedy birds flock about and feast on the poor buffaloes that the Indians leave."

Memo.—The Territories enumerated at that date were Florida, Missouri, the Northwest Territory, which included Dakota, and Oregon. Buffaloes are mentioned as being very numerous in Arkansas in 1836, the date at which it was admitted as a State. Charles Hallock.

Vermont Game.

Sheldon, Vt.—Small game is more plentiful in this section than for several years past. The broods of young ruffed grouse average from ten to fifteen each in the moist covers. Migratory woodcock are thin in flesh, owing to the extreme dry weather in their Northern breeding grounds.

As nuts will be plenty this autumn, it means many gray squirrels.

Several coveys of quail are reported, the result of the plant made several years ago.

Foxes are numerous, and deer are seen every day by some of our farmers, and are quite tame.

Stanstead.

Sea and River Fishing.

ANGLING NOTES.

Small-Mouth Black Bass Grow to 10lbs.

There is not the least doubt in my mind that when the next century is as near its end as this one is there will be plenty of people who will declare that the small-mouth black bass does not and never did grow to weigh 6lbs., and for proof they will assert that Forest and Stream offered, more than a hundred years ago, a prize for a black bass of 6lbs., and it was never produced. There will be a small and select few who will swear that no such fish exists or existed, because they never saw one. I say small and select because there is a chance that most of the people who do not believe what they have not seen will be killed off within the next hundred years.

There will be also another lot of men at the end of the next century who will swear in the fashion of that day that the brook trout—"our common brook trout, the little fellows that grow right here in our brooks"—never grow to 4lbs. in weight, because a man by the name of Barnum, who was in the show business, offered $100 for a brook trout of 4lbs. and could not get it in all the United States. Of course he did get it, and I saw it, and he could have had any number of dead 4lb. trout, but it was live ones he wanted; but that will not make any difference at the end of the next century, for the same doubt will be expressed as is expressed now. However, I have got away from black bass, and will get back to them. I have declared in Forest and Stream that I have had reason to regret that I ever told any one that I caught a black bass of the small-mouth species that weighed over 8lbs., for it required too much proving; but I have come to expect that with a fair degree of regularity some one will ask if this species of black bass ever does grow to exceed 6 or 7lbs. The last letter on this subject I found on my return home last evening, and it is from Mr. Silas H. Paine, of the Standard Oil Company, and is as follows: "A few weeks ago two of the guests at the Silver Bay House, Lake George, caught four black bass; they were not weighed until about three hours after being taken from the water. At that time the largest one weighed strong 7lbs., the second 6lbs., the third 5¼lbs., and the fourth 4½lbs. Naturally I have been doing a little bragging about the weight of the fish, claiming the first mentioned to be the largest or nearly the largest small-mouth black bass ever caught. I have just struck a snag in the person of one of my associates in the office who does a good deal of fishing during the summer on the St. Lawrence, and always comes home with a good stock of stories, and who boldly denies that a small-mouth black bass ever was caught weighing 7lbs., and says the Lake George catch was not of that variety, but are known as Oswego bass. Will you inform me if the black bass in Lake George are what are known as small-mouth bass, or are they Oswego bass, and if they are the small-mouth bass whether there are any of the other variety in the lake at all?"

The black bass of Lake George are all small-mouth bass, and the big-mouth, called Oswego bass, when it should not be, does not exist in the lake. Forest and Stream's "Big Fish Record" has the details of the capture of a small-mouth black bass from a pond near Lake George, originally stocked with bass from Lake George, that weighed 10lbs. Two days ago a young man caught in Glen Lake, near Lake George, a black bass weighing 8¾lbs. There are no species of black bass except the small-mouth in any waters near Lake George. The10lb. bass is mounted in New York city—somewhere in Liberty street, I think. Two other bass of the small-mouth species weighing over 8lbs. each are also mounted in New York city. I weighed them all soon after they were caught, and know the weights and species to be what is claimed for them. The Smithsonian Institution (National Museum) in Washington has a small-mouth from Glen Lake that now weighs 8lbs., and did weigh 8¼lbs. when sent there.

One word about bass or other fish being weighed at the time of capture or hours afterward, for like Mr. Paine the point is often made that fish are not weighed until some time after they are captured. If fish are kept moist the shrinkage in weight is very inconsiderable between the time of capture and hours later. If the fish are allowed to dry and become hard the shrinkage will be greater, but it will not come within four miles of what I have heard claimed this very season on Lake George and elsewhere, when fish were shy in weight.

International Fisheries Review.

Last winter Mr. W. Weschniakoff, president of the Russian Imperial Society of Fishculture and Fisheries, St. Petersburg, Russia, wrote me asking my co-operation in establishing an international review of fishculture and fisheries as a permanent organ of International Fisheries Congresses. The Review has been established, and I have just received the initial number. It is published by the Russian Imperial Society, and edited by Mr. N. A. Borodine, Fish Commissioner of the Ural District, and is printed in German, French and English. Its mission is to give new facts pertaining to fish and oyster culture; data pertaining to fisheries—statistics, inventions, laws and fishing news; work of fishing societies; reviews of scientific investigations relating to fisheries; new books on fishing and fishculture, etc., etc. It has an intelligence department, giving titles and addresses of the Fishery Commissions of the world; a list of specialists in ichthyology, fishculture and fisheries, and a list of periodicals dealing with fisheries and fishculture throughout the world, in which Forest and Stream occupies a prominent place. A great deal of practical information is condensed within the thirty-eight pages of the first issue of the Review. In an article by Commissioner Borodine upon the artificial propagation of the Russian sturgeon he mentions that he first impregnated the eggs of sturgeon and hatched the young in 1885, and it occurred to me that this antedated the work of Dr. Dean in hatching the sturgeon eggs in the Delaware River. I am aware that Seth Green hatched sturgeon eggs in the Hudson River in 1875, but eggs and milt were secured by cutting open the fish and removing ovaries and milt sac, while Dr. Dean and Commissioner Borodine took eggs in the usual way that is employed by fish breeders in handling either species of fishes. In fact, Mr. Borodine says that "when the ova are ripe they flow from the fish quite easily," and this was true also of the fish handled by Dr. Dean. With Commissioner Borodine the sturgeon ova hatched in seven days with a water temperature of 19 to 20 degrees centigrade, and they were hatched in Seth Green shad boxes, no longer used in this country, where they were invented. It was found to be very difficult to rear the young sturgeon in confinement, as they were easily affected by changes of temperature in the water; but they are great feeders, and as a natural consquence grow rapidly, attaining a length of 5½in. in two months' time after they are hatched. I quote one paragraph: "Several thousands of sturgeon fry were put in a large box in the river, but most of them escaped through the small holes of the metallic grate. It is demi-fluidal consistence of the body of the young sturgeon that enables it to get through the holes, which are four and five times less than the thickness of the body. I draw all fishculturists' attention to this fact."

I smiled when I read what I have quoted, and I would like to add that if there is any fish born in water with a body of greater "demi-fluidal consistence" than the small-mouth black bass I have yet to find it out. So many years have elapsed since I found this out that it may be perfectly safe to tell it now. Some impregnated black bass eggs were gathered and placed in a box to see what they would come to, and as the water where the experiment was tried happened to be a trout brook, every precaution was taken to prevent the escape of the black bass when they hatched. The box had a wire bottom of very fine mesh, but over this cheesecloth was fastened. When the young bass hatched every one of the little beggars had a body of such demi-fluidal consistence that they went through wire mesh and cheesecloth to the last one. It is hoped that the trout for once got even with the black bass tribe, and finished them to the last one; any way I never have heard of any black bass in the brook, and now I believe there are some; but a brook is not a good place in which to experiment in hatching black bass eggs.

The Fly-Fishers' Club.

In this caption I use the definite article advisedly, for there is but one Fly-Fishers' Club, holding no tournament and giving no prizes, and it is in London. Every year for fifteen years, when, as an honorary member, I have received the annual report of the club, containing an account of the annual dinner, the speeches, etc., I have wished there were at least two and that one was in New York city. There is no good reason that I can see why there should not be a Fly-Fishers' Club in New York, and there is every reason why there should be, but I have said so half a dozen times already in Forest and Stream. New York is not as big as London, but it is big enough to support a club of this sort, and surely with town and country membership of a small part of the fly-fishers available for the purpose, such a club could be instituted and made to flourish so easily that every one would wonder that it had not been done before. The London club has grown from the start in 1884, and has been moving into larger and larger quarters, until now the members talk of having a club house of their own. The list of members in last report shows about 350 names. The membership dues for town members are $15, and for country members $7.50. The London club has a fine fly-fishers' library, which is being added to annually, so that the club possesses about all the literature on the subject that has been printed. There is also a fly-tying room, containing all the feathers and materials used in fly-tying, all properly classified and mounted. The report of a special committee for the collection of feathers and fly-tying materials would fill more than two columns of this paper. After showing diagrams of birds' wings—upper and under surface—with pointers to indicate portions, by names, useful to fly-dressers, typical hackles other than poultry are shown between glass sides; thus back, breast, crest, neck, rump, tail and every feather are displayed. Then shapes of cocks and hens, hackles and typical poultry hackles, dyed and undyed. Examples of special hackles, examples of wings. Body materials, floss, furs, gut, hair, india rubber, herbs, mohair, pig's wool, seal's fur, tinsel, wools, crewels, silks, etc., and finally the birds which furnish the feathers for the fly-dresser. The Fly-Fishers' Club professes to be a social club alone, but it has grown by evolution into an educational club. I notice that one of the rules of the London club is that no member shall engage a room for more than a month in advance, and I'll warrant that in a similar club in New York a country member could not get a room unless he did engage it a month in advance. A few years ago I found there was a decided feeling among some of the fly-fishers in New York with whom I talked in favor of a Fly-Fishers' Club in town, but no action was taken, and the matter was dropped. From time to time I have mentioned the matter to fly-fishers outside of New York, and not one but favored the plan, and I believe that to-day a club could be organized that would become permanent and a joy to fly-fishers all over the country as a common meeting place. All roads lead to New York in this country, as all roads lead to London in Great Britain; and as a Fly-Fishers' Club is bound to come, I hope it will be organized in New York before it is organized in some other town. If I mistake not Forest and Stream was in favor of such a club when on previous occasions I have brought up the subject, and probable Dewey would indorse it, and that would settle it.

It is not for would-be country members to take the initiative in organizing a Fly-Fishers' Club in New York, but I am satisfied that they would give substantial support to such a club if the fly-fishers in New York would afford them the opportunity.

Silkworm Gut.

When the late Dr. Garlick, the father of fishculture in America, produced gut from an American silkworm that was 9ft. long, the American eagle probably ruffled its feathers with pride and may have thought that he was *it* so far as gut was concerned, and I thought so too, but

the American eagle was wrong if he had any such thought. At the last annual dinner of the London Fly-Fishers, one of the speakers was Sir Thomas Wardle, and he spoke of two friends who were fishing with him on one occasion, referring to one as follows: "The other friend was a distinguished literary man, a learned professor in Baroda College, who had been very hospitable to me in India. Some years ago he was asked to go to India on Government service, to report on the silk industry of Bengal, and other subjects. He was sent into the jungles of Western Bengal to visit a missionary, the Rev. George Campbell, of Manbhum, interested in silk culture, and he suggested to that gentleman that it would be a very good thing if longer length of the silkworm gut were obtainable. Two years afterward the missionary sent him a collection of gut which absolutely astonished him. From two species of silkworms, *Antheræ mylitta* (the Tussar silkworm) and *Philosamia ricini* (the Erin silkworm of Assam), there were lengths of 15ft. to 21ft. [Hear, hear.] I have arranged the specimens in a little book and will be pleased to present them to the club." [Cheers.]

No wonder they said "Hear, hear" and cheered when Sir Thomas presented silkworm gut from 15 to 21ft. long. He further said that since his visit to India they had given considerable attention to the gut question, and were producing good gut of over 2ft. in length, instead of 1ft. as formerly. If London had not had a Fly-Fishers' Club those specimens of gut might have gone elsewhere, and New York fly-fishers do not know what they are missing every year by not having a club that such things could be given to.

Pacific Salmon.

A letter has come to me on the subject of Pacific salmon taking the fly from Cheneyville, La., written by Mr. J. Robert Mead, and I am obliged to him for the information in the letter, and also for making known to me that there is such a place on the map as Cheneyville. He says:

"I have just finished reading your article in FOREST AND STREAM of Sept. 2 on Pacific salmon and artificial fly, and am moved to write you in regard to it. I resided in Portland, Ore., for five years, and while there caught my share of salmon at Williamette Falls, near Oregon City, also a few in the Clackamas River, all of which were taken with the spoon. Judge Green and myself tried all manner of spoons, and finally had some made to order, which we found very successful. Blade of spoon 2½in., nickel plated, hammered. Triple hooks of extra strength with bright red and white feathers. I have known salmon to open their mouths (after being hooked) and bend the ordinary hooks almost straight. Would naturally suppose from the fact that red and white feathers are the best on spoons, that they would take a fly composed of those colors. I have personal knowledge of salmon taking the fly in the Clackamas River. One occasion I witnessed, and the other I was present, but was not an eye witness. The first was a fresh run Chinook salmon a little over 3lbs. in weight, and was caught half a mile below the dam near the mouth of the stream. The salmon rose twice, but was finally hooked foul back of the head. The other was caught thirty-odd miles up the river, and was fairly hooked in the mouth. Both fish were taken by Sidney Smith, then of Oregon City, but now of Portland, with a fly about 2-0 in size, known as the Mead. I have the honor to be the originator of the fly, and have found it a killer on all trout I have taken in Oregon and Washington. I am willing to go on record as making the statement that the Chinook salmon of the Columbia River and its tributaries have taken, and will take, the artificial fly under favorable conditions. In one day at Williamette Falls I killed twelve salmon with spoon that weighed 132½lbs. Wherever I have used the word salmon, I mean the royal Chinook of the Columbia River. As many as twenty-seven small salmon, 5 to 6lbs. each, have been taken with steelhead roe for bait."

As to feathers on spoon, I have long held the opinion that it made little difference whether the spoon had feathers or not. The first spoon made had no feathers and many modern spoons have none. It is the flashing of the metal in the water which attracts the fish, although the bright feathers may add to the attractiveness of the spoon. The Mead fly I have been familiar with since it was first made, and then I declared that it looked like the larva of the May fly in the water.

A. N. CHENEY.

Success with Bass Ponds.

PERHAPS some of your readers may be interested in the success of breeding black bass in a small way.

Some years ago I had about three acres of bog land, in which there were some spring holes dredged out. The land on three sides was high, hard ground; on the fourth side I dug a ditch about 3ft. wide, and down to the solid ground of the pond, building up a wall on each side with the tough bogs and with the grass side out. The whole width of the bank was about 15ft. With the sand dug from the pond, I commenced at the end of the ditch, where it joined the hard ground, and filled the ditch to the surface. This drove the soft mud and water before the sand, and as some of the mud remained they together formed a mortar, so that when the ditch was filled throughout this part was very hard. Although the muskrats have made many attempts to work through it they have not succeeded so far.

For an outlet I sunk a 6in. iron pipe lengthwise well down to the bottom of the pond, and at the inside end I made an upright box about 2ft. by 3ft., sunk well into the sand at the bottom of the pond, and about 2ft. higher than the bank, with cover and lock. Into this were put two screens of fine wire in summer, and in winter one of wire and one of solid wood, with ¼in. holes bored into it. This was to prevent the muskrats from gnawing through the wire screen. Back of the box and around the pipe we filled with broken glass before pounding the earth in place. At the end of this box and opposite the pipe was a square hole in the box about 4in. by 5in.

The depth of water in ponds is from 2 to 8ft. There is more or less grass, with water lilies, in the shallow water, which gives food and shelter to the young fish.

In the winter I put in nine yearling small-mouthed bass. The second year they spawned, but did not increase very fast, as the principal food they had was a quantity of grass pike that had come in from the creek through the outlet while the pond was being built. To remedy this lack of food in the pond, we drew a net about twice a week in the bay, where we caught killies, silversides and shrimp. The killies and shrimp bred, and some of the killies are now in the pond. The silversides could not live long in the fresh water, and were soon eaten by the bass. In about three years I found that this small pond was overstocked and did not afford food for the fish. I then built another pond of about nine acres in the same way as the first pond. This pond was open to the bay from fall until the following May. When the outlet was closed off by a dam we found that perch, pout, sunfish and alewives had run into the pond through the outlet and had remained there. After constructing the two ponds, I found that the bass would not leave the small pond, although the large pond had plenty of food. I caught about fifty of the largest fish and transferred them to the large pond, but found they returned almost at once, often as soon as they were placed in the water, near the connecting water. The only way to prevent this was to put up a screen between the two ponds and transfer them again. The next spring I counted thirty-one beds, and now have good fishing, and both ponds are well stocked with bass from fingerlings to fish of 2½lbs. The perch and pout and sunfish are of all sizes, but the alewives after breeding thousands the first year, and fewer the second and third, have now entirely disappeared. These ponds being fed entirely by springs and without inlet, most of the food consists of young sunfish, perch and killies, and the fish must be bred in the pond.

I believe that fish become attached to localities, as we always find them near the same place. One that we call the old bachelor can always be found alone under the roots of a certain tree, and if we feed him he never misses a meal.

E. D. WARD.

LONG ISLAND.

Fishing Up and Down the Potomac.

Hunting Creek.

HALF a dozen miles west of Alexandria a small stream takes its rise, called Back Lick Run, and after flowing some distance eastwardly receives a tributary from the north called Turkey Cock Run; the resulting stream is Cameron Run. A little later into this, from the north, comes Holmes' Run, rather the larger of the two, and below their junction the stream is Hunting Creek, almost as puzzling to the stranger as a London thoroughfare with its half-dozen names. Hunting Creek empties into a wide shallow cove in the Potomac, that is a tidewater marsh just south of Alexandria.

The upper lip of this cove is a little promontory, called Jones' Point, on which stands a Government lighthouse, which is the southern corner of the great square forming the District.

About this country cluster associations of the immortal George, Mt. Vernon lying close by on the south, and Washington's highway crossing the run. The Mt. Vernon Electric Road crosses the upper end of the marsh on a long trestle, and some fishing has been done about its piles from the wagon way of this bridge, which has been lately removed. The upper runs, which must be waded, are well stocked with the large white chub, and legend has it, once had trout, which is, however, unlikely, as the waters are warm always, easily muddied by freshets and do not carry the appearance of trout streams.

On the occasion of our last visit, a little while ago, we went down the night before to the lighthouse, the keeper of which is a boat builder, and engaged a couple of skiffs, which were to be at the Electric bridge early the next morning, as we desired to avoid the long paddle up the cove covered with the heavy moss.

We spent the evening about the shores of the Point, but it was ebb tide and the water too shallow inside the line of moss and spatterdocks to shelter anything but sunfish and the two perches. We caught some dozens of the little fellows with No. 12 flies, and did not expect better with so little room on a shore so much used.

When we came on the first car the next morning the skiffs were waiting at the bridge, and we set out at once, first threading the piles of the long trestle, hoping to pick from their shallows a good rock or black bass, as we had been told they were often secured here with bait. The wind was high, which interfered sadly with the management of the boats and with the cast, but by anchoring to the piles we succeeded in covering the water to our satisfaction, but if there were any fish there they made no sign. The weather had driven them too deep for the fly, or they were not hungry; at any rate, we found none.

Among the causes which interfere with fly-fishing, and which some experience leads to conviction is serious enough to warrant a closer study than seems to have been given, is barometric pressure. Common expressions found in all extended accounts of trout fishing are that the fish were "on the feed," or "not feeding," to account for good or ill luck with surface lures.

Of course the same thing happens with the bass, and there are times when they seem to be ravenous, and often times when they do not. Thunder is generally believed to send them to the bottom of the deeps, but some one makes a catch while the thunders roll, and straightway announces it's good weather for fishing. Sometimes a silent shower sends them scuttling, and between showers the lake will be alive with breaks. There is no fixed hour for their feeding, though where the flies are plenty they are usually lively, and the cold, east wind which is supposed to be fatal for fly-fishing may do no more than drive the insects to the shelter of the bushes, and the fish leave the surface when the bugs do.

A little swell in the river before a freshet and before the water becomes turbid will make them suddenly leave off rising. At other times they come and go, for no apparent reason to the angler, who is the victim of a puzzled disappointment over what he considers their vagaries. People of nervous temperament are susceptible to atmospheric conditions and changes, and it is not only the nerves of pain in a corn that gives notice of a storm. Sometimes the subject "feels like a rag."

The water too responds to the pressure of the air, and a falling barometer may be enough to make the fish uneasy. Of course it is not suggested that one may ever carry a pocket aneroid, and consulting it at the water side decide it is useless to wet a line to-day. For one reason, that a single observation carries no intelligence; if it stood at 28, that might be high, if it had been a few minutes before at 27.90, or low if it had stood at 28.10.

A series of observations are, of course, necessary, not only as to pressures, but as to the conduct of the fish, but that there is some relation, so far as surface fishing is concerned, there is no doubt, at least in the mind of the writer, who for ten years has believed this without being able to get any closer to a demonstration. It is one of those comfortable theories to which one may be devoted without fear of being disturbed, for opposition is so easily dismissed as ignorant prejudice.

The channel winds about through the marsh, which is filled with wild oats, moss, sedge, the little yellow water lily, the nelumbium and the marsh mallow, the latter with great flaring white or pink bells with scarlet centers, that we fondly believe furnish the gummmy confection that travels under the name, but that for years has been nothing but flour, sugar and gum arabic.

It was a report of big bass which took us here, and we avoided the perch and chub, the sunfish and roach with which the stream is filled. It is a long pull up the creek to the head of navigation, but we are out for the day, and resolve to do it well. Every grass pad and moss bed, every sandy riffle and log of wood, every bunch of brush and overhanging willow is faithfully tried and a fly dropped at the door by way of invitation as temptingly as we know how, but all to no account. A yellow perch sometimes trails the fly for 20ft., and then on the retrieve makes a mad rush as if he feared he would miss his lunch, but they do not fasten often. The long-eared sunfish are more sudden and generally take it at once or not at all, but our flies are too large for them, and we do not take many. We have a good many runs and get some bass, but while they are outside the limits of the law, they are not the kind we are after, and go back with the rest. We do not even raise a pike, which must be plenty here, but the heat is reason enough why they should not show, and they are probably deep in the shadow of the grasses.

Up the creek we go and down again, without a sign of the big fellows we are here for. Once more down in the cove, we skirt the lower shore toward Hell's Hole, long a famous place for rock and perch, but far too deep for the fly. The southern point is low-lying, swampy ground, and an effort had been made long ago to reclaim it, but the dikes were not substantial enough and the tides make in and out through the breaks. The whole swamp is locally known as the Dikes, and we follow the tide through, into the old ditches, and find a good many fish in the pools, but the water is too shallow and warm and the pools too small to expect anything of any account. Coming out at a lower break we find several parties of fishermen outside in the wide mouth of the little run which empties into the diked marsh. This cove is deep, with great beds of wankapins. The great rhizomes of this lily are sometimes exposed on the streets of Washington as an insect destroyer, under the name of Walker Pin roots. The origin of the name Wankapin is obscure; probably to distinguish this little yellow water lily from the large white nelumbium, called the water chinquapin whose acorn-shaped nut much resembles the common chinquapin of these woods.

In and out we worked among these beds, but far out the water was too milky for the fly, and well in too shallow, so we had to be content with a rush or two, that might have been the 5-pounder we sought, but we will never know. It was growing tiresome and the tide was going out as we beat back and tried to paddle through the moss across the mouth of the bay to the lighthouse. It is nearly a mile and a half, and with wind and tide against us we did not make over a mile an hour. It was a long day of hard work, and not a fish to carry home, but not without its pleasant recollections. The sunfish alone are enough to keep a fly-fisherman from getting lonesome. There are four species in the Potomac, though differences in waters and age give the impression of many more. The larger ones here are called bream, though a very different fish from the English bream. Ours is game, and first rate in the pan, while Palmer Hackle says of the other ("Hints on Angling," p. 149): "When you have succeeded in getting him out of the water be careful not to handle him, as he possesses a most filthy hide; but get the hook out of him in the quickest and best way you can. If he be alive and uninjured throw him in again; if not, either leave him on the bank for hawks and polecats or throw him into the first pig sty you happen to pass." He evidently regarded them as some people do cucumbers. Yet they do furnish both sport and meat to many fishermen, and not to boys alone, as the bream grows beyond a boy's size, reaching 20lbs.

HENRY TALBOTT.

Pacific Salmon and the Fly.

Editor Forest and Stream:

Upon my return from the North I found your issue of Aug. 26, and have read therein Podgers' contribution upon the question raised by Mr. A. N. Cheney and discussed by Henry P. Wells, as to whether the Pacific salmon can be taken with a fly, and in which Podgers submits his experiences. His story is certainly interesting to all fishermen, but did he catch any salmon in the Navarro River? That is the question. I am satisfied that he thinks he did, but I believe that he was taking steelhead trout, and not salmon. The writer has never fished the Navarro River, but has fished in the estuaries of similar coast streams to the north and south of the Navarro, and believes that he is familiar with the fish that run in these waters.

The steelhead (*Salmo gairdneri*) is the most common of all the Quinnat salmon (*Oncorhynchus tschawytscha*). The salmon of California does appear for a very limited time in the Navarro River late in November or during December, according to the season.

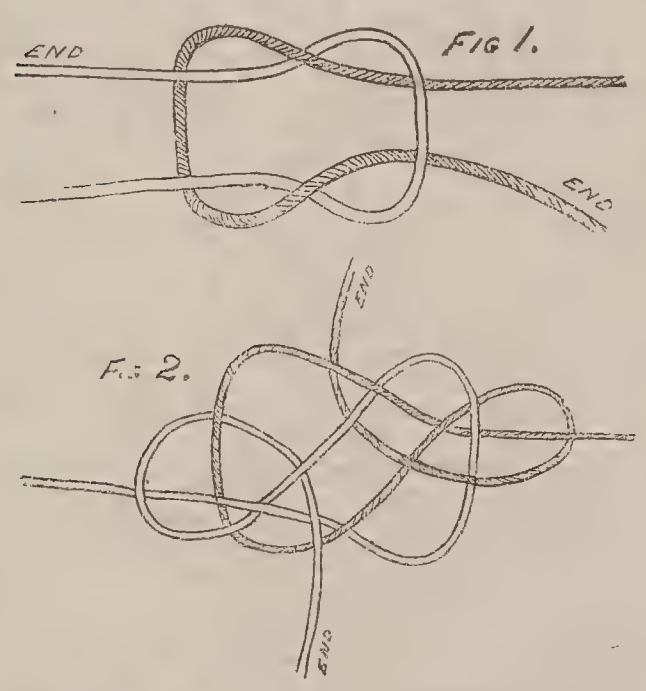
The steelhead trout, which is known to more people as salmon, enters the estuaries of all the coast streams as early as September, and is found in all the streams during the winter months. The steelhead is a large salmon-like fish, running in weight from a few pounds to 20lbs. The Quinnat salmon that enters Mad, Eel, Matole and Navarro rivers average 20lbs. in weight. The run of Quinnat salmon in Eel River greatly exceeds the run in any other California coast stream, save the Sacramento. Their run in the Navarro is insignificant,

while the run of steelhead trout is large. The fish taken in that river with nets are sent to the San Francisco markets, and very few Quinnat salmon are to be found in these shipments.

Now, the steelhead will take the fly both in the estuaries and in the streams from September to February, though very few of the large steelheads can be taken in that way, while I have never known but two Quinnat to be taken with the fly in Eel River. I have visited that stream several times, and have talked with many fly-fishermen who go there every year, and can only find authentic testimony of the captrue of two Quinnats with the fly. They will occasionally take a spoon, and I have seen many of them taken that way in Eel River and in the headwaters of the Sacramento and McCloud rivers, and in Battle Creek. I have never known a Quinnat to be taken with a fly in the Sacramento or McCloud River, or in Battle Creek, save a few grilse from the McCloud River, and they seldom exceeded 3lbs. in weight.

From Podgers' communication I am of the opinion that he caught steelhead trout, and not salmon, and would suggest to him that next time he catches fish in the Navarro River he send one of them to Dr. Jordan or Dr. Gilbert, of Stanford University, and let them determine the species, for even so accomplished a sportsman as Podgers could easily mistake large steelhead trout for salmon.

The steelhead which Mr. Henry P. Wells caught at Clackamas Station, Ore., must not be considered a fair test of their ability as fighters. The fish that he caught were certainly "lathy," and with us are termed "spent." They all take any moving thing in the water, but have no strength with which to fight. If Mr. Wells should take these fish when they first enter the coast streams from the sea, he would have an entirely different opinion of their fighting ability. They are then undoubtedly the grandest fighters of any species.



STEELHEAD.

SAN FRANCISCO, Cal.

A New Knot for Gut Lines.

THERE is probably nothing new under the sun, and the inclosed method of knotting gut may be well known. I was tying salmon casts a day or two ago, and was struck with the clumsiness of the ordinary knot. The knot I inclose is, as you will see, a sort of double figure of 8 knot, and is less than half the size of the ordinary knot.

Fig. 1 shows two strands of gut forming the original loop. Fig. 2 shows the method of tying the knot. Take the end of the dark strand, pass it over dark main line, then under, and into the original loop from above downward. Take the end of the light strand, pass it under

the light main line, then over, and be careful to pass the end into the original loop from below upward.

It will be noticed that each operation is exactly the reverse of the other. Hold the two ends with thumb and first finger of each hand, and draw the main lines tight with the other fingers. If the knot is properly tied, the two ends will stand out at right angles to the main lines. When the knot has been made secure by holding each end between the teeth and tightening the main lines, the ends may be cut off flush with the knot. Of course, the gut must be well soaked.

Advantages of the knot are: 1. Very little of the gut is wasted in tying the knot. 2. The knot is smaller and more compact than the ordinary one. 3. The ends are at right angles to the cast, and so do not catch. 4. The ends can be cut off close to the knot without any risk of "drawing." 5. One end or both projecting at right angles can be left long for dropper fly. 6. There is a fourfold grip of the loops of the main line on each end, as will be seen in Fig. 2.—London Fishing Gazette.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Take inventory of the good things in this issue of Forest and Stream. Recall what a fund was given last week. Count on what is to come next week Was there ever in all the world a more abundant weekly store of sportsmen's reading?

"The Wrong of Dog License."

MRS SARAH K. BOLTON, of Cleveland, O., who is well known as a writer on the dog, sends us a leaflet prepared by her on "the Wrong of Dog License," from which we quote the following paragraphs. It is Mrs. Bolton's desire to put the paper in the hands of owners of dogs and lovers of animals, and she will be glad to send it on request. Mrs. Bolton writes:

Every day in our cities there are scenes which would not be tolerated, if we witnessed them. Dogs loved and petted by many a child, noble creatures who would die to protect their owners, are terrified by having a net thrown over them, or a lasso, and dragged along the street, thrown by dog catchers into wagons, hurried off to pounds or shelters, and killed by gas or poison or drowning.

Several years since a lover of dogs, a member of the Cleveland Kennel Club, Mr. C. M. Munhall, realizing how the license law bore heavily on the poor who could ill afford to pay, and believing that the dog is "property" and that a city has no right to kill it, any more than a man's horse or cow, brought suit against Cleveland, and a "perpetual injunction" was granted by the court "restraining the city from killing dogs." The license law was of no effect after this decision was rendered. Mr. Munhall proved himself by this test case a public benefactor. Mr. Munhall says: "The course I pursued is the only way to wipe out such illegal laws." If other cities would follow his example, through some man or woman who is a friend to animals, we might be spared the yearly slaughter of thousands in some of our large cities.

A prominent vivisector in Cleveland has urgently advocated a dog pound to "prevent pet animals from straying into the colleges, and it would give the latter a regular channel through which their material might be derived."

Of course one of the chief reasons adduced for license is a revenue for the city or the humane society. In 1898 the Cleveland Humane Society, needing money, tried to obtain through the Legislature a dog license law, but was not successful. One of the most prominent judges in the city wrote me: "I have been pretty well informed that the dog license law will not pass the Legislature on account of the question of its constitutionality. I am glad to think that the poor dogs and poor people who take comfort in them, are shielded by the great constitution of the State of Ohio.* * * I do not believe in the bill at all. It is inhuman, and the idea of a Humane Society entering upon such a 'slaughter of the innocents' is repugnant to the purposes of the society itself. Our Humane Society is one of the best institutions in the city, but it would seem to me that funds ought to be raised in some other way than through a law which would result in destroying thousands of these companions and guardians of children, and faithful and devoted friends of mankind."

A letter lies before me from a well-known Ohio man who has sixty dogs in his kennels. He says: "I love dogs—all dogs—and believe that they have all a right to live, and that no law is a just one that allows them to be killed by any society or any person. I believe in humane societies for the good they do, and it is not good they do when they destroy the life of any dog or other animal, unless said animal has been hurt, or is diseased and cannot live.'"

One of the old arguments that license is necessary to prevent the increase of dogs is refuted by the experience of this city of 400,000 inhabitants. There is no surplus of dogs in Cleveland except possibly to a few persons who dislike animals. There are always some homeless creatures, but comparatively few where there is no license.

Whenever a tax is imposed some dogs will be turned upon the street, because many owners cannot or will not pay the tax. When the license reaches the exorbitant sum of $7.15 for female dogs, as in Hartford, Conn., or $5, as in Boston, many persons who would gladly keep a dog or give a stray animal a home find it well nigh impossible to do so.

A kind woman in Boston, seeing a dog catcher running after a homely little creature, who, frenzied almost to madness, sought refuge in her cellar, was so touched by the helplessness of the lost animal that she paid the $5 fee, and though not well able to do so, has paid it for some years, and been rewarded by a remarkable devotion.

What use for a license law which causes all this suffering? Does a city or a humane society need a revenue which comes from the death of devoted animals?

If we are anxious to prevent "mad-dog" scares, license and muzzling are not the remedies. There are not so many supposed cases of hydrophobia in Cleveland as in places where the license law is enforced. In Constantinople, where a man is fined $50 for abusing a dog, and not allowed to kill one, hydrophobia is said to be unknown. Fortunately, in America muzzling is not common, as most people know it is harmful and cruel, the dog needing the open mouth for perspiring as well as breathing, and that the muzzle promotes madness rather than prevents it.

"If license with its dog catching and killing has such abuses under city management, turn these matters over to humane societies," say some persons. This has been done in some cities, and if the cruel work be carried on as humanely as possible the results are appalling. In New York city, where the Society for the Prevention of Cruelty to Animals collects the license money and kills the unlicensed dogs, the increase of deaths is startling from the rigid enforcement of the law. In 1895 over 46,000 dogs and cats were killed by the S. P. C. A. In 1896 over 70,000. In 1898 over 91,500, about four times as many as when the city had charge of the license and killing. New York city, twice as large as Philadelphia, kills more than ten times as many small animals; New York city, six times as large as Boston, with half a million population, kills forty-five times as many small animals. Boston kills 2,000 unlicensed dogs during the three summer months; New York city kills cats and dogs the whole year through.

No persons can realize the pity and the horror of such killing unless they visit the Shelter at the foot of One Hundred and Second street, New York, and see the poor creatures in the pens, not for the most part "homeless or disabled past recovery," or diseased, but unlicensed setters, fox terriers, black and tans, who look up to you and whine piteously, asking for release from their prison and sure death. Alas! that so few have any time to visit the Shelter, or to ask if there is no remedy for this destroying of useful, affectionate creatures.

The Humane Society of Cincinnati, O., following the example of New York, obtained the license fees and killed the unlicensed dogs. A Dog Owners' Protective Association was formed, and one of its members brought suit to restrain the Humane Society from killing his dog, on which he had not paid the license. The dog license law with fees collected by the Humane Society was declared unconstitutional by the court, "because the dog is private property and cannot be taken without due process of law without violating both State and National constitutions." The law which gave the Humane Society power to collect license fees has been declared illegal not only in Ohio but in New York as well. The Appellate Division of the Supreme Court of New York declared in 1898 that the "Legislature cannot vest a society with power to kill or dispose of other people's property." The Legislature gave this power to the S. P. C. A. of New York city in 1894, four years previously.

A well-known humane official of New York State writes me: "New York city has a State law of its own which is practically the same as the one defeated. The New York city law is doubtless invalid, but they continue to enforce it, as no test case has been brought to determine its validity.'"

The Dog Owners' Protective Association of Cincinnati helped to obtain the passage of the O'Neil bill in the Ohio Legislature in the winter of 1897-8, which gave an unqualified property right in the dog. "Any animal of the dog kind shall be regarded as, and shall for all intents and purposes whatsoever be, property," and if killed or carried or enticed away, "damages by way of compensation for the dog, as well as exemplary damages, may be allowed." Whoever steals a dog is guilty of larceny. The O'Neil bill also repealed a most inhuman law on our statute books which permitted "any person to kill any dog away from home unaccompanied by his master." Nearly similar laws are among the statutes of Massachusetts, New Hampshire, New York, New Jersey, Minnesota and elsewhere. Such laws are a shame to a civilized people, and show how carelessly and unfeelingly we have dealt with the most devoted and truest friend of man, who would die for him as no human being would. Our humane societies could do noble work in effecting changes in these laws.

In Indiana a female dog over ninety days old is taxed $3, "more than a man is taxed on his fifty or one hundred ewes and lambs. Justice says such a law is a disgrace to all voters of our State," writes a man from Indiana. A lady from that State writes me: "Here in the city an additional tax of one dollar makes the keeping of a female dog a very great burden upon poor people. Even the rich are unwilling to pay $4 a year for tax on a dog. The result is, female puppies and dogs are dropped all over the city. We find them homeless and starving."

It is difficult to see why a dog should be taxed any more than a pet cat or a pet bird, but if licensed and the tax not paid, why the dog should be killed, any more than a man's horse or ox.

For whom are such cruel license laws made? For creatures without voice or vote, whose devotion has no equal, whose sensitive appreciation of our approval or disapproval is a marvel, who guard us and our children with their lives.

With all this affection and sensitiveness, found alike in the homeless waif and the household pet, we hunt them in highways and byways, and if their license fee has not been paid we kill them, without a word of compassion and without burial, and this in a Christian land!

There is a growing conviction that this wholesale slaughter is wrong, and that we have a duty to animals, as to orphans and aged, which we have never fully realized. In London, England, where the police gather

up over 40,000 unlicensed dogs yearly, which are killed with gas by the Humane Society, at the Battersea Home—the almost incredible number of 700,000 dogs since 1860—so heart-breaking has this killing become that a country home with several acres of ground has just been opened at Hackbridge, where large numbers of these animals can be saved and put into good homes. There is to be a cemetery in conection with the home, like the one at Victoria Gate, Bayswater Road, opened in 1859, and now nearly full. A touching place is this with its monuments to devoted friends. One stone bears the words, "To Faustie, faithful friend, lovely, loving and most dearly loved." Another, "Dear little dog; as deeply mourned as ever a dog was mourned." But the 700,000 unlicensed and homeless dogs have no graves to rest in.

The report of the Home on Battersea Road, for 1896, says, after the muzzling order of that year, about 700 dogs were gathered up each day for several weeks. "From morning till night the home was crowded with, not only dogs, but persons seeking for their dogs. All day long a string of vans laden with dogs might be seen waiting in the road to discharge their burden. In addition, police constables were constantly arriving on foot leading three or four dogs each." Men worked till midnight and even 1 o'clock at the home, and came again at six in the morning, for the destruction of these blameless, unmuzzled creatures. What a picture of an easily passed muzzling law, with little thought apparently by the council of the misery and death of the poor victims!

A speaker at a recent meeting in London said the Exchequer receipts showed that dog licenses produced in the year 1895-6 over £500,000, and added, "Where shall we find another class of taxpayers who contribute so largely to the revenue and receive so little in return?"

In Philadelphia, where 6,000 or more unlicensed dogs are put to death each year, the Journal of Zoophily, April, 1898, says: "It is a sorrowful necessity which compels us to take the lives of any of the number who are well and strong, and in a condition to enjoy life, and we wish we could do otherwise. Some of our colleagues are so penetrated with this feeling that they have started a temporary home for dogs in the upper part of the city, 3241 North Twelfth street, near Tioga, where those possessing any great degree of beauty or intelligence, or any valuable qualities, are kept until good homes can be found for them."

Boston (at Brighton, a suburb) has the Gifford Home for Animals, much like that at Hackbridge, to which Mrs. Ellen M. Gifford gave nearly $100,000. There are over 200 cats in the institution, happy and well cared for, and many dogs. Similar homes ought to be built in all our cities.

The Frances Power Cobbe Refuge, of Indianapolis, Ind., saves hundreds of homeless dogs and cats. Mrs. Mary O. Elster devotes her life to teaching that she may provide means for this beneficent work, while her husband, who is somewhat crippled, cares tenderly for the animals. To both this noble work is a labor of love.

"What shall we do with our surplus animals?" is the oft-repeated question. Repeal the license laws, let the poor keep their pets, and we shall have few surplus animals. Every family is better for having some pet animal to love. Where it is impossible to repeal license laws, let the license fees be given, not to city or humane officials, or to public schools to teach children kindness to animals, or public libraries to spread knowledge, but to build homes or find homes for unlicensed animals. For the really homeless dogs and cats, let us do our personal share in caring for them, and let homes be provided as for others of God's helpless creatures. When we find a homeles animal, let us advertise it in the papers, saying that we will give it to a good home, and then taks pains to find out if the home is a good one. Let agents be employed, not to kill homeless creatures, but to seek homes for them as we do for unfortunate children. A philanthropic woman gave several hundred dollars in the winter of 1898 to provide food for homeless dogs and cats in Boston, and an agent was hired to carry out her noble thought. We give to hospitals, to libraries, and to poorhouses. What do we give to animals?

Perhaps our Legislatures will sometimes grant money to humane societies as they do to schools and libraries, for the elevation of the people. Helpless children and helpless animals as well are in a large sense the wards of the State, and anything to better their condition should receive the sympathy and aid of the State.

The West Virginia S. P. C. A. has obtained from the Legislature an appropriation of $3,000 annually to aid the work of the Society.

Let the kennel clubs, or lovers of dogs, obtain laws through each State Legislature making the dog "property," so that nobody has the right to kill him, any more than a man's horse or his cow, and then test the license laws in the courts. The question of revenue from dependent creatures who look to us for safety and protection, and killing them by the tens of thousands because the money is not paid, is unworthy a Christian people. Each day the dreadful work goes on. While we walk in the sunshine and enjoy perchance homes of luxury, the dog catchers with their wagons are carrying the terrified and devoted friends of man to pounds or shelters, and to death. If a city of 400,000 population does not need and does not have license with its pitiful results, let other cities, even larger ones, try this humane policy.

Points and Flushes.

Vol. XVIII. of the Greyhound Stud Book, 1899, contains 387 pages of matter replete with information of interest to all greyhound owners and fanciers. The review of the coursing season of 1898-1899 is particularly interesting and instructive. The book is published by Horace Cox, London.

OCTOBER.
3-5-7. New York, America Cup matches, Sandy Hook.

To all appearances the question of a clear course is likely to be no longer a factor in Cup races at New York. The subject has been taken up vigorously by the United States Government, and the Navy will be called on to carry out the rigid regulations laid down by the Treasury Department. The proposed plan is of course an experiment, of a sort never tried before, and further experience may be needed before it is perfected; but it promises to protect the two racing yachts and to keep a clear course. Its practical working will be watched with deep interest, as it is evident that without some such plan no important race can be sailed at Newport, Marblehead or elsewhere in waters convenient for the racing craft. One important point to be tested is the effect on the attendant fleet, whether the general view of the race will be as good as when every boat which chose to do so was allowed to hang close to the yachts.

Among other considerations, it must not be overlooked that the proper reporting of the race is of very great importance to all yachtsmen. To insure this and to remove one of the serious causes of interference, it would be well if an arrangement were made to carry some of the representatives of the press on a special boat of the patrol fleet, under the charge of proper officers, who, while using her at a safe distance, and as a patrol boat, would still place her so as to give the best possible view of the race to those who are compelled to see it as a matter of business.

THE special agreement between Sir Thomas Lipton and Mr. Iselin, that each boat shall abide by its own mishaps, one continuing over the course even in the event of the other being compelled to withdraw through an injury, disposes of much of the namby-pamby sentimentalism which surrounds this detail of yacht racing. Under the racing rules of all clubs and associations, a race starts as soon as the preparatory signal is given, after which time no one can interfere with it, and it must be sailed out under the rules. No race committee or similar body has power over the yachts to recall such as cross the line before the starting gun, or to peremptorily disqualify such as plainly violate the rules. It may be that special cases may arise, as in the fouling of Genesta and Puritan, in which the race is stopped through an injury involving both yachts, necessitating an entirely new start; but ordinarily after a race is once started by the sounding of the preparatory signal it must run its course until the competitors finish or withdraw or the time limit expires.

While in yacht racing, as in all sports, there is always an opportunity for the display of chivalry, and the true sporting spirit, there is nothing in the strict rules nor in the ethics of modern yachting which makes it necessary for one competitor in an international race to withdraw on account of a mishap to the other. On the contrary, as the chosen representative of his club and nation, it is the duty of each competitor to stick to the course under all circumstances, observing the rules both in spirit and letter.

As we pointed out not long ago, the challenger in the America Cup matches is sailing not strictly as the chosen representative of a club, but rather as an individual challenger indorsed by a club, and he has by custom a much greater freedom of action than the owner or skipper of a yacht chosen to represent a club from a trial fleet. It is an open question as to how far an individual may go in declining to take a race on technical grounds or in other similar matters without laying himself open to the charge of sacrificing the rights of his club. It is pretty safe to say, however, that in most international and even interclub matches the representative of a club has no right whatever to withdraw from a race unless instructed to do so by the members of the club regatta committee or similar body.

In such great contests as the present one, it is quite conceivable that peculiar circumstances may make it desirable in the interests of all parties—the two contestants, the two clubs and the spectators—to stop a race after it has fairly started and to order a new start. As the rules now stand, however, we cannot see that this can be done; there is nothing for it, even in the event of the injury of a competitor by outside interference, for which she could not be disqualified, but to allow the other yacht to continue over the course and to declare her the winner.

It is probable that in time the conduct of great international races will be placed in the hands of a special committee composed of yachtsmen of known ability and integrity and of various nationalities, for instance a committee of five—American, English, French, German and Canadian; this committee having far greater powers than those now enjoyed by the club regatta committee. In the case of a serious complication, such as that of the Valkyrie-Defender foul, and the charges of Lord Dunraven against Defender for violation of the ballast rule, the decision of such an impartial and disinterested body would carry infinitely more weight than that of any committee, however able and impartial, composed of the members of one interested club. The great cost of the modern 90ft. racer, the infinite labor imposed on both parties, the widespread interest in the races and the serious effect for good or evil on the mutual relations of two great nations, all make it desirable special efforts should be taken to secure absolutely fair and satisfactory races and to avoid all subsequent discussion and ill-feeling.

THE docking of Shamrock on Wednesday of last week was marked by a sad mishap, no less than the sudden and violent collapse of much advertised "world's scoop" of the Boston Herald. The trouble began on the previous day, when it was noticed that the keel blocks as laid for the docking of Shamrock indicated a rockered instead of a perfectly straight keel as shown in the Herald's design. By the time the yacht was half dry the impudent imposition had shrunk to infinitesimal dimensions, and when she finally stood exposed down to the lowest point of her keel there was an explosion, followed by a dull, sickening thud, as the remains of this "world-beating" fake fell to the ground. Profiting by the warning of the keel blocks, some of the many newspaper men present had armed themselves with copies of the "X-ray" design which was to bring confusion to Shamrock's owner, designer and builder, and show them that their efforts at secrecy were of no avail against the Herald. They were brutal and unfeeling enough to produce these and to point out how every important and characteristic feature of the yacht contradicted the alleged exclusive and exact design.

Instead of being short and straight, as pictured by the Herald, the keel is long, with a distinct rocker aft and a much stronger curve forward; the fore edge of the fin is much further forward and with a straight to it in place of a continuous curve, and the rudder post is much further aft. The topsides of the yacht were quite as different as the bottom from the alleged plans; in place of the excessively long overhangs, with a low spike-ended bow and a higher counter, the sheer being circular, with a ridiculously low freeboard and the lowest point amidships, the real yacht shows a noticeably high bold side, with short overhangs, round blunt bow, and straight sheer, the lowest point being well aft, as in most good yachts. Those elements such as draft, displacement, lateral plane, midship section and wetted surface, which in the fake Shamrock are less than in the sister fake Columbia, are in the true Shamrock considerably greater than in the true Columbia; and the reverse is true of the over all length. Even assuming that Shamrock would never be docked in public in this country, and that the whole extent of the fraud would not be discovered, the alleged design was so utterly unlike anything that Will Fife has ever done, and what any intelligent designer ever would do, that it could only impose on those entirely ignorant of yachting. It is a matter of surprise that a paper of the Herald's prominence will deliberately lend itself to such a palpable and obvious attempt at deception.

Shamrock and Columbia.

HARDLY less interesting than the racing itself, the docking of the two Cup racers last week made a fitting prelude, attracting thousands of curious spectators. It was expected that the two yachts would be docked in the same basin—at the Erie Basin drydocks—on Thursday, Sept. 28, and both parties agreed to this; but for some unexplained reason this programme was changed. Shamrock was towed up to the Erie Basin on Sept. 26, the original intention of another trial under sail on that day being abandoned, and she was docked on the following day. Columbia was under way on Sept. 26 on the Sound, and met with a mishap—her bobstay parting—so that she was compelled to forego further trials. By special permission of the Navy Department, she was docked in the new drydock No. 3 at the Brooklyn Navy Yard on Sept. 28. The programme is for the two to be floated on Monday, Oct. 2, and at the same time to be measured by Mr. John Hyslop, measurer of the New York Y. C., before leaving the basins, as the work can only be done satisfactorily in perfectly smooth water, undisturbed by wind and tide. While in the docks both yachts were freely exposed to view. The Erie Basin drydocks were open to all visitors, the only restriction being against cameras, which were checked by the watchman at the yard gate. It was more difficult to secure access to the Navy Yard, as the public are only admitted on passes furnished on written application by mail, a fact unknown to many, while there was little time to procure such a pass. In one way or another a great many managed to get into the yard, but many were turned away from the gates; cameras were as far as possible excluded. Both yachts were exposed, no attempt whatever being made to cover them with "petticoats" or other feminine adornments. Before the paint stages were in place there was practically nothing to interfere with the view, the few shores on each side being high up at the deck. The only difficulty in seeing arose from the fact that each yacht was down in a deep dock, where no one but those connected with her was allowed, and the view from the top of the dock, though showing all parts, was very misleading, especially as to the midship section and the depth of bilge. In spite of the barring of cameras, a number of photos were taken of each boat.

The work of preparing the keel blocks for Shamrock began on Tuesday, the outline of the lower side of the keel being laid down full size from the docking plan on the mould loft at the Erie Basin and a mould made which was set up on the keel blocks in the smaller drydock—the same one in which Genesta, Thistle, Pilgrim, Valkyrie II., Valkyrie III. and Defender have been docked in previous years. The extra blocking required for the yacht was laid near the entrance to the dock, where Thistle, Genesta and Pilgrim were located, and further down than the position of Valkyrie III. and Defender. The work was watched by a number of curious spectators, some of them newspaper men, and there was a great deal of amusement as the blocks were built up to fit a rockered keel instead of the straight one designed by the inspired author of the great "word's scoop." The blocks showed a decided round-up aft, the after block being about 6in. deep, while, as subsequently disclosed, the heel of the rudder is over a foot above the baseline. The lower side of the keel has a rocker for its entire length, rising each way from a point abaft the middle of its length. The blocks supported the keel for a length of about 25ft., and the forward block was nearly 2ft. high.

The Lipton fleet at the Basin included Shamrock, the crew steamer Plymouth, the big derrick barge with the extra spars, and the launch Killowen, the tug Lawrence being also in attendance at times. Shamrock and Plymouth were moored at the mouth of the drydock, and the crew on paint stages set to work on Tuesday to scale all the green paint from the topsides. This was nearly completed by Wednesday morning, but the men were at work smoothing up the topsides until about 10 o'clock. The gates in the caisson were opened just after 10 o'clock, and by 11:30 the dock was full. The caisson was then floated and warped clear of the entrance, and Shamrock was towed in by her crew. Under the direction of Mr.

McGillvary, foreman of the docks, who has performed a similar service for all the previous yachts, she was warped into place over the blocks, and after the caisson was replaced the pumps were started shortly after noon and the water was lowered a couple of feet, until the yacht grounded on the keel blocks. A diver was then sent down to make sure that she was squarely on the blocks, and after he came up the pumps were started anew and kept at work for nearly two hours. Mr. Fife and Mr. Ratsey were present from early in the morning, and Sir Thomas Lipton came along in the afternoon.

As the water fell the crew worked around the yacht in scows, sweeping the bottom with hard brushes. As the brushes were kept busy at and below the water, such dirt as there was on the bottom was largely removed before it came into view above water, but to all appearances there was merely a soft scum adhering to the bronze plating; nothing very serious, though an item in very light winds. When it came to the lead keel, which is not plated, but merely painted with a white enamel over red lead or a similar pink paint, a number of large barnacles were visible.

It is safe to say that all who saw the yacht as the water slowly fell and revealed her form were surprised; but in a very different way from what was anticipated. After all the efforts (and most successful they have been) to preserve absolute secrecy as to dimensions and model, it has been confidently expected that if shown at all to the vulgar eye Shamrock would disclose some new marvels in the way of naval architecture up to date. So far from this being the case, she is positively commonplace, an ordinary everyday Fife cutter, without a single novel feature about her. There was not a sign of a centerboard, a lifting fin, a plate fin, or any of the wonderful freak features that have been vouched for in the most reckless manner. It needed but a glance to see that at least nine-tenths of the published descriptions and dimensions that have appeared on both sides of the Atlantic during the past nine months were lies out of the whole cloth; deliberate impositions on a gullable and credulous public. The stories of 22, 23, 24 and 26ft. draft, with hundreds of others relating to other details, have been either rough guesses or deliberate lies, equally dishonest in either case. The alleged "lines" that have been so impudently vouched for are as utterly unlike Shamrock as they are unlike all of Mr. Fife's known work.

So far as the eye can judge of dimensions—and in a large yacht of this type it is not very far, much depending on the surroundings—the dimensions given recently in the London Times and printed in the FOREST AND STREAM of Sept. 23, are possible, plausible and apparently nearly correct. According to the Times, the l.w.l. is 89ft. 2in., with a fore overhang of 17ft. 2in., and after overhang of 21ft. 5in., making 127ft. 9in. over all. The beam is given as 24ft. 6½in. (the same as in Lloyds' Yacht Register), the draft at 20ft. 3in., the area of midship section at 130sq.ft., the lateral plane at 970sq.ft., and the displacement at 160 tons.

As to one most important point, the draft, everything goes to show that it is very close to 20ft., probably a little over; the fact that the yacht grounded with 21ft. 6in. showing on the scale on the caisson of the dock, which was assumed by some to indicate that she drew that much water, is of no account whatever, as there are the keel blocks and the rise of the bottom of the dock to be deducted. The beam of such a large boat is very deceptive, the appearance depending on the fullness of the deck line toward the ends, but it is apparently somewhat over 24ft. The great freeboard has the effect of making the yacht look rather short as compared with the Herreshoff boats, and here again the over all length as given above comes in, under 128ft.

As she stands, with her deck below the level of the ground at the top of the drydock, Shamrock looks small and compact, of full model and with short overhangs. Seen thus, and Columbia being in a wider and deeper dock, the deck still more below the surrounding ground level, it is most difficult to compare the two fairly; and the chances are that all comparisons will be unfair to Shamrock. With a higher freeboard, due to the necessity of the ocean voyage, and a bulwark added to this, she is deeper and bulkier in the topsides than Columbia. At the same time, probably from considerations of weight in the ends and high up, Mr. Fife has been very sparing in the amount of overhang which he has taken. The consequence is that Shamrock looks full, bulky and heavy, but at the same time rather small and compact in hull, the long boom and bowsprit naturally tending to decrease the apparent length of overhangs and hull. It would appear that Mr. Fife had considered it necessary to carry a liberal amount of freeboard, for the sea work, and that both for strength at sea and to save weight where it tells he has cut the overhangs as short as he dared. With this freeboard and the short overhangs, the bow buttock lines are necessarily round and hard above water, giving the appearance of much harder and coarser ends than in Columbia, with her low freeboard, no bulwark and some feet more of overhang at each end.

To jump at once from the topsides to the midship section, the bilge is materially deeper than in Columbia, which again tends to round and harden the buttock lines and diagonals, the result being that all comparisons of the two by the numerous experts are strongly in favor of Columbia. There is no question that she has the finer and easier form, with longer and easier fore and aft lines, and that she uses her ends more effectively to gain length; her entire model in fact is the better for light weather; but it is probable that a critical study of the two from the bottom of the dock amidships and at each end, showing the midship section, bottom and bilges clearly (as they cannot be seen from the top of the dock), would give a different idea of the relative merits of the two. Columbia's topsides are such as to show her entire model at its very best, while it is probable that Shamrock's bottom in its essentials is very much better than it looks to be in connection with the high sides and short ends.

There is one peculiarity of both boats as seen from above which is puzzling. As one approaches Shamrock, lying bows on to the head of the yard, the most striking feature is the hard side abreast and just forward of the chainplates, from which point the bow runs away in almost straight lines, like a wedge. The middle body of the boat looks to be particularly full and round, while the bow is like a straight-sided wedge, thinning away quickly inseady of carrying a curve in all of the level lines. Whether viewed from amidships or forward, this hard place catches the eye, with the straight wedge of the bow joining it abruptly and unfairly. This point was commented on by all who saw the yacht on Wednesday as a marked defect. Strange to say, there is something of the same in Columbia, though to a lesser degree, the side showing hard at the chainplates and the bow looking straight and flat, as compered with the side amidships. It is not to be supposed that such expert draftsmen as the two designers have produced lines which are not perfectly fair and true on the drafting board, and the mould loft floor, and the most reasonable explanation is that the eye is misled by the lines of the plate edges and other external features.

With the topsides scraped bright and nothing to mark the forward point of measurement or the position of the load waterline it is very difficult, especially from above, to judge of the form of the level lines below water. The stem has a decided curve near the head, and carries a moderate curve to the waterline, then running straight for a short distance, after which it reverses easily at first and then with a long radius curves into the straight line of the fore edge of the fin. This edge runs aft at an angle of about 40 degrees, then rounds with a long radius to join the upturned end of the keel.

In the type to which both boats belong, although all the lines are continuous curves, and there is no break or angle between body and fin as in the extreme fin-keels, the two members, hull for displacement and fin for ballast and lateral plane, are sufficiently distinct to be identified individually. The "fin" of Shamrock is much longer than that of Columbia, apparently 6 or 7ft., the excess being on the forward end. In Columbia and Defender the mast is stepped almost over the point where the forward end of the fin joins the hull proper. In Shamrock the mast is stepped about over the middle of the straight part of the fore edge of the fin. This difference is due in part to the mast being 3ft. further aft than in Columbia, but in addition the fin extends very much further forward, the lateral plane being much larger.

Shamrock is a modern semi-fin cutter, of the same general type as Mr. Fife's later boats in the larger classes. The dimensions were of course specially selected to meet the conditions of the America Cup races, a waterline of 90ft., with a very light tax on sail and none on girth, displacement, draft or other vital factors of design. The hull above water is of the same type as Mr. Fife's linear rating rule boats, but modified as already described in the matter of freeboard and overhangs. The underwater portion of the hull is much the same as in the girth rule boats, the bilge is swept with a large radius and the floor, tangent to it, with a deadrise of nearly 25 degrees, is carried well fore and aft. At its lower edge the floor turns into the fin with a radius much shorter than that of the bilge. The beam at the waterline and above it is very far aft, but the underwater body shows the strong rake to the midship section which is characteristic of Mr. Fife's work. With possibly ten tons more displacement than Columbia, the body looks much fuller below as well as above water, but the bulk is well disposed of, both designers probably following about the same curve of areas of sections, and the diagonal lines are all fair. As they turn up in the comparatively short, high ends, they become very much harder than in Columbia, and there is far less gain of effective length by heeling. It is evident, however, that while Columbia conforms to a certain extent to the modern theory of heeling easily and gaining length, Shamrock is designed after the regular method—to sail as nearly upright as possible, her deep bilge, added displacement and deeper and probably heavier lead keel all helping her. There is even yet a good deal of uncertainty as to the value of the new principle in large yachts, and the present trial cannot fail to be interesting and instructive.

The fin of Shamrock, as already stated, is much longer than that of Columbia, as well as some 6in. or more deeper. The excess of length is mainly on the fore end; the after end has a sternpost of certainly not quite 45 degrees, a very moderate rake for a Fife boat. The rudder is wide and carries its breadth well down. The fin is cut very thin below the garboards, but it widens to at least 3ft. through the thickest part of the bulb, which is of course well forward and low down. With probably more lead, dependent on her construction, as yet unknown, the center of gravity of the lead is brought lower through the added length of keel than in Columbia. The afterbody is carried out to a handsome Fife counter, with a curved archboard set at the usual angle.

The topsides carry two strakes of aluminum plating, extending some 6in. or more above the deck by way of bulwarks. The rest of the plating is of a bronze alloy, probably manganese bronze, all in-and-out plated. The plating is beautifully worked, and the exterior surface of the yacht is nearly perfect. The garboards extend some 15 to 18in. down on the lead, the bronze sternpost running down and protecting the after end of the lead.

The deck is of aluminum, covered with linoleum of a similar fabric. It has the usual companions and skylights, a capstan forward and large bronze and teak kevels for the main sheet. The bowsprit is stepped in a short section of tube at the stemhead, and another some dozen feet inboard. The mast is of metal, probably nickel steel, flush-plated, a handsome piece of work. At about three-fourths of the way from deck to hounds, well below the jaws of the gaff, two spreaders are fitted to brace a masthead shroud on each side, and also a small platform, apparently a metal casting, in place of the A-strut. This platform, with a circular opening for the heel of the topmast when housed, carries on each of its forward corners a leader for one of the parts of the jib halyards, the halyards, when the jib is set, serving as the jumper stay on the fore side of the mast. When the mainsail is sent up a man stands on the platform to clear the gaff jaws as they pass the struts, and to make fast the parrel after the jaws are above these obstructions, the reverse maneuver being necessary when the gaff is lowered. With a complete outfit of metal spars, including duplicate masts, booms and gaffs, the topmast and bowsprit are of Oregon pine, and an extra topmast and gaff of the same wood were finished at the Erie Basin drydock while the yacht was in the dock.

The bowsprit is fitted with the conventional forged cranse-iron, with lugs for the bobstay and shrouds and the jib tack. There is also a short pole outside the cranse, as in American yachts, the topmast stay leading to the end and not to the same point as the jib tack. The bobstay is of wire rope, but after the mishap of last week two will be fitted. They will be set up with a turnbuckle in the usual way, with a strut from the stemhead.

The rigging of Shamrock has been criticised on this side as rough and clumsy, but however it may compare with that of Columbia, it is by no means bad work. The wire is probably the best made, the blocks look very small and light, and the parts are well arranged. The throat halyards reeve through two single blocks shackled to lugs riveted one on each side of the masthead, the gaff block traveling freely in the bight thus formed. The masthead pendants are fitted with a span aloft, one end fast at the upper cap, the other in the usual place, at the masthead, the pendant proper traveling on this span and distributing the strain along the entire masthead.

As soon as the dock was dry on Wednesday the yard men brought in long spruce timbers and built a strong staging all around the yacht, on which electric wires were quickly strung, so that work might go on by night. On Thursday morning three small dynamos were mounted on deck, and by means of flexible shafting and emery wheels the topsides were polished, the rivet heads and plate edges receiving special attention. The bottom plating, which was apparently fully finished in the shop, was polished by hand, the crew using some polishing composition and steel wool. The lead keel was coppered with the sheathing copper used on wooden yachts. All the time that the Lipton fleet was at the Basin a large gang of sailmakers was at work on the barge and on the deck of Shamrock. While a very large number of people visited the yard, it did not seem at any one time on several days that there were as many present as when Valkyrie III. was docked. As it happened, the Dewey celebration reached its climax just at the time that both yachts were docked, and it was naturally the more attractive to the general public.

The keel blocks for Columbia were laid in the new timber drydock of the Brooklyn Navy Yard on Sept. 27, under the direction of Naval Constructor Francis T. Bowles, the head of the yard. The short keel and great depth and length of the yacht made her very difficult to handle, compared with the vessels usually docked at the yard, with long straight keels and often with auxiliary docking keels as well, and every precaution was taken against accident. Columbia reached the yard about 8 o'clock on Thursday morning, being towed from New Rochelle, and she was warped into the dock and the gate closed. There was 26ft. of water in the dock at the start, and this was pumped down several feet before the yacht touched the keel blocks. A diver was sent down to make certain that she rested squarely on the blocks, and then the pumps were started anew just before noon, and by 2 P. M. the hull was bare. As the water fell the bottom was cleaned by the crew from floats, the bronze being coated with scum. The paint staging was quickly put in place and the crew set to work to polish the entire bottom. All the previous docking having taken place at Bristol, and the yacht then being hauled only partly out of water, the hull has been seen by comparatively few, but still its general form has been so frequently described that there was no such mystery about it as attended Shamrock. On the same waterline, both being designed just to come safely within the 90ft. limit, Columbia has a longer overhang at each end than Shamrock, decidedly less freeboard to the deck and no bulwark, about 4in. less extreme beam and probably about 6in. less draft, or a few inches less than 20ft. The angle of the sternpost is, if anything, a little greater, the bottom of the keel is nearly straight and much shorter, and the whole fin is shorter on the fore end, barely reaching to the mast.

The midship section shows a fairly straight topside, widest at the deck, but with little flare, a rather hard turn to the bilge and a moderate deadrise to the floor, with a quick turn of the garboards into the fin. Compared with Shamrock, Columbia has apparently some ten tons less displacement, the topsides flare less, the bilge turns more sharply and is not so deep, the floor is a little flatter and the round from floor to fin is sharper. The section of Shamrock is nearer to a fair and continuous S curve, while Columbia shows more of a straight flat floor, with a quick turn of bilge above it and of garboard below it.

With the lessened displacement, shoaler bilge and section generally, longer ends and lower freeboard, the mere running of fair fore and aft lines as practiced by all designers to-day gives to the hull of Columbia above and below water the smart clean-cut look of the small racing yachts in vogue several years ago, before the introduction of the scow type here. Bow and stern alike are long and clean-lined, and appeal to the latest ideals of what a racing yacht should be, while the freeboard, bulwarks and short ends of Shamrock suggest the fast cruiser rather than the extreme *fin de siecle* Cup racer.

From every point of view Columbia should and probably is the more perfect boat of the two. While Shamrock is based rather on the wide experience of her designer in all classes than on special experience in the 90ft. class, Columbia, apart from Mr. Herreshoff's experience in Navahoe, Colonia and Vigilant, is but a remodeled Defender, the most perfect 90-footer ever produced. Every detail of dimensions, form and construction is derived directly from a similar detail of Defender, modified if experience has shown that a change was desirable. In addition to this, Mr. Herreshoff has within the past four years experimented extensively on the effects of small changes of form in the 21ft. knockabout and raceabout classes, keel boats of the general type of Defender. In Shamrock the first question to be faced was the ocean passage, imposing limitations on the designer both in model and construction. The appearance of Shamrock indicates that, whether rightly or wrongly, her designer has conceded to the possible demands of Father Neptune a good deal in the way of freeboard and extent of overhang. So little is known of Shamrock's construction that it is impossible to say how much has been sacrificed to the sea voyage; but the general idea is that the necessary strength has been obtained by a system of secondary bracing, removed after the yacht reached New York, so that she suffers nothing in this respect. In general construction the two boats are closely on an equality. The various known defects of Defender have

pointed the way to material improvements in Columbia, and the skill of the Herreshoffs in all classes of light work has produced a most perfect craft. In the construction of Shamrock Mr. Fife had the aid of the master hands in the manipulation of modern materials and light scantling, the renowned Thorneycrofts. At the same time their work is confined to a field distinct from the sail yacht, torpedo boats and light-draft commercial steamers, of radically different form from the fin-keel cutter.

With a far more intimate knowledge of all conditions and details of Cup racing off Sandy Hook, Mr. Herreshoff has from the outset been at an advantage over Mr. Fife, whose American experience is limited to a few hurried visits to this country.

The hull of Columbia is plated from keel to deck with Tobin bronze, the workmanship being excellent. The side stops at the deck, with no bulwark and only a light steel angle bulb 1¾ x 3in. on top of the stringer plate and inside of the upper edge of the upper strake, the bulb taking the place of a rail. The stringer plate is 20in. wide amidships, and tapers to 10in. at the ends; on its inner edge is a plain steel angle 1¾ x 1¾in., against which the deck planks lie. It is merely an extension of the usual waterway of a steel vessel, but carried to an extreme. There is a saving of an appreciable weight of deck planking and a clean deck edge, with very little to catch the water when submerged, as it often is.

The bowsprit is short and light, a specially fine piece of Oregon pine, stepped in the two short tubes on deck. The head gear is all fitted with long eyes over the bowsprit end, there being no forging except a light steel band and a collar to prevent the bobstay from cutting into the wood. There is no turnbuckle on the bobstay, but the bowsprit is held at the heel by a metal fid. From the stemhead on each side of the bowsprit is a round steel bar, the after end of each bar passing through one end of the fid. By setting up the nuts on the ends of the bar the fid and bowsprit are forced forward, tightening the bobstay. The forestay is set up a dozen feet inside the stemhead, abaft the heel of the bowsprit. The mast is of steel, with the Oregon pine topmast housing inside of it, as shown in the photograph. The boom and gaff are also of steel, the former braced by a strut on each side, raking upward, over which is set taut a wire rope guy. While Shamrock steers with a tiller about 15ft. long, Columbia steers with a wheel fitted to a special gearing devised for her by Mr. Herreshoff.

While in the dock Columbia was painted white above the waterline and Shamrock received a new coat of that pea green which, with her particularly ugly and inartistic flag of light green and yellow, is supposed to vouch for Irish nationality in spite of her Scotch designer, her English builders and sail makers and her Scotch and English skippers and crew.

According to the present programme the measurement will be completed by Monday afternoon and the result in possession of the New York Y. C. officials by evening, but it will hardly be made public in time for publication in the present issue of the FOREST AND STREAM, which goes to press as the first race is being sailed.

While the chances are plainly in favor of Columbia holding the Cup, there are so many important factors which are necessarily unknown to those outside the yachts as to make the result by no means certain. The long experience of Mr. Herreshoff in the Cup defense warrants the expectation of a still better boat than Defender, and this expectation has been fully justified by the performances of Columbia in her many races and informal trials. Assuming that the two yachts were equal in design and construction up to the launching and fitting out, the subsequent trials of Columbia against Defender have been of immeasurably greater value in improving her than the few solitary sails of Shamrock, even when over measured and timed courses. The smaller displacement and finer lines of Columbina promise a higher speed in the average weather, and the known performances of the two boats strengthen this expectation, while it is probable that Columbia will be very fast in harder weather when Shamrock is expected to do her best work.

In the matter of rig there are many things to be considered. With a short baseline and small headsails, Columbia has the advantage to windward, but in reaching the big fore triangle of Shamrock is likely to show up near the front, and the center of gravity of her rig must be lower in proportion to the longer base. Most yachtsmen would at once select Columbia's sail plan as the more effective, but still there are advantages to the other. As to sails, it is known that both yachts are more perfectly canvased than any ever before known, but the materials and weights of each of the many mainsails and other sails without number are known only to those directly connected with the respective yachts. To all appearances so many experiments have been made in the sails that it is still a question which particular one out of three or four is the best for certain conditions, and the final choice may be a mere matter of chance. Of one great factor of the problem, weight of construction and ballast, little is definitely known. It is evident that Columbia has less displacement, and it is quite probable that Shamrock has relatively as well as actually more lead, her hull being the lighter. As Mr. Fife and the Thorneycrofts have kept their secrets admirably, there is nothing but to guess on the possible advantage of Shamrock in this respect. So far as strength goes there is no doubt that each hull is amply strong for the racing, whatever the weather. When it comes to strength of rig and gear the question is still open; Columbia has lost her steel mast, Shamrock has lost her steel gaff, honors are even as to bobstays, as each has sprung one. Each righ is largely experimental both as to arrangement and dimensions of parts, the work of the ablest men in the business and tested by more or less actual trial. It would be no great wonder if the mast went over the side on one or both boats within the first hour, and on the other hand each may sail the series of races without a serious mishap. The two principals have come to a very sensible agreement, that as construction is quite as important as any other detail of the designing, and each has gone as far as he dared, each shall stand by his own mishaps. This means that if one yacht breaks down and is compelled to withdraw the other is to sail over the course and the race is to count, of course provided she does not break down too.

The question of handling, on which the winning very largely depends, is still a doubtful one. It is a matter of "too many cooks" on both sides, a plan that has been followed with success on all the Cup defenders for many years, the only failure being in 1885, when Puritan fouled Genesta, owing to contradictory orders from different captains. In all other cases the American yachts have been sailed by an owner and skipper acting together, with a large force of Corinthian and professional aids. There has been a perfect concert of action between owner and skipper, mates and crew which has attained the best possible results, as in Mayflower and Volunteer under Gen. Paine, and Vigilant and Defender under Mr. Iselin's ownership. This year Columbia will be sailed in the same manner. On Shamrock there will be at least two skippers in joint command, Hogarth and Wringe being on equal footing. It is also stated now that Capt. Ben Parker, of Meteor II., will be on board. Mr. Fife will sail in the boat, and it is hardly probable that he will be a mere passenger. How these combinations will work in each case is as yet uncertain, while the success of the yacht depends largely on the thorough and effective cooperation of all the principals and crew. Taking the little that is really known by the outside public, even including expert yachtsmen, the many points on which even those on each boat must still be in doubt, and the varied chances of wind and weather, and the probable consequences of a failure of any one small but important detail of the big and light rigs, there is more uncertainity as to the final outcome than has ever before existed.

COLUMBIA.

Conditions of the Cup Races.

On Wednesday of last week a meeting of the representatives of the Royal Ulster Y. C. with the officials of the New York Y. C. took place at the New York Y. C. house, those present being: Vice-Com. Lewis Cass Ledyard, Rear-Com. August Belmont, Secretary J. V. S. Oddie, Treasurer F. W. J. Hurst, ex-Com. Edward M. Brown, ex-Com. E. D. Morgan, Herman B. Duryea and Henry F. Lippitt, representing the committee on challenge, and Vice-Com. Sharman-Crawford, Secretary Hugh C. Kelly and Mr. McGildowny, of the Royal Ulster Y. C. committee.

Sir Thomas Lipton and Designer Fife were also present.

As the result of the conference several changes and additions were made, as follows:

The original agreement provides the following regulations as to signals:

The preparatory signal shall be given 15 minutes before the starting signal, and in case of a change in time of start, a preliminary signal shall be given 15 minutes before the preparatory.

At the starting signal a yacht may cross the line; the exact time at which a yacht crosses the line during the succeeding 2 minutes to be taken as her start, and the end of that period as the start of the one crossing after its expiration.

If a race is not started by 1:30 P. M., the regatta committee shall have the right to declare the race postponed for the day, and no race shall be started after 3 P. M.

The foregoing was modified as follows:

First—As to Signals.—A preparatory signal shall be given 15 minutes before the starting signal, and a warning signal 5 minutes before the starting signal. In case of a change in the time of starting, the same signal shall be used. The change is in the addition of the warning gun and the provision that in case of a change in the time of starting the same signals be used.

Second.—The provision that if a race is not started by 1:30 P. M. the regatta committee shall have the right to declare the race postponed for the day, and that no race shall be started after 3 P. M. was changed to provide that no race shall be started after 12:30 P. M. (half past twelve).

Third.—The provision for the presence on board during the races of a representative named by a competitor was changed by adding that a representative of the competing yachts should be present during all measurements.

Sir Thomas J. Lipton and C. Oliver Iselin also signed the following additions to the original agreement:

Inasmuch as we are of the opinion that the America Cup races are not less a test of the strength of construction of the competing vessels than of their sailing qualities, and it is deemed advisable to avoid the embarrassment in which a vessel finds herself when called upon to decide whether to withdraw from a race upon the occurrence of an accident disabling her competitor, it is agreed that in the races between Shamrock and Columbia, each yacht shall stand by the consequences of any accident happening to her, and that the uninjured vessel shall sail out the race.

On the subject of overcrowding by excursion steamers the joint committee agreed upon the following:

In case either contestant shall complain to the committee on challenge that his vessel has been interfered with by excursion steamers or other vessels in any race, the committee will take the complaint into consideration, and if it finds it well founded, will seek a conference with the committee of the Royal Ulster Y. C., with a view of arranging for the sailing of subsequent races without public notice.

The general conditions of the races were announced in a circular made public on Sept. 28, as follows:

The start will be made from Sandy Hook Lightship at as near 11 A. M. as will be practicable, the preparatory signal being given 15 minutes in advance.

But always with the understanding that should the direction of the wind prevent laying the course from the lightship, the starting line will be shifted to the nearest available point, and that in this case the preparatory signal will be given about half an hour before the time set for starting from the lightship, with a warning signal 5 minutes before the starting signal.

Courses.—No 1 (Letter C).—From the starting line to and around a mark 15 miles to windward or leeward and return, leaving the mark on the starboard hand. No. 2 (Letter D).—From the starting line, 10 miles to and around a mark; 10 miles to and around a second mark, and 10 miles to the finish line, leaving the marks on the outside of the triangle, to port or starboard, according as the vessels are sent around.

Starting and finish lines will be between a point on the committee boat, indicated by a white flag, and the mainmast of the lightship or other stakeboat if the start

is shifted from the lightship. These lines will be at right angles with the outward and home courses respectively.

Compass courses (magnetic) will be set before the preparatory signal is given.

Turning marks will be white flags carrying a red ball with horizontal white stripe. The position of each mark will be indicated by a two-masted tug lying about 100yds. beyond. The tugs will carry a red ball at each masthead, and will swing a red ball from the triatic stay. Should a mark be wrecked, its place will be taken by its marking tug, which will display a red flag with diagonal white stripe in addition to the other indications, and in turning the tug the directions for the mark will govern.

Starting Signals.—Preparatory.—A gun will be fired, the "blue peter" set and a red ball hoisted. Start—Fifteen minutes later a gun will be fired and the ball will drop. Handicap time—Two minutes later a gun will be fired and the "blue peter" hauled down.

Should a signal gun misfire a prolonged blast of the whistle will be given. At the finish a short blast will be given as each vessel crosses the line.

Special signals.—C, assent. D, negative. P, preparatory. *Recall, display of private signal. G, do you assent to postponing race until later in the day? H, do you assent to calling race off for the day? J, race postponed for the day. K, race postponed until later in the day. N, race postponed on account of fog. R, race is off. S, the start will be shifted from the lightship. T, accident. Should either vessel meet with serious accident prior to the preparatory signal she will display letter T, and shall have sufficient time to repair before being required to start, or should such accident occur during the race she shall have time to repair before the next race is started.

Preliminary.—Should the start be materially posponed (15 minutes or over), a preliminary signal will be made by the discharge of a gun and the disply of the yacht ensign 15 minutes prior to the preparatory signal.

Night.—After dark, the marking tugs, and at the finish line the committee boat (and the stakeboat, if the start has been shifted from the lightship) will show four red lights horizontally; the guide vessel will show four white lights in a similar manner—and the marks will hang two white lights vertically. Fog.—At three-minute intervals the marking tugs will give five short whistle blasts, with 2-second intervals between the second and third, and the fourth and fifth; and if the start has been shiftel from the lightship at the finish line the committee boat will strike five strokes upon the bell.

The races shall be sailed on Tuesdays, Thursdays and Saturdays until completed, commencing on Tuesday, Oct. 3. The racing rules, time allowances and system of measurement of the New York Y. C. shall govern. Best three out of five races, each 30 nautical miles in length, over ocean courses outside of headlands, and with a time limit of 5½ hours; the first, third and fifth races being 15 miles to windward or leeward and return, and the second and fourth being around an equilateral triangle, 10 miles to a leg. In every case the outward course shall be laid to windward, if possible, and from Sandy Hook Lightship. If a race has not been started by 1:30 P. M., the committee may postpone it for the day, and no race shall be started after 3 P. M. The committee may postpone the start in case of accident, or if the course cannot be laid from the lightship, as already stated; if in their opinion the space around the starting line is not sufficiently clear; in case of fog; and if both vessels assent to a postponement, in which case the time of starting will be fixed by the committee.—From the Mutual Agreement.

The committee boat will display the committee flag, and at the finish of each race she will also display a red ball. The courses will be laid by Lieut-Com. H. H. Hosley, United States Navy (New York Y. C.). The guide vessel will be under command of Lieut. R. T. Mulligan, United States Navy (New York Y. C.). On Starting she will display two speed cones, and when half-way down the course will masthead a third. When stationary the cones will be reversed. Should it be necessary to move the starting line from the lightship the emergency tug will act as stakeboat at the start and finish, and like the committee boat will display a red ball.

Instructions with regard to the maneuvering area and the methods adopted for preventing interference with the competing vessels will be announced later.

S. NICHOLSON KANE,
CHESTER GRISWOLD,
IRVING GRINNELL,
Regatta Committee.

The task of patrolling the course and keeping it clear for the yachts in previous years undertaken by the New York Y. C. has this year been assumed by the U. S. Government, under the law passed since the Valkyrie-Defender races of 1895. The following regulations were prepared by the regatta committee of the New York Y. C. and accepted by the Assistant Secretary of the Treasury after approval by Capt. Robley D. Evans, U. S. N., who will be intrusted with their enforcement. They have been issued in the form of a Treasury circular:

"Rule 1. Observe carefully the movements of the patrol vessels, and carry out promptly and cheerfully the instructions received from them.

"Rule 2. A clear space of half a mile about the starting line will be maintained until the race has been started. To accomplish this the vessels of the Revenue Cutter service will be formed in column extending from the vicinity of the starting line to the left in a direction four points from the wind. The torpedo boat flotilla will form a similar line, four points to the right of the direction of the wind. The two lines of patrol vessels will thus form a right angle. All vessels except the judges' boats must be kept outside of the patrol lines. The space inclosed in the right angle thus formed will be reserved for the competing yachts.

"Rule 3. If after crossing the line the competing yachts stand on the port tack the torpedo boats will form column and stand on course parallel with them. All vessels outside of the torpedo boats will take the same course. The revenue cutters will form line and head the same course as the competing yachts. All passenger vessels outside of this line will head in the same direction, and be careful to keep astern of the line of patrol vessels. The entire fleet of vessels will thus be heading the same course with the yachts, and will be entirely clear of them. When the yachts tack all patrol vessels will at once change course, and steer the course taken by them. Passenger vessels will do the same. The torpedo boats will find themselves in line in this case, and the revenue cutters in column.

"Rule 4. When the competing yachts turn the stakeboat for the run in all patrol vessels will head for the vicinity of the finishing point. The revenue cutters in column, inverted order, will head for a point half a mile to the right of the starting boat. The torpedo boats, in similar formation, will head for a point half a mile to the left of the starting point; thus a clear space 1 mile wide will be maintained astern of and to the windward of the competing yachts.

"Rule 5. All passenger vessels will be careful not to cross astern of the competing yachts on the run in, but will remain on the outside of the line of patrol vessels and avoid crowding about the finish line.

"Rule 6. If the race be to leeward and return, the patrol vessels will form two parallel lines one mile apart, torpedo boats to the right and revenue cutters to the left and in this formation head the course, followed by the competing yachts. Passenger vessels must keep outside of these lines and observe Rule 5. Until reaching the turn buoy Rule 4 will apply. When the yachts turn the mark and start on the beat back Rule 3 will be observed.

"Rule 7. Should the wind shift during any of the races, patrol vessels will immediately indicate the line to be formed, as in the rules above laid down, and passenger vessels must keep outside of these lines with as little delay as may be consistent with safety.

"All seafaring men will understand the difficulties in the way of keeping a triangular course clear, and it is hoped that the public will be patient with rules, which must from the necessities of the case bar them from following the entire course. The fact that the competing yachts will be faster on the second leg of the course with their sheets eased than a majority of the vessels carrying passengers, renders it impossible to allow these vessels to follow the entire course. Therefore the following rule becomes imperative, and must be carefully observed:

"Rule 8. When the competing yachts reach a point on the first leg of the course, to be determined by the officer in charge of the patrol fleet, the guard flags will be lowered to half mast and the steam whistles blown on all patrol boats. When this signal is made all vessels carrying passengers will run at full speed for a position to leeward of the last leg of the course, and as near the second stakeboat as may be without approaching it nearer than half a mile.

"The patrol boats will in this case establish a single line, revenue cutters in the lead to leeward of the line on which the competing yachts will run in, and all passenger vessels must find themselves to leeward of this patrol line before the yachts turn the second stakeboat. On the run in all vessels must be careful not to cross the sailing line of the competing yachts, either ahead or astern of them, but to keep to leeward of the patrol line until the race is finished.

"Rule 9. A blank cartridge fired from any one of the patrol boats will indicate that some vessel is persistently violating some rule. Prompt attention to this warning signal will obviate the necessity of sending the offender back to New York in charge of an officer of the Revenue Cutter Service, and the revocation of the license of the master.

"All patrol boats will display the guard flag—white, with red diagonal cross.

"All masters and owners of water craft of all descriptions are hereby warned that any violations of the foregoing will be under penalties for violation of the navigation laws of the United States, to wit: 'Fine and forfeiture of license.' O. L. SPAULDING, Ass't Sec'y."

In his instructions to Capt. Robley D. Evans, who will have direction of the revenue cutters and other vessels assigned to police duty in connection with the races, Assistant Secretary Spaulding says:

"You are advised that all arrests for violation of the navigation laws must be at once reported to the Collector of Customs at New York, in order that the penalty for such violation may at once be enforced. For example, a vessel violating the law on the first day of the race will be reported immediately, in order that action against the offending party may be taken before the second race shall be sailed."

The boats were measured last Monday by Mr. John Hyslop, and the details follow:

	Columbia. Feet.	Shamrock. Feet.
Length on l.w.l.	89.66	87.69
Length from after end of boom to forward point of measurement	181.62	189.13
Length from forward side of mast to forward point of measurement	73.35	79.46
Extreme length of spinaker pole	73.35	79.46
Length of gaff	64.95	67.64
Length of topmast	64.50	58.06
Less one-fifth length of topmast	51.60	46.45
Height from upper side of boom to topsail halyard block	134.75	128.28
Sale area (square feet)	13,135	13,490
Square root of sail area	114.61	116.15
Sailing length	102.135	101.92

Columbia allows 6.3 seconds.

Tuesday's Race.

The starting gun for the first race was fired at 11:02, and Shamrock crossed the line at 11:15:37, followed by Columbia at 11:16:20. The course was south by west from the Sandy Hook Lightship. Shamrock maintained her lead for several miles, but was overtaken by Columbia, which by 2:30 was leading by a half-mile. In the light winds each boat took the lead alternately, the contest resolving itself into a drifting match, until at 4 o'clock it was apparent that the course could not be covered within the time limit, and the race was declared off, Shamrock being at the moment ahead. They were then within four miles of the finish.

Two Russian wolves were received at the New York Zoo on Monday of this week, and the following night one of them escaped and disappeared. At the time of our going to press it was still at large.

This number has as a supplement the full-page illustration of blacktail deer, "Listen."

Rifle Range and Gallery.

Rifle at St. Stephen, N. B.

CALAIS, Me., Sept. 28.—Below I give you the result and scores of Interclub and International Club cup shoot, held on Broad Rifle Range, St. Stephen, N. B. Conditions were military target, 7 shots, 1 sighting shot, seven men to each team, three ranges; 200yds., off-hand; 400yds., prone or kneeling; 500yds., prone.

The scores:

St. Croix Rifle Club, Milltown, Me.: Total, 455 points; possible, 525 points. Eaton Rifle Club, Calais, Me.: Total, 432; possible, 525. St. Andrews Rifle Club, St. Andrews, N. B.: Total, 413; possible, 525. St. Stephen Rifle Club, St. Stephen, N. B.: Total, 389; possible, 525.

St. Croix Club.

Rifle at Shell Mound.

SAN FRANCISCO, Sept. 25.—The weather conditions at Shell Mound were good yesterday. The Golden Gate Club team of six men shot for the first time in the contest for the trophy offered by Outdoor Life, of Denver. It is proposed by the donor that this trophy carry with it the championship of the territory west of the Mississippi. Conditions: Team of six men, members of any regularly organized club; distance, 200yds.; standard American targets, 8 scores of 10 shots each; any rifle, but users of any form of palm rest penalized 5 rings per score.

Scores yesterday:

First 10: D. W. McLaughlin 88, Schuster 84, Faktor 83, Gorman 80, Mason 76, Rodgers 70.

Second 10: Mason 90, McLaughlin 86, Rodgers 85, Faktor 84, Gorman 81, Schuster 81.

All used some sort of palm rest exeept Gorman. Two scores per month will be shot during the rest of the year.

This club held its regular contests. Scores:

Rifle, 25-ring target, 200yds., one re-entry allowed: Mason 223, Rodgers 220, McLaughlin 218, Gorman 214, 211, Moor 212, 197, Belknap 209, 198, Waenne 205, 200; Jacobsen 201, 199, shot military rifle; Bremer 192, Bridges 186.

Pistol, 50yds., standard American target: Gorman 94, Dr. Rodgers 89, Jacobsen 87, Bridges 80; Roberts 80, shot revolver; Tompkins 77, Moor 73.

Norddeutscher monthly medal shoot: First class, Frank Rust, 414; second class, John Lankenau, 387; third class, not won; fourth class, John Woebke, 327; first best shot, Otto Lemcke, 23; last best shot, Frank Rust, 23.

San Francisco Schuetzen Verein monthly bullseye shoot: George Schulz 75, F. Koch 217, D. B. Faktor 336, N. Ahrens 385, J. De Wit 397, J. Beutler 406, F. Schuster 448, S. Heino 459, H. Lilkendey 512, J. Lankenau 555, F. Brandt 631, D. Dunker 730, R. Stettin 750, D. Salfield 789, H. Helberg 898, Capt. Thode 994, H. Stelling 1,045, A. Lemaire 1,058, H. Zecher 1,258, F. Rust 1,272.

Germania Schuetzen Club monthly bullseye shoot: J. Gefken 182, L. Bandel 300, A. Zecher 387, J. Tiedemann 412, D. B. Faktor 416, F. P. Schuster 419, H. Stelling 552, J. Jung 558, N. Ahrens 595, D. Salfield 631, William Morken 712, Dr. Rodgers 808, A. Thode 844, R. Stettin 855.

Bushnell medal, only one score, 10 shots allowed: Dr. Rodgers 219, Schuster 215, McLaughlin 209.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the New Jersey State Sportsmen's Association's tournament can be obtained of Mr. L. H. Schortemeier, 201 Pearl street, New York. The tournament will be held on the grounds of the East Side Gun Club, Foundry and Ferry streets, Newark, N. J., to reach which take Plank Road Newark trolley car from P. R. R. station, Jersey City, or east from P. R. R. station, Newark, to Foundry street, whence a wagon will carry the shooters to the grounds. The dates are Oct. 10 to 13. The first day will be devoted to targets, and there are eight events on the programme. Shooting commences at 1 o'clock. Events 3, 4, 5 and 6, at 25 targets each, make a 100-target event, entrance $5. Wednesday is the first day of the State shoot. There are twelve events, of which 7 and 8 comprise the individual championship match, and 9 and 10 the three-men team championship. The second day has a live-bird programme. No. 1 is at 7 birds, $5, birds included. No. 2 is at 10 birds, $7. No. 3 is at 15 birds, $10. In the two latter birds are extra. All live-bird events will be handicaps. The fourth day will be devoted to live-bird shooting. Interstate Association rules govern all contests. The Rose system of dividing purses will be used at this tournament. There will be three moneys in the 10 target events; four moneys in the 15 target events and five moneys in the 20 and 25 target events. The ratios will be: Three moneys, 5, 3 and 2; four moneys, 8, 5, 3 and 2; five moneys, 8, 5, 3, 2 and 1. In the live-bird events all purses will be divided class shooting. Two sets of three traps each, Sergeant system, for targets and a fast set King automatic traps for live birds. Targets 2 cents each. Live birds 25 cents each. Guns and shells addressed to Smith Bros., Foundry and Ferry streets, Newark, N. J., will be delivered at the grounds free of charge. A meeting of the members of the New Jersey State Sportsmen's Association will be held Oct. 11 at Smith Bros.', Foundry and Ferry streets, Newark, N. J., immediately after the close of shooting for the day. Lunch at all hours during the shoot.

The programme of the tournament under the auspices of the Hilltop Gun Club, Oct. 10 and 11, at Alfred Clay's, midway between Paris and Winchester, Ky., provides three live-bird events on the first day, as follows: No. 1, miss and out, $2. No. 2, 7 birds, $5, birds included, four high guns. Hilltop handicap, 15 live birds, $15, birds extra; money divided 40, 30, 20 and 10 per cent.; handicaps 25 to 22yds. Twelve target events are provided for the second day, eight at 15 targets, $1.50 entrance, and four at 20 targets, $2 entrance. Ten per cent. will be deducted from each regular event and will be divided among the four high guns shooting through the programme. Winchester, Ky., situated on the C. & O. and L. & N. railroads, will be headquarters for visiting shooters. Take 7 A. M. train to Austerlitz, only twelve minutes' run to the grounds. Return at 5:45 P. M. Guns and shells shipped to Alfred Clay, Austerlitz, Ky., will be well taken care of and delivered on the grounds the day of the shoot. Shooting to commence promptly at 9 o'clock each day.

Dr. D. A. Allen, of Toledo, O., writes us as follows: "In reading your report of first day at Parker's shoot, I notice your reporter made a mistake when he stated, 'as he (Dr. Allen) made but one straight,' etc. Now, by referring to the scores you will see that I made two straight scores in succession, Blake and myself being the only ones to make two straights in succession during the day; and next to Blake I made the longest run of the day. I don't know how many on last end of one score before the straights and first of the other after straights I broke, but should say that the run was over 40. The last race was shot after it was too dark to see the targets well. I also made two straight scores the following day. I did not shoot through the programme, as I was not able, having been out of health for two months and suffering at the time from ague, the weather being particularly unfavorable to this malady, and consequently was badly out of form."

The sixth annual field day and merchandise shoot of the Buffalo (N. Y.) Audubon Club, to be held on Oct. 12, has a very attractive programme, the grand merchandise event, No. 2, having 28 prizes and the club guarantees a prize to every competitor. There are also seven regular sweepstake events, at 10, 15 and 20 targets, a total entrance of $4. Shooting commences at 9 o'clock. Dinnner served free to club members. The secretary is Mr. Chas. S. Burkhardt.

Shooters should keep in mind the shoot of the Pawling Rod and Gun Club, to be held on Friday and Saturday of this week. The Pawling shooters make visitors welcome and hold the pleasantest of tournaments.

On Friday of this week, at Lyndhurst, Messrs. Harold Money and C. W. Feigenspan contest for the championship of New Jersey and the E C cup, which is emblematic of that championship.

In a match at 25 live birds, Sept. 27, at Watson's Park, Burnside Crossing, Ill., Mr. A. H. Johnson defeated Mr. B. B. Jackson by the score of 22 to 21.

The programme of the fall tournament of the Pickaway Rod and Gun Club, Circleville, O., Oct. 17, 18 and 19, provides both target and live-bird events. Shooting commences at 1 o'clock on the first day, and 15 target events and miss-and-out at live birds will be the programme for the afternoon. On Wednesday there are 10 target events, $1.50 and $2 entrance, and a special handicap event for a Marlin repeating shotgun, 50 targets, $1.50 entrance. To the four high guns, amateurs, $25 will be given, and to the two drawing the least money $5 each will be given. The third day will be devoted to live birds. There are four events on the programme, a miss-and-out, $2; 5 birds, $5; 7 birds, $5; 20 birds, $15. To the first high shooting through the programme events of the second and third days, $30; to the second, $20. Guns and shells sent to the secretary, Mr. G. R. Haswell, will be delivered on the grounds free.

The New Jersey State Sportsmen's Association held a meeting in the rooms of the Sportsmen's Association, New York, on Monday of this week. The South Side Gun Club, Climax Gun Club, Dunellen Gun Club, East Side Gun Club, Lyndhurst Shooting Association, Bergen County Gun Club, Endeavor Gun Club, Passaic City Gun Club and Boiling Springs Gun Club were represented. The programme for the tournament, Oct. 11 and 12, as reported by Mr. L. H. Schortemeier, was approved and adopted, and a vote of thanks was tendered to him for accepting the office of manager of the tournament. It was carried that the individual live-bird championship trophy and the three-men team championship trophy be contested for under the same conditions as governed them heretofore.

Stormy weather in the West last week seriously affected the attendance at several tournaments held in that section.

BERNARD WATERS.

WESTERN TRAPS.

Garfield Gun Club.

CHICAGO, Sept. 30.—Twenty-two members of Garfield Gun Club faced traps to-day for the twenty-second trophy shoot of the season. Class A medal was won by R. Kuss on a score of 23. Class B medal was won by Dr. J. W. Meek on a score of 21, but only after a shoot-off with Mrs. Dr. Shaw and A. Hellman. Class C medal was won by W. A. Brabrook on a score of 14. The weather was chilly, and a north wind off the lake made one's teeth chatter. The Garfields close their target-shooting season after one more shoot and will on the following Saturday begin the regular bi-monthly shoots on pigeons. The club is in a very thrifty condition, being out of debt, membership full to the limit and nine applicants on the waiting list. Trophy contest:

Dr Meek	0111111111011111011111101—21
Kehl	0010010011100001100000001— 8

Brabrook	1111110101101101000100010—14

Shoot-off for B medal at 10 targets:

Dr Meek	1111111110—9	Hellman	1010011111—7
Mrs Shaw	1100110111—7		

Eureka Gun Club.

Chicago, Sept. 30.—This was not a perfect day for shooting. The light was very bad, but some scores were very good. Mr. A. W. Adams made a straight 25 in the trophy event—No. 2. In Class B Dr. Miller won. R. R. Mack won Class C. Mrs. Carson won Class D.

The scores:

Events:	1	2	3	Events:	1	2	3
Targets:	25	25	25	Targets:	25	25	25
F P Stannard	19	20	21	A W Adams	19	25	22

W D Stannard	23	20	25	Morton	..	..	15
Mrs Carson	18	18	22				

Dupont Gun Club.

OMAHA, Neb., Sept. 26.—*Editor Forest and Stream:* Inclosed please find club scores of Dupont Gun Club in their weekly shoot, Sept. 23. Mr. Chas. Curtis' work deserves special mention, as when he shot his club score the wind was blowing a perfect gale—you could hardly stand up against it, and the sand came down the Missouri River in clouds. He would call "Pull" and a puff of smoke would tell where the target was when the shot struck it. All this would happen before a bystander could tell which direction the target had taken. He seemed to have a wire attached to them, and all he had to do was to press the button and the thing was done.

Mr. J. P. Sneeod scored 14 out of 15, missing only his first bird. The scores:

Gold badge contest, 20 targets:

Roberts	00011111111111110000—13
Bates	11110111011111111111—18
Mr Townsend	11011111111111111111—19
Kimball	11111111111111111010—18
Burgess	10111110111111110010—14
Plumber	00111111011110111111—16
W P Townsend	11111111111111111110—19
Curtis	11111111111011111111—19
Morrill	11110111110011111100—15

W. P. Townsend and Chas. Curtis tied for gold badge. Each will wear it half a week.

Townsend and Roberts against Curtis and Plumber for price of the birds:

Roberts	1*201*1212—7	Curtis	00020222*2—5
Townsend	2001*22112—7—14	Plumber	2122121220—9—14

Resulting in a tie. The tie was shot off, 5 birds per man, with the following result:

	No. 1.	No. 2.	No. 3.
Roberts	22212—5	12221—5	12221—5
Townsend	22120—4— 9	11111—5—10	11*12—4— 9
Curtis	12221—5	22212—5	22201—4
Plumber	12202—4— 9	11122—5—10	11111—5— 9

Roberts and Townsend win by 2 birds.

ON LONG ISLAND.

Brooklyn Gun Club.

Sept. 30.—Owing to the Dewey celebration, it was a comparatively light day on the grounds of the Brooklyn Gun Club. There was a good stiff wind blowing, which made shooting quite difficult. No. 5 was at 15 singles and 5 pairs. The scores:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	25	15	15	25	10	10	15	25
Waters	8	23	14	9	21	6	7	14	22

Grant	8	11	8	10	37	Richardson	..	..	4	5	9

Arkansas and the South.

St. Louis Doings.

ST. LOUIS, Mo., Sept. 23.—H. C. Griesedick and Jno. J. Sumpter shot a 25-bird race at Dupont Park to-day to settle the possession of the Busch medal, for it will be remembered that these same two principals met two weeks ago for the same purpose, but on that occasion the race resulted in a tie after each had shot at 50 birds.

The race to-day was again characterized by some very fine shooting, and was ultimately won by Sumpter by the close score of 25 to 24, Griesedick losing his very first bird and thereby the match. This bird was not a fast one, and it is possible that the shooter was a trifle too cautious. However, from this on he shot in his usual steady clip and really did much the cleaner work of the two.

For once Sumpter had his luck with him and actually gathered 2 birds that looked irretrievably lost. One of these, which appeared to have escaped his aim, flew almost to the boundary and then suddenly pitched to the ground dead. Again, one which was only slightly hit and was making frantic efforts to get beyond the wire, succeeded in breaking its own wing, which had doubtlessly been fractured by a shot.

A win for Griesedick meant much to him, as it carried with it the absolute possession of the trophy. He had already won it five times, and this was his first defeat of the season in an individual contest.

Mr. Griesedick at once challenged for the trophy, but in this he was a trifle too late, as Mr. W. S. Thompson had likewise done so, and this challenge reached the trustees first, so that he will be given the first opportunity. Mr. Sumpter is now in Hot Springs and will not be back for several weeks, so that it will probably be three weeks before the next contest takes place.

The weather was bright and clear, though a trifle warm, and with very little wind. The birds were a very good lot of summer birds.

The scores:

Sumpter	2222222222222222222222222—25
Griesedick	0111212222221222222222222—24

IN NEW JERSEY.

Morfey vs. Heflich.

Sept. 26.—The second match of the series between Messrs. Morfey and Heflich was won by the latter to-day with a straight score of 25 to Morfey's 19. Each stood at 30yds. and had as many shots as they pleased with their repeaters. The weather was calm and the birds were good.

The scores:

Heflich	1222112212132231121112222—25
Morfey	0123204202223222232220200—19

Fifteen birds, one money, $2:

Morfey	122*22222001120—11	Doty	222222022222212—14
Heflich	120222221211002—12	Shoemaker	2002*2*002*2022— 8

Miss and out:

Heflich	2222222 7	Morfey	1121120—6

East Side Gun Club

Newark, N. J., Sept. 28.—The main event of the East Side Gun Club's shoot to-day, held on Smith Brothers' grounds, was at 10 birds, $4 entrance, optional, three moneys, Rose system. This was the opening shoot of the fall season. The shooters were divided into classes as follows: Class A shooters stood at 29yds; Class B at 27yds.; Class C at 25yds. The birds were a very good lot, and a stiff 3 o'clock wind made the shooting all the harder. A. S. A. rules governed. The scores:

H C Koegel, 29	0022121211— 8	W Hassinger, 29	1002201201— 6
G H Piercy, 29	210222020*— 6	CW Feigenspan, 29	2220022*22— 7

Sinking Spring, Pa., Sept. 28.—At a meeting of the Independent Gun Club, of this place, the tournament committee in charge of the club's second annual target and live-bird tournament, Oct. 11 and 12, reported as having secured 1,000 of the finest country birds to be had and guaranteed that the birds will be of the hardest flyers ever trapped for a live-bird shoot. Also as having heard from different shooters who are going to be present both days. Targets will be shot on Oct. 11 and live birds Oct. 12. Added money will be awarded in the target events. Arthur A. Fink, 426 Franklin street, Reading, Pa., is manager. All shells and guns sent care of Joel W. Hainly, Sinking Spring, Pa., will be delivered free of charge to the grounds. The live-bird events are open to the world, but in the target events the professional trade representatives can shoot for targets only. A fine space will be reserved for the trade to exhibit their goods.

West Chester, Pa., Sept. 30.—The West Chester Gun Culb, of this place, held a target shoot to-day for the West Chester Gun Club challenge cup. Gill won by breaking 22 out of 25. The scores: Ford 19, Gill 22, Peters 19, Henry 19, Davis 19, Hoar 17, Hooper 13, Charles 20, Mowere 17, H. Brinton 17.

DUSTER.

Junction Park Gun Club.

PITTSBURG, Pa., Sept. 30.—The Junction Park Gun Club opened the season to-day, and the members were out in force. Bill McCrickert, of this city, handled the birds, and owing to good work the shoot was a complete success. The events and scores made were as follows:

Junction Park Club's introductory, 5 live pigeons: Jeff 5, Seven 5, Hepler 5, Johnston 3, Evans 2.

Geo. E. Woodruff sweepstake, 7 live pigeons: Hepler 7, Evans 5, Seven 4, Johnston 3, Jeff 3.

Club's Dewey cup, 15 live pigeons: Seven 12, Jeff 12, Evans 10, Johnston 8.

Olympia medal, 7 live pigeons: Hepler 7, Lutes 6, Jeff 5, Johnston 4, Seven 4, Evans 3.

Rochester Tumbler sweepstake, 5 live birds: Evans 5, Jeff 4, Seven 4, Lutes 4, Braden 4, Hepler 4, Johnston 2.

Club's loving cup, 7 live pigeons: Seven 6, Jeff 6, Braden 5, Johnston 4, Lutes 4, Evans 4, Kingsbury 3.

Clinton Bidwell Trophy.

BUFFALO, N. Y., Sept. 30.—On Sept. 28, at the Bison Gun Club grounds, E. C. Burkhardt defeated Wm. McCarthy for the Clinton Bidwell live-bird trophy by the score of 21 to 18 out of 25. There was a high wind blowing and the birds were a selected lot of very fast bluerock pigeons, requiring the contents of both barrels to stop them within bounds. Burkhardt lost 3 just over the boundary, and McCarthy 2. This makes the fifth time Mr. B. has won the above trophy. The victor will next defend the trophy against Mr. R. C. Stacy, who has challenged, and the contest will take place on Oct. 5 next.

On Sept. 30 E. C. Burkhardt again defeated Wm. McCarthy in a match at Audubon Park. The contest was at 50 live birds each. The birds were similar to those furnished in the previous match on the 28th inst., and were again aided by a forty-mile breeze blowing from the score across the traps, making them mostly outgoing drivers and twisters. The score was 43 to 35 in favor of Burkhardt.

BISON.

Shooting Tournament.

HASTINGS, Neb., Sept. 27.—Herewith are scores of the shoot held here Sept. 19, 20 and 21. Mr. Chas. A. Young, of Springfield, O., won first average, with 451 breaks out of 480 shot at, using a repeating gun of his own manufacture and U. M. C. factory loads. His shooting on the magautrap was of a very high degree. Out of 275 targets shot at over this trap he scored 273. This certainly proves beyond doubt that the little Sparrow can build a gun as well as shoot one.

Mr. A. B. Daniels, of Denver, Colo., won second average, losing only 38 targets. He used U. M. C. loads. Mr. Daniels is a very clever shot and a perfect gentleman in every respect.

Mr. Dan Bray, of Syracuse, Neb., and Mr. F. S. Parmelee, of Omaha, Neb., were tied for third place with 40 misses each.

The entries averaged nearly fifty all the way through.

The targets on the Sergeant system were puzzlers, and straights were sure to pay well, 19 out of 20 winning first without a tie.

First Day.

W. S. DUER.

Cincinnati Gun Club.

CINCINNATI, O., Sept. 25.—Herewith are the scores for the ninth contest for the diamond trophy. Willey, of Miamitown, won it for the month.

The Cincinnati shooters will be quite numerous at our tournament, from present indications. Quite a number having entered, all the way through the prospects are favorable for a large attendance.

The trophies are nearing the finals, the most interesting being the Fleischmann-Peabody live-bird cup. Two more contests will wind it up, the next taking place Oct. 4. See, Gambell, Schuler and Dick are all in a bunch, any one of them being liable to land the coveted prize, a handsome, large, solid silver loving cup.

G. W. Schuler, our captain, commonly called Billy, is having another trophy made, to commence when this is shot for. That it will be worth winning is assured, as Billy does well everything that he attempts. He will even shoot targets well some day.

Scores of ninth contest for the diamond medal, handicap, 50 targets:

Waddell	01111001111111111101111111—21	
	01111111110110110111111110—20— 8—49	
Robertson	01011111111101000001110 01—15	
	11101110110011010111111011—18—10—43	
Gambell	11111111011110111111111111—23	
	11011011110011111110011110—18— 4—45	
Small	01110101111111111101111111—21	
	11111011111101011111111101—21— 8—50	
Willey	11111111101101010101111111—20	
	10111111101110011111111110—20—10—50

	01101110011111111110001111—18—12—46	
Ackley	00001001000001001101011 11—10	
	01011110101010100110100 01—13—14—37	
Ahlers	11111111101111011111111011—22	
	11101110100111010111111111—19— 7—48	

Tie:

*Gambell, 2	11110111110101111111101011—22
Small, 4	01011001110100111111100110—19
Willey, 5	11111111110101101111101 01—25

*Gambell broke 50 straight at the first contest of the month, entitling him to a shoot-off in the ties.

CINCINNATI, O., Sept. 27.—Below are scores shot here to-day. Shooting is becoming quite lively again, but there are several of the active members away yet. Nine of the Cincinnati members attended Jack Parker's shoot and gave a good account of themselves. All the cracks expressed themselves as intending to come to our tournament, so a good crowd is assured.

Event No. 1, miss and out, $2; birds extra: Robertson 9, Ahlers 9, Schuler 7, Romwell 2. Robertson and Ahlers divided.

Event No. 2, 15 birds, $5, 60 and 40 per cent.:

Robertson	1212222*2222210—13	Ackley	112102121011120—12
Gambell	212220*22222222—13	J B	2*22*2220222202—11
Ahlers	10111212101*121—12	Romwell	110001222002012— 9
Schuler	111*12101120021—12		

Event No. 3, same conditions as event No. 1:

Robertson	2212222222112212—15	Gambell	220222222222222—14
Ahlers	2121212122122 11—15	J B	222222101211121—14
Schuler	1121111210111 11—14	Ackley	2120111210*1222—12

Event No. 4, 10 birds, $5, 50, 30 and 20 per cent.:

Robertson	2211222222—10	Zimmerman	1122221202— 9
Schuler	2121212112—10	Gambell	2222*22222— 9
J B	1111112221—10	Ahlers	*1*1211112— 8
Ackley	1101211212— 9		

Florists' Gun Club Shoot.

The regular monthly club shoot of the Florists' Gun Club was held yesterday on the club grounds, at Wissinoming, and despite the unfavorable weather a fair-sized crowd attended. The day was against the shooters, a brisk wind driving the targets in all directions, and the making of high scores was an impossibility.

The conditions of yesterday's shoot were 25 targets, from five traps, expert rules, 15 singles and 5 pairs doubles from magautrap. W. H. Wolstencroft, the Frankford crack, made a splendid score and carried off high honors for the day, but was beaten out on high score by B. Cartledge, who had a handicap of 14.

Points won to date: Wolstencroft 7, Park 5, Smith 5, Anderson 4, Jones 3, Dorp 3, Cartledge 3, Harries 2, Bell 1, Westcott 1.

Twenty-five expert rules, rapid fire, five traps:

The scores:

		Hdp.	Total.	Pts.
Westcott	0111000111011100011010000—12	11	16	39	
Anderson	1011111111010011011100110—17	18	8	43	1
Dorp	0100111100010000100110000— 9	11	18	38	
Cartledge	1111111110110111101111110—21	19	14	54	3
Harris	0101101011000011011110110—14	15	19	48	2

Piasa Gun Club's Tournament.

ALTON, Ill., Sept. 29.—Herewith are scores made at the tournament of the Piasa Gun Club this week. A bad storm and extreme cold weather cut down our attendance severely, but the shoot was a success in all other respects. The scores:

First Day, Thursday, Sept. 28.

Events:	1	2	3	4	5	6	7	*8	9	10	11

F. C. RIEHL, Sec'y.

Rummel-Gaston Gun Club Tournament.

NILES, O.—Owing to miserable, cold, rainy weather in this p of the country, our tournament was not as successful as we hop To our own cost, we have learned by experience never to r bluerock and live-bird events; but next time we will know bet and bring events of such on separate days. We appreciate the h and patronage of the Cleveland, New Castle and Pittsburg bo also Fanning, of "Gold Dust" fame; Eggleston, of Warre Mackie, of the Peters Co.; Phillips, of North Benton, and P North, "Our Own" was represented by Hamilton Naylor, Ru mel, Gaston, Farmer Naylor and Seaborn. We believe we ha some good timber, when it is shaped.

A large number of live birds will be used during the winter local shots. The scores:

First Day, Tuesday, Sept. 26.

In 10 the handicaps were as follows: Fanning, 33yds.; Hamilton, Naylor, 31; James, Clark and Eliott, 32; Gaston and Hopkins, In No 14 Seaborn was at 26yds.; all the rest at 30. One yd. added after each kill. Seaborn's last kill was at 31yds.. Naylor's 38, Farmer's at 37, Gaston's at 36 and Eggleston's at 30.

Lost or Dead.

SHELDON, Vt.—*Editor Forest and Stream:* When a person is perfectly sure of the ground upon which he stands, he often t to strengthen and fortify his position by argument. While writer is perfectly sure that his new equitable system for di ing moneys is unlike and much superior to any other system use, he feels sure of his position and does not care to discuss matter; but in the question whether "lost or dead bird," as sented in FOREST AND STREAM, I am not so sure about my p tion. Admitting that competition begins when the shooter "Pull," there is no law but what admits that the bird is just dead if killed within bounds by the use of the second barrel being clean missed by the first barrel as it would have bee killed by a shot from the first barrel. Such being the case, ha the shooter the right to use the first barrel as he chooses—fir into the air, fire it into the ground, either before or after the is sprung, and trust to his skill to kill the bird properly with second barrel?

But here comes in another question: Supposing he so fires his first barrel and the puller through some defect is unable pull off the trap, or if he springs the trap and the bird, thro disease or physical causes, is found to be dead, and of co unable to fly, how is it then declared against the shooter "no bird" or a "lost bird"? If a "no bird," does the shooter h the use of both barrels at the next bird? Is a bird in the before it is sprung considered as a bird on the ground after trap is sprung? N. P.

[As to the first part of our correspondent's letter, a shooter fire off his gun as he pleases, but in a competitive way he m abide by the results of his own acts, as our correspondent soundly intimates. In the last paragraph he introduces ano question—one fully covered by the rules. If the puller fails spring the trap properly, the shooter has still the privilege of fusing the bird, whether his gun is not cocked, or not loaded, what not. The rules enjoin that the bird must be delivered p erly when the shooter calls pull. He has the use of both ba at the next bird, because the first trial was no trial, and the petition begins anew. A bird sitting in the trap after the is sprung is considered as being on the ground.]

The last wonderful tale being told among the Burmese Rangoon is concerning a monster egg. A few months ago Shwebo the villagers heard a strange and mysterious voice in jungle uttering in Burmese the words "I am going to lay," w were repeated frequently several times a day for many d Eventually the egg was laid, and its size is said to exceed of ten large paddy baskets. Nobody will go near this egg, which now come the words "I am going to hatch," also repe many times every day.

Answers to Correspondents.

No notice taken of anonymous communications.

J. L. B., New Orleans.—Can you give me the address of reliable breeders of deerhounds? Ans.—We know of no deerhou advertised for sale.

Clarion, Vandergrift, Pa.—In a shooting contest there is a and second prize. A, B and C shoot as follows: A breaks 78 78 and C 72. A and B tie and shoot off for first prize, B being winner. Who is entitled to second prize, A or C? Ans.—C.

S. B. B., Rutherford, N. J.: 1. Will rice grow in water th slightly salt, like the headwaters of the Hackensack meado 2. What is the period of gestation in a bitch? Ans: 1. 2. From fifty-eight to sixty-five days; generally about sixty-t days.

LOOKING OUT FOR NUMBER ONE.

AND now it is the summer boarder who must answer for depleted game covers. The men and women and children who invade the rural districts in the summer season constitute a factor with which in growing degree we must reckon, when we are seeking to account for barren covers. They do not shoot and do not in this way actively destroy the game, but their presence in the game country has a directly inimical effect upon the supply. Wandering through the woods they alarm the grouse, interfere with the breeding, and spoil the sport. This is a complaint frequently heard, and one which is by no means fanciful. Nor does any remedy suggest itself. The hosts of the summer boarder are growing; places which never knew him before know him now and will know him for all time. Many a resort once famous for its game and resorted to only by those who were in search of game has come to be a fashionable center. The rough accommodations which sufficed for the sportsman have given way to pretentious caravansaries; and the man in search of grouse or deer might as well look for them in the streets of his home town. There are whole districts of the Adirondacks where a dense summer population has completely changed the aspect of the country as a game region, and where even the deer hunting has come to be a fashionable function, engaged in for no other reason than that it is "the thing."

When one has been deprived of his shooting in this way he finds no special mitigation of his chagrin in the reflection that the rule of the greatest good to the greatest number demands that if a hundred can find varied pleasures in the wild territory contiguous to a summer resort it is not for him to complain because his autumn shooting has been destroyed and his own peculiar pleasure marred. This may be true, but it does not give him back his birds.

The fact is that we sportsmen as a class and in so far as our sport goes stand with faces opposed to all the development and settlement and wilderness reclamation which in our other relations of life we are wont to applaud and advance. The sportsman of to-day, of just this day in particular, is confronted by conditions which perplex and alarm him. He sees his own hosts growing, and the field open to him more and more rapidly narrowing. His swamps are drained, his woodlands felled, steamboats invade his sequestered lakes, hotels occupy his camping sites, the railroad shrieks through his deer country, and where he once enjoyed the quiet of nature is now the shingle mill or the discordant saw. With all this the problem of shooting territory is growing more and more pressing.

The solution of the question is found by an increasing number of shooters in abandoning the old line of effort, which was to provide for a public game supply, and in resorting to the expedient of individual game protection for individual benefit. In other words, shooters are despairing of saving game by game laws and are saving it by trespass signs. Whatever may be the merits of the system when considered from the standpoint of public interest, the fact is that the provision of a private game preserve or a posted stream is the end to which the most determined and effective individual effort is now directed. We were talking the other day with a New York business man who used to be known to the readers of this journal as a staunch advocate of game protection and an ever-ready complainant when the local game protectors were lax in their service. But for months and years he has been unheard. Why? Certainly not because the reasons for complaint have been removed; but if the game laws have been violated and the game fields have been denuded, nothing of this has perturbed his spirit. His name is on the list of members of a shooting club which has a large territory of owned and leased lands within easy distance from town. Here every year hundreds of live quail are imported for stocking the fields. Bass and trout waters yield an abundant reward to the angler. Wardens patrol the club premises the year round, and in the shooting season the force is doubled. This erstwhile contestant with other unattached sportsmen for a share of the game, this advocate of protection who long made the fight of the public his own fight because it was his fight, needs now maintain the contest no longer. When he wants to go shooting, he repairs to his comfortable club house, his dogs quarter bag producing fields, and he may shoot up to the limit set by the rules, with the gratifying assurance that he is getting his quota of birds this year and will have the quota the following years. So far as he is concerned game protection is a dead issue.

The same thing came out the other day in the talk of a Massachusetts man, who, having commented despondently upon the inconsequential results of a local game protective association movement with which he had been associated, and upon the apparent uselessness so far as game protection in his State was concerned of contributing a dollar to a league of American sportsmen, set forth the peculiar attractions and advantages of a New England mill site, with its availability for a trout preserve, with partridge shooting in the adjoining covers. And a trout preserve it will be made.

The rule of the greatest good to the greatest number is a fair-sounding proposition to which in a general way we all assent; but in the other rule of looking out for number one is found the motive for most of the actions of imperfect humanity. The game preserve is an institution directly in line with the observance of the rule of number one.

ARE THE GEYSERS DYING?

OF all the wonderful, beautiful and interesting things seen by the visitor to the Yellowstone National Park none is so startling as the geyser in eruption. In this national pleasure ground, geyser phenomena are to be seen on a scale larger than anywhere else in the world. There are a half dozen distinct geyser basins, in which a number are grouped, besides many individual geysers, as well as many groups of hot springs which show every evidence of having been active in the past, but which are now quiescent. We are all familiar with the old-time pictures showing the eruptions of Old Faithful, the tall, thin spout of the Bee Hive, the gigantic convulsions of the Giant and the Giantess, and we are likely to think that such expressions of activity will continue to take place forever. It is by no means certain that this is true.

We are told that within the past few years a great change has been noted in the action of the geysers of the Park, and that there appears to be a distinct decline in their activity. The observations made are said to have been superficial, but the conclusions drawn from them indicate that many of the geysers are dying, and that their places have not been taken by others of equal force and activity.

In a paper recently read before the American Association for the Advancemeint of Science Mr. Erwin H. Barbour gives it as his opinion that the activity of the Yellowstone Park geysers is declining at an extraordinary rate, and he believes that if the decline of activity which has been noted during the past four years should continue for eight or ten years longer, the features which most interest the geologist will disappear.

The first thing that impresses the visitor to the Yellowstone Park, if he enters it from the north, is the great lime formation, known as the Mammoth Hot Springs. In these springs, which, when the Park was first discovered, flowed at almost all points, the activity is said to be now not one-tenth what it formerly was. The well-known Minerva Terrace has become extinct since 1895, while from several other important terraces the discharges have almost ceased. Roaring Mountain, which formerly bellowed, grumbled and muttered continuously from its dark cavity, is silent now. Steam issues from it, but no sound.

In the Norris Basin, geysers that were once important have ceased to play, while in the Lower Basin the beautiful Fountain Geyser is extinct, and the Paint Pots, which used to be watched with so much interest, occupy a much diminished area, and that portion which was pink has ceased to bubble. In the Upper Basin many well-known and beautiful geysers appear to be extinct. Among these are the Splendid and the Bee Hive. The Grand Geyser, which used to spout frequently, now does so only at rare intervals.

Mr. Barbour's warning will very probably lead to the setting on foot a series of careful observations on the geysers and hot springs of the Park. It may be hoped that their present inactivity may prove to be only temporary, for if the National Park should lose its geysers one of its features most attractive to the general public would be lacking. The lover of nature would take not less pleasure than formerly in wandering through its charming fastnesses, but the great public which longs to behold wonders that are startling would find in the Park much less to marvel at.

SNAP SHOTS.

Our Boston correspondent reports that there is much dissatisfaction over the Massachusetts law which forbids shooting on Sunday, though why there should be more cavil at the statute now than in past seasons is not explained. The 1899 law quoted is new only in respect to the Sunday gunning penalty; the prohibition itself was contained in the 1882 revision of the Public Statutes, and presumably had been the Massachusetts law from time immemorial. The amendments made from year to year have been designed to provide more effective punishment for violations; and the reason given for this by the Game Commissioners has been that the Massachusetts Sunday gunner, in the vicinity of towns at least, is a decided nuisance, which under the old law they found it difficult to suppress. Of the magnitude of the nuisance and the intolerable nature of it abundant testimony can be given by the dwellers and land owners in the neighborhood of the factory towns. The Sabbath observance phase of the subject—if it has any such phase—we do not discuss; but as a game protective measure pure and simple, and as affording land owners some protection against the invasion of three-dollar pot-metal gunners, the law has a good purpose and quite sufficient justification; and these points should be given consideration in making up an estimate of its wisdom. As for "the partridge and quail gunners," reported by our correspondent, who say that if they are interfered with by the authorities "it will be a trial of the best man, the gunner or the officer of the law," this is bravely spoken, but it is hoodlum talk and much more worthy of the sand-lots or the Haymarket than of Washington street, Boston.

In the use of the long quill feathers now so much in demand for women's hats, those of the eagle are especially desired. Those of either wing or tail are used, and it is not uncommon to see a woman passing along the street bearing on her hat the single tail feather of a war eagle, much as the Indian warrior of old times used to tie an eagle's feather in his head. However, the supply of eagles does not at all equal the demand for these quills and almost any long feathers are used. Among these are the primaries and tail feathers of the turkey buzzard, a bird which, as Mr. Lucas has pointed out, has hitherto been little pursued to satisfy the whims of fashion. We may wonder how long this demand will keep up, and whether it will result in the extermination or marked decrease in the numbers of buzzards. The use of the feathers of this malodorous and notorious fowl on the heads of women who are endeavoring to be fashionably important is not without its humorous side.

For a behind-the-time folk commend us to the good people of Pike county, Pa. They are well meaning and hospitable, and have grouse and deer and bear, not to mention some of the toughest hunting country on the face of the earth; and withal they are so old-fashioned and unprogressive that they shoot their game under a law which is no longer in force, but which they observe because of an apparent inaptitude to catch up with the times. Pike county was given open seasons for deer and game birds by an act of 1878; that law has been repealed, and the Pike seasons are those of the Commonwealth at large; but Pike county newspapers have this year, as before, published the old law as still in force; and at last accounts the Pike hunters, native and visitant, were booming away at game out of season. Thus it comes about that those who are behind the times are ahead of all the rest.

The well-known English writer on ornithological subjects, W. B. Tigetmeier, has published a book on the house sparrow, which he calls "the avian rat." This is perhaps the most felicitous description of the bird ever invented.

The Sportsman Tourist.

A Tempest in a Stubble Field.

Several years ago, while pursuing a course of study, it was my custom to recreate every few days by a bout with the birds. In a good quail country, not too constantly shot over, it was frequently my luck to make a fair bag in an afternoon without tramping further than a pleasant constitutional. Not owning a dog, I sometimes borrowed a neighbor's, but more frequently shot without any dog.

The available dog was well bred, but miserably broken, and after a particularly trying time with him, it generally resulted in my leaving him to enjoy the seclusion of his kennel during two or three trips and going it alone. This working alone made me expert in marking down dead birds and locating the survivors, and I soon became quite independent of that supposed necessity, a dog, and could find and bring to bag birds in any but the heaviest cover. My sister became interested in my shooting, and begged for permission to accompany me on some short trip. Knowing where there was a covey of birds near town, I promised her the desired pleasure the first pleasant day mutually convenient.

A cool, bracing afternoon was selected, and the start was made about 3 o'clock. Just as our expedition was getting under way we met an intimate girl friend of my sister coming in for a visit, who, with very little persuasion, was induced to join us.

A block from the house we were hailed by two young ladies—sisters—from the porch of their home, who bid for an invitation to join the hunt, received it, and quickly fell in line. This performance, with slight variations, was repeated until four more girls were added to our party. It struck me then as rather strange that so many pretty girls happened to be so situated as to notice our departure and be ready to join us without any of the usual feminine procrastination and special preparation of toilet, and it was not until several days thereafter that I discovered it to have been what the street calls "a put up job." My sister had talked of the anticipated pleasure of a real quail hunt, her girl friends had begged her to get them permission to accompany us, and they had put their curly heads together and evolved a plan. They rightly feared objections on my part to starting with a large party, but well knew that I was at their mercy after the start was made.

Out of town we filed, looking like a "select school for young ladies" taking the air, and soon reached the field the birds used. There was a gate quite convenient to us, but of this fact I made no mention. Climbing the fence, I laid down the two top rials and invited them one by one to "come on." With more or less effort they all finally reached my side of the fence. There is another thing a woman cannot do besides throw a stone; that is climb a fence.

All safely over, we started down through the field, with the gun in the center and the girls forming the right and left wings. For a few moments they tiptoed along, expecting to find birds every step, and not doing so fell to criticising and reproaching me because they did not. Upon my assuring them that I often walked miles before finding birds, they jumped to the conclusion that there were no birds in that field, dismissed the subject of birds entirely from their minds and resumed their ordinary walk and conversation.

As they strolled carelessly along, chatting and laughing as only a healthy, happy lot of girls can, suddenly, without a moment's warning, we walked into a fine covey of big, strong-flying birds, that burst out of the stubble and weeds with a roar like a foghorn. Every one of the girls screamed as loud and long as she could, and they fell into each other's arms for protection.

A good deal shaken by the awful row they were raising, I missed clear with my first, but pulling myself together killed a long shot with the second barrel. I did not hear the report of either shot fired above the lamentations of those fear-stricken damsels, who never ceased to scream until compelled by exhaustion.

Marking down the birds, I was glad to see them settle on a little piece of flat ground covered with clover on the banks of an alder-grown branch, scattered as nicely as though placed to order. I foresaw a real "hot corner," and was ungallant enough to wish my fair companions all back in town.

At first I thought it possible that they would desire an immediate return to their homes after their awful fright, and determined to discover the gate to them, and do all else in my power to accelerate their retreat. But in this I was disappointed, for as soon as they ceased to scream and recovered breath sufficiently to talk, they at once fell to assuring each other how "perfectly delightfully fascinating" they considered the sport of bird hunting, and how glad they each and every one was that she had been fortunate enough to come.

Concealing as well as possible my disappointment, we resumed our hunt in the direction of my dead bird, and when I found it there was another scene. The girls seemed as much surprised as though I had found a large and well assorted box of caramels in the field at my actually killing and finding a quail.

They inquired very earnestly as to what had killed it, some not knowing (small wonder) that I had fired my gun, and others, knowing that I had fired, but "supposed it was only to make the birds fly fast."

They were overjoyed that "we had killed one," and finally grew so enthusiastic that I felt as though my recent thoughts had done them injustice, and that they had some pretty blue sporting blood after all; but just then a girl with abnormally developed tenderness in the cardial region proceeded to express her opinion to this effect: "It is a dear, sweet, darling little birdy, so there! And I think it is really too bad, and real cruel besides, to kill the poor little innocent, pretty thing, I do, indeed."

This sentiment met with a warm reception from my fair companions, and started a condolence movement that rapidly assumed alarming proportions, and would have resulted in having me then and there tenderly bury the "poor little bird" had I not, in a determined manner, put it in my shooting coat pocket and ordered a general advance on the survivors.

Another fence had to be crossed before we arrived at the clover field where the covey had settled, and when this was reached the girls held a consultation, which resulted in their ordering me to climb over, walk on slowly, and remember a celebrated Biblical character—Lot's wife. Obeying this order implicitly, I was soon joined by my fair companions, who had each in her own way surmounted the fence difficulty, and we entered the clover field in good order. I kept them well together until we had reached a point where I felt sure there was many a brown beauty lying close, ready to flush, until we were fairly in the midst of my expected warm corner, when one of the girls caught sight of a beautiful spray a goldenrod just ahead, and with a cry of delight rushed to it.

There was more of it in sight, and apparently forgetting that we had any other object in view than gathering goldenrod, they all scattered with exclamations of delight toward the nearest spray.

Thoroughly provoked, I shouted at them remonstrances in about the tone one would use to unbroken and headstrong puppies in the field, but before my vigorous protest could make any impression the first truant reached her flower, bent over to grasp the stem, when whir-r-r! from immediately under her face flushed a brace of birds. With a shriek of terror, she fell over backward, while the birds flew straight at me. Wheeling around, I let them pass over my head and then drew on them.

There were several girls in the general direction they were taking, and as I raised my gun they one and all threw themselves down, screaming, and imploring me not to shoot. I promptly discharged my duty to them by feeling profoundly sorry for the fright they were suffering, but as they were in no real danger, and my sporting blood was up in the nineties, and rising, I proceeded to make a pretty right and left on the birds, killing both.

Crowding in fresh shells, I was in time for another bird flushed by a girl on my right that was in fact almost stepped on by her as she turned at the report of my gun to run back.

Evidently badly frightened by the unusual scene in his covert, he made off with the speed of a meteor from the immediate neighborhood of the screaming girls. Clean killed, he was propelled by the momentum of his flight fully 25ft. before striking the ground. The next, a pair, came from the rear, and I could only persuade the slowest of them to stop.

By this time the girls were demoralized beyond the hope of doing anything with them, some running erratically around, others prostrate on the ground; but all shrieking and protesting, so I left them to their own devices, and paid strict attention to the business in hand, shooting at every bird that flushed when my gun was loaded. It veritably was a warm corner—the warmest ever known.

The birds had not run and were lying close, flushing just about as fast as I could work my gun, with no lost motion.

A girl on my left started to scramble to her feet, and flushed a bird that flew toward the girl in front. When I fired and killed it nearly on a line with her she dropped as though shot, raising her scream—which had been going constantly since the shooting began—several notches, which brought it about to "high C"; this started a bird from the grass at her feet that flew to my right and was killed over the heads of more protesting Dianas. A bird then flushed independently, near me, and flew toward the branch a few yards distant. As I swung around and brought my gun to bear on it a poor little frightened girl, who had crept up almost to me from the very line of his flight, and who, as she admitted afterward, really thought that my shooting was being done with an utter and reckless disregard for the personal safety of my companions, turned and fled toward the branch (continuing) shrieking.

Holding on the bird that was flying in a line with her retreat, and waiting until it got well above her head, I fired and killed. As my gun spoke the fugitive reached the banks of the stream, and there ran on a pair of birds that flushed from under her feet. Feeling sure that I would fire at them immediately, she chose what seemed to her the lesser danger and pitched headlong over the steep bank into a patch of willows on the water's edge. One glimpse of a pair of French heels was all I had, as I killed with my second barrel one of the birds she had flushed.

Unquestionably, it was my duty to go immediately to her assistance; but it was birds we had come out after, birds we had found, and birds I honestly considered my first duty. In any event, no partiality should be shown, and the condition of all my fair companions indicated that when succor was attempted at all it would have to be on a wholesale plan.

The fun was fast and furious for a few moments longer and the shooting under less difficulties, as every girl was now flat on the ground, doing nothing more distracting than screaming, and I had become entirely accustomed to that.

The last bird killed flew over my shoulder and was shot too close. It fell squarely upon the head of the original sinner, the first girl to run out after the goldenrod, who was seated on the ground bent over, her hands pressed tightly over her ears, and like her companions voicing her displeasure.

Evidently believing the blow from the falling bird, which was rather swift in its descent, to be a shot striking her, she promptly proceeded to improve so much upon the performance she had been giving that several of her nearest neighbors became dissatisfied and discouraged with their own efforts, left off entirely and went to her assistance.

Waiting a moment and no more birds flushing, I proceeded to draw a long breath and look around. The apparent slain lay thick about me. It seemed I'd lived a long time in the few moments just past, and a suspicion crept over me that the few moments to follow would probably seem longer.

Not a reckless nor careless shot had been fired, and no better score had I ever made shooting from one stand at quail, and yet, in spite of these facts to my credit, I felt that I would probably be censured by my unreasonable companions. Somewhat embarrassed and not sure as to what was the best course to pursue under the circumstances, I concluded to cross to the other side of the stream and retrieve the three or four birds that had fallen over there, thus giving my companions an opportunity to recover their composure. The bank of the stream had been hollowed under by the water, and when I dropped over, there sat the girl who had fallen (or jumped) over earlier in the action, as far back up in under the bank as she could crowd, with her hands pressed tightly to her ears and her eyes shut. She had stopped screaming, probably from exhaustion. I touched her on the arm, and she opened her eyes with a startled look, which changed immediately to one of injured indignation when she recognized me.

Considerably disheveled, and with her becoming turban hat tilted rakishly over her left ear, the dignified and haughty air that she at once assumed was not so crushing as might have been under more favorable circumstances and conditions.

When I had found a sloping place and helped her back up the bank, without a word of thanks she walked away to join her companions, while I continued my way across the stream to seek my birds.

I did not hurry the search, as it was borne in upon me that my conduct was being freely discussed and frankly condemned by a "committee of the whole" on the other side. I even entertained serious thoughts of deserting entirely under cover of the thick growth along the bank of the stream; but the thought of the killed birds scattered around over that lovely bit of clover more than the duty owed my fair companions restrained me. Returning at last, I found the young ladies all gathered together, apparently too much interested in conversation to even be aware of my existence.

The temperature seemed to have suddenly fallen almost to freezing. My polite request that they assist me in finding my dead birds elicited no other response than a positive refusal to "assist me in any way," spoken by my sister.

Making the best of a bad matter, I searched the ground over carefully, finding in all nine birds, which certainly did not represent all that I had killed. The greatly injured and deeply offended young ladies then informed me, the sister acting as their spokesman, that they desired to call off the hunt and return to town, and wished me to lead the way, after removing the loads from my gun. This was painfully arbitrary, but after such shooting as had just fallen to my lot I could afford to be generous and submit gracefully to the will of the majority.

Removing the cartridges and shouldering my gun, we marched for the gate, as I was afraid to set them at any obstacle in their present humor.

Not one of them so much as noticed me the entire return trip to town. At my earnest and humble request they allowed me to be heard in my own defense before we reached the point where we separated, and I made a strong argument, but so far as appearances indicated their verdict remained unchanged. They one and all looked the belief that I was a wild, reckless, unmitigated, deceiving villain—so there!

The next hunt was made with the worthless, headstrong dog that was mentioned before, and he seemed by comparison pretty good company. We had some misunderstandings, and even a personal difficulty or two; but I did not have the misfortune to fall so low in his estimation as I had succeeded in doing in that of my companions of the higher order of intellect, for we did manage to come in on speaking terms.

Lewis Hopkins.

A Delinquent Narrative.

Editor Forest and Stream:

A kind of literary piracy has been designated by some mild critic as "unconscious assimilation." As it is applied to persons who write things the phrase is quite as specific as it would be to say that those who eat, drink and respire unconsciously assimilate, for the mental process of digestion and appropriation is quite as common as the gastronomical or the respiratory. It would doubtless be impossible for any civilized person to speak or write a dozen sentences without assimilating somewhat.

Thus and therefore we are all assimilators, but as to the conscious or unconscious part of the process of appropriation, as nearly as I can assimilate the theory, there is opportunity for the compilation of more words than I can afford to have published, at my own expense. It would seem that much depends upon the diet assimilated, for I have heard it said, or seen it stated very wisely, that the ox is a product of the pasture—a conjecture that ought to meet with general appropriation, particularly with those who hunt, fish and fowl. Exterminatory peregrinators who have "roughed it" by camping out, and who have tried to assimilate the results of the chase, cooked by themselves, must have succeeded, or perished from the face of the earth. And yet there may have been instances when they did both, simultaneously.

"The mountain sheep are sweeter,
But the valley sheep are fatter;
We therefore deem it meeter
To carry off the latter,"

and

"Upon what meat doth this our Cæsar feed
That he hath grown so great?"

are mere fragments of ancient lore, but they go to show that even the ancients realized that

"You may break, you may shatter the vase if you will—
The scent of the roses will cling to it still";

also that

You may bake, you may batter the fowl as you will—
The mud-hen's aroma will cling to him still.

It is perhaps a somewhat extravagant appropriation of space here to admit that the last couplet is an off-hand result of assimilation, not wholly unconscious. I am not good at "these numbers" or rhymes, and I identify them so that no Ignatius Donnelly will tamper with them some

three hundred years hereafter. The verses all go to show, with notable unanimity, that the savor of fish and fowl is somewhat profounder than the cuticle thereof.

With further regard to this problem of assimilation, be it known that I deal with the topic understandingly. When I was younger than at present writing, and more confident than at this time, I was jungle beater and quarry jumper for a daily journal in a populated town. I did my work so well that, if I could have controlled the convocation of politic editors who garbled my returns, the journal would have attained large and conspicuous reputation. Those autocrats persistently refused to assimilate fresh diet until I lost ambition and began to shrivel to conventional dimensions. It was to avoid the assimilation of which I was conscious, that I permitted the journal to proceed with clam-like velocity to an obscure destiny, while I departed at right angles, with zig-zag variations.

The experience convinced me of the unmistakable tendency of assimilation to make typical mutton of all sorts of sheep, and other quadrupeds. This is perhaps the natural, or the most comfortable, condition, where the taste for fish, fowl and 'possum has been forgotten or despaired of. They have an old civilization in the Oriental quarter. Thousands of Chinamen came to California with no ambition beyond rice and rats; and it has taken these renegades half a century to interpolate two or three alternatives, such as shrimps and cats.

After an interval of reflection, I now recall to mind that I commenced this writing to contribute some fish or snake history to the worthy of our day and generation. But I fell to thinking, which often interferes with expression, and lost confidence in the value of the truthful things I was about to unwind. I was about to launch the first of a series of careful statements about men I have hunted with, when overtaken by thought and very swiftly convinced that I was a victim to that magnificent new malady, unconscious assimilation. Mr. Fred Mather hit upon a phrase that almost copyrights the entire commonwealth, and I shall refrain from sizing up against his works.

But yet I never could control the desire to trample grass if there was a trespass sign up, unless some personal inconvenience was impendent. And this reminds me that apology is due to your several correspondents who disagreed with my say about Sportsmen. I sincerely extend to them my regrets that the editor prevented me from pulverizing them. However, editors are entitled to some discretionary power, for if there is anything in this unconscious assimilation theory it is a wonder they are not all in asylums, such as are not, necessarily, sanctums.

RANSACKER.

SHASTA MOUNTAINS, Cal.

A Week on the Upper Penobscot.

"WHAT is the programme for next week?" asked Hal Godwin, meeting me one day about a week before the B. Outing Club went on its summer outing.

"Let you know to-night," I replied. "Come around as early as you can."

We were four—Hal Godwin, George Morris, Charlie Leighton and myself—bound together by a common pleasure in outdoor life. It is true Hal's preference was canoeing, that Morris and Leighton found more pleasure in hunting or fishing, while my special hobby was tramping. Yet as each recognized the other's preference as a perfectly sane one, peace and harmony reigned among us.

About three years ago this common interest in outdoor lift had led to the formation of the B. Outing Club. It was an exclusive affair, limited to "present company." We generally arranged for four outings a year—one for the fall hunting, another for the winter fishing, a third for the spring salmon fishing, while the fourth was a week's camping out in the summer with plenty of canoeing and fishing thrown in.

Each one of these outings was under the entire management of one of the members. He decided where the club should go, always subject, of course, to the approval of the others—an approval which, during the three years of our existence, had never once been refused. He was also "commodore" during the time away.

It had fallen to my lot to make arrangements for the summer outing on which we were to start the next week, and the club was to meet that night to talk over affairs and make arrangements about impedimenta.

"I'll bet it is a canoe trip down the Penobscot," interrogated Hal, as soon as we had gotten together.

"I hope you don't intend making us tramp it up Katahdin," Morris put in.

"No. It is neither of those," I hastened to add. "My plan is this: Take two canoes with camping outfits by tram and team up to the West Branch of the Penobscot; let Hal and Leighton pole the canoes about five miles up, where there is a clearing, with three or four houses, Morris and myself will relieve them there and pole up to a pond about twelve miles above the Fork. I know of an ideal camping place at the upper end of the pond close under the Falls. There are several trout brooks running into the pond, and if these do not satisfy the 'Waltonians' we can get plenty of pickerel about a half-mile from camp. When we break up, we can easily run down to Oldtown, take a train there and come home in style."

"One moment," broke in Morris, who was getting suspicious. "You spoke of only two at a time in the canoes—one for each. What do you propose to do with the other two?"

"Tramp."

"I thought so," he muttered. "Well, I'll have to do it. But if I get nervous prostration through over-exercise in the hot sun, I'll——"

"Never mind, Morris," Hal broke in. Then, with a dig at Morris' failing, "Just think of the appetite you will have for that supper of fried pickerel, baked potatoes and hot coffee."

A growl was the only answer. Morris had started in a couple of years ago to make sport of my tramping expeditions. Since then I am inclined to think he has become gradually won over, and now takes almost as much pleasure in legging it as I do, though he will not say so.

The following Monday morning a lot of camping outfit, two stout yet light canoes and four enthusiastic "rusticaters" were left by the early train at Mattawamkeag.

They were received into a couple of teams and started on the second stage of their journey. This was about ten miles, and took a couple of hours. It was about 9 in the morning when the canoes were launched at Medway and the final stage of the journey begun. Leaving Leighton and Hal to pole up against the current, Morris and myself started on our six-mile tramp.

The road we took ran parallel with the river, now along the very edge, now turning abruptly away and passing over some rocky hill that had rudely brushed aside the rushing waters.

"There is good beginning," Morris said, pointing to the leaping waters of the Nickatons Rips, as we came out on the river bank a few minutes after seeing the canoes start.

The bed of the river made a decided drop. Here and there huge rocks brought down from the quarries above by nature's quarrymen were piled up. In and out among these the water dashed, increasing in momentum, till with a final splash that would push back some eddy trying to escape from its prison into the swifter stream, it would go on its way, sparkling and foaming from the very exuberance of life.

The boys were ready for their "beginning." Paddles were exchanged for the iron-pointed pick-poles. A quick succession of strong shoves send the canoes well ahead despite the rapid water. Care is taken to keep the canoe head pointed directly in the stream. If it but turns so that the current strikes on the side, unless the canoeman is quick and strong, a wetting, a loss of baggage and sometimes a broken canoe is the result. Nothing of this sort happens to our comrades. They are accustomed to this kind of work. A few minutes of hard but skillful use of the pole and they "rest from their labors" on the quiet water above.

Leaving them there, we follow the roads into the wood on the onward march.

It is a splendid day for either tramping or canoeing. Slow-moving masses of clouds are an ever-shifting curtain beneath the sun. Now and then through some rent, stray glimpses are caught of the world above. The same gentle breeze that rolls on the clouds above reaches down and fills the wood with nature's music.

And the wood! There is always an inspiration here for the seeing and feeling soul. A spirit fills these quiet aisles. It speaks to our restless spirit fresh from the hurried struggle of competitive life and whispers, "Peace, be still." Calmness, peace, joy, fill the soul. Oh! keep away all thought of those days that will come only too soon—days of toil and strife. Live for awhile in the present, full of nature's presence.

A deer dashes across the road, frightened and expecting every moment to hear that report it heard last winter when mother was killed. It passes on, the rustle and crackle of branches and twigs dying away in the distance.

The six miles are covered all too quickly. The sight of the clearing and the houses brings our thoughts out of the skies to the earth. We had to wait about an hour before the canoes arrived. After a cold luncheon an exchange was effected, Morris and myself taking our turns at poling, while Leighton and Hal took to the road, ready for "whatever may come."

"Look out for the logs ahead," shouted Morris, who was a little in advance, shortly after getting under way.

A drive that for some reason or other had been held back too long was "hung up" on the rips just ahead. Logs, telegraph poles, ties had drifted together, forming all sorts of fantastic figures. Had it been a "jam" some carrying would have been necessary. As it was, there were openings here and there through which the deeper water flowed, where we could pole up.

There is an excitement in pushing a canoe up against the swift water. That element of danger which gives a zest to all sport is wanting to some extent here, it is true. Yet sufficient damage will result from the lack of skill and judgment to make it an interesting undertaking.

I had an experience on these very rips that came near being exciting enough.

Shortly after Morris had warned me about the logs, I heard him shout again. Looking up, I saw him jump for a rock. Reaching it safely, he let his canoe drop down and around, bringing it up on the other side of the rock on which he stood.

A large log had succeeded in getting afloat and came down, sweeping the whole channel; now floating crossways, then one end striking some obstacle the other would swing around and lead the way till it in its turn met a rock, when the first would take precedence.

I realized in a moment if that log struck my canot it was "all wet" with me and everything else there. Yet I was helpless. The channel was free from rocks. Nothing to break the onward sweep of that "demon of destruction."

A moment and it was all over—not the water, but the danger. For some unknowable reason, just before the log reached the canoe, it swung around end foremost. And in that position it swept harmlessly by the side of the canoe.

A short, hard struggle of the kind that makes this sort of thing disagreeable to the lazy man, and we were paddling quietly along in the smooth water above.

Another ten minutes of hard "picking" about a half-hour later was rewarded by the sight of the pond ahead. We found our comrades waiting near the mouth. Taking them in, we started on the last half-mile of our journey.

The pond is formed by the West Branch, suddenly widening to a half-mile for about a mile. On the right as you enter the Millinockett stream flows in, with large masses of grass at its mouth, where the pickerel like to lie in wait. Further upon the other side several brooks add their waters. These furnish splendid grounds for both trout and pickerel. The latter especially are quite plenty. Moreover, these are favorite places for deer. Go there any evening at sunset or any morning just before sunrise and you will see some "beauties." Especially at sunset they like to loiter around the open feeding grounds at the mouth of the brooks.

As we paddled up, enjoying the quiet beauty of wood and water, a breaking of twigs on the left told us we were not alone. The glimpse of a white brush told the whole story. Here was hunting in plenty. Everything was favorable for bagging game—everything but the law. It was close time, and I believe those deer knew it too. During the few days we remained, we saw no less than twenty of them at different times.

We pitched our camp in an old field about a hundred feet from the Falls, that mark the upper end of the pond.

"Now you have us here at last," yawned Morris, stretching lazily back after finishing half a pound of steak that night; "what are you going to do?"

"Take you down to the brooks to catch some pickerel."

"All aboard for the banks," came the cry.

We all obeyed the summons willingly. Our efforts at first among the lilypads and grass at the brooks were not very satisfactory. A paddle across to the other side was more successful. We took back a dozen splendid fellows.

The paddle back in the early evening was a fitting close to our first day. The clouds that had been so welcome earlier, had dissolved; a few torn remnants in the west—that was all of that huge gray curtain of the morning. And these seemed to belong to some other creation. Georgeous gold, deep crimson, deep purple—all thrown together recklessly, yet making a harmonious grouping. Trees and water took on the same hues, while on Old Katahdin rested a crown of glory rivaling in beauty the exquisite coloring of St. Mark's.

How quiet nature's performances are! The stillness of the dead pervades the abode of the living.

Only a few moments and it was over—and we were at the camp.

For a couple of days we lived quietly on—just enjoyed living. An occasional trip down the pond after fish or for a paddle—this was about all that broke the existence of those days.

It was the third or fourth day, I have forgotten just which, that brought a most effectual stirring up. The day was a little dull overhead, and we had gone down after some fish. A nice string rewarded us. On the way back Leighton offered to show us a spring of fresh, cool water. Running the canoes ashore, he and I stepped out to fill a small can we always carried for water. A few steps brought us face to face with a bear.

It is difficult to say who was the most taken aback. Leighton was the first to get his wits together. Stepping quickly backward, he took the rifle from the canoe—and Bruin was ours.

For a few moments we could scarcely believe our good fortune. But there was the bear. And that speedily convinced us.

Our good fortune brought the evil with it. It was now necessary for us to break camp as soon as possible in order to keep our game fresh. Much as we disliked to, we pulled up stakes early the next morning. Everything was packed snug, the canoe nicely trimmed for running, and bidding good-by to "Bear Camp," we pushed off.

The run down was an unexciting one. Down over the Rocky Rips, through the "hang-up," using a pole here to snub, a paddle there to guide. A little after noon we pulled into town, sorry to get back, and with plans all laid for the fall hunting.

A. B. HUNT.

Yukon Notes.

(*Continued from page* 286.)

Patching Hose.

"IT was so extreame cold that the fire almost cast no heate, for as we put our feet to the fire we burnt our hose before we could feele the heate, so that we had work inough to do to patch our hose." So writes Gerrit de Veer, chronicler of the polar voyages of Barentz the Dutchman, who lost his life while trying to find the Northeast Passage to India in the latter part of the sixteenth century.

The sock question is a bond of union for all men who have been in cold countries. The returning Klondikers could sympathize with the difficulties of Barentz's party drying and patching their hose. Most men on the Yukon made no allowance for loss by burning, which is sure to result even when the greatest care is exercised in drying socks at low temperatures, and as a consequence were reduced to straits for footgear.

The demand for moccasins in Dawson raised the price early in the winter to $7 a pair, and the kind sold had bedticking uppers, and further up the river men were glad to get socks for $5 a pair.

Mac and I had eight or ten pairs of good socks apiece on leaving Fort Selkirk, but by the time the Big Salmon was reached there was scarcely a whole sock in the lot. The night after leaving the police post we happened on a deserted cabin at the foot of the Seminow Mountains, and took advantage of the shelter for repairing our footgear. We built a fire on the dirt floor of the cabin, but as there was only a small stovepipe hole in the roof the place smoked abominally. We were obliged to leave the door wide open to get any relief, and even then we could not stand upright without danger of suffocating. The only clear strata of air was next the floor, and on the floor accordingly Mac and I took up our positions, squatting Indian fashion on our haunches.

The draft from the door made the candle flicker and burn lopsided. Often entire heels or toes were missing. It taxed our ingenuity to repair such holes, and the matter generally ended by cutting the sock short off at the burned place and sewing it up without regard to the fit.

It was midnight before we finished, and we were ready to admit, with the old navigator, that we had "work inough to do to patch our hose."

Cassiar Bar.

We made the distance from the Big Salmon to the Hootalinqua River in a little more than two days. By the map it is thirty-one miles. The traveling was better than any we had previously encountered, and our load was reduced to one sled, with the extra man pushing behind on a 6ft. pole.

Eighteen miles from the Hootalinqua we passed the historic cabins where the pioneers of 1886 lived while working Cassiar Bar. The total output of this bar is stated to have been as high as $40,000. Ogilvie says that four men working thirty days cleaned up $6,000. Its richness only lasted a year, and in 1887 $10 a day to the

man was its best record, while at the present time it is a sucked orange.

A short distance above on the west side a small stream empties into the river. As far as is known this stream has never been prospected with modern bed rock methods, and it seems an interesting possibility that this may be the source of the cassiar gold.

A Maine Man from Texas.

We reached the Hootalinqua the evening of the day we passed Cassiar Bar, and spent the night with a man named Kelly, who was wintering in a cabin on an island.

After a few words with Mr. Kelly, I said in an aside to Mac that I was confident our host hailed from the State of Maine, whereupon Mac asked the direct question, and was told that Mr. Kelly came from Orange, Texas.

Mac had the laugh on me for the time being, but I felt sure that my diagnosis was correct. Later Mr. Kelly talked of lumbering and tote roads, and snow and river driving, and then the conversation turned to game, and he talked of moose in a way that a Texan might have talked of deer or perhaps antelope, but no other cervidæ. Mac remarked that he seemed to know a good deal about Northern game, to which Mr. Kelly replied that he guessed he should know something, seeing he was born and brought up in Maine and had spent much of his time in the lumber woods. He had lived in Texas for eight years, but his down East habit of thought and speaking had not lost its savor in any degree.

Mr. Kelly found appreciative listeners, as he discoursed on various subjects included in the length and breadth of the continent, but what he had to say about Maine was of the most interest. The following story has to do with Alaska. Its primitiveness commends it:

The Man Who Nearly Burst.

"I was off on a trip this winter with a young fellow who had a bad attack of indigestion," said Mr. Kelly. "It was as a result of eating my biscuit, I guess, though the grease cakes he ate for breakfast had soaked up a frying pan full of grease, and that may have had something to do with it. Grease don't suit everybody, taken wholesale, though to tell the truth it makes my mouth water now to think of those cakes.

"The biscuit, however, was another matter. My baking powder had gotten wet and the flour had been to the bottom of Lake Lebarge and was lumpy, and as perhaps you've observed, my stove had a hole in the oven and wasnt' much good for baking. As a result, when my biscuit were done you could have knocked a man down with them.

"Each of us ate our share, and then we turned in for the night. I felt nice and comfortable and rested well; but along about sunrise when I woke up, I found this young fellow rolling around on the ground, saying he thought he was going to die. He said he felt sure he was going to burst, and that he couldn't hold together much longer.

"I laughed at him and told him men didn't die that way, but he said he knew better; that back East where he was born he had often heard his folks tell of one of their pioneer neighbors who'd had the same trouble he had and who'd have died if they hadn't bound him round with basswood bark and saved his life.

"The young fellow said he wasn't afraid to die; he wouldn't mind being shot, or drowned, or anything of that kind; but it was the disgrace of the thing that hurt him; if his folks heard he'd died by bursting they'd be covered with everlasting disgrace.

"I asked him if he'd taken any medicine for his trouble, and he said he'd taken some cholera cure mixture. I didn't wonder then that he felt bad, and I said to him: 'It's those biscuit, and you've got to get rid of them.' He groaned when he heard biscuit mentioned, so I didn't say anything about grease cakes. I took a stick and wrapped a bit of tissue paper around it, and I told him to poke that down his throat and sort of tickle. He did as I directed, and it wasn't long before he got rid of the biscuits, and after that he felt better."

A Gritty Actor.

Through Mr. Kelly we learned of an acquaintance on the trail for whom we had always had a warm feeling, as a result of observing his pluck and good temper under the most adverse circumstances. This was a Mr. Ehrhart, an actor from New York. When Harrington and I left the Grand Central station the previous August our train had been crowded to such an extent that we gave up our seats and eventually found a position on the platform of one of the cars.

Mr. Ehrhart was out there smoking a cigar, and it did not take us long to make his acquaintance and to learn that he was also on his way to the Klondike.

He wore very narrow, light-soled russet shoes, and he had the appearance of being a man who had never known what it was to rough it, and though a big, manly looking fellow, his hands were white and soft, and didn't look as though they would make a success handling an oar in the rapids or later on a pick or shovel in the mines.

Again at Victoria we fell in with Ehrhart and found that he was booked for the same steamer as ourselves. On the way up to Skagway he associated himself with a party whose leading spirit was a Dane who had packed on the trail to the Cryolite mines in Greenland, and who was as tough and seasoned as hard work could make him. Ehrhart had expected a friend from the East, but for some reason the friend did not materialize.

In company with his new associates he started in packing on his back. He had a heavy outfit and the party had made the mistake of tackling White Pass.

On the Hog Back and at other points on that terrible trail we ran across Ehrhart and his partners, and always found him doing his share of the work. It was a revelation to see how he could work, and it made me think of some big-framed pale-looking bookworms at college who had taken up football and played like fiends, winning on their nerve over mere muscle and "beef."

The last time I saw Ehrhart was one black winter day when I crossed the summit of White Pass through nearly a foot of new-fallen snow. I took a short cut through the cañon to the head of Summit Lake, and traveled most of the distance without meeting a soul. When nearly at the lake I turned a corner of the rock and came suddenly upon Ehrhart resting, the familiar pack on his back braced against a shelf in the ledge.

His smile was as bright as ever, but he did not look well. Most men on the trail had already selected their winter quarters and given up all idea of going down river till spring, but Ehrhart was not built that way, and preferred to keep at his work of bucking the line till the game was called.

Now at the Hootalinqua we heard that ill health had compelled him to make a temporary halt, but that he expected soon to keep on over the ice for Dawson. His party had broken up and he was alone. Mac and I sympathized with his hard luck, and would have tried to see him if it had been possible, but he was some distance up the Hootalinqua at a little settlement of miners who were off the main route of travel, and we could not afford the time.

A Mistake in the Trail.

The following morning Mac and I took the trail of the Henning party, who had camped just ahead of us the night before. To the south was a beautifully shaped mountain with a long graceful ridge rising from the east, only to fall away in a steep precipice to the west. The outline was not unlike that of Noon Mark, at the south end of Keene Valley, in the Adirondacks.

The wind and snow had obliterated all previous trails, and only the newly made sledge tracks of the party just ahead were to be seen. They had crossed from the west bank of the river to the east, which was the natural course, owing to the fact that the river was still open in places on the west side.

Early in the forenoon Mac and I got into a discussion over the trail. We had camped somewhere in the neighborhood the previous autumn and were unable to locate the old camp site. Then, too, things had an unfamiliar appearance and the ice was smoother than it should have been over the swift current of the Thirty-Mile River, as the stretch between Hootalinqua and Lake Labarge is called.

While we were still arguing the matter we came upon the Henning party at lunch on the river's bank. They were also in doubt as to the trail, and as the result of a conference between us we came to the conclusion that in some way or other we had gotten switched off onto the Hootalinqua.

After the lunch was over we took the back trail several miles and then cut across a low point of land to the west and found ourselves on the main river. Dawson says that at their juncture the Hootalinqua is 575ft. in width, while the Lewes is only 420ft. "The valley of the Hootalinqua is evidently the main orographic depression which continues that occupied by the Lewes below the confluence. The Lewes flows in through a narrow gap, closely bordered by high hills and nearly at right angles to the lower course of the river."

Though a narrower and shallower stream than the Hootalinqua, it carires a much greater volume of water, owing to the fact that its current at this point is nearly six miles an hour, while that of the Hootalinqua is less than three.

The Henning party camped in the first timber after reaching the Lewes, but Mac and I kept on several miles further. We had heard that Mr. Rafael, a White Pass friend of ours, from Philadelphia, was occupying a cabin just above, and we were anxious to pass the night there and to have a friendly chat with him. The river was open from shore to shore, owing to the current, which in places ran at a speed of ten miles an hour, and we had to climb out of the bed of the river over hills three or four hundred feet in height, breaking trail at the same time.

After two miles or more of this kind of work the blazed line again descended to the river, but the moment the trail went onto the ice it was lost and no trace of it could be seen in the drifting snow. Darkness overtook us while we were picking our way over a treacherous ice floe that rocked with the surges of the rapid, and we had to go into camp in the nearby timber without seeing our friend.

The Thirty-Mile.

A half hour's pull the next morning brought us in sight of the cabin, and though we had just finished our own breakfast, nothing would do but that we must sit right down and begin over again. We were equal to the occasion, and did justice to the delicious biscuit and salmon (prepared with fat salt pork) and other dainties set before us. "Pa" Rafael and his partner, who was also a Philadelphia man, were excellent cooks and had made a study to secure the best results from a limited commissary department. The Thirty-Mile was one of the most dreaded parts of the river. Long detours overland were necessary, and in places where the trail went over the ice there was always danger of breaking through. T. D. Patullo, Gov. Walsh's secretary, nearly lost his life in this way, and several pitiful stories were told of Dawson refugees who had gone through the treacherous ice and perished.

In places there was a narrow rim of shore ice from 2 to 6ft. wide at the base of the bluff bordering the river. This ice at the time we passed slanted toward the water at angles which sometimes were as great as 45 degrees. It was next to impossible to draw a sled over the slant unless supported at both ends, and men could only get footing with difficulty. A single misstep was likely to throw the man who made it into the rushing water, and the chances were good for drawing in his partners, too.

Old man McNeally, the leader of the vanguard, working down over the ice, managed alone to get his sled by most of the dangerous places, but he traveled very slowly and was a week in going the same distance Mac and I could in a day. Once as he was crossing a narrow place, edging the sled along a few inches at a time from below, the ice his feet were resting on gave way and the sled pushed him down into the water. At the last moment he got a new foothold under water, but he was in such a perilous position that he thinks he would have drowned had not two police constables come along and rescued him.

From Buluwayo to the Klondike.

We spent a night with McNeally in his tent. The old man, who must have been about seventy, was hospitable and ready to have us share his tent, but he was very reticent at first and had little to say. By and by, however, he joined in our talk and began taking a friendly interest in our movements. He asked our names, and on hearing mine wanted to know if I was any relation to Charlie Burnham, the South African scout, who was then on his way to the Klondike. He told us several anecdotes of Burnham, and then warmed up enough to give some of his own experiences. It was a stirring recital. He had been to every mining excitement of any prominence in the last fifty years in the United States, Australia, New Zealand and Africa. He had struck it rich three times, but each time he had lost everything "trying to get more," as he laconically phrased it. Once it was at Florence, Idaho, once at the Cassiar diggings, in British Columbia. As a boy of 18 he had had 150 men working for him in the eastern Rockies.

He told of river-bed mining, where a season's work in building coffer dams was swept away by the early floods in a few hours' time, with never an ounce of gold secured; and he talked of lucky finds in deserts, on high plateaus and in geological formations where experts said gold could not exist. Once, after a season of unproductive prospecting, he threw a stone up in the air, phophesying that where it fell he would find gold. His partners laughed when they saw the stone fall on a mossy hillside among a lot of boulders, but McNeally went to work with something of the same spirit that a bull paws dirt over his back or a stag fights the brush, and cleared away the rocks and moss and muck, and "right under the grass roots," as they say, he got some surprising colors. Other claims were taken up alongside the one he recorded, but all of them were barren. McNeally sold his for a few thousands, however, enough to provide him with several seasons' grub stakes.

In 1892 he was on the gold coast in Africa and there contracted a fever which had bothered him more or less ever since. He was getting along nicely in Buluwayo, but the news of a new gold country was too much for him, and there was nothing else to do but to pull up stakes and travel half way around the world to it.

Food Economics.

McNeally was one of the old-timers who have learned the secret of living without eating. He had passed a year in the bleak interior of British Columbia with only 80lbs of flour and a little salt and a few balls of grease and meat. Of course he got some game. The meat balls were made, as I recollect the conversation, from offal of one of the Hudson Bay stock yards boiled and the fat skimmed and saved. A few shavings from the periphery of one of these balls were put in the frying pan and water added, and the whole thickened with a spoonful of flour. This was a meal at times when there was no game in the larder.

It is said of other old-timers that in periods of scarcity they went to bed and initiated the bear's method of killing time. In this way they could pass a whole winter on the food that would only last an ordinary man a month.

A Mythical Outfit.

McNeally, as near as we could estimate, had with him not much more than a couple of hundred pounds of food, which was certainly a meager grub stake. He could not have taken more, however, very well, for he had all he could do to drag what he had. At the time the ruling had gone into effect requiring every man who went into the country to have at least 600lbs. of food. Later the requirement was raised to 1,000lbs. How McNeally got by the police posts was an enigma to us, but later, at Lake Bennett, we were told by Mr. Casey, the townsite promoter, the following story:

He said McNeally, who was a friend of his, came to him one day in a great stew, remarking that the blood-police had just passed a law which would forever shut him out of the Klondike. "They want me to carry 600lbs. in there," said McNeally, "when any one with a pair of eyes can see that no man born of a woman can draw such a load over their blooming rough ice. Now what would you advise me to do?"

Casey pondered a minute and then an idea struck him. "I have it," he said, taking McNeally impressively by both shoulders; "you can get your papers if you do just as I tell you. Cache your sled somewheres in the woods before you get to Tagish Post and go to Inspector Strickland and engage him in conversation. You are an Irishman and should have a limber tongue. Tell him you are just from South Africa, or any other blooming thing you can think of, and when you get him good and interested tell him you want to pay the customs duties on 600lbs. of grub. See how that works."

McNeally took the advice, and when he had the Inspector interested in his story he remarked incidentally as if he had just thought of it, that he would like to pay the duty on 600lbs. of food. The Inspector turned to one of the customs men standing near, directed him to make out the papers, and then he resumed his interesting conversation with the old miner, who he could see was a man of parts. It never occurred to him to ask whether the 600lbs. of food were, as he certainly would have asked if he had not had his mind absorbed in the conversation. With his customs papers for 600lbs. of food in his hand McNeally could snap his fingers at any subsequent official who asked where the food was. The official was left to suppose that it was following on the trail or to formulate any other hypothesis that would give him an excuse to get rid of a troublesome matter if he was ever in future called to task by his superiors.

The story may or may not be true, but it is a fact that McNeally in some way or other got the start of 30,000 men, many of whom would have jumped at the opportunity of going through light to Dawson.

J. B. Burnham.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Natural History.

Pet Deer.

Editor Forest and Stream:

Perhaps I can add something to Mr. Andrew Price's interesting communication in yours of Sept. 30.

I remember one 'Lish Bryner, a typical mountaineer of Fayette county, Pa., who, thirty years since, kept a ragged, gaunt pack of hounds, about the stoutest and best deer hunters of the mountains. He had a pet deer—I suppose about a year old—that ran at large about his farm in entire harmony with his hounds. Now, as any native hound will run a deer trail more readily than any other (I think this is true of all hounds that have not been carefully broken from such trails), how came it that 'Lish's hounds let the pet alone? Did they distinguish her scent from that of a wild deer?

Another bit was amusing. A German was met coming down the railroad track with a small animal under his arm, which he said was a fox that he had jumped on in a fence corner, and as it is not the habit of foxes to be so sleepy examination was in order, when, behold! he was carrying a fawn and had it nearly choked to death in fear that it would bite him!

I remember Dr. Hill's noted old Bulger running a pet deer and snapping a hindfoot off (i. e., snapping it into a jelly) just as it rose to clear a fence.

Tame deer are mighty inconvenient pets in a hound country, and any kind are detested by a fox hunter (so are goats). One year the mountain parts of Fayette county were so infested with deer that at last we gathered up all the half-hounds and running curs we could find, and harried the woods in our neighborhood night after night, until we ran the pests out of the country, and could have a fox chase with safety.

"Hounding deer" is a high crime with you sportsmen, and it may be destructive of deer for all I know; but did it never strike sportsmen what a beastly business it is to wound a deer that escapes into the brush, cannot be found, and dies and rots there? In my experience in running deer with hounds I never knew an instance where it appeared this had happened. We always had one or more hounds that would lead to the game, if, on their coming in, we had reason to suppose they had run into the deer. I am not arguing the question of hounding, pointing out the wrong of the outlawing any dog found on the trail of deer. An active spaniel, Bassett, beagle or any trailing dog to follow up wounded deer would relieve the "sportsmanlike" method of killing deer from the disgrace of **wounding animals and leaving** them to rot in the **woods.**

"Cur" Dog.

I must dissent from the statement you extract from the London Field that "cur" is derived from "curtail," as the term "curtal dog" is frequently applied to the bobtail sheepdog in Shakespeare, Drayton and other early writers, and as "curtal" was constantly applied to shortened animals, men and implements, as "curtal friar" (hair cropped), and "curtal axe" (short-handled), and as "curtal" is still given in Webster for a horse with a cropped tail, is it not more reasonable to derive the word "cur" from the old English "curtal," despite the professors who go to the Danish "Kurre" (only the name "dog" in general), when so obvious a derivation is right under their noses? W. WADE.

OAKMONT, Pa., Oct. 2.

The Wild Pigeon of Colorado.

Editor Forest and Stream:

In the matter of the wild pigeons.

For ten or twelve years past there have been from fifty to one hundred wild pigeons on the Crystal River, about thirty miles south of Glenwood Springs, Colo. I have seen them nearly every summer in July or August. Saw them last the middle of this month.

They frequent two localities about ten miles apart, and so far as I know are not seen anywhere else.

I think they have doubled in number, and I never heard of one being killed.

As they are high up in the hills—about 7,500ft. above sea level—where the snow gets deep in winter, they must migrate, but what brings them back every year to the same localities is a mystery, as there is, so far as known, no food there not common to the Rocky Mountains.

They do not flock to any considerable extent—usually three or four together—but the whole area occupied by each bunch does not exceed one or two miles square.

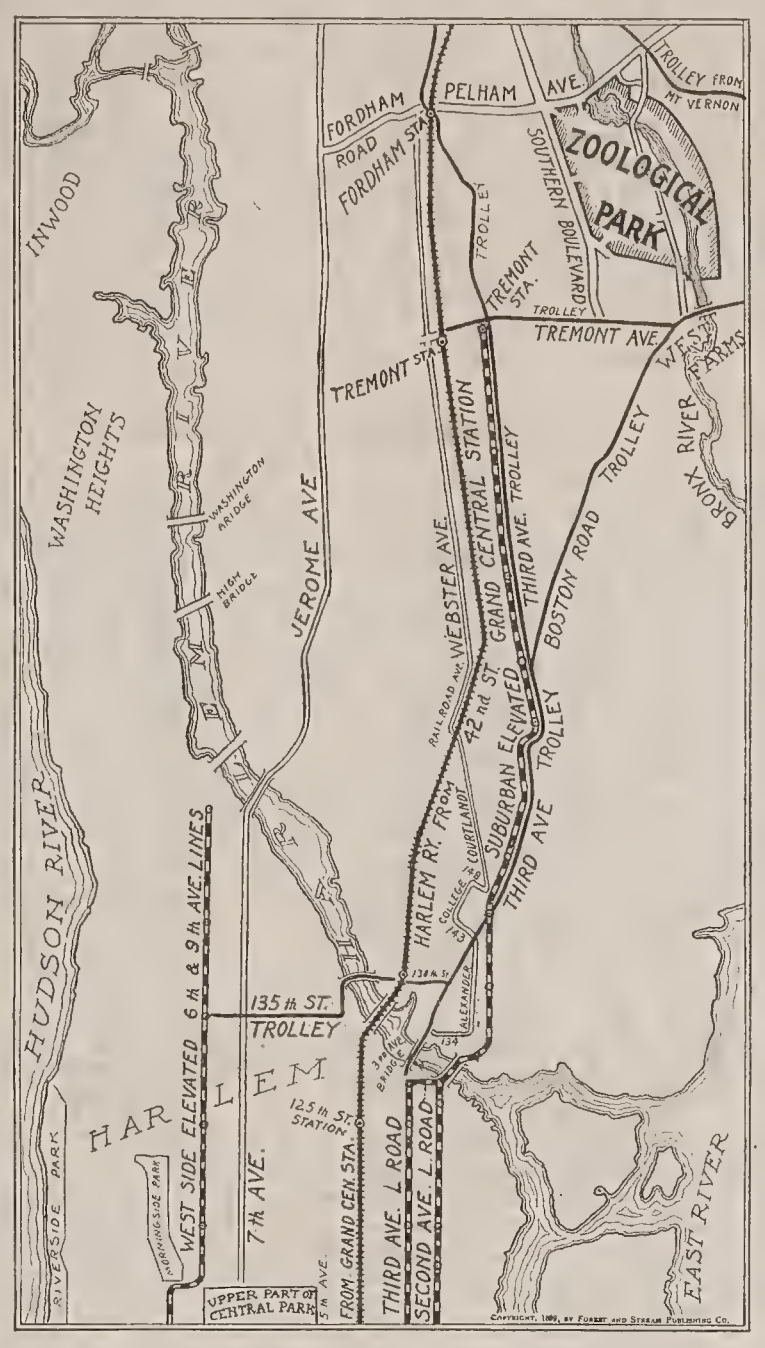
Scrub oak acorns and berries are all the food in these places. When frightened they rarely fly more than a quarter of a mile. D. C. BEAMAN.

DENVER, Colo.

[The bird here described is probably the band-tailed pigeon, or white-collared pigeon, which ranges from the Rocky Mountains to the Pacific.]

Wide Range of the Ruvetto.

IN an interesting monograph on the Atoll of Funafuti, Mr. E. R. Waite speaks of a large fish known to traders as the oilfish, known to the natives as palu. This is said to weigh sometimes 150lbs. and to grow to a length of 6ft. It lives in very deep water and is usually caught from 120 fathoms down to 200 fathoms, and is fished for only at night. It is highly valued by the natives of Funafuti. Every portion of it is edible, and the flesh if left uncooked never putrifies, but merely dissolves into oil.



The last expedition to this island secured a specimen of this fish, which is found to be nothing more than the escolar, known to the Italians as Ruvetto. It it a North Atlantic fish, found in the Mediterranean, at Maderia and at the Canaries. Here in winter it occurs in great schools, and the fishermen take it with hook and line at a depth of about 100 fathoms. At Madeira it has been found at depths as great as 300 and 400 fathoms. It occurs also in the waters of Cuba, and we are told that there it can be caught only on dark nights in September and the early part of October at a depth of 300 fathoms. The fish is rarely seen in the market on account of the difficulty of capturing it. It has been taken on George's Bank. Its discovery at Funafuti vastly extends the known range of this fish.

Routes to the New York Zoo.

HARLEM RAILWAY from Grand Central Station, Forty-second street, to Fordham Station. Eight minutes' walk to the right along Pelham avenue to Southern Boulevard and main entrance to the grounds. Round trip from Forty-second street, 25 cents.

Second or Third avenue Elevated Railway to Tremont Station, thence by trolley either to Pelham avenue or by trolley along Tremont avenue to Southern Boulevard and short walk to lower entrance to the grounds.

Sixth or Ninth Avenue Elevated Railway. Take the trolley at 135th street and change at 138th street and Third avenue, either to the Fordham car for main entrance

to grounds or to a West Farms car for lower entrance to grounds.

Trolley car can be taken at Third avenue and the Harlem River. Fare, 5 cents.

When going by elevated and trolley buy an 8-cent transfer at elevated station.

From Mt. Vernon and New Rochelle leave trolley at Pelham avenue and walk west to entrance to grounds at Bronx River.

Cycle Routes.—1. From West Side of town, take Seventh avenue to Harlem River, cross to Jerome avenue, thence to Fordham road, turn right and on to Pelham avenue, then to main entrance at Southern Boulevard. 2. From the Third avenue bridge take 134th street left on Alexander avenue, left on 143d street, right on Collegs street, right on 148th street, left on Courtlandt street, cross railroad to Railroad avenue, to Webster avenue, direct to Pelham avenue, where turn right to the main entrance to grounds. Asphalt all the way except a few blocks on Railroad avenue.

Field Columbian Museum Lectures.

CHICAGO, Oct. 8.—A course of lectures upon science and travel has been arranged by the Museum for Saturday afternoons in October and November at 3 o'clock. All of these lectures will be illustrated by stereopticon views. The lectures are given in the Museum Lecture Hall. Entrance doors will be closed at ten minutes past 3 o'clock. Admission free.

Oct. 21—"A Cruise Among the Antilles—Puerto Rico," Dr. C. F. Millspaugh; Oct. 28—"A Cruise Among the Antilles—Cuba," Dr. C. F. Millspaugh; No. 4—"Some Curious Insects," Mr. E. B. Chope; Nov. 11—"Fishes and Fishing on the Pacific Coast," Dr. S. E. Meek; Nov. 18—"The Katcinas of the Hopi Indians," Rev. H. R. Voth; Nov. 25—"The Eskimo," Dr. George A. Dorsey.

The Ground Sloth.

IN a communication recently published in the Revista del Museo de la Plata, Dr. R. Hauthal expresses the belief that the ground sloth, whose skin and other remains have been found in a cave in Patagonia, was a domestic animal of the pre-historic Indians of Patagonia, and that the cave where the specimens were discovered was the stable in which this herd was often sheltered. The author expresses the belief that all the remains are pre-historic, and that the animal is extinct to-day.

Nest of the Little Tern.

IN a recent number of the Irish Naturalist, Mr. Patten publishes an interesting note on the little tern, and thus, so far as this bird is concerned, corrects a quite common impression that terns and gulls make no nests, but lay their eggs on the bare sand or earth. Mr. Patten shows that the little tern digs out what is really a conical pit about 2in. deep in the sand, in which the eggs are deposited. The deepest part of the nest contains broken shells in which the eggs lie with their points down. The eggs of this bird being very large in proportion to the mother, this is evidently the way in which they should lie to be most easily covered.

Zoological Society Opening.

IT is announced that the New York Zoological Park will be formally opened to the public Oct. 25. Among the large animals recently received there are elk, buffalo, polar bears, a pair of Russian wolves, and many others less in size.

The Russian wolf which made its escape last week from an improperly secured pen has been recaptured, and without injury.

Rhode Island Bird Protection.

MR. THOMAS B. STOCKWELL, Commissioner of Education of the Public Schools of Rhode Island, has issued a circular calling attention to the great destruction of birds, and to their value both from the material and the æsthetic point of view. He alludes to the general reawakening of an interest in nature study, and urges that the children be encouraged to observe and study the birds.

A Bob White Snap Shot.

MR. G. HILLS, of Hudson, N. Y., sends us a photograph made by Mr. John Crawford, of a quail in shrubbery, "one of a brood of fifteen that were hatched within five minutes' walk of the court house."

Game Bag and Gun.

More About the Stutzen.

THE old gun was, as I thought, safely concealed in the hollow willow tree, and would have been, had I been able to get it before the first snow or rain had a chance to fill up in the barrels. It must have been fourteen days or nearly as long before I had a chance to bring the Stutzin home unobserved. Having tasted of the forbidden fruit, my appetite was sharpened for more of it; but the next time it was my desire to get a hare or two. These animals are in that country of considerable weight and size, ranging from 10 to 18lbs. They always sleep in the open, taking advantage of and having their burrows in the strip of grassy sward which forms a boundary line between the fields of two different owners, and which is generally 2ft. broad. These small strips of unplowed land take the place of wire fences in that country. Fences, especially barbed wire fences, are unknown there; and I hope fervently they will never be introduced. In very cold weather the hares have the habit of coming to the immediate vicinity of villages and towns to gnaw the bark of small fruit trees, and do considerable damage, for the gnawed and stripped trees generally die. This habit makes them also an easy prey for the hunter, who, hidden to leeward, can easily bag them, although this manner of killing is not at all sportsmanlike.

I had hardly arrived at the place of my eager expectations when I heard the voices of two gamekeepers well known to me. I had just time to take the stutzen out of its hiding place and to sneak off as quickly and noiselessly as I could. The moon was about half full and shone now and then through slowly passing clouds; and after about ten minutes' swift running I made a halt to examine the gun. The hammers opened hard and stiff, the barrels had a coarse feeling like sandpaper. This indicated rust, although I could not see it in the uncertain moonlight, but could perceive the folly and carelessness committed in leaving the gun muzzle up in the old tree. Considering what to do, I heard the two keepers talking in a loud voice, and to judge by their conversation they were bound toward the Upper Inn, a hostelry about two miles away at the north end of the town. Jumping hastily back a few yards, where an old gnarled apple tree afforded me a hiding place, after what I thought was half an hour's time of waiting I started in the opposite direction, determined to shoot off both barrels and reload afresh. But three or four caps snapped without igniting the load, and to my chagrin I found that I would have to give up hare shooting for this evening, so I struck out for home, where with not a little trouble I succeeded in hiding the stutzen in its old place in the garret.

There was an old locksmith in the next block from where we lived who was known to be very skilled in repairing guns and pistols—in fact, about everything made out of iron. Paradox as it may seem, in his idle moments he used to make door mats out of long rye straw and did it neatly and substantially. In that part of the country houses are built in a peculiar and novel manner. In almost every one of the stone or brick houses a hall runs through the center of the house, with the rooms arranged on either side of it, and this hall has either a brick or stone flagging. Soon after my unsuccessful hare shooting expedition I asked mother whether I should not take some rye straw over to old man Eger and have some mats made for the house floor, as it is called, and she consented. This was my opportunity. Making two bundles of straw, I put the gun into one and carried them over to the old man, who was very much surprised, and asked me what kind of grain we threshed out of old shotguns. I told him how I found the gun in the garret and asked him to do me the favor to put it into shooting condition, but to take care, as it might be loaded; that I had shot out of it I kept to myself. He readily consented, even promising to be mum about my possession

of the arm. But in that respect he was by no means like the old nurse—in fact, he babbled, as we shall see in the course of this narrative. He seemed to take more interest in the gun than in the matting to be made, for he examined it very carefully, with repeated shakings of his wise old head, and finally said: "I'm surprised that this gun is in such a neglected condition. If your dead father could see it he would turn around in his grave. Dont' you know, boy, that this is the first gun your own grandfather bought for his son (your own father) when he was a boy of your age? I was with the old man and your father the time he bought the gray horse; and the gun was bought the same day. Oh, if this gun could talk; but I remember that ever since the breechloaders came out your dad never used it much. This was forty-eight years ago, my boy; forty-eight years." His honest blue eyes had a sad look. Nevertheless, he proceeded to push the screw end of the ramrod down, and brought forth the wadding until he had both loads removed. "Now, boy, these loads may have been in the gun five or six years for all I know; but I am wondering how your father put a loaded gun away; it was not his custom to be so careless with weapons. Come to-morrow evening and get it." But by to-morrow evening half the little town knew of the heavy charge found in B.'s stutzen, for Eger had found occasion to talk about it to his chum, the one-legged harnessmaker next door, while imbibing their morning drink of birshwasser.

The stutzen stayed in my possession until I left the country in 1880, then was left behind in my older brother's keeping. Since then I have had different guns, cheap ones and good ones, but none of them so dear to my memory as the old stutzen, although I love any and all shooting irons. C. F. B.

DANBURY, Conn.

New Brunswick Notes.

Two years ago, largely upon my advice, Mr. Fred Talcott, of Providence, came to New Brunswick for a moose hunt. Mr. Talcott was unsuccessful that time through mistaking the horns of a big bull in the tote road for an upturned root; but he returned in 1898 and bagged his game. This year, however, Mr. Talcott covered himself with glory, for he not only shot a very fine moose but called the animal himself. It does a man—especially a sick man, who is denied the campfire's cheering glow—good to receive a letter such as this from Mr. Talcott:

"We went, my friend Mr. E. L. Johnson, of this city and myself, from Blackville, up the South Branch of the Renous. Our men were new at the work of guiding, and I relied upon my own calling. Monday night, the 25th ult., I was out alone on a small beaver meadow, and at about 5:15 heard an answer far away in a swamp. The old fellow came along, making at times a great smashing, and reached the edge of the clearing in about an hour after dark. From my position it was about 100yds. across the open to the bushes, and there the bull showed a tendency to pause. Afraid to sound the horn at so short a range, I crawled into a small brook at hand and mussed up the water like a wading animal. That started my friend, and he came with a rush to within 20yds. and stopped again. I could not make out his shape definitely, and waited about ten minutes, hoping he would turn sideways. He was a noisy old chap, and roared as I have never heard any other moose. My position was certainly a puzzling one. I paddled the water again; then dropped the horn and held the rifle ready, expecting him to appear on the bank above me, but instead of doing this he circled and crossed the brook to my side and gradually worked away. I went back to camp, reproaching myself for not taking the uncertain shot offered, instead of wainting for a sure thing. The next morning at daybreak Mr. Johnson and I were at the same place, and in half an hour I had called the moose back again, and we killed him. He had a twenty-point set of horns, measuring over 50in. wide in the main blades and 46in. across the front prongs, and 13ft. 3in. around the points. He stood 6ft. 7in. at the shoulder, so the boys claimed. I think they allowed that he walked on his toes. We succeeded in bringing out all the meat, as we had a team of horses near where he fell. I am glad to get such a head, and especially pleased to have called him myself. It has been one of the ambitions of my life to go out alone and call a moose. A pleasant part of the trip was the way the Blackville people treated us—not in so pretentious a way, but just as well as New York treated Dewey."

Up to the time of this writing the sportsmen who went in from Fredericton this fall have maintained their extraordinary record. Not one as yet has come out without his complement of horns. The few cases of failure I have heard of have chiefly occurred in the Tobique country, which has been in places overcrowded. Occasionally one hears of a sportsman who declines to shoot unless he can secure a notable head. Such is the statement made of my friend, Carl Pickhardt, who hunted this year in the Trowsers Lake country. Mr. Pickhardt had three chances at moose, but none of them having remarkable heads he refrained from bloodshed. Mr. Pickhardt took home, however, an unusually good caribou head.

Mr. E. E. Adams and wife, of Rockville, Conn., passed through St. John on Monday after a most enjoyable trip in the Northern woods. Mr. Adams had a moose head of which he was justly proud.

One of the best moose heads that has been taken for some years in the Gaspereaux country is the property of Mr. John W. Murray, who lives in that locality. This moose put up quite an exciting fight before he was brought down, and left Mr. Murray a trifle shy in the item of pants. His horns are very shapely, and have a width of 58in.

Mr. W. T. Fowle, of Woburn, Mass., returned the other afternoon from his annual hunt in Braithwaite's land. Mr. Fowle's immediate vicinity as he passed through Fredericton was adorned with the decorative features of a moose and a bear.

Mr. E. S. Steinam and friend, of New York, are expected out to-morrow from Grand John Lake. No recent word has been received of them, but at last accounts they had hung up their full allowance of deer and caribou.

Among successmul moose hunters on the Tobique in the region of Nictaux Lake are Thomas Martindale, of Philadelphia, and G. P. Camman and friend, of New York. These had as their guide "Uncle" Adam Moore, of Scotch Lake.

J. H. Ross, of Chicago; E. P. Hetherington and J. S. Walker, of Minneapolis, formed a party which had an unique experience on the hunting grounds of Cain's River. They were encamped at the mouth of Otter Brook. One morning they were awakened by a tremendous splashing in the river. Rushing out, they met almost face to face a large herd of caribou charging up the bank. At sight of the Western folks the caribou formed a circle, during which time Mr. Walker developed sufficient presence of mind to secure his rifle from the tent. With this he shot a very fine buck with antlers numbering thirty-three points. At the report of the rifle a renewed splashing was heard in the river, while the caribou hastily departed. Proceeding to the bank, Mr. Walker was fortunate enough to shoot, as the animal started up the opposite shore, a large black bear. Bruin had evidently stampeded the herd.

Charles Frioroclan, of Boston, and Mr. C. S. Pierce, of Worcester, Mass., arrived to-day from Arthur Pringle's hunting grounds, on the Norwest. Each secured a specimen head both of moose and caribou. Mr. Pierce's caribou had thirty-three points, and his moose head measured 53in. Mr. J. S. Ehrich, of New York, also brought out a fine moose head. Dr. B. S.Thorne, of Havelock, in a short trip to the Canaan, shot a moose and caribou. O. H. Humphrey, Jas. E. Cox and W.F.Dunphy, of Waltham, Mass., have gone into Grand John Lake for a caribou hunt. The party will return in about ten days if Shamrock beats Columbia. However, they may take to the woods. FRANK H. RISTEEN.

FREDERICTON, Oct. 8.

Massachusetts Game.

WORCESTER, Mass., Sept. 29.—*Editor Forest and Stream:* I inclose an interview with myself in Sunday's Telegram. It is correct except as to one point—the season which, because dry, has been favorable to partridge and quail, has not been good for keeping woodcock here. The interview follows: A. B. F. KINNEY.

Mr. Kinney says he makes his statements as president of the Worcester County Game Protective Association. This gives them added weight, and they will be subjects of serious comment among sportsmen.

"At the opening of the bird season, Sept. 15." said Mr. Kinney, "I spent two days visiting different covers. I shot twenty-five years ago, and I shoot to-day. The covers I visited are around Sutton, and they are perfectly familiar to me. In all I visited four towns and forty or more different covers. I drove around in a team, and was accompanied by John M. White, of Sutton.

"I make this statement from observations of twenty-five years. Where there is one partridge to-day, there were twenty-five partridges fifteen, twenty or twenty-five years ago.

"I went into the same covers I did then. There should be partridges there if anywhere. It it not the fault of the covers being thinned out. As a matter of fact, the covers are thicker than ever. Some that were cut off are up in sprouts. It is clearly not because timber has been cut off. Nowhere else in the State are there thicker and better covers than in central Massachusetts.

"Now, what is the cause of the scarcity of birds?

"The answer is easy. Where there was one good brush shot twenty-five years ago, there are now twenty or twenty-five; where there was one good bird dog in Worcester twenty-five years ago, there are now twenty or twenty-five, and while there was one breechloader twenty-five years ago, there were many more muzzleloaders.

"There are three causes then—better brush shooters, better firearms and better bird dogs. Naturally, there are more of all.

"The better brush shooters have been developed from work at the traps and a healthy love of outdoor sport.

"There is another factor to be considered in the shooters out after birds now. That is the man who hunts for market purposes. He is out to kill without limit. It is a business. There is none of the sport before him as he seeks birds.

"This must all be remedied or in a few years the partridge will be wiped out. The question is how it shall be done.

"I believe steps should be taken to prevent this extermination, either by limiting the number of birds to be shot in a day and the season, or by shortening the season, or by both.

"The number of birds allowed to be shot in a season could be placed at a figure to be decided on. The season should at least be cut down to six or perhaps four weeks. It could begin say Oct. 1, and last until the middle of November.

"We have got to do it, not only to increase birds but if we are to save what are already here.

"You will still find the man in the brush hunting who maintains there are as many birds as twenty or twenty-five years ago. It is not so. My observations, as the result of twenty-five years' hunting allow me to form an intelligent judgment.

"What few flocks found are large, but they are not numerous.

"Market hunting must be stopped, and the season shortened. Otherwise it will be a question of only a few years before the partridges are cleaned out. I am talking of birds within a radius of fifteen miles of Worcester.

"Worcester sportsmen are kicking at the close season law on Sunday, but it has been in force for a long time in other States. In Connecticut no one is allowed to shoot over five birds in a day, or thirty-five in a season, and the law is not off until the middle of October.

"In regard to the number of birds, it is different with quail; although the same season that has been beneficial to partridges this year has been detrimental to them, there seems to be plenty. Worcester County Game Protective Association has liberated birds from year to year and added to the number by putting out 750 this season. It looks as if there would be reasonably good shooting when the quail season opens on Oct. 15.

"The woodcock season is on, but few birds have been shot. This was because woodcock cleared out to a wetter place. Most of the woodcock shooting this year will be at flight birds. Take Paxton as a northern point, and the southern part of Worcester county is the best shooting place for flight birds in New England. This flight of woodcock will last only a few days, as long as the weather is favorable. The start also depends on the weather.

"Worcester County Game Protective Association has decided not to release any more English pheasants this year on account of sportsmen shooting some of those already put out. There have been seventy-five young birds and twenty-five old ones set free. The young thrived and did well. The trouble is they have taken to covers with young partridges. This accounts for their getting shot. It is almost impossible to tell a young pheasant and partridge apart as they rise from a cover. All pheasants shot have been killed innocently, and in each case the sportsman has come to me and told about it.

"It is in view of the fact that they are taking to these covers with young partridges, that the Association has decided to withhold the 100 pheasans scheduled to be put out before Nov. 1, and they will not be set free until spring. They can then mate and bring up broods, and nine-tenths will be located before the bird shooting season opens in the fall, and we will know where they are."

Boston and Maine.

BOSTON, Oct. 7.—Shore bird shooters in this vicinity and all along the south and north shores are a good deal concerned over what they regard as a spasmodic attempt at enforcing the Sunday non-shooting laws. Last winter the Massachusetts Legislature passed a new law making every Sunday in the year a close time on game birds. The new law reads:

Chapter 116, Acts of 1899.—Every Lord's day shall be close season. Whoever hunts or destroys birds or game of any kind on the Lord's day shall be liable to the penalties imposed for violation of the law during other close seasons, and such penalties shall be in addition to those already imposed for violation of the laws relating to shooting upon the Lord's day.

Sportsmen have felt that no attempt would be made toward enforcing this law, and about the usual amount of Sunday gunning has been done. So far no arrests have been made. But Chief Wade, of the District Police, has lately been called upon to enforce the law. Willingly, or otherwise, he sent a squad of officers, under the leadership of Capt. Proctor, last Sunday, to patrol the shores of Massachusetts Bay, in the police steamer Lexington. The boat sailed from 5 o'clock Sunday morning till dark, but either by reason of the weather, or because the gunners had had a warning, no arrests were made. The territory watched extended from Rockport on the north shore to Plymouth on the south shore, but only two suspicious cases were observed, and these were not arrested. It is understood that this patrol of the shore is to be kept up, and that later, when duck and coot shooting is on, the Sunday shooters, out in boats, will be in danger. The partridge and quail gunners, some of them, say that they shall continue to shoot on Sunday, and that if the State wants to patrol the woods there is an opportunity; in which case it will be a trial of the best man, the gunner or the officer of the law. To say the least, the gunners are much displeased at what they regard as a foolish attempt to bring them under laws long since obsolete.

Moose seem to be working down nearer the settled towns in Maine. Dr. Daintree, of Lewiston, has word from a farmer in Webster that a big moose has been down among his cattle. The same gentleman has a letter from his guide, in the Millinocket range, stating that he has come across twenty-two moose and 150 deer in that section this season. The doctor is a noted moose hunter and will be among them as soon as the law permits, accompanied by Mrs. Daintree. Another moose has been killed by a Maine railway train, other than the one killed by the Bangor & Aroostock, Sunday, Oct. 1. This time the narrow gauge, from Hiram Junction to Harrison, is guilty. Mr. Samuel Scribner, who was on the train at the time, says that the moose was inside the railway fences and trotting along when the train appeared. Then he kept running ahead of the train. Several times it was slowed down, in order not to kill the animal. At last the moose ran into a clump of bushes, and the engineer thought he had disappeared. All steam was put on, when suddenly the animal attempted to cross the track ahead of the engine. This time he was too near, and two of his legs were broken. The trainmen decided to kill him.

A Bangor special says that the provision men are much displeased with the new law concerning the selling of game in open season. That law provides that marketmen shall have not more than three deer exposed for sale at any one time; that they shall keep a record, open to the inspection of wardens or the Commissioners, showing of whom the deer was purchased, at what time and other details; that they shall sell only at retail and to local customers, and for this privilege pay an annual license fee of $5. In addition to this, they cannot sell partridges at all. The report says that the Bangor marketmen have entered into an agreement not to sell deer at all. Hence Bangor will have to go without venison, which has heretofore been very plenty in that city in open season, while, through evasion of the non-transportation law, Boston market is likely to be fully supplied. The report also suggests that the marketmen of other Maine cities are likely to join them, and not handle venison at all. Possibly this is one of the first steps upon the FOREST AND STREAM's Platform Plank—"Stop the Sale of Game at all Seasons."

Oct. 9.—The smelt fishermen are at work and good success is reported all along the shore. Many dozens are being taken off Quincy, Hull and Nantasket. A party of fishermen for smelt went down to Scituate Saturday evening, to return to-day. They had reports of the smelt biting well. Sunday evening I saw five smelt fishermen at the Southern Union Station, with their rods and baskets, waiting to take the train for Quincy. It is a curious fact, although Chief Wade is patrolling the

shore with police boats, to catch Sunday gunners, the smelt and cod fishermen are not molested. Well, there is no law against fishing on Sunday, either in Maine or Massachusetts, except the old common law providing against all sorts of work and play, while both States have special laws against Sunday shooting. Is such legislation consistent?

Worcester county partridge hunters are having fair success. Charles S. Dodge has taken seven this season. A party composed of Dr. H. H. Gabelar, B. J. Bertels, H. H. Capen and A. D. Putnam got eleven birds in two days' hunting last week. E. C. Stevens, of Boston, was out after birds Saturday.

The Robinson party, of Boston, is absent on its annual trip to the Megantic Preserve. In the party are Mr. and Mrs. Harry Sanborn, Mr. and Mrs. E. E. Traiser and Mr. and Mrs. A. W. Robinson. Mr. H. E. Hills has returned from his fishing and shooting trip to Lake Magaguadavic. He got no deer, but partridge shooting was fair. One long shot at a deer was all he had, though seeing several. N. G. Manson is out from Camp Leatherstocking, Richardson Lake, Me., where he has spent the summer with Mr. Will Jones and family. He has made lots of improvements to his beautiful establishment—new music room, boat houses and wharves. He got no deer, though having a license to shoot one in September. A number were seen, but generally small, while they wanted a big one, since the family at camp was large. They put off shooting till it was too late to get any at all, although hunting pretty hard the last days of September. The $6 license is posted in the camp; an instance of where the State got the money, but the hunter did not get the game. There are hundreds of like instances.

If returns amount to anything, deer shooting in Maine has not been up to that of a year ago, thus far in the open season. No deer have been received in Boston yet, though a number of hunters have returned who stayed for a few days in the open season. The papers have very few accounts of deer shot by Maine hunters themselves up to date. The hunters say that deer are plenty, but hard to get.

Oct. 9.—At Upper Dam the September deer shooters were Louis Chadwick, Upper Dam; Mrs. Dr. Downes, of Germantown, Pa.; H. F. Stevens, New York; J. J. G. Williams, Philadelphia; E. V. R. Thayer, Boston. At Kennebago Lake the successful licensed September deer shooters were Dr. G. D. Rosengarten, Philadelphia; Robert Mallory, New York; E. C. Luther, Pottsville, Pa.; Arthur Swan, Stockbridge, Mass. At Carry Ponds deer were taken by Mrs. G. W. Hutchins, Waterville, Me.; N. Merrill, Solon, Me.; Geo. Dobson, Seneca Falls, N. Y. At Spackman O. R. Holt, of Boston, got his deer in September. From Moosehead Lake there are accounts of about a dozen deer killed in September, including one each for J. B. Webster, Bangor; Mrs. E. H. Outerbridge, Staten Island, N. Y.; C. V. Fitch and W. G. Beal, Boston; Miss Alice Taggart, New York; Walter Kidder, Montclair, N. J. Of the many hundreds taking out licenses to kill deer probably not one in ten succeeded in getting the game. SPECIAL.

Minnesota Congressional Expedition.

Festivities at St. Paul.

EN ROUTE, Minn., Sept. 30.—The festivities at St. Paul yesterday were fully up to the reputation of that splendid town, and beyond the expectations of the Congressional party. The gathering of the women's clubs during the afternoon was a pleasant event. Condé Hamlin, of the Commercial Club, made the address of welcome, and Charles Cristadoro presided at the meeting. Addresses were made by Mrs. William Ely Bramhall, Mrs. George C. Squires, Mrs. Condé Hamlin, Mrs. James and Mrs. Channing Seabury. For the guests, Dr. Schenck spoke briefly and Judge Flandreau and J. Adam Bede made brief addresses for Minnesota. Full credit was given to the women's clubs of Minnesota for the organization of the idea of a national park in the pine woods of Minnesota.

The hospitalities of St. Paul were concluded by a grand banquet in the evening at the Merchants' Hotel, at which over one hundred sat at table. Judge C. E. Flandreau presided handsomely, and at the head of the table in the seats of honor were Governor Lind of Minnesota, Mayor Kiefer, Col. Cooper, of Chicago; Congressmen John Allen, of Mississippi, and C. F. Cochran, of Missouri; Judge Sanborn, of the United States Courts. Archbishop Ireland, of Minnesota, was also in a place of honor, associated with Congressman Cannon, of Illinois; General C. C. Andrews, Fire Warden of Minnesota, etc. Near by were Congressmen Stevens, McCleary and Eddy, of Minnesota, also Congressman Page Morris, of Duluth; ex-Lieutenant Gibbs, Mr. George R. Finch, Senator Buckman, Mr. Joseph A. Wheelock, Mr. George A. Gifford, Mr. F. I. Whitney, general passenger agent of the Great Northern Railroad. The menu was elaborate and the gathering a distinguished one.

Most post-prandial talk is tinted with a certain perfunctoriness, but the speaking of this evening was looked forward to with a certain eagerness, the public being anxious to know what the Congressmen probably thought about this question of a forest reserve. Congressman Joseph Cannon, of Illinois, left the matter still somewhat in doubt. Mr. Cannon referred to the earlier reservation of 18,000,000 acres of Western forest lands, and also touched upon the dead and down timber act of Minnesota, which he said no doubt covered a multitude of trees not dead and down. He said that before the representatives in Congress could act they would need a full education on the Minnesota problems. A modification of the Indian treaties might be necessary. Mr. Cannon said that he doubted whether Congress would do anything unless it could be shown that the forests at the head waters of the Mississippi were necessary to the preservation of the stream.

Archbishop Ireland, of Minnesota, made an eloquent address of welcome and eulogy to the distinguished guests, and came out distinctly and strongly in favor of a national park. "There is something more to be sought than the mere commercial valuing of this timber," he said. "The esthetic and the beautiful have their claims. Moreover, we can assure the gentleman from Illinois that it is necessary that these forests be preserved, or the whole volume of the Mississippi River will be changed. We feel that all that is necessary is for the gentlemen to look at this country and they will see their duty plain before them."

Mr. Allen, of Mississippi, made a brief and characteristic address. He said that if Minnesota was following the way of the South, the pine forests would soon be gone.

Mr. Cochran, of Missouri, left no doubt as to his position in the matter of a forest reserve. He made the most thoughtful speech of the evening. "It is a sin that this Government has permitted such wanton wastes of its great resources," he said. "The sweeping away of the forests would change the rainfall, alter the climate and cause destructive floods. What forests we have left in this virgin country should be preserved," he said. "I want to say to you clearly and unmistakably that it must be a very extraordinary bill in favor of forest preservation which I will not support and vote for in the Congress of the United States."

George A. Schilling, of the Knights of Labor, said that this park would be a poor man's park and not one belonging merely to the rich. Colonel Cooper, of Chicago, said that he was satisfied with the prospect. He had only wanted to get the gentlemen up into the country and let them see for themselves.

Governor Lind, of Minnesota, came out unmistakably in favor of the park. He pointed out the State of Minnesota purposed a string of small State parks between Lake Itasca and Leech Lake. He hoped that Congress might add to this reserved State land some of the Indian lands which remained under the control of the United States Government. Governor Lind, however, seemed to be afraid that Congress might make too big a concern of it. He counseled moderation, and thought that 50,000 or 60,000 acres would make a magnificent park. At the conclusion of Governor Lind's address it was discovered that the time was short before the starting of the northbound train which was to carry the party to Walker, and a considerable list of speakers for the evening were left undrawn upon, among them being Mayor Kiefer, Editor Hubbard, of the Philistine; the Minnesota Congressmen. Judge Sanborn, James R. Mann and Alderman Fitch, of Chicago; Congressman Clark, of New Hampshire; H. E. White, of the American Federation of Labor; Bishop Gilbert and others.

The Great Northern Train.

Mr. F. I. Whitney, general passenger agent of the Great Northern Railroad, was in charge of the magnificent train which carried the party out of St. Paul. There were two dining cars, a baggage car, a special car and six palace sleepers, and the whole went through on a special schedule, which brought the party into Walker, on the shores of Leech Lake, at so early an hour in the morning that many of the tired banqueters had not yet opened their eyes. There were on this train in all 105 passengers. Of these there were twenty-one members of Congress, their names being as follows: Joseph G. Cannon, Danville, Ill.; James R. Mann, Chicago; J. D. Bowersock, Lawrence, Kan.; Oscar Turner, Louisville; Roswell P. Bishop, Ludington, Mich.; J. W. Fordney, Saginaw, Mich.; William S. Mesick, Mancelona, Mich.; Charles F. Cochran, St. Joseph, Mo.; John M. Allen, Tupelo, Miss.; Frank G. Clark, Peterboro, N. H.; Fremont O. Phillips, Medina, O.; Athelston Gaston, Meadville, Pa.; William H. Graham, Allegheny, Pa.; Theobold Otjen, Milwaukee; James H. Davidson, Oshkosh; James A. Tawney, Winona, Minn.; Joel P. Heatwole, Northfield, Minn.; Fred C. Stevens, St. Paul; Frank M. Eddy, Glenwood, and L. Fletcher, Minnesota. Those who joined the party at St. Paul were Mr. Charles Cristadoro, George R. Finch, D. B. Finch, Hon. George M. Nelson, General C. C. Andrews, Channing Seabury, E. P. Bassford, C. P. Stine, H. P. Hall. Duluth sent down Gilbert Hartley, W. E. Culkin, P. Donan, B. L. Taylor and M. Bonnell. Senator Albert Schaller, of Hastings; Senator Young, of Appleton, and O. M. Lord, of Minnesota City, also joined the party, and from Minnepolis there came Senator S. A. Stockwell, Messrs. Thomas H. Shevlin, Thomas Lowry, Drs. R. O. Beard, J. W. Bell, H. M. Bracken, McDonald, Crafts and Westbrook. The Chicago delegation remained solid, among these being the following: Colonel John S. Cooper, W. F. Snyder, W. H. Snyder, Sidney L. Wright, Eugene S. Pike, H. P. Robinson, George A. Schilling, H. P. Williams, Everett Sisson, John A. Campbell, Theodore P. Shonts, Henry S. Fitch, L. W. Pitcher, P. S. Eustis, D. K. Clink, John E. Williams, E. Hough, all of Chicago; Fred N. Stephenson, Menomonee, Mich.; C. L. Bailey, Mancelona, Mich.; R. T. Bishop, Ludington, Mich.; Henry W. White, New York; Elbert Hubbard, East Aurora, N. Y.; Dr. C. A. Schenck, Baltimore, Md., and K. N. Harris, of the Chicago Record; F. N. Wood, of the Tribune, and John S. Spargo, of the Times-Herald.

In addition to the above, the following Minnesota gentlemen were discovered on a later count. Judge C. L. Brown, of Morris; S. W. Leavitt, of Litchfield; E. L. Read, of Anoka; H. F. Brown and Larry Kennedy, of Minneapolis. The whole contingent of 105 travelers retired at a late hour, but this fact was due to their own high spirits and not to the arrangements of Mr. Whitney, who handled his large family with true railroading *sang froid*.

The Day at Walker.

WALKER, Minn., Sept. 30.—The morning dawned bright, cool and beautiful at Walker, and the party scattered like a bevy of quail, eager for exercise in the keen, refreshing atmosphere. The Hotel Pameda, under the charge of that good-natured hustler, Mr. Patrick Henry McGarry, was made headquarters for the visitors, and a remarkably good hotel it is, too, here at the edge of the world, in a community not yet out of its swaddling clothes. There is a little detachment of soldiers at Camp Bacon, at Walker, and weekly inspection was in progress when the party, or part of them, reached the village of Walker after a sandy walk of more than half a mile from where the train was stopped. Captain Mercer, the Indian agent, took some of the distinguished members of the party out to the agency in a steam yacht, and showed them how this part of the United States machinery works. A committee of citizens, headed by Messrs. Charles Kinkele, P. H. McGarry, John King, L. W. Case and A. G. Burnhard, editor of the Pilot, the local newspaper, took the bulk of the tourists in charge, and gave them a splendid outing on Leech Lake. The craft employed was a big house-boat, double-decked and commodious, which was towed by a tug. It was the intention to visit Bear Island, where just a year ago there occurred the sanginary encounter between the troops and Chippewa Indians, in which half a dozen officers and privates were killed. There was in progress, over on this island, a council of the Chippewas, gathered for the purpose of electing representatives to send to the Great Father. The Indians understood that the Great Father was sending representatives into their country, and naturally this was a great event for them, and they wished the party to join them at their meeting. There was good deal of a sea on, however, and it was found impossible to make Bear Island with the house-boat, so a landing was made about twelve miles from Walker, on Otter Tail Point, the site of a little Indian village.

Now in the West.

We were now in the West. All around was an untroubled wilderness. The great sea of Leech Lake showed no white sails, and on its shores there were the cottages of no summer dwellers. Tall pines, great oaks and wide branching maples with reddening leaves covered the bold shore line of this inland sea. Hauled up on the beach were the high-prowed canoes of the Chippewas, and clinging hard to the earth, back among the groves which crowned the summit of this beautiful island, were the squat houses of the children of the soil, oval, bark-covered lodges with frames of poles, such as their forefathers builded when they lived to the east on the shores of the Superior. In the center of each bark lodge, and beneath a hole in the center of the dome-shaped roof, smouldered the household fire, and around the fire was a platform of boards serving for beds and resting places. The scheme of the interior of the Chippewa bark house is much the same as that of the conical tepee of the Sioux or Blackfoot, except that the Chippewa is a woods Indian and has much timber at his disposal, and is moreover civilized enough to know the use of a board. The Chippewa does not use pine boughs for his bed, but substitutes pine boards, covered with the cheap cotton comforter of the modern dry goods shop. The dress of the people is semi-civilized, and I saw no real blanket Indian, although some of the women wore shawls or blankets about the heads. The platform, or bed, in these bark lodges was usually covered with a beautiful matting woven of bulrushes, stained in the crude, barbarous colors which one sees in the Navajo blankets and in the finest Oriental rugs. The people seemed unwilling to part with these mats, and only a few were offered for sale. I secured a very beautiful one, only partially completed, about a foot or so of the weaving having been finished, with some 6ft. of the stained rushes hanging free and unwoven. This mat I fancied for a hanging screen, but the Indian women had never heard of any such thing as that, and thought me jesting when I made signs that I wished to buy it. They could not understand what any man could want of a mat which was not yet done. The visitors secured only two or three of these mats, which seemed to me very beautiful examples of native art.

The Squaws Fooled the Artist.

The party scattered among the native houses with the customary enthusiasm of tourists, to whom this sort of thing is a novelty, and it is a question which was most amused, white man or red. A number of cameras were brought into play, and no doubt some good pictures were secured. This brought out several interesting incidents, of one of which I was a witness. A couple of ancient Indian squaws, wrinkled into a picturesqueness simply admirable for photographic purposes, were sitting on the ground near the house-boat as it lay at the beach. Each was smoking a cigar, which had been the gift of some tourist, and the combination of lady and cigar was a bit fetching, it must be admitted. The two were talking together in their own language, looking at the camera fiend as he completed his preparations, and now and then one of them laughed heartily. Some of the bystanders were saying what a joke it was on the Indians, not to know that they were about to be photographed; but just as the artist removed the cap from his lens, both squaws threw themselves flat on the ground, and lay there, shaking with laughter at their own joke. The artist did not get his picture.

The Chippewas.

The Chippewa Indian as a boat builder is a success, and I have never seen a more beautiful birch bark canoe than one which I saw just completed on the shore at this vilage. Every line was a perfection of grace, and the workmanship was beautiful. These Indians weave their own gill nets, and we saw drying on their racks a great many whitefish which they had taken. Their birch bark vessels, wild rice trays, etc., are also very neatly done, and they seem thrifty, healthy and contented. In stature these people do not seem so large as the plains Indian, but they have the reputation of being fighting men. Of all the tribes of the West, the Sioux have perhaps been the most warlike, yet it is historical that these same squat Chippewas drove the Sioux out of their ancient homes into the forests of Minnesota, and forced them westward out into the plains. The natural hunting grounds of the Chippewas, a hundred years ago or more, lay along the shores of Lake Superior, but they coveted this beautiful ground around Leech Lake, which the Sioux held as their own. Here on the shores of "Ga-sa-ga-squa-ji-mai-gog-sa-ga-aigan," as the Indians called this great body of water, there was the finest hunting to be found anywhere in the Northland, and the fishing there was easy and prolific. The Chippewas concluded to annex this country for themselves. The Sioux at this time were armed with only bows and arrows, but the Chippewas had obtained firearms from the French traders. The Chippewas, or Ojibways, moved westward, and fought the Sioux in a series of bloody battles. At this very spot of Otter Tail Point, in 1774, there took place the decisive battle which broke the spirits of the Sioux and sent them westward out of their ancient territory. It was at night that the Sioux tried a surprise, setting out from the mainland with a flotilla of canoes. They were met by the Chippewas, who headed them off and surrounded them. It is supposed that the

firearms gave the invaders the advantage, but at any rate the Sioux were killed in hundreds, and the victory rested with the people from the Great Water, who have ever since then held the land they thus gained by conquest.

The Chippewas still want this land. They want it as their fathers left it to them, with its trees, its fish and game still abundant. In all the wild lands of our great Northwest, there is no more beautiful spot than this. Leech Lake itself is invested with ancient legend by the Indians, who tell that long ago an Indian maiden was visited by an emissary of Hiawatha, the tribal deity, and instructed to strike a certain rock with a spear made of the sacred pipestone. She did so, and a great spring gushed forth, which in time formed this great lake. To escape drowning the Indian maiden climbed out of her boat at Bear Island. This was the central stronghold of the Pillager band of the Chippewas, who held this point last fall against the troops who came to take away from them their chief, who had refused to go again to Duluth because his white brothers had once made him walk home when he went there. To make it short, the troops have never yet caught the chief, and never yet punished the men who did the killing last fall at this storied locality, so much prized by the tribe.

In the Way of Ignorance.

At the Indian village the party made many purchases of miniature birch bark canoes, bows and arrows, etc., and the community sold out about all it had to offer. I do not know how much the village took in by way of actual cash, but it seemed to me that if those people could have their country left to them unspoiled, so that the white men could come and see what a wilderness actually was and is and can be, they would make a living more easily from the sale of their little wares than they ever did before, and could yet feel that they were not outcasts. It all reverts to the old misunderstanding of the one race by the other, as witness one little incident to-day. One gentleman, whom it is best not to name, saw a pair of snowshoes hanging in the woods, and he wanted them. Generous to a fault himself, it is not to be supposed that he would take anything not belonging to him, or refuse to pay for what he took. Yet he did not know that the woods are the household of the Indian, that the man who cached the shoes there knew perfectly where they were and left them there because he wanted to do so. The Indian, who chanced to be head man of the tribe, followed the gentleman to the boat and claimed the shoes. Not understanding him, the latter refused and carried off the shoes, exulting in his capture. Two days later, at Cass Lake, it was learned that this incident had caused great dissatisfaction among the Indians, and the latter gave it out that if this man ever came back among them he would not be safe. This trouble was the result of no intent, but of ignorance, and the old, unreasoning contempt of the Indian because he is an Indian. I am very glad to say that a collection of some twenty dollars was later raised by the party and sent back to the chief with full explanation, and I think the gentleman was later advised of his mistake, which he himself would be first to rectify.

Remarkable Banquet at Walker.

The party was entertained at luncheon on Otter Tail Point with some of the ladies of Walker as hostesses and the house-boat was towed back to town late in the afternoon. In the evening there was served at the Hotel Pameda a banquet which made one of the most remarkable features of the entire trip. It should be remembered that Walker is less than three years old. Around it stands the unbroken forest. On the beach of the lake, at the foot of the bluff, where the village of the white man stands, there lie not only the steamboats of the lumbermen, but the birch canoes of the Indians. At the banquet table itself there were 115 persons who sat at table, and this number was exclusive of many of the expedition who remained at the cars too tired to attend. Part of the gentlemen were in evening dress. There were ladies present, as beautiful, as *au fait* as any you shall see in a metropolis in the East. The big dining hall was decorated with the Stars and Stripes. Several United States Army officers in full uniform were present. Some of the party present were dressed in business wear, or the rough garb of the cruder way of the woods. Three paces from the door of the banquet hall was the hotel bar, with gambling rooms in which games of roulette, faro, etc., were continually going on. Gazing in through the doors at this spectacle were woodsmen in Mackinaw jackets, spiked shoes and overalls, Indians with braided hair, half-breeds with swarthy faces. Now and then, interrupting the voice of the speakers, arose the shouts of an excited and semi-demented half-breed, who was accusing another half-breed of treachery to his tribe. There was present in the black coat of civilization an Indian preacher, educated in the colleges of the East. There were present members of the Congress of the United States, some of the ablest and most brilliant minds of the entire country. I question whether any man there present ever looked upon a scene more strange, more incongruous, more suggestive or more inspiring. Here was the West, and here were those who had come to sit in judgment upon the West, to decide whether all of it shall be wiped out and destroyed, or whether a part of it shall be set aside forever under the Stars and Stripes, which stretched above the heads of the banqueters this night, under that strong arm of Uncle Sam, whose jury had come here to learn and pass upon the facts.

The village of Walker, in proportion to Chicago, St. Paul and Minneapolis, did a dozen times as much as even the royal efforts of those cities.

Mr. A. G. Bernard, editor of the Walker Pilot, was toastmaster of the evening. Owing to the length of the programme, but a few speakers were called upon—Judge McGarry, Mr. Schilling, Mr. Allen, Colonel Cooper, Mr. Cochran, Mr. Cannon. It is impossible in the FOREST AND STREAM space to give even a brief synopsis of all these addresses, but to my own notion that by Mr. Cochran was the ablest effort and most fitting to the occasion. Mr. Cochran has evidently taken his part in this expedition seriously. He reviewed to-night the story of the Louisiana Purchase, the history of the country threaded by the mighty Mississippi. He shed the light of a full information upon the subjects connected with this work and brought out the enthusiasm of the entire audience by his clearly expressed conviction that this remaining pine land ought to belong to the people and not to the lumbermen. Every allusion by this speaker or by the others to the formation of a national park and to a successful completion of this enterprise brought out ringing and long continued applause. Colonel Cooper also met an ovation when he spke, albeit with a voice hoarse with cold and a face pale with the fatigue he had undergone. Mr. Allen, of Mississippi, as usual had his audience with him at every point. I regret that I cannot more fully go into this banquet at Walker, which was a very striking and most satisfactory occasion. The little town received the compliments of every one upon the train.

This is what the West can do. It can offer you birch bark and steamer, dress coat and overalls, wild rice and oratory. There is no land like the West. I think many of the party are deeply touched by the scenes of this trip. Thus Mr. Cochran, who was a frontiersman in the buffalo days, an employee of the old Ben Holliday stage lines, a rancher, a lawyer, a newspaper man, a State Senator, a Congressman, said to me in course of conversation: "There never was a country like the West. If I knew any place upon the globe like the West of my early days, I would resign my seat in Congress to-morrow, sell out everything I have and start for that country as soon as I could go, even old as I am to-day."

It is a little part of the old West, a small portion that remains, which the gentlemen of Congress are asked to leave so that their children will have a notion of what this West once was. It is for them to say whether the people or the lumbermen shall own this land.

At Cass Lake.

Colonel Cooper wished to take the party to Bemidji and out to the end of the Itasca Lumber Company's logging road. It was also thought that perhaps a party could be made up to take the twenty-five mile ride by wagon to Lake Itasca. All these plans were cut short. Even at Walker there was spread a strong rumor that some of the party wished to go back directly to Minneapolis from Walker. A compromise was made, and at 1 o'clock A. M. the train left Walker for Cass Lake, where breakfast was had on board. Cass Lake is a raw and straggling little villge only a few months old, and is located on the reservation. It is the town which this summer gave the United States Government so much trouble, the result being that the Secretary of the Interior has set aside a quarter section for auction sale to be held open to Cass Lake residents next November. Cass Lake, it may be added, is hostile to the forest reserve movment, and has ambitions to become a lumbering center. Indeed, such are the beautiful and wonderful workings of the justly famous "dead and down timber act," one might very well suppose that Cass Lake was already a lumbering center. It has a big saw mill, a mountain of sawdust 50ft. high, booms holding large rafts of logs and a number of steamboats used in logging purposes. No one need be told that the lumbermen are after this Indian pine land. I myself saw in the woods many and many a stump of a tree that had been untouched by fire. I saw logging camps which must have held fifty men. Give the lumbermen a few more years and you would not know this Chippewa reservation from the slashed lands of Michigan or Wisconsin.

At Cass Lake we met for the first time the camp committee, who preceded the expedition from Chicago—Mr. H. G. McCartney, Captain Clow and son—and saw visible proof of their activity. These gentlemen had established a beautiful camp on the high bluff bank of an island in Cass Lake, known usually as Big Island, but unmarked on the maps. This island was reached by steamer only after a tempestuous voyage, for the weather had now changed and a strong, cold wind was blowing. Less than half the party made the trip, but were very well repaid. A more beautiful spot than this island never was discovered. The lumberman's axe has not entered here, and the groves are as God made them. Giant white pines, magnificent Norways, many hardwood trees and dense thickets on the lower grounds cover this beautiful spot. The island itself is apparently three or four miles in length, and two or more in width. Camp was pitched on an open spot among the big Norways, at the top of the bluff on the lake shore, and a more ideal camping ground never was seen. Mr. McCartney had handsomely completed all details. A long table of rough boards extended some 50ft. in front of the camp. Big iron broilers lay over long fires built between logs. Delicious whitefish, purchased from the Indians, were broiled to a turn. The potatoes grantly and bright the sun shone o'er fair tin cups and new spoons. Those who came over to the island said they would not have missed it for many a dollar.

The Guide Got Lost.

There had been a few boats portaged over into the little inland lake upon this island, a sheet of water perhaps a half-mile across, and some attempts were made at fishing, but the high wind prevented any success, only a few small bass being taken. Accompanied by Mr. Fred N. VanDuyse, of the Pioneer Press, I started out to find this lake. We were led by one of the local guides, who said he would take us there directly, but somewhat to the chagrin of the latter, he missed the lake by about a mile and a half, and turned up completely lost on the shores of Cass Lake, about two miles from camp. My friend and I had to conduct him to his lake ourselves, which we did by following the shore line of the big lake, until we came to the portage path, wading in the icy water part of the way. Wishing to get some fishing for muscallunge on the following day for one of the members of the party, I here captured one of the boats on the little lake, portaged it over into Cass Lake and by the help of two men got it around to camp after a very tempestuous voyage of about five miles. Very little of concerted plans were carried out during that day, and it might be said that none of the party had any sport, the weather being very bad and the preparations being confined to a trip to the island, rather a picnic than anything else. Yet the utmost jollity prevailed, and nobody was heard to complain, there being in evidence the usual rejuvenating influence of a pine woods trip. I have earlier mentioned the fact that a Congressman is a very human sort of being, and does not necessarily go about with folded arms and unfurled, thoughtful scowl. We had only one man in our party who looked like a Congressman, and he wasn't. In the morning, as we lay around a little group of Indian houses on the shore, waiting for the steamer, some one picked up a big horned owl that an Indian had killed, and began to pull out the quills and tail feathers. Some one else stuck a feather in his hat, and this became infectious. Young Mosher, a reporter for the Globe, of St. Paul, gravely offered a plume to one of the Congressmen, who as gravely accepted it and stuck it in his cap. Soon every one of the Yankee Doodle party had a feather in his hat, and the Congressmen and all sat in the presence of the Indians, and every man had a plume on his head except the Indians. Now that was rather a singular and pathetic thing to see. Here was the savagery of civilized man sticking out, and in the very face of the men we were asking to become civilized like ourselves. It was sad as to the savages who are trying to be civilized, and not free from sadness as to the white men who were longing to be savages.

A Split in the Party.

CASS LAKE, Minn., Oct. 1.—This afternoon, while the party was well scattered over the island, there came word by boat from the train that all should hurry back to the railroad, for that the entire party was to start back to Minneapolis. Col. Cooper, Mr. Cochran and others returned to the cars, though yet others remained out in the woods. At evening it was discovered that six of the ten cars were gone, with over forty of the party, about fifty-five men remaining with the four cars left. Some of the baggage of those remaining had been carried off by the departing ones, who had gone to Duluth, and thence home, and much confusion ensued that night in essaying to make those remaining comfortable; in the general shifting about of berths, baggage, etc. There was a great amount of outspoken criticism on this action of a part of the party, and some of the Congressmen privately voiced their wonderment. Col. Cooper was perturbed, but with characteristic good humor treated the matter as a "tempest in a teapot." Mr. Whitney, of the Great Northern, evidently regretted the matter, but explained that he could not stand in the way of those who wished to return home. The party of "quitters" or "cold feet," as they were called by the remaining members of the party, were led by Mr. Thos. Shevlin, of Minneapolis. Among those who returned were Congressmen Cannon, of Illinois (who was ill); Heatwold, Fletcher and Eddy, of Minnesota; Fordney and Mesick, of Michigan; Drs. Wesbrook and Bell, of Minneapolis; Thomas Lowry, George R. Finch, Senator Young, etc. Many of this party are business men of large affairs, who were in a hurry to get home, and who took little interest in the sporting side of the excursion. The incident, though smoothed over as much as possible, unquestionably did a great deal to shorten the trip and rob it of its full measure of pleasure, if not of its full effect. Mr. Shevlin came in for severe criticism by members from his own State. There was a story out that he, being a lumberman, did not wish the Congressional party to see too much of this country, and he was accused also of insincerity in his connection with the enterprise. Sober judgment cannot approve of this supposition, for conduct so clumsy would be sure of its own detection and its own condemnation. It seems more likely that Mr. Shevlin was hurried and busy, and too impatient to think carefully of the others of the expedition who had come such great distances to see the country. Mr. Shevlin has been one of the largest financial contributors to the trip, and his influence is of value, so that this action was regrettable, though by no means fatal.

The Christening Party.

Oct. 2.—The "stayers," or "thoroughbreds," of the party, as they now styled themselves, were at last rewarded with a perfect day, and they deliberately set about availing themselves of the sporting resources within their reach. Another fish dinner was prepared on the big island, which drew a considerable number of the tourists. As this island and its beautiful little lake had neither received a definite name, it was decided to make up a christening party. With this party were members of Congress Stevens, of St. Paul; Otjen, of Milwaukee; Col. Cooper, Mr. Whitney, of the Great Northern; Gen. Andrews, Senator Schaller, Dr. McDonald, Dr. Schenck, Mr. Clink and others. Congressman Stevens made the address in appropriate speech. Dipping a vessel of water from the lake, he poured back the contents and christened the lake by the name of Helen. Congressman Cannon's daughter is named Helen, and there lives in Chicago a descendant of Lewis Cass whose name is Helen. The island was named Cooper Island, and the bestowal of the name was greeted with cheers. These names will be official on the maps and in the Great Northern literaure from now on. The names were cut deep into a pine tree, and Messrs. Stevens and Otjen said they would have the christening confirmed by the Interior Department at Washington.

The Angling Parties.

Other steamboat parties were made up, the most important being that bound for Moose Lake, fifteen miles away. With this party were Congressmen Graham and Gaston, of Pennsylvania; Clark, of New Hampshire; Allen, of Mississippi; Cochran, of Missouri, and Tawney, of Minnesota, all of whom expressed a desire to catch some fish. Several of the members of the party were put off near an Indian village and secured birch canoes for voyages up the Turtle River. The Congressmen above mentioned, with three guides, and accompanied also by Mr. Stevenson, of Menominee, Spargo, of the Times-Herald, and myself, made the portage of three miles from Turtle River over to Moose Lake. It was an easy wagon trail. There had been a rumor circulated to the effect that heavy windfalls had made this trail impassable, but we did not find this to be the case. Mr. Stevenson and his guides even carried a boat across the trail, and Mr. Cochran, who has one limb which he describes as not of the best, made the walk with no serious consequences.

We were now getting a taste of the fishing of these great fishing waters. After leaving the steamer at the Indian village, the Moose Lake party divided out among the rowboats. Mr. Cochran, of Missouri and myself sort of drifted together, and we sort of picked out the best guide there was, young Zembrick. I am sure that I got the most genuine thoroughbred in the whole party

h Mr. Cochran. He is a shooter and angler of experi-nce, and has the genuine love of the outdoor air. Better ompany no one ever had on a fishing trip, and if he and have real good luck in the future we will see Moose ake again one of these good days. We trolled on our ay up the Turtle River to the portage, and it soon be-me evident that pickerel was to be the order of the day. t the mouth of the river there were three fish on at the me time in different boats, and a dozen strikes in less an five minutes. We soon had the bottom of our boat ell covered, and at last Mr. Cochran struck and cap-red the largest fish taken during the day, a pickerel eighing 8½lbs. on the scales. Mr. Cochran is a quiet gler, and his methods are deliberate, showing no ex-tement or haste. I think Mr. Cochran is the only man ever saw who could look dignified with an owl ather stuck up the back of his head, a cigar in one rner of his mouth, and a big pickerel at the other end his line.

A Grand Bass Lake.

We have found Moose Lake a beautiful body of water couple of miles in length, and about the best bass ke I ever saw in my life. None of us was well fixed r bass fishing, for we had all been prepared for mus-allunge. There was not a casting outfit in the party, nd in our boat we had only trolling tackle and big oons, with the alternative of some very small spoons, hose hooks would not properly hold a bass. We had ve strikes and lost five fish in as many minutes after arting away on this lake; but after awhile began to do more successful business. We caught a great many ickerel, and lost a great many more of the more active ass. I never saw bass fight better than they did in this ke, and I never saw pickerel fight so well. Mr. Allen, f Mississippi, joined our boat about 1 o'clock, and we ansacted business with the fish with considerable suc-ss. By some misarrangement we had no lunch, some f the guides and others there present having swiped the asket. We suspected Fred Stephenson of having pro-ded well for his guest, for he looked smiling and said wasn't hungry. Messrs. Stevenson and Tawney went r up the lake, but our boat stayed near the end of the ortage, and we were always in sight of the boat which rried Messrs. Clark, Graham and Spargo. At about o'clock we landed at a little camp, where one of the uides had been shooting and fishing for some days revious. Here we found some raw potatoes and the iscarded end of a piece of bacon, and I expect you ever did see Congressmen eat fried potatoes the way Ir. Cochran and Mr. Allen did; and they liked them, oo. We had no tea or coffee, but there was plenty of ater in the lake, and we got along very well. Mr. ochran rose still higher in my estimation as a thor-ughbred when he proposed to me to stay over night the little dog tent that we found, and have a full day's shing the next day. All, however, were haunted by the ear that this would delay the party at the cars, so nally it was decided not to tay over at the lake.

The above-mentioned gentlemen caught on Moose ake that day, and in Turtle River going up, between oo and 700lbs. of fish, mostly pickerel. Mr. Tawney and Ir. Stevenson brought out ten bass which weighed over olbs., the largest weighing 4¾lbs. These are all big-outh bass, but they were all fat and full of fight. What ne could do in that lake in a day's fishing, with proper utfit, is something which I should not care to prove, ut I know very well that Mr. Cochran and I could have barrel of fun there.

Good Sporting Country.

We were now in a fine sporting country. Our guide aid that there were a great many moose in that region, ut that the Indians did not kill very many, as they were o lazy to carry out the meat, and would not kill a moose nless it was near their camp. Deer of course are very umerous. Within a few miles of Moose Lake there is nother lake of the Turtle River chain, where we were old there is a splendid island camping place. Near by his are heavy rice beds, where the ducks feed in great umbers, and one can also get here fine muscallunge fish-ng. This is the place which Mr. Cochran and I have icked out for our camp in case we should ever go in here again. No one on this whole trip caught or saw muscallunge, nor was any muscallunge fishing done in he proper localities. The guides speak of this fish as eing "slow fishing," but mention fish taken up to 30lbs. his season.

The Prettiest Picture.

A slight rain came on toward evening of this day, and he party waited at the Turtle River end of the portage ntil after dark for the arrival of the steamer, the return rip being made down Cass Lake in the dark. We picked p scattered members of the party here and there going down in the night, and it was during this work that we aw the prettiest sight of the whole trip. There was a ail from shore, and we stopped to take on a passenger, who came out from the wild rice in a birch bark canoe driven by the steady hand of a woodsman. There was a antern in this canoe, and as he approached, the pas-senger, who proved to be young Mosher, of St. Paul, icked up the lantern and held it high in order to see clearly in making the landing on the steamer. He was quite unconscious of the fact that the light of the lantern brought into splendid relief against the black shadows behind him the full outlines of the canoe and its oc-cupants. I never saw so striking a combination of lights nd shades, and this is one of the pictures of the trip which will linger very long in my own memory, at least.

Returning and Adjourning.

We reached the Cass Lake landing at night, had a muddy ride and walk over to the cars, and a hearty din-ner. The train then pulled out for Minneapolis, the ex-pedition now being officially declared homeward bound. Until midnight jollity reigned, and toasts and votes of hanks were made the order of procedure. Mr. Whitney was formally thanked as the representative of the Great Northern road, which had made the pleasant trip a pos-sibility and a success. Col. Cooper was called upon, and Mr. Clark, of New Hampshire; Mr. Tawney, of Minne-sota; Mr. Allen, of Mississippi, and many others kept the packed audience convulsed. Mr. Tawney escaped to his berth, but a committee in charge of the Sergeant-at-Arms was sent after him, and he returned, partially dressed and without a collar. He was then called at bar and asked to explain how he dared come into the House without a collar. These proceedings were kept up until all sorts of hours in the morning, and marked the official adjournment of Congress for the term.

The Party at Minneapolis.

MINNEAPOLIS, Oct. 3.—The party arrived at an early hour in the city of Minneapolis, and went in a body to the West Hotel. The Minneapolis Club had planned a banquet for the members of the party for the evening of Oct. 4, and as the arrival was a day ahead of time these plans were disarranged. Mr. Shevlin arranged for a late luncheon or dinner at the Minneapolis Club, and during the day Mr. Thomas Lowry took the party out for a trolley ride over his lines in the Twin Cities.

At the dinner party Mr. W. H. Eustis, ex-Mayor, was toastmaster and presided happily. At the request of Col. Cooper, Mr. Cristadoro read a number of letters of regret from prominent gentlemen all over the country who were unable to join the expedition.

Mr. Eustis spoke of the early history of the Louisiana Purchase, mentioning the fact that under the administration of Thomas Jefferson a committee had been appointed by Congress to investigate that unknown region and to secure its purchase from the French. That first purchase had been a great thing to the United States, and that first committee had builded better than it knew. Here now was a second Congressional committee investigating the upper waters of the Mississippi. "Gentlemen," said Mr. Eustis, "if you set apart a porttion of this region for the American people you also may be building better than you know."

Col. Cooper made one of his happy addresses, recounting the chances, the changes, the compromises, the little jealousies and bickerings which had come up in connection with this enterprise. Col. Cooper made a noble address, and left no doubt as to the sincerity and steadfastness of his purpose from the start.

Mr. Cochran, from Missouri, made the speech of the evening. He said he thought that the agricultural lands of several Western States would in the future be less thickly settled than they were now. The population of the country would drift into larger communities, located largely along the river valleys. He thought that much of the Northwestern land could be classified as unessential to agriculture. (Applause.) He thought the cutting off of the American forests had not been unpatriotic, but had been done through ignorance, and the United States should have looked to the reforesting of the denuded tracts. Even France in the wild days of the revolution spared her forests, and the Communists who went into the Vendee to pillage and destroy spared to the general people the bridges and the forests. "This is one of the worthiest and most beneficial movements ever started in this country," said Mr. Cochran, and he was greeted with a burst of applause.

Mr. Eustis called upon Mr. Clarke, of New Hampshire, alluding to the fact that New Hampshire had given many noble sons to the West. Mr. Clarke said: "I was ignorant of this country, but I have been learning all along. It grows on me, and I propose to learn all I can. New Hampshire has sent her sons and her institutions all over the West, and I feel at home here. I am with you in any honorable undertaking you may attempt. I am going to meet you all again to dedicate this beautiful park begun by Col. Cooper, of Chicago."

Mr. Allen, of Mississippi, addressed the meeting half seriously and half in fun. He said that it was generally known that as Private John Allen, of Tupelo, Miss., he had been able to prolong the Civil War a couple of years, and since then he had kept the country safe, and had been prominent in international affairs. Yet as showing the quality of fame, he would cite the fact that his name had appeared on a menu as "Col. Joseph Allen, of Cupola, Alabama, and he believed in future he would be known in that way. Mr. Allen said he had intended to make a speech about Col. Cooper, but the Colonel had relieved him of that necessity. (Laughter.) Referring to Mr. Clarke, of New Hampshire, he was reminded of the story of the New Hampshire man who was ill, and who was asked to prepare for another world. "Well, I have been farming here in New Hampshire all my life," said he, "and if the next world has anything worse than that to offer, let her come!" Mr. Allen said that he was much concerned about the headwaters of the Mississippi, because that river ran through his own State. The Mississippians did not want much water, but they wanted it good. He was satisfied that it would be good, because his friend Mr. Shevlin had told him that the word Minneapolis was derived from two Greek words, "Minne," meaning beautiful, and "Apollinaris," which means water. Mr. Allen concluded by saying, "In the words of the exhilarated farmer, 'if you want anything, just draw on me.'" He said, "I might have been dining with President McKinley and Admiral Dewey, but I came here instead, and I have had the most delightful time of my life." Mr. Allen said that he had heard the list of regrets, and that the men who did not go ought never to be heard from. He had come to the place he thought best, and was satisfied that it was the best place.

Mr. Mann, of Illinois, was called upon, but stated the hour was late and he would speak but briefly. He called for three cheers for the National Park of Minnesota, for Col. Cooper and for the railroads which had been so courteous and generous. These salutations were given with a will.

Mayor Gray, of Minneapolis, said that Congress had always done everything that Minnesota had asked. He hoped this movement for a park would be kept free from politics or a low commercialism, and that it should always be remembered that its origin was due to the women of Minnesota.

Mr. Stevens, of St. Paul, made a good direct speech and concluded by saying, "Gentlemen, in some form this movement will be successful."

Mr. Gaston, of Pennsylvania, said that he would do all that he could to further the interest of the movement.

Mr. Thomas Shevlin, of Minneapolis, was called upon and made an interesting speech. He said that he had always been a destroyer of forests and not a protector. His chief aim in life had been to make money. He said that in five years more the pine of this region would all be gone. If it was thrown open on the markets he said he would get his share and take care of himself. As Col. Cooper had first outlined this park it took in nearly a third of the State and was unreasonable. He was willing and eager to see the pine lands of the Indian reservations set aside, and would do what he could to help in this enterprise. At an earlier hour in the evening Mr. Shevlin arose and toasted the "New park, the greatest in the world." Mr. Shevlin rose for a second talk a little later, and his remarks were listened to with the keenest interest.

Mr. J. Adam Bede, of White Pines, Minn., editor of Bede's Budget, one of the most renowned humorists of his State, and a genius withal, made one of his laughable speeches. After this the Eastbound party hastened to the Burlington train, which started them for Chicago at 9:30 P. M.

Disbandment at Chicago.

Last evening was spent by the party on the Burlington special train pleasantly, but with a certain soberness of thought in view of the approaching parting, for many of the party felt much drawn toward each other by the friendships made under such surroundings.

Votes of thanks were passed to the Burlington and Great Northern railroads, and it certainly is to besaid that these railroads did their part nobly. Acknowledgments were also made to Mr. McCartney and Mr. Clow, of the camp committee; to Mr. Pitcher, for his assiduity with cigars; to Mr. Chas. Cristadoro, for his unflagging zeal and great executive usefulness. These gentlemen have each in his way been powers behind the throne.

Permanent Organization.

A permanent organization will be formed of all of those who made this trip, this movement being in the hands of Mr. John A. Campbell, of Chicago, who will correspond with the members later. After the formation of the park the party will meet again for a trip over the same country.

The Results.

The inception and progress of this project for a Minnesota national park has been followed step by step in the columns of the FOREST AND STREAM. The purpose of the Association was really completed with the end of this Congressional trip. It never was intended to push this matter in Congress, but to leave it entirely in the hands of the Congressmen who had seen the country. Yet this trip was undertaken for results, and it is natural to surmise what these results will be.

The story of the trip itself may forecast something of the probable Congressional action. These members have seen the workings of the dead and down timber act, and they have seen the Indians and the Indian lands. No one can tell what the entire body of Congress will do, but I can say this, that one of the members of Congress told me that he intended to introduce at the next session—and support to the extent of his ability—a bill which will practically suspend as by injunction the present cutting of timber on the Indian lands, pending a thorough investigation by a special committee of Congress. This gentleman is in favor of the park, and he will not be alone.

The Opposition.

A member of Congress said to me that the main opposition to the park project would come from Mr. Nelson and Mr. Morris, the latter the Duluth representative, who fought the park in its first form, and the former the father of the dead and down timber act.

The Indians.

It is likely that the Indians can be persuaded to sell their timber in such form that it can be used for park purposes. It will be necessary to sign another treaty with them before this can be done, and these Indians have the best of cause to be very much afraid of treaties, for the treaties of the past have often been but farces. There are several sorts of titles which must be handled in setting apart a continuous body of land in area of the extent last suggested. It is thought these can all be reconciled. The Indians will be contented provided they are left alone where they are and are not obliged to move. They fought for this country and won it, just as we are fighting to-day for country across the seas. It is theirs, and should be left to them. The white men can share with them the sky, the lakes, the beautiful forests of one of the most remarkable regions of America.

A Loophole.

I have noticed somewhere in the comments of this proposed park the statement that if it were established it would probably be found desirable to cut some of the larger timber. I ask careful attention to that statement. In France or Germany that might do, but this is America. The dead and down timber act was supposed to allow the marketing of a limited amount of otherwise useless timber belonging to the Indians, but it really meant wholesale fraud and a general marketing, for as Congressman Tawney remarked, there is not one in a thousand who can tell the difference between a live and a dead log after it gets in the water. Permission to cut some of the large trees, if given to any lumbering concern, would mean license to cut anything in sight. We are not marketing any of the trees of the Yellowstone Park, or using its geysers for commercial purposes. The Government of the United States can afford to buy and keep this country as it is to-day, and to give it to the people as the one portion of our territory most nearly approaching in primeval beauty this magnificent land when nature was its only sovereign and the wild beasts and the wild men its only citizens.

Atmosphere.

A special car party, traveling with the private car of General Manager Whitman, of the Northwestern Road, and made up of Mr. Whitman, Messrs. L. Wolff, C. J. and Fred Wolff, are just back from a shooting trip in South Dakota. They were gone a week or more, and got forty birds. They report the atmosphere as bracing and all that could be asked.

E. HOUGH.
480 CAXTON BUILDING, Chicago, Ill.

Some Old Weapons.

CHARLESTOWN, N. H., Oct. 3.—*Editor Forest and Stream:* I am surprised that your correspondent, C. F. B., who seems to be of Austrian birth, did not understand the word "stutzen." It is given in the German dictionaries as "a rifled gun," but said to be a provincialism. It evidently refers to the length of the gun, and not to the rifling, and comes from the old Scandinavian word "stib," "stybbe," or "stubbe," found in the Anglo-Saxon Danish, and Icelandic languages, corresponding with the Latin "*stype*," and the basis of our words "stubbed" or "stunted," meaning something short and stiff.

Another correspondent recently speaks of an old breech-loader, which he could not identify, and in which the breech block opened on a hinge, but which leaked gas fearfully at the joint to the barrel. It was the old "Hall carbine," built at Harpers Ferry, between 1830 and 1840.

Each member of Congress had one, at the time of the appropriation for them, and one member, who was not a sportsman, gave his in charge of my father, who had the reputation of being a pretty good shot. I could beat the old gentleman at the target with it, however, and it was practically in my hands for two or three years. It was in some respects a convenient weapon for military purposes, as it could be loaded without rising, when one was sitting or lying down, and without exposure to the enemy.

The ½oz. ball which it carried was too big for squirrel shooting, however, as it tore the game all to pieces, and the sights were so coarse and clumsy that it was not possible to "draw a fine bead" on the head of the game. I remember, though, shooting a red squirrel, "end on," once with it, when all I could find of him afterward was part of the skin, with the tail and paws attached. I afterward tried it with shot, but not with great success, as it "scattered" in an outrageous manner, probably due to the rotary motion given the shot by the rifling.

We have had a slight touch of equinoctial, and the ground has been moistened a little, but I see no noticeable rise in the brooks or river. One of my young friends was good enough to bring me a nice, plump, young, gray squirrel last week, which my daughter fricasseed, and which we relished hugely. It is the only game I have heard of so far in this region, but the newspapers report deer quite abundant in the northern part of the State, and I think it probable that Mr. Stark or some other one of your New Hampshire correspondents may soon give us an account of a successful hunting expedition. Alas! I can only look on, read and enjoy the stories of success, and comment and criticise occasionally, when something awakens my memories of the past.

Thank Shoshone for dubbing me Nestor. Since I can no longer play the part of Achilles or Ulysses, I am very well contented with that cognomen. VON W.

Central New York Game.

ITHACA, N. Y.—The shooting season has sufficiently advanced to show that a pretty fair supply of ruffed grouse is to be found in local covers. In fact, the birds are more numerous than they have been for at least three years. It is unnecessary to specially mention the many good covers hereabouts in which a number of birds should be taken daily. Suffice it to say that almost any road leading out from Ithaca will bring one into likely covers. Spencer Summit and Van Etten, points on the Lehigh Railroad, south of the city, are surrounded with especially favorable covers, out of which good bags can be taken daily. Indeed, were it not for the merciless daily shooting of a couple of market-shooters who operate in that locality, it would fulfill the claim of being the best grouse grounds in this part of the State.

There is considerable quiet rejoicing among local gunners over the return of the woodcock. There are a few to be found on the oldtime grounds, but probably in no wise up to the expectations entertained earlier in the season. John McCormack, one of the best-informed and most active sportsmen of the local brotherhood, during the course of a recent entertaining talk on shooters and shooting, said to the writer that the long continued scarcity of woodcock is an astonishing factor in the problem of the central New York game supply, and can be acounted for in no other way, so far as his experience extends, than by ascribing it to the close, hard shooting out of these birds on local grounds from year to year. It is the man who wants the last bird, and who keeps on shooting until he gets it, who in large part is responsible for the sorry state of things now existing. The late John Doty—honest, brave, rugged John—was wont to stoutly contend that this wild savagery in shooting, this fierce appetitie for the total extermination of the woodcock, simply left no birds familiar with and attached to local covers, to return and bring with them new comers. Depleted and barren covers were the result.

Now, McCormack may be wrong; Doty's hypothesis, theory, or whatever you may elect to call it, may be at fault; but the one vivid, indisputable fact stands out clear and distinct above all discussions pro and con, namely, that the woodcock have practically gone the way of the buffalo, the pigeon and so many other forms of wild life. Ten or fifteen years ago Ellis Hollow, a low, swampy reach of ground, twisting out southeast of Ithaca, had a state reputation as a fairly ideal woodcock cover. The birds were there in great abundance. One would need a pocket full of shells to go in there for a little shoot. To-day that great outlook of country is in the main untenanted, and echoes only the forlorn note of a straggling longbill. There were other good local grounds, over which enjoyable shooting was to be had, but the glory of all these has departed, and to get two or three birds out of them now one must work with the patience of a prophet and with the vim and masterful energy of a hod carrier. The annihilating methods of the game hog, to speak without equivocation, have simply blotted the woodcock, as a game bird to be considerably reckoned with, out of local existence. Were it not for the impregnable habitat of the ruffed grouse, coupled with his matchless wariness, he too would be only a tenderly cherished memory. All of which renews the strength and timeliness of FOREST AND STREAM'S platform "Prohibit the Sale of Game." Agitate that in and out of season, and then keep on agitating it until the end of time, "avows the consensus of intelligent, far-seeing, local sporting opinion," and perhaps through this medium—and assuredly through no other present visible agency—will the sportsman be able for years to come to temperately enjoy the shooting privilege, with its appreciated rewards.

Greater uniformity and stability of the game laws is another imperative requirement. The many and frequent changes have a misleading tendency; they shake the average man's confidence in the integrity of the sentiment back of the law, and create disrespect for it among those who recognize the value of a good law righteously enforced. Generally speaking, the game laws of New York are not permitted to remain undisturbed long enough for the country people to become acquainted with their provisions. The law as it applies to ruffed grouse does not protect the birds in this section of the State—and the same factors are at work in all parts of the State, it may be naturally inferred—to the extent that it should. To permit the open season on grouse to continue through December invites a slaughter that might well be avoided. The back-country farmer is ready and alert to take advantage of the December snows, when the grouse take to the trees promptly, and he pot-shoots them without any compunction of conscience. The local markets during a period of December snow bear testimony to the force of the above statement. Then the farmer comes to town with his bunch of grouse, and continues to come as long as the snow lasts and the birds tree good. It is during that month that the annual cleaning up of the grouse supply occurs. A fine fall of snow, a $10 breechloader and a vigilant-eyed party turned loose in the woods, is a combination which the grouse in a tree is unable to regularly circumvent.

Better, however, than to attempt to regulate these matters, to clear the vision of the politicians to a sensible view of the situation—better than all this is the simple, straightforward adoption as the law of the State, of the Nation, of FOREST AND STREAM'S "Prohibit the Sale of Game" clause. That will clear the atmosphere, stop the clamor, save the game, and yield an enactment easy to enforce. M. CHILL.

A North Dakota Hunt.

FORT RANSOM, North Dakota.—On my deer hunt I had with me two weapons I never worked before—a small kodak and a .30-40 smokeless Winchester. For over twenty years I never used but a .44-40, a very handy rifle in thick timber, and I don't think I ever lost a deer I struck with this rifle. I sold it this summer, with the understanding that if I went to the woods I was to have the use of it. A week before I intended starting I bought the .30-40, and the day I started a friend handed me the kodak, loaded with twelve rounds. I fired eight times with the kodak, and eleven times with the .30-40. I killed four deer. The rifle being strange to me, I did not get onto the first deer until the fifth shot, and when it landed it was enough—the bullet struck him close to the heart. The first thing I noticed as I got up to him was the small hole where the bullet entered. I turned him over to find a hole I could stick my four fingers into. So I made up my mind the rifle would do its work if the man behind it was all right.

Hunting was bad, as there was no snow. One night about bedtime it snowed a little. Next morning we were up in good time, but after breakfast it turned warm. The snow would not last until noon. I struck a track before I had my smoke finished, so had to put my pipe in pocket. The track was fresh, and I made haste. Slowly, as the snow was going fast, I followed out to an opening, and there stood not over 50yds. from me a beautiful buck. I raised my rifle to drop him in his tracks; but he would not have it that way. He made a bolt for the timber pretty lively, broadside on. I tried to catch him behind the shoulder, but it struck a little too far back. However, the next brought him down stone dead. The bullet holes were 3in. apart. I hung him up where he had fallen. Coming home to camp, I took a shot at the Chippeway Indian burying ground on the banks of the river, with an old log house in background, where an Indian killed another Indian, supposed to be accidentally. No one has lived in it since. .30-40.

My First Turkey.

IT was my good-fortune to have spent my boyhood upon a farm amid the hills and valleys of northwest Arkansas, and nowhere is the air purer or the winds more refreshing, and in truth it is a place where the love of simple, healthful pleasures of rod and gun can be indulged in to satiety by him who loves these, the purest and most harmless of all sports—it is an ideal place.

My father's house was always a stopping place for those very genial and useful members of society, the Methodist circuit riders. When at breakfast one day my mother announced that she wanted "the boys" (meaning my brother John and myself) to knock off work at noon and go squirrel hunting in the afternoon to kill some squirrels for the preachers who were coming that day to begin a protracted meeting, you may rest assured that there were two boys who watched the sun as he climbed to the meridian, and finally, when that sweetest of sounds, the old-fashioned dinner horn, sounded, we lost no time in answering the call. In those days I knew nothing of breechloaders, but did my hunting with a small, old-fashioned percussion cap, double trigger rifle, running 120 bullets to the pound. A hasty dinner, a rubbing out of the rifle, and with my dog Jowler in front and John, who was too small to handle a gun, but was useful in "turning the squirrels and carrying the game," bringing up the rear, I was soon in the forest, intent on the very pleasant, if rather colossal, task of feeding three Methodist preachers, the number assigned to our house during the meeting. I will not attempt to describe that particular hunt, but when the sun began to sink behind the western hills a count showed that we had ten nice fat squirrels. This being all we cared to carry, we started for home, taking a shady path down a small creek, and when about half a mile from home we saw two fine wild turkeys fly across the valley and light on a hillside near where we were. In a very short time Jowler was barking furiously, and the "put put" of a turkey told us that he had treed one. Hastily cocking my gun, I slipped in under the high bank of the creek and waded down opposite to where the dog was standing, and peeping up the hill I saw the turkey almost directly over me. Hastily slipping my gun up the bank, I drew a quick bead on the turkey's breast and fired. There was a crash and a thump on the ground, and the turkey rolled down the hill right against me. I dropped my gun and grabbed her by the neck with both hands, and yelled "I've got her." It was a very large hen, and very fat. Talk to me about the joys of triumph. Never in all my life have I felt happier than on that beautiful June evening when John and I walked into my father's yard, I with my gun and ten squirrels, and he with that splendid bird on his shoulder, and we walked out under a shade tree and cast at the feet of those three venerable ministers "my first turkey." J. E. L.

Deer in Southern New England.

PROVIDENCE, R. I., Oct. 5.—*Editor Forest and Stream:* In the Journal, of this city, for Oct. 3, I think, was an account of deer shooting here in Rhode Island. The deer—a doe—was shot by a fox hunter of Exeter, in the western part of the State, and weighed 132lbs. The Fall River, Mass., News said the other day:

"One of the interesting items of recent information is as to the appearance of deer in southern New England. The Hartford Courant comments editorially upon the fact, saying that several deer have been seen this fall in the vicinity of Winsted, and that others have been reported in Middlesex county. The Springfield papers report that Deputy Sheriff Bouton, of Belchertown, had seen deer as he was driving between that place and Granby. In Massachusetts all seasons are closed seasons on deer. There is satisfaction in this fact. It would be too bad if huntsmen should destroy or even molest these gentle denizens of the forest, which are welcome to our woodlands and which we hope can find sufficient shelter and nourishment to enable them to endure our winters. Certainly they could gain nothing in this respect by migrating northward. Let them live and multiply under the protection of law." W. A. S.

Catskill Deer and Cows.

FROM the Catskill Mountains comes the news that the deer which are overrunning Ulster and Delaware counties in large numbers, under protection of a law which forbids all persons to shoot them during five years from the time when the law went into force, have exercised a pernicious influence over the cows of those counties. It is reported that the deer, having lost all fear of the proximity of man, have frequented the pastures and barnyards, have sought the society of the mild-eyed and normally phlegmatic kine, and have caused those usually sedate animals to imitate the frisky habits of their somewhat remote cousins of the forest.

It is said that the Ulster and Delaware county cows have learned to leap with ease and agility over fences which formerly were sufficient to keep them within territory assigned to them, and that they have been roaming over the country with the deer and helping to do injury to crops.

Thus do we see that it is not man alone who is easily lured from the path of rectitude by the deceitful charms of a bad example.—Albany Journal.

Elk in the Olympic Forest Reserve.

D. B. SHELLER, forest superintendent, is taking up the question of preserving the scattered bands of elk in the Olympic reserve.

"My instructions from the Interior Department," said he yesterday, " are to co-operate with the State game warden in the enforcement of the State game laws; but I have not yet had a chance to confer with Mr. Little. My opinion, however, is that some measure of discretion is vested in the Commissioner, and my interpretation of that discretion is to allow no hunting in the reserves.

"There are only two or three bands of elk in the State outside of the Olympic reserve, and those can be reached by trails over which you can drive a wagon, so it is only a question of a very short time when those bands will be exterminated.

"The reserves should be maintained for the preservation of the timber, and also as preserves for game, and until I have some different instructions from the Department my policy will be to allow no hunting whatever."—Seattle Post-Intelligencer.

An Extraordinary Buck.

DUNBARTON, N. H.—*Editor Forest and Stream:* I inclose clipping from Manchester, N. H., Daily Union: "Mr. Bombard, of Cleveland street, shot a magnificent buck weighing 175lbs. while in Canada last week. The buck's antlers spread about 6ft." Of the numerous incredible reports of game, I think the average reported for the daily newspapers is never equaled. Just think of a buck with horns spreading 6ft.

I saw a somewhat similar account last winter in a New York daily. A deer was seen on the track just in front of a train. There was quite a race between the engine and deer, the latter keeping but a few feet ahead until, reaching a pond by side of track, the deer jumped into the water and swam across. As this was said to have happened during the latter part of January or early in February and in the northern part of New York State, the remarkable part was finding in that region at that time an open pond. C. M. STARK.

Game in Texas.

HIGH ISLAND, Tex., Sept. 29.—The guides tell me the feed is as good as they have ever seen it. Our lakes have been protected as against tide water, and the millet

will thrive, the ground become more firm and game more plentiful, especially canvasback and blackhead. Teal and sprigs are now coming in. Our guides, I think, were quite proper when they, a few days since, suggested that large barrels be sunk in the marshes (these barrels could be bailed out when water reaches them) and the blinds placed about them. A man (a 300-pounder) could then rest on his feet and against the barrel with ease, and turn at any direction he thought proper for shooting and not be compelled to sit or kneel down.

C. T. Cade.

An Incident of the Filipino War.

As an illustration of the strange happenings of war I tender to the readers of Forest and Stream a paragraph of family history.

At the battle of San Thomas the First Montana Infantry, to which my son, Bruce Belknap, belonged, was fighting in the jungle, and a Mauser bullet, which had torn its way through a mass of tangled foliage until its force was greatly lessened, was seen to burst a hole through a large drooping leaf a few feet in front of him just as he staggered back from the force of its blow, delivered directly over his heart.

In his breast pocket he carried a big thick letter from his sister-in-law, Mrs. Byron Belknap, in which she had written: "I hope you will get hit—just a little—so you will have something to tell of when you get back home."

This, together with his clothing, formed a pad where the deadly missile was stopped in its flight, and only a dark contusion upon his breast remained to show how narrowly he had escaped its breaking through into "the bloody house of life."

The bullet he afterward found in his pocket.

Orin Belknap.

Valley, Washington.

Three Very Much Alike.

North Ferrisburgh, Vt.—The Forest and Stream is a very welcome visitor each week, and to say that we enjoy it is expressing our feelings in a very mild form. H. B. C.

Framingham, Mass.—In renewing my subscription for the twenty-third time, am free to say that I have had my (nearly) one hundred dollars' worth "full measure and running over." Am now in my seventieth year and virtually "laid on the shelf"; but I shall surely continue to look to your pages for entertainment, information and instruction till the end comes. F. C. B.

Chillicothe, O.—I do not know of any bill I pay so cheerfully and gladly as I do my annual subscription to dear old F. & S. I get larger returns, better value, more pleasure and benefit from the investment than any other I make. I would sacrifice every other magazine and paper I take before Forest and Stream.

L. B. Y.

Sea and River Fishing.

ANGLING NOTES.

Successor to Boy with Pinhook.

That there is a demand for fishing stories in the daily papers cannot be doubted, for if it were not so the papers would not print them, and they are generally very readable, and often amusing to the angler of experience to see how much is made out of so little. Some of the fishing articles show plainly that the writers have fished a little in boyhood days or associated with those who have, or perhaps they were born in the country and have a hazy recollection of the streams and ponds of their childhood, and when they sit down in a city office to evolve the story, it is really wonderful that their creative powers are so highly developed, and commendable that they build so well upon such slight and shaky foundations. It is not my desire to be hypercritical, but I often think that if these men who construct the stories I refer to and embroider them with such painstaking care could have actual fishing experience for a few years they would make the best angling writers in the world, for they are close observers and have excellent memories, with wonderful powers of description, and if they could actually fish themselves instead of hearing about it at second hand, there are plenty of them who could then sit down when there was a column or so to fill and write a fishing story that would not only be flawless technically, but charming and fascinating to a degree that the average angling writer with lifelong experience could not hope to equal unless he were peculiarly gifted.

One of the greatest bear hunters (in a metropolitan newspaper) of modern times, a man whose reputation is broader than this country, is a very dear friend of mind, and while I never asked him the question, I doubt if ever he saw a bear outside of Central Park. He was once fishing with me, and I introduced him to a man who had killed bears in the woods with powder and ball, and knew nothing whatever about killing them with pen and ink. For an hour my friend sat and listened to the stories of bears that the man had killed, but he made no memoranda then or afterward of the incidents related. Later his paper had columns of bear stories built upon what he learned in that hour's time, but they were constructed skilfully and accurately on facts; but he is an artist in his line of exceptionable ability, and has hunted bears in his paper for more years than most men hunt them in the woods.

The impulse which moved me to write this note was the reading of a fishing story sent to me marked. I saw the story in the paper the day it was issued and glanced at it and passed it by, but when it came clipped and marked, I felt bound to read it in its entirety. On the whole, it is a good story, on the order of a sequel to the boy with a pinhook who catches more trout than the man with modern approved tackle, although in this case the boy has been graduated from the pinhook class and has risen to the dignity of fishing for trout with "minnys," but this was made necessary because "minnys" will not stay on pin hooks. The New York sportsman meets the boy in Maine, where he "was fishing from a bridge on shore. We were using quite different rods and tackle. Mine was a 6oz. rod with silk line and flies of the most approved tying, while he was dangling from the end of a 25ft. peeled spruce pole——" and there I stop, for while there can be no possible objection to spruce trees growing to a height of 25ft., and being cut down and peeled, I think the writer ought not to burden a boy only twelve years old with such a battering ram. If he will measure off 25ft. and go into the woods and select the slenderest spruce tree of that length he can find and measure the butt, I think he will revise his story and put the "rod" into the custody of a steam derrick or a pile driver, otherwise that society which looks after abused children will appear to him through its agent to know why he is so cruel as to make a twelve-year-old boy fish with a ship's mast when alders are probably growing contiguous to his scene of action.

That boy should be cared for tenderly, for he is a marvel, not that he catches so many trout, for they all do that, but as a minnow catcher he is more remarkable:

"'What kind of bait yer usin'?' he asked as the boat touched the shore.

"'I fish with flies,' I answered with dignity.

"'H'm! Yer'll never ketch trout in this pond with them things,' he said, with authority. 'Gimme yer net and balin' dish till I get some minnys.'

"I passed him the tin pail and landing net, and he went to a little cove round the point of the ledge, threw a muck worm into the water to entice the fish, and in ten minutes came back to me with about thirty minnows swimming in the pail."

To the writer of the story that was a mere incident leading up to catching "thirty-four trout weighing from ½lb. to 2½lbs. each," but really it was little short of a miracle, and the writer did not appear to know it; far more marvelous than what follows, and which is supposed to be the grand climax where the red fire comes in. Landing nets are not made for holding fish so small as bait fish or minnows, and I have never seen a landing net that would hold minnows, although because of this it does not follow that there is not one that will hold minnows in its meshes. But admitting that a net used as a landing net will hold them, to catch thirty in an open lake in ten minutes is more of an achievement in my estimation than to catch the thirty-four trout mentioned afterward. But it is a good story, and has a real out-of-doors flavor now that the trout season is over and winter is at hand, and I enjoyed it down to catching trout with a fly, in spite of the boy's ultimatum that it could not be done.

Mysis in Maine.

Prof. C. Dwight Marsh, of Ripon College, has been investigating the vegetable and animal life in the deep waters of Maine, and has made some interesting discoveries, which he has made public in part as follows: "Beneath the waters of our American lakes there are swarms of a living mass whose existence is not recognized by most people. * * * There are also countless numbers of minute animals, most of them belonging to the crustacea. In this inexhaustible field for research I have been at work for a long time past, and now give the result of my investigations, believing that the work of the fishculturist will be aided and scientific storehouses enriched thereby.

"I have pursued my investigations for the most part in the waters of Green Lake, a long, narrow body of water something over seven miles in length, with a maximum width of less than two miles. In the general manner of its vegetable life Green Lake resembles in a striking manner the Great Lakes. * * * In the deepest depths investigated, I discovered some animals which are never found near the surface. In the Great Lakes, for instance, is found in abundance a beautiful crustacean known as the *mysis*. This little animal seems to form the chief food of the lake trout. The *mysis* is not known to occur in any of the smaller lakes of the United States, except in Green Lake, where I discovered it. It would seem probable then that Green Lake is especially well adapted to the culture of lake trout, and might be made the home of this coveted fish."

Shorn of its Latin name, *mysis* is the oppossum shrimp, so called because the females carry their eggs in pouches between the thoracic legs, of which there are seven or eight pairs, and in general the diminutive animal resembles a fresh-water shrimp with an elongated tail. This shrimp to my knowledge exists in one lake in New York, having connection with the St. Lawrence, a lake over thirty miles long and noted for its lake trout fishing and the flavor of its fish when cooked. I know of its presence in the water only through finding the shrimp in the stomachs of captured trout, and have often wished to know more about this crustacean, how often it breeds, how many eggs a single female produces in a season, but have never been able to find anything in detail concerning the shrimp in such text book as I have examined for its life history. In an article I once wrote on fish food, I intended to mention this shrimp, and even secure a figure of it for reproduction, but I could find nothing about it, and my own knowledge of it was so limited that I omitted it entirely. If Prof. Marsh would furnish further information in regard to this shrimp in the line that I have indicated, it may prove most desirable to transplant the shrimp to furnish food for lake trout and landlocked salmon.

Green Lake, where Prof. Marsh prosecuted his investigations, I understand to be the Green Lake now famous for its landlocked salmon, and from which the United States Fish Commission secured many eggs for hatching and afterward the young salmon are distributed in other waters. My recollection is that Green Lake is a stocked lake, stocked with salmon, and that from the first the fish have grown remarkably in its waters. The problem of food for our fishes is so important and one that has received so little attention in comparison with other brands of fishcultural work that I am sure Prof. Marsh will prove a public benefactor if he continues his investigations on the lines he indicates and makes them known very generally.

I had written thus far when I referred to the newspaper clipping again. It says: "Prof. Marsh, of Ripon College, Maine," plainly enough, but it occurs to me that the only Ripon College I ever heard of is in Wisconsin, but if the Green Lake he investigated is, as alleged, the Green Lake in Maine, I will not object to the change in the location of the college should it prove that there is no Ripon College in Maine.

Death of Mr. J. M. Buxton.

Some years ago, perhaps six, perhaps ten, I received a letter from Vancouver, British Columbia, signed J. M. Buxton, asking for information in regard to some fish. I replied and thus inaugurated a correspondence that has continued at intervals until quite recently. Mr. Buxton was greatly interested in everything pertaining to fish and fishing, and particularly was he interested in investigating new species, and was always more than kind to send me specimens of fish about which there was doubt. I have quoted from his letters in this column on several occasions, and assisted him in acquiring text books that might aid him in identifying the fishes of his region. In his last letter he sent a drawing, description and scales of a fish of which Dr. Bean desired specimens, and I wrote for them, but had no reply, until his silence was explained to me this evening by a letter from his legal representative, who writes that Mr. Buxton died suddenly on Aug. 27.

New Fish in Richelieu River.

A partial desk cleaning this evening revealed letters that gave me the shivers down my back, and some that will haunt me, and others that will, I fear, cause a coolness to come between the writers and myself, all because they are unanswered. One from my friend Chambers is more than a year old (I hope he has forgotten the precise date), although it has in blue pencil on the envelope "Angling Notes," which should have called it to my attention some time when I have been digging into the pile. He says: "I have just cut the above from the St. Johns News, published at St. Johns, on the Richelieu River, between Montreal and Lake Champlain. As no description of the fish referred to is given, I wonder what it can be—smelt, tomcod or the young of frost fish?" The "above" reads:

"It is said that a new variety of fish, something like the sardines that make their home in the lower St. Lawrence, have been caught in the Richelieu this summer. They probably come from some of the tributaries of Lake Champlain, which have in latter years been stocked with spawn by the United States Government, but unless the wholesale seining as still practiced in the Richelieu is put a stop to, they will be speedily drained out of this beautiful stream. Fishing in the Richelieu is for the speculator—not for the many anglers."

My opnion is that Chambers hit it about right in the fish he guessed first, the smelt, for it cannot be the tomcod, nor can it be the frost fish (not, in this instance, another name for the tomcod, but the round whitefish), although it is barely possible that it may be the branch herring or "saw belly" from Lake Ontario.

It is more likely to be the smelt than any other fish that comes to mind, and if it is, it simply confirms what I said in this paper a year or two ago might be true, that the Lake Champlain "ice fish," which is the smelt, runs into the lake from the St. Lawrence through the Richelieu River.

The smelts in Lake Champlain grow larger than in any other known waters. The officers of the National Museum in Washington had never seen such large smelts as were sent from Lake Champlain. The St. Lawrence is said to have two runs of smelt, one of fish of ordinary size and the other very large fish, but these runs take place in the autumn, and Chambers' letter is dated in July. Now, the question arises, if the fish were smelts, were they on their way back to salt water after spawning in the lake in the spring? Smelts on Long Island Sound run into the streams and spawn in the night and return to the Sound before daylight of the morning following. I know that when I brought this matter up before, it was contended that smelts remained in Lake Champlain throughout the summer and instances were cited of their capture, but where do the great body of smelts retire to after they appear in the winter and the fishing season through the ice comes to an end? The express agent at Port Henry told me that every winter tons of smelts were shipped away during the fishing season from February until the ice practically breaks up, or becomes unsafe for the fishermen, and the fishermen have again assured me that they do not take smelts at any other season. Where do they go? Last spring I made further inquiries as to the possibility of them spawning in the streams flowing into the lake from Port Henry to Westport, where they are caught through the ice, but the fishermen all declare that they do not spawn in the streams, for they would know it if they did. To be sure, we know that it is not necessary for them to enter the streams to spawn, for in New Hampshire they were found by accident to have spawned in the lake where the water was from 30 to 40ft. deep. Last spring the smelts did not enter the Long Island streams to spawn, either on the New York or Connecticut side of the Sound, but they must have spawned somewhere, and that somewhere was probably in deep water off shore, perhaps near the mouths of the streams which for some reason they would not or could not enter. A year ago the Fisheries, Game and Forest Commission planted 5,000,000 Long Island smelt fry in Lake Champlain, and it remains to be seen if they will enter the streams of Lake Champlain to spawn when they grow to suitable age. Those who have produced evidence that smelt have been caught in Lake Champlain during the summer months have not mentioned any considerable number as having been so taken, and that there are vast schools in the lake in winter, when many are caught with hook and line, cannot be disputed. Now where do those not caught go to if not down the Richelieu to the St. Lawrence? There must be some connection between a run of big smelts up the St. Lawrence in the autumn and the catching of big smelts in Lake Champlain in winter, which the presence of a few smelts in the lake in summer will not explain, so I am still of the belief that the great bulk of the Lake Champlain "ice fish" run into the lake from the sea, and return again to it through the Richelieu River. There is no other fish that I can recall that would fit the description of the fish in the newspaper clipping from St. Johns so closely as the smelt or "ice fish" of Lake Champlain.

Red Trout in Canada.

Four years ago I went to the Triton Club in the

Province of Quebec, and made a two days' journey from the club house in search of a "red trout with a forked tail," said to inhabit one of the lakes in the preserve of the club, and I found only the common *fontinalis* in breeding colors. From that time to this I have heard more or less about red trout with forked tails in Canadian waters, but four other trips to Triton Club has not brought any red trout with forked tail within the radius of my personal observation. That some of the Canadian waters do furnish red trout with forked tails, I have proof positive in the discovery of the Marston trout, and in another trout, the identity of which has not yet been revealed with certainty. Also Mr. G. M. Fairchild, of Cap Rouge, Quebec, has sent me the skin of forked tail red trout from entirely new waters, so far as I know, for such a fish to hail from, and to-day Mr. George Hart, of Waterbury, Conn., writes me: "I have just returned from Canada, where I have been for five weeks. We had awful weather, and out of the five weeks, not six days of fine or clear weather, and on Sept. 22 at Lake Light it snowed. Had fair sport fishing, and visited many of the lakes of the Triton Club. Moose and caribou signs were plentiful, but we killed no game. In a small lake near Lake Light I caught a trout that looked like the American saibling, and I sent it to Prof. Garman, Museum Comparative Zoology, Cambridge, Mass., for identification. It was the most beautiful fish I ever saw. I never have seen such coloring in a trout. I caught it in deep water. It had a forked tail, and the under half of the body was a bright pink, and it had scales like a salmon and head not like a trout or any other fish I have ever seen. Garman writes that he will report soon on what it is. I caught trout up to 5lbs. in weight. I went away sick, and although the weather was the worst I ever encountered, and I was most of the time in a tent, I came home feeling finely, in good health, and was hungry as a bear all the time, and I hope to keep in this condition until spring, when I will try it again."

Lake Light, near where the forked tail trout was caught, is on the Triton Club tract nearly north of the club house, and I sought the forked tail red trout at a much greater distance away at the south and east. Another of the forked tailed red trout came from a lake south of the Triton Club, and still another from waters between Quebec and Montreal, and to the north, and other forked tail red trout have been found south of the St. Lawrence. I did not intend to say anything about these red trout at present, as the whole matter is under investigation so far as it can be investigated with the limited materials at hand, but if specimens of the fish could be obtained, not a single fish from each locality, but several specimens, the matter could be settled beyond question, for it is risky at best to attempt to classify a fish from a single example. I have not yet seen a specimen that it was safe to pronounce a saibling from the skin or single fish in decayed condition. It may prove that the Marston trout is more widely distributed than is now known, or it may prove that some at least of the fish are *Stagnalis,* but what is wanted is specimens of the fish in condition to be examined and not skins or outlines on bark or written descriptions. Seven different people have held out inducements that they would procure specimens of the forked tail red trout, a sufficient number to remove all doubts as to species, but as yet not one has procured the specimens.

Preserve Specimens.

If those who fish the waters where the fish are to be found would provide themselves with formaldehyde for preserving the fish they would materially aid the ichthyologists who are waiting to tell us just what the fish may be. Formaldehyde is a solution similar to formalin (and that will also serve the purpose), and comes in 40 per cent. solution, and is diluted with twenty times its own bulk with water. One pint of formaldehyde (or formalin) with the water added will make twenty-one pints of preserving fluid. Put the fish in the solution, where they should remain a few days, and then they can be taken out, wrapped in cloth and shipped and kept for months. The solution is irritating to the eyes and nostrils from evaporation if the operator works over it long, but this is the method in vogue at national museums for preserving fishes when it is desirable to preserve their colors.

A. N. Cheney.

The Ways of Trout.

At one of the best of Canadian club preserves the experience with trout this summer has been a singular one, and it will be interesting to all of the club members if some one of your readers who is posted on the habits of brook trout will explain the phenomenon. The fishing of this preserve is in a large number of small lakes, which are unusually well stocked, and the membership being small, with the daily catch limited to twenty-five fish for each rod, it has been very evident that the trout have been rapidly increasing for the past few years. The spring fishing was all that could be desired, and if any one failed to reach the limit each day it was something remarkable. The first few days of August were of the same kind—the fish rising well to the flies and the sport first class. There came a sudden change, and from that time to Sept. 15 it was surprising if any one came in after a day's fishing with a half-dozen. It was only by hard and patient work that enough were taken to supply the table at the club house. Such a state of affairs has never been known in previous summers, and it really looked as if the fish had suddenly emigrated to some other waters. The conditions did not appear to differ from those of preceding years, but work as they might the best anglers of the party came in day after day with little or no catch, and often without so much as a nibble by way of encouragement to try again.

I always make it a point to examine the fish when they are dressed, in order to learn what they are taking for food. During the four weeks all of the fish taken were very thin and lanky in appearance, and not one of them had the least evidence of food in it, and the stomachs were contracted, and with two or three exceptions perfectly white and clean—the exceptions contained a small quantity of green vegetable substance. The two layers of fat which are always present in ordinary times were entirely gone, and the fish appeared to be in a starving condition. The water was very warm, having a temperature at the surface and near the shores as high as 70 degrees during the hot days, and not below 66 degrees at night or when the days were cool and wind strong.

At last there came what we hoped was the grand change, and the idea that there were no trout was suddenly put to flight, for one evening, from 6 o'clock until dark, every lake seemed to be in a boil with jumping fish, and the sport was fast and furious. Anything that had any resemblance to a fly was seized as quickly as it struck the water, and all who were fortunate enough to be out at that time had as lively an hour as could be desired.

The writer, with three others, was in camp several miles from the club house, and we fell asleep on the balsam spring beds full of expectations of a great day coming, which became a certainty when we turned out at daylight, finding everything white with a heavy frost, and went to the shore for the morning ablution. The air was decidedly sharp and chilly, but the water felt like a warm bath. We paid little attention to this, however, for a matter of far greater interest was the sight of thousands of trout rising all over the lake. We hurried through breakfast, and were soon out in the canoes, only to find that the fish had done the same thing, for not a fin did any one of us raise for the rest of the day, until again in the evening there was another lively hour. After that day, however, the same old programme was resumed, and the fishing was as bad as ever, and continued so up to the time we came away.

Now, what was the cause of this long period of fasting on the part of the trout? Not the want of food, for there was any quantity of flies on the water, and swarms of minnows in it, and if any one can explain why for over a month the fish gave themselves a period of starvation in the midst of plenty, and at the same time treated us with a most disappointing experience in angling for them with every known device and all of the skill we could command, it will be, as I said, a most interesting bit of reading and information. It has since been learned that the same state of affairs was found all through the various club preserves in the Laurentian district, above Quebec.

Here is another question: Many of the fish taken last May were full of spawn, the eggs being large and to all appearances just as they are in the fall, when the fish are seeking the spawning beds; were these eggs carried through the winter, or is it a common thing for trout to spawn in the spring months? It was observed that the spawn was found in none but large fish of nearly 2lbs. weight or over.

B.

Available Trout Waters.

Many hundreds of fishermen come to Canada from all parts of the United States each year, and many thousands of fish are taken, but there is still a country to the north here which is as unknown to the average fisherman today as was the Grand Discharge and all the Lake St. John region twenty-five years ago.

The territory referred to is that part of the Laurentian Mountains north of Montreal, and extending back across the head waters of the Ottawa, and so on to James Bay. But there is no necessity of extending one's travels to a point so distant as this. The Canadian Pacific Railway has a branch road which extends northward to Labelle, a point sixty miles from Montreal. Step off at any station within twenty-five miles of the northern terminus of the line and make your way east, west or north and you are at once in a country of fish.

Do not attempt to look for anything like a complete map of this territory, for the very simple reason that none exists. Within a few miles of the railway line, on each side, an endeavor has been made to fill in the blanks upon the map with lakes, rivers and mountain ranges, but even these are very incomplete. Some day, perhaps, the Provincial Government will send in a party of engineers with the idea of giving them a few years of constant employment, jotting down a description of the country, but that day is yet far distant.

The lumbering industry, which was the main reason for the railway's construction, has only tapped the very edges of this vast wilderness, while the French-Canadian farmer is just beginning to settle down beside the streams in the valleys near by. With the exception of these few habitants, and the small towns which have grown up beside the railway track, there is but one place of any size. This is Ste. Agathe, which is situated some forty-five miles from Montreal, and is much frequented by Montreal people during the summer months. With these exceptions this vast district is as absolutely without inhabitants as when the pioneers of the great fur companies passed through it on their northward way, upward of a hundred years ago.

The network of mountain streams, rivers and lakes which nestle in these Laurentides (the geologists tell us it is the oldest rock formation on earth) are absolutely beyond calculation. Of course the lakes within easy distance of the railway are known, and in a number of cases locally celebrated for the fish they contain, but beyond the comparatively few Montreal sportsmen who frequent the country, and the native habitant, who indulges in a fish occasionally, the trout is left alone in his mountain lair. And such trout! Here is a lake fed from mountain streams and within an easy half-day of the railway. It winds in between the mountains and is perhaps a quarter-mile wide by three miles long. Try it from the short—a boat is not a necessity, only it is an accessory so far as comfort is concerned. One cast of the line—snap—you have two fish on your leader. One will go ¾, while the other weighs not an ounce less than 2lbs. In this lake the trout run as high as 3½lbs. As to the fly on the line? Why, any fly will do—and so will a worm, a caterpiller or a grasshopper. It's all the same to them.

In this lake there is absolutely nothing but brook trout—not a chub, nor even a minnow—and judging from the trout themselves, one would say that they began life at a little less than ½lb. in weight. The fact of the matter seems to be that the trout while small remain up the streams which feed the lake, and only venture down when of sufficient size to take care of themselves. No one ever caught a better bred or handsomer brook trout in any Adirondack stream, and it would be a poor day's fishing that would not give you a hundred such fellows.

The particular lake referred to is leased from the Government of the Province for the sum of $10 a year, and the five gentlemen who have secured the right have also the leases of six smaller bodies of water all within a radius of three miles. The method of forming a small fishing club has been found by experience to be the most efficient, and at the same time the inexpensive means of taking a holiday during the spring and autumn months. The French-Canadians in the neighborhood, who are woefully poor and glad indeed to work for a dollar a day—never having been introduced to the lavish methods of American sportsmen—will construct a modest log house sufficient for all needs for a matter of $50 or $60. This is then furnished with the necessary bed clothing, cots and cooking utensils. To this you must add a couple of boats of the flat-bottom variety, built at a cost of about $10 each right here in the neighborhood. Or if you prefer a birch bark canoe, that is also obtainable. A convenient farmer, who can drive you to and from the railway station, as well as furnish you vegetables at short notice, is duly appointed guardian. For a reasonable sum he looks after the house for you and sees that not too many people fish on your lakes without permission.

In this manner a small-sized club can, after the first cost, obtain magnificent fishing at a sum not to exceed $10 a year each. In the club I have mentioned the cost is a trifle above this figure, owing to the number of lakes under lease.

Though as yet I have only referred to the brook trout, one must not go away with the impression that these waters hold nothing else. As a matter of fact, there are lakes here which contain gray trout in any quantity—and these fellows run all the way from 2 to 15lbs. each. Then again, there are lakes which have bass and pickerel, and big lusty fellows they are.

There are hundreds of just such bodies of water as I have described, all within a day's journey of the city, and while most of the unused ones, and I might say undiscovered ones, are at present hard of access, owing to the undergrowth on the mountains, this can be remedied in a short time by a couple of lively axemen, who will cut you a trail from the nearest road.

One thing which must be taken into consideration, and which will prevent fishing through midsummer, is the mosquito and the black fly. Up to July 15 these pests are not ordinarily troublesome, but from that date until Sept. 1 it is well to give the country a wide berth. Even with these disadvantages there is probably no other place in Canada where good sport can be had so near civilization and at so moderate a cost.

C. F. Paul.

Trout Fishing on Rapid River in '74.

It should be understood at the start that Gethro was an old hand at fishing, and naturally when it came to the question of a honeymoon I followed him into his favorite haunts. Umbagog Lake being his first choice, we started from Bethel, Me., one warm morning in August for Upton, a drive of twenty-eight miles, and one of the finest in the country. We follow Bear River for miles in and out among the hills, stopping to see the wonderful Screw Auger Falls and Moose Cave. Then a climb to Grafton Notch, with Saddleback Mountain on one side and Goose-eye on the other, filled me with admiration; but the climax was B. Hill, two miles from Upton. Nothing out of doors could be grander than that view.

We arrived at Upton in time to take passage on the little steamer Diamond for Umbagog, and had a delightful sail up the lake. We landed at Sunday Cove to fish for big trout; there was a deep hole in the lake near Sunday Cove, from which Gethro the year before had taken a 4lb. trout, but now the fish had all left for parts unknown. We spent the day rowing to different points, trying our luck—without success, however. At 3 o'clock we got on the steamer again, intending to go back to Upton for the night, as all our baggage was there. The steamer was anchored at Cedar Stump, and the engineer, who was guide as well, had gone with Mr. E. E. Steadman to Smooth Ledge to see if they could catch the big trout that had run off a few days before with a silver-doctor and several feet of leader in his mouth. At 5 o'clock Mr. Steadman and his guide came down the carry with a fine string of trout. Such a string I had never seen before! I was so excited I insisted I would not return to Bethel without a string equally as large, especially as Gethro was called a champion fisherman. In those days we had to walk a four-mile carry, which was a mass of boulders, covered with green moss. The trees had been cut, otherwise it was as nature made it, and such terrible walking never was known! The guides tried to discourage me, but I was determined I could walk the carry, for I knew the trout were at the other end.

A guide came down from Middle Dam to take passage on the steamer for Upton; we persuaded him to return with us, so a small rowboat was left for us at Cedar Stump, and we started for Middle Dam—Mr. Steadman and his trout for the return trip to Bethel. Gethro stopped at the Hop Yard and caught a few trout, then at Smooth Ledge (another trout pool on Rapid River) he caught eight beauties. Trout are said to be more brilliant in that water than in any other pool on the river.

We arrived at Middle Dam Camp a little before 8 o'clock, tired and hungry, but not too far gone to feel interested in a smudge at the end of the piazza, over which stood the horse and cow, to rid themselves of the mosquitoes, which pest reigned supreme at that season.

After regaling ourselves with one of Asa Frost's delicious suppers (he was a fine cook), we sat by a large open fire, while the men had their evening smoke, and planned the morning work. We agreed to get up at 4 o'clock and go down to the Dam. I had been in bed about five minutes, it seemed to me, when there was a rap at the door, and our guide said it was 4 o'clock. I insisted his watch was wrong and I would not get up for all the trout in B. Pond (and there were many in those days), but Gethro knew it was the early bird that caught the trout, as well as worm, and he went down to the Dam to get the big string of trout we had walked so far to

catch. He was repaid. When I appeared at 7 o'clock there lay twenty-seven trout—such beauties! none under a pound and the largest 3lbs.! Gethro stood up to his knees in water; a few yards below him the guide with his net. As Gethro cast into the middle of the stream, often hooking two fish at one strike, an old guide who sat on the rocks watching the performance said: "They seems to be a reg'lar flight er the critters." Gethro wanted me to try my luck. I had never thrown a fly, and like everything else it needs practice; but I managed to get one into the water, and the second the fly touched the surface a trout had it and was off. I was told to play the fish till the guide brought the net. I could not wait for all that ceremony, so I snatched my trout out, doubling my rod terribly. The two men nearly had a convulsion; they thought the rod would snap, but I thought I should lose my trout, and I did not wait for the proper way. I ran off, dragging him into the bushes, where I was sure he could not get away from me. I dropped the rod, seized him with both hands, took him off the hook myself, and ended his life.

We had caught all the fish we needed for ourselves and friends, and after a breakfast of trout baked in cream we packed our finny prizes for the walk back to Cedar Stump. I was so lame I could not walk, and Bony was called to carry me down. (He was so named because he ate fish, bones and all.) I was strapped on to his back. My whole duty was to look out that the branches didn't sweep me off his back, or the black flies devour me. Reins were not needed to guide this remarkable horse; he picked his way among those boulders as man could not—never stumbled. But the pitching down and back was very peculiar—quite seasickening in effect. Occasionally I would exclaim, "Oh, Bony! do wait a minute till I regain my equilibrium," which language he always understood, and cheerfully waited. He often made the journey over the carry with people strapped on his back; no less a personage than Gen. Ben Butler had been carried in the same manner a few days before.

At last we reached Cedar Stump. I was taken off dear Bony's back, and I bade him an affectionate farewell and told him I would drink his health from Cold Spring nearby. I was dying of thirst, and proceeded at once to the spring, a little in advance of the men, who were collecting materials for a fire to cook our lunch before the twelve-mile row down the lake. As I neared the spring a man was lying down, drinking. I had often seen Gethro do it, so thought nothing of it. As he finished and moved, behold! a bear before my very eyes! I stood gazing at the shaggy creature, when the guide, a few feet away, called out, "I smell a bear." I thought it was rather circus-like in odor in that lovely dell, but did not connect it with bruin. I could not move—whether fear or interest held me, I was unable to say. After a satisfactory gaze at me, the bear with great dignity marched into the bushes. The guide was much excited and wanted to chase him with his gun, but I told the guide it was my bear, for I saw him first, and as bruin was polite enough to leave me unharmed and enough water in the spring to quench my thirst, I should protest against molesting him. The guide, too, belonged to us, for in those days we actually bought guides.

We had what I call a wild lunch—no dishes to cook in, but trout and thin slices of salt pork stuck on a green stick (which would not burn easily), and frizzled, and delicious water from Cold Spring, the quality of which cannot be excelled.

We found our little rowboat just as we had left it the night before. I was so tired I was made to lie in the bottom of the boat and an umbrella spread over me to keep me from being sun-burned, for I was already a wreck from lameness and the miserable black flies. We arrived at the mouth of the Cambridge River as the sun was going down behind Squaw Mountain, and I forgot all my ills in my admiration of the surroundings. I cannot describe the grandeur. Please, readers, all go there and see for yourselves the beauties of nature in that region.

When we reached Upton we found an audience ready for us—guides who had been to B. Pond and Parmachenee Lake with Gethro in the old days, and who thought him a wonder because he could throw a fly so far, and several woodsmen who had many a time enjoyed his good stories round the open fire. In we stalked, carrying the big string of trout. "There! I tole ye so! The biggest ketch yit!" said one of his old friends.

The next morning we were up before the lark even, because we must reach Bethel early—before the heat should wither our trout—and as the driver said it was a "dreffu han'some drive down to Bethel." I suspect by "han'some" he meant the downhill drive as well as early morning scenery, and with our own horse we were able to make the trip more rapidly than the stage. The news of our good luck had preceded us, and never were mortals more warmly welcomed than we that morning by our friends at the Bethel House.

To-day Cedar Stump carry is much like any other piece of wood road, and a span of horses attached to a three-seated buckboard makes the journey from Middle Dam to Sunday Cove, morning and afternoon. Middle Dam of '99 is quite different from Middle Dam of '74. The lake, mosquitoes and flies can be found the same. The old log cabin, Asa Frost, the man of the place, the dear horse and cow, as well as most of the trout, have disappeared. ELC.

Muscallonge at Hay Bay.

Editor Forest and Stream:

At Hay Bay, Ontario, near Napanee, on Oct. 2, the several boats that were out trolling took thirteen muscallonge. Messrs. Maxwell and Peal, of New York, were credited with five. The writer, with a friend, staying at Mr. Spencer's at Hayburn, captured seven, using steel rods successfuly in preference to hand lines. The October season seems to be the best for this noble fish. A.

If you have the *Game Laws in Brief* you have the authority on fish and game laws of the United States and Canada. It will tell what you want to know; and what it tells you may depend on. Time, money and pains are expended to make the *Brief* an accurate and safe guide.

Fishing Up and Down the Potomac.

Uncle Sam's Little Fishes.

THE resources of the United States have been exploited in nearly every direction. Maps have been made of the land, topographical, and the strata studied to great depths and charted, so that for much of the United States one may know not only the elevation of the surface but what stones he may expect to find on boring to any reasonable depth beneath that surface in almost any locality. Its waters have been measured and sounded and charted. Its minerals are located, measured and valued.

Agriculture has a separate portfolio, and no scale too small to claim its attention if it threatens a crop. Soils are studied, and climates and rainfall; bugs and blights are constantly under the microscope.

A Fish Commission has been appointed and directed to study the fisheries and propagate and distribute fish to suitable waters in our borders, and has done this so successfully and economically as to awaken the admiration of the world in the gigantic results, that stock not only our pools and streams but oceans with millions. All this to our credit and glory. To our shame no provision has ever been made or the slightest attention paid by the Government to the needs of these little fishes. There is a marine station where investigations are going on into the forms of this lesser life, but there is nothing being done, nor has there ever been in the more important fresh waters of the country. Millions of fish are hatched every year at the various stations. What do they eat? What do they need? Where will each sort thrive best? Who knows? If bolting cloth be carefully shrunken, stretched over a net frame, let down to the bottom of a body of water, marine or fresh river or lake, and drawn up, there will be found in the net a mass of microscopic living forms. It will not contain quite all in the vertical section through which it was drawn, for the resistance of the close net will cause some water to overflow its edge, and fine as are the silken meshes some forms are minute enough to pass through.

This infusorial life, which contains both vegetable and animal forms, as well as some almost impossible to classify, is called the plankton, and aside from its interest as an integral part of the economy of life, has as well the charm of the unknown. Its students are explorers in a densely populated but almost undiscovered continent, the country of the Lilliputians. Illinois and Michigan stand out bright examples by the encouragement they have given to such men as Kofoid, Reighard and Forbes in their investigations of the plankton and the food of local fishes, but no other State has done so much. The interstate rivers have received absolutely no attention. Even the Potomac, important as its waters are by reason of its nearness to and use by a capital where gather the representatives from every corner of the land, stands unsurveyed.

Nobody knows anything about the life in its waters. The Hydrographic Office did collect samples a couple of years ago at various points, which the Marine Hospital Service examined, but only for bacteria of typhoid and kindred diseases, and the result was such a revelation that the Secretary of the Treasury has ever since been asking for authority to examine all interstate rivers in the interest of the public health. It is impossible to understand why such authority is not given; perhaps because it comes in the form of a suggestion and does not appear in the estimates for appropriations, and as it is not pushed never is considered by the proper authorities. Departments are always slow to ask for appropriations in new directions, and this is as it should be. Expenses grow all too rapidly with strictest economy, and it is the province of the Legislature, the people, to direct new enterprises that necessitate the expenditure of public moneys.

But here is a case where the public is ignorant not only of the importance of the subject but of its very existence.

That standing water has some wrigglers of course is common knowledge, but most of us not only never saw these, but never even met any one else who knows anything about this lesser world, peopled with a thousand forms, with species as distinct and as easily identified as in the larger fauna of the earth—an unseen world, in which the struggle for existence is as hotly waged as among the higher forms, for if their destruction was stayed but for a few weeks the ocean would become solid, the waters of the earth would disappear.

That no effort should be made to know something of this life, which teems in every drop of the Potomac, and which furnishes the milk for every suckling fish, is negligence so gross as to be in the nature of a national disgrace.

The Fish Commission does what it can without specific authority or appropriation. At Put-In-Bay Prof. Reighard, with volunteers, is conducting investigations. In Indiana some observations are being made, and a limited exploration is being conducted on the Monongahela. The Potomac remains a no man's water, unexplored and unknown.

The pollution of our rivers has destroyed the fisheries of many States. A factory assumes the right of using a public stream as a sewer, and throughout its course the fish disappear and there seems to be no redress. One of the reasons why the public is powerless to put a stop to these outrages is our crass ignorance. To show cause for complaint the public must show damage, and that has heretofore been impossible, because we could not tell how the refuse of mills and mines affected the waters. Sawdust may cover the spawn beds and, slow to decay, accumulate from year to year. It is visible and grows offensive to man, and therefore has always come in for the principal burden of execration. But there are chemicals which may work worse harm; astringents and pugnent acids may irritate the delicate gills of the mature fish and drive them away; may strangle the young fry; may blight the spawn; may destroy the riparian vegetation which sustains the minor forms so necessary for the sustenance of the fry; may so modify the condition of this wealth of small life as to destroy nature's balance, and if the volume of the plankton is undisturbed its elements may be so changed as to lose its value as fish food.

How do the various pollutions affect the waters of our pools and streams? Until this question can be answered we are helpless. It can never be answered until the waters have been measured and strained, and their contents counted and named and pictured.

Ehrenberg, who practically broke the ice for the study of the infusoriæ, could not distinguish the animal from the vegetable forms; but he left a startling idea of the miraculaus reproduction of a single form in an estimate which showed that undisturbed an individual in less than two months might outnumber all the peoples of the earth. It is well to map the stars and count the glittering glories of he sky, but here is a question directly concerning the daily life and sustenance and health of our people, about which collectively we know little—individually, save for here and there a student, we know absolutely nothing.

What is wanted is a knowledge of these forms and their place in the great chain of human life.

Some are more deadly than the fabled Upas tree. Destroy them all, and not only the fish but man would die. They must be identified and tagged.

In his last annual report to Congress the Secretary of the Treasury said (page LXI.): "It is also recommended that a commission of medical officers of the Marine Hospital Service be authorized by act of Congress to investigate the sources of pollution of streams and other water supplies of towns and cities, where it affects the people of more than one State."

This is well, but more is needed. This proposed commission of medical officers it is only intended shall devote its efforts to an investigation of those forms of bacteria which directly affect human health; waterborne germs of typhoid and other diseases that threaten life. The relations which they bear to the normal plankton may be far too remote to lead to any information on the subject of the fishes and their needs. There may well be pollutions which will not directly affect man and yet be fatal to fish life.

What is needed in addition to the investigation demanded above is a coincident study by infusorial experts like those of Illinois and Michigan into the effects which the various pollutions have upon the plankton and through this upon the fishes of our rivers.

Give the Fish Commission the necessary authority and funds to do this, and take away the burden and discredit of our ignorance; increase the sum total of human knowledge, and for a more direct reward than mere scientific progress, desirable as this may be, secure the more practical result of increasing the efficiency of our tremendous operations in fish hatching and the pecuniary benefits which must follow in greater returns for the appropriations already authorized.

HENRY TALBOTT.

CHICAGO AND THE WEST.

Illinois State Fish Commission.

CHICAGO, Ill., Sept. 27.—The Illinois State Fish Commission, under guidance of Dr. Bartlett and President Cohan, of the Commission, touched at Peoria, on the Illinois River, with their steamer Reindeer this week. The Commission is now engaged in a large distribution of young fish, and Mr. Cohan sends me the following synopsis of the plans:

"There are large tanks aboard the Reindeer, and these receptacles contain about 5,000 game fish, two-thirds of them being black bass. There are some rock bass, some croppies, and a few ring perch in the collection. These fish were taken with a net, ranging in length from 30 to 100yds., as required for use. The vessel has been operated with a crew of eight men in Lost Lake, below the Copperas Creek Dam, and there have been not less than 100,000 fish, other than those selected for distribution, captured and liberated in the river. As the lake is drying up, this transfer saved them for future use.

"The fish reserved as desirable for distribution are graded according to size and age. There are some adults, and others of less maturity. The water in the tanks is kept in a condition suited to the health of the inmates by a system of pumps, the water being literally aerated. In sending the fish out from Peoria the trains will be taken advantage of. But in using the rail in this way it can only be at night. An attendant is sent out with each shipment, and it is his duty to keep the water aerated by hand, so that there is no stagnation detrimental to the health of the fish. The pumping and draining of the Reindeer's tanks is according to an ingenious system invented by Commissioner Bartlett, and it is found to be very effective.

"A very good idea of the importance of this work may be had from the fact that, according to the conservative estimates of the Fish Commissioners in charge, the shipment aboard the Reindeer just now will, in the course of two brief seasons, yield not less than 10,000lbs. of the finest fish food for those residing on the banks of the Illinois River and its tributary streams. During the season now about to close the Fish Commissioners of Illinois have saved not less than 150,000 bass for distribution, and these fish were taken from lakes cut off by low water, and in which the fish must soon have perished. The operations are to be continued until the advancing winter closes the river channels with ice and prohibits navigation until spring.

"The points which it is intended to reach in making shipments from Peoria before the departure of the vessel are Monmouth, Hillsdale, Milan, Aurora Lakes, Clinton, Lake County and Kankakee. The idea is to place a liberal share of the bass in the Kankakee River if the supply holds out." E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

NOTICE.

THE New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

My First Trip to Tea Creek.

TEA CREEK is the coldest, the clearest, the cleanest trout stream in the mountains of West Virginia. I had heard of the rocks as big as a house, of the Falls, and the fine trout waiting to be caught. Now that we have visited the place and a fall chill is in the air, we will put the memories of those swift waters, burnished rocks and cool shades, with the "sunlight glimmering through," away until the days are long and the roads hot and dusty. Still, those mountains and streams are lovely in the fall days, when men hunt deer in this region. The upper slopes of the mountains are timbered with pine, the green of which contrasts strangely with the varied hues of the lower mountains.

In July a man came from New York to fish in Greenbrier River. But the bass seemed to be not at home. We suggested a visit to Tea Creek for trout. The road leads over Laurel Mountain, ten miles away, where it ends abruptly, and the tourist goes on foot down Williams River three miles to Tea Creek House.

This lodge in the wilderness was erected many years ago, and a man was stationed there to prevent squatters locating on a 50,000-acre tract of valuable timber land. It is famous as a camp, from the number of hunting and fishing parties who have sheltered there for two generations. Several years ago some gentlemen had the house furnished with camp equipage, including bedsteads and a cooking stove, at considerable expense, as these articles had to be carried several miles by men or horses. Some persons have stolen the lids of the stove and burned much of the furniture.

Sam Gay and his family, the most hospitable people in the world, live where the road ends. We left the team at his place and started out afoot, with rather heavy packs of camp duffle, including a heavy camera and tripod, ready to do and dare, and promptly missed the trail by about 10ft. and followed a cattle path into an impenetrable jungle of marsh grass high above our heads, where we were constantly running into mud ditches called "sloos" in the vernacular of the country. The famous "dead water" of Williams River is here, and the usually clear mountain stream is no better than a lowland bog at low water. After a deal of exploring around, getting very hot and uncomfortable, and wondering if we were to spend the night in that morass, we located the road and crawled into it by means of the trunk of a fallen pine, my friend losing his spectacles in that bit of escalading, which was destined to be the last of this little series of misfortunes. He showed real grit during the remainder of the toilsome tramp, and while not assuming a boastful tone, remarked that he could stand as much of that sort of thing as anybody.

This delay caused us to reach camp too late to fish that evening. We met a depraved looking man diligently rubbing snuff, who was moved to inquire if John T. McGraw was represented in the person of either of us. (Mr. McGraw is a wealthy land owner who owns vast tracts in these mountains.) The Tug wanted to negotiate for what remained of the furniture of Tea Creek House. This moved us to stow away in the woods our camp supplies during the next day's fishing.

Tea Creek is a most peculiar stream, in the color of its water, due to a discoloration of its bed, which makes the water appear to be of an amber color; but when dipped up it is found to be as clear as crystal. Being spring water, it is cold, and tumbling down a mountain over huge stones, it is most picturesque. The stones are scoured and kept spotlessly clean, which is remarkable when it is considered that there are but few streams that do not deposit sediment at low water.

We saw a stone weighing at least a ton that had been shattered by a blow near the center as though by the blow of a Titan. Fissures radiated from near the center where the force of the blow was spent. In flood the stream moves stones of a ton, and one of these had been dropped 2ft. or more, with the effect stated.

Another peculiarity is that the first mile or two is of no use for trout at low water, they having retired to the pools among the big rocks further up. We did not know this, and wasted our hopes and two valuable hours in careful fishing where there were no fish. We had grown discouraged and sat down for consultation. The camera I carried decided us to push on and see the wonders beyond, for we had almost given up the idea of fishing. I started in to make the best of what I considered hard luck, and began to look out for scenes. My friend pushed on, and when I caught up in the course of a half hour he had three of the prettiest trout I have ever seen, all taken from one pool at the foot of a long flat rock, where the creek runs in a rift that may be stepped across.

We found a succession of pools from there on and had good sport. For the first time in my life I experienced the delights of fly-fishing. I had always heretofore used bait, as being most conducive to successful fishing. I now believe in the bi-angling doctrine, or the use of fly or live bait, as the occasion warrants, indiscriminately. I have since caught a number of bass with flies and am proud of this accomplishment.

I cast into a pool beside a big rock. Instantly there was a commotion in the water, but the line came in empty. The next cast brought a repetition, and presently I saw there were two trout hooked—one on each fly! They were landed successfully, one 9in., the other 7½in. After that I grudged the time to set up tripod and camera.

In places one travels from one big rock to another, like walking from one housetop to another. Of course there are many fine pools at the base of these rocks. The stream appears to have a fall of 200ft. to the mile, more or less, and at 2 o'clock in the evening we supposed we had passed the falls, when in reality we had only come within a half mile of them, as I have since been informed.

There is a wonderful pool below the Falls big enough to float a ship, and there the trout have their fortress. The trout will make a final stand there, to be found when improvident fishing shall have exterminated this beautiful fish in waters not so well guarded by nature. The beauties associated with "waters that run among the hills" will always be found here in a surpassing degree.

The next morning we fished in Williams River. Big trout rose frequently, but were wary.

Three of the Hammonds, from Bug Run, passed carrying rifles and knapsacks. They are a tribe of Tugs, veritable wild men of the woods, refusing to work, depending on hunting and fishing for subsistence.

We returned on the now familiar road to Gay's, where we were served with an excellent dinner. After keeping our horse two days (during which time he had eaten an embroidered pillow-slip off the clothes-line, being the same horse which has heretofore had honorable mention as a polo pony), and extending us every hospitality, Mrs. Gay refused to accept compensation! This generous hospitality is not unusual in some of our mountain homes.

THE CREEK HOUSE.

Two deer had come into the buckwheat patch near the house that morning, a buck and a doe. The buck had a big head of horns.

The house is high on the mountain facing the Black Mountain across the Williams River Valley. A breeze was stirring continually that July day, and the sun's warmth was grateful. The glamour of those high mountains was on us as we descended old Laurel Mountain a thousand feet to the foothills bordering the Greenbrier River.

NORMAN PRICE.

MARLINTON, W. Va.

On Canadian Lakes.

EARLY in July I accepted the invitation of a Canadian friend to spend a few days with him at his summer home on one of a chain of small lakes in Ontario. It was a revelation to me; for, though I had heard of the place, I had no idea of its beauties and attractions. The lakes are about twenty in number, ranging in size from one to twelve miles in legth, and from a few rods to three miles in width, and most of them filled with small islands—one of them having over three hundred—and here is the ideal cottage and canoe life. No palaces like those of the St. Lawrence, but real cottages in every variety of genuine cottage architecture. Quaint and pretty in their detail, located on the rocky points and islands, they make a picture which seems like the realization of an ideal. On one of the islands, in the middle of the largest lake, is a pavilion, at which one of the Canadian military bands gives frequent evening concerts, and at one which we attended more than three hundred canoes gathered about the island, each with its one or more lanterns, making, with the music, an impression on eye and ear that required little to complete one's idea of what fairlyland might be—and such canoes and canoe handling! The canoes are the perfection of the boat building art, and so light, graceful and fine lined as to make the Adirondack or St. Lawrence skiff look like a freight car, and with the single-blade paddle handled with a skill and certainty that seems almost marvelous. The gentler sex could not be classed as passengers, for the large majority of the Canadian girls wield the paddle with quite as much skill and grace as any of the young men, and are as much at ease in a canoe as the Yankee maid on a bicycle.

One of the inducements to go was the promise of good black bass fishing, and I soon found that the lakes are swarming with great lusty, hard-fighting fellows, who make it extremely interesting for light tackle. The moment they are struck they come raging out of the water, and unless the hook is well fastened it comes back empty the next instant; but if it holds, the individual with the rod is bound to be kept busy for the next few minutes, and be entertained with an exhibition of rushes and leaps, contesting for every inch of line, until the fighter has exhausted the last ounce of strength and is drawn to the landing net, where he is almost sure to make one more supreme effort; and many a one parts company with the angler right then and there, leaving him with a very tired wrist and an opportunity to make some forcible remarks, while his opinion of the fighting qualities of the black bass rises several points. In these lakes a 5lb. bass is no rare fish, and our host made a practice of keeping nothing under 2lbs., returning all smaller ones to the water, for a chance to grow and become of some account, as all self-respecting bass should be ambitious to do. The programme was often varied by the vicious strike of a 'lunge, as he pounced upon the bait, and many a bass rig came to grief when this occurred, for the 'lunge has a trick of his own that clean cuts anything in the line of leaders except such as are made of wire; but if through good fortune the tackle holds, there is a battle royal on hand for the fisherman, and I know of no sport more exciting than the combination of a 10lb. muscalonge with a 7oz. fly-rod. It is a proposition in which the chances of victory and defeat are about equal, and no rest for either party until fought to a finish.

The Canadian game laws are good, and if respected and enforced will preserve these wonderfully stocked waters against depletion for all time; but there's the rub—the observance and enforcement of the statute. It requires every non-resident of the Province to take a license for fishing, for which a fee of $10 is to be paid. This provision is waived on condition that the visitors employ Canadian boatmen or are guests of a Canadian house. It also limits the catch to fish of over 10in. length, and not more than twelve bass to be taken by each fisherman each day. It would seem that in consideration of waiving the legal license fee the spirit of fairness alone would prompt the strict keeping within the limit of the number prescribed. A dozen good-sized bass each day certainly should be enough to satisfy any fisherman. On our way up we stopped for a few minutes at a small hotel just at the time when a party of its guests came in after the day's fishing and spread the day's catch on the lawn in front of the house. There were five of our countrymen in the party, and they displayed 150 bass, and stated that they had fished every day, except Sundays, for three weeks, and this was the smallest lot they had brought in. Many of them were handsome fish of 3 to 4lbs., but the large majority were under 1lb.! Think of it! over 3,000 fish taken from this one little lake by one party. It seemed hardly possible; and when I asked what became of so many fish I was told that they were nearly all given to the oarsmen, who either sent or took them to the markets of the nearby towns, where they were sold. Another party of six more Yankees (as we are called) arrived at this house on the following day. The strange part of it is that the boatmen, who make a part of their living by rowing and paddling the visitors, seem to be as enthusiastic as their employers in the effort to catch all of the fish in the lakes, and a strong rivalry is evident as to which boat brings in the largest number. A kind Providence, however, interfered with the slaughter, for after two or three days more of such great fishing the water of all the lakes began to bloom, and became so thick with a marine pollen that it was impossible to see into it more than a few inches, and consequently the taking of a fish soon became a rarity, and if enough were caught for the luncheon each day it was unusual good luck. It surely is a blessing that nature interferes to some extent to preserve the fish; but how long will they last at such a rate of destruction, and why is it that men who are noted for their far-sightedness in other respects, who are regarded as intelligent thinking men—why is it that they seem to throw aside all of these qualities when they find themselves in water that affords them such glorious sport, and immediately engage in a contest among themselves to demonstrate which can do the most to destroy it? What satisfaction is there in killing small fish after they have given all the sport in their little power, when by returning them to the water they will not only perpetuate the species, but afford a deal better fight when they have attained a better size? If the law restricting the number is to be disregarded and "count" is the main object, why not go a step further, and laying aside the rod and reel, take a net?

B.

Riparian Rights.

WILLIAM H. TOWNSEND was the owner some years ago of a lot at Milton, N. Y., on a stream emptying into the Hudson River. Winslow M. Bell and A. E. Bell at the same time owned and occupied lands upon the stream just above Mr. Townsend, having a mill for the manufacture of plush. There was a discharge from the mill into the stream twice a day of water used in dyeing cloths. Different colors, pink, red and green, appeared. A suit by Mr. Townsend in the Supreme Court to restrain the continuance of such use of the stream was first tried in 1891. A dismissal of the complaint was reversed by the late General Term, which ordered a new trial. The case came before the General Term a second time, when it appeared the trial judge had refused to find whether or not the use of the water of the stream in question by the defendants was a reasonable one. On the third trial the complaint was again dismissed. The Third Appellate Division recently ordered a reversal of that decision with a new trial, holding, in an opinion by Justice Putnam, that the discharge of this colored water constituted an unreasonable and improper use of the stream, which entitled the lower riparian owner to an injunction restraining its continuance.—New York Times.

San Francisco Fly-Casting Club.

THE medal contests of the San Francisco Fly-Casting Club for the season of 1899 practically closed with the re-entries on Sept. 30 and Oct. 1.

The club medals will be awarded as follows:

LONG-DISTANCE (single-handed rods, length limited to 11ft.).—Championship medal, W. D. Mansfield; first-class medal, A. E. Lovett; second-class medal, T. W. Brotherton.

ACCURACY.—Championship medal, C. G. Young; first-class medal, Chas. Huyck.

F. H. Reed, with the highest score in the first class in accuracy on Saturday, and Chas. Huyck with the highest score in the first class in accuracy on Sunday, cast off yesterday for the first-class accuracy medal. On the first trial they tied; on the next trial Huyck won by a small margin.

DELICACY.—Championship medal, W. D. Mansfield and C. G. Young; first-class medal, H. F. Muller and A. E. Lovett.

LURE-CASTING.—Championship medal, W. D. Mansfield and T. W. Brotherton.

The general average medal was won by W. D. Mansfield, with a total of 496 points (about 10 per cent.) over the next highest contestant.

The Smyth medal for the greatest improvement in any one of the fly-casting events will go to T. W. Brotherton on improvement in long-distance.

The race between T. W. Brotherton and E. Everett for this medal was very close. At the time the classification scores were completed, it seemed almost certain that Everett would win, but the wonderful strides made by Brotherton in long-distance during the last five contests raised his average improvement in long-distance over 24ft. Everett's average improvement was about 16ft.

The longest cast made during the season of 1899 is the cast of W. D. Mansfield, 133ft., which stands as the world's record, and was made at Stow Lake, Golden Gate Park, San Francisco, July 30, 1899.

H. F. Muller and A. E. Lovett will cast off for the first-class delicacy medal next Saturday. Following are the scores:

Sept. 30.—Wind—Heavy, southwest. Weather—Warm.

"The Wrong of Dog License."

PHILADELPHIA, Pa., Oct. 7.—Under the above caption there appeared in FOREST AND STREAM of Oct. 7 a most interesting plea for the freedom and cherishment of the dog—man's best friend. While I have a deep affection for the dog myself, I also have a profound respect for the rights and comfort and freedom of my fellow man, and on this ground, Mr. Editor, I wish to offer some points for the consideration of the distinguished lady who so ably and kindly makes a plea for the dog's preservation.

First of all, I wish to declare that I believe dogs never can be recognized legally as property unless they are kept within certain limits as to numbers, and certain limits as to multiplication of the species. The dog is a very prolific animal. His fecundity is astonishing. Under the favorable conditions afforded by man's protection and a certain food supply, he multiplies far beyond what society can tolerate and far beyond the needs of society, whether in this relation we consider the dog as a protector or a companion.

Of the thousands of dogs bred, probably 80 per cent. are worthless curs. The remaining 20 per cent. are, we will assume, well bred and valuable, from the standpoint of the useful or the beautiful, the working dog or the guarding dog, or the handsome dog, ornamental to the home or companionable to the family. It is chiefly on the credit of the latter class of dogs that the 80 per cent. number of curs and worthless dogs are tolerated and allowed to live.

The case of Mr. C. M. Munhall, to whom Mrs. Bolton pays so high compliment, was not exactly prompted by a realization of "how the license law bore heavily on the poor who could ill afford to pay," but I think there was some realization of the manner in which it bore upon himself, for he kept a kennel, and sold dogs when opportunity offered. The opposition which he evoked against the law was not so much from a matter of sentiment as from a matter of business.

The kind lady calls attention to how dearly owners love their dogs on the one hand, and that if a tax of $1 or $5 is imposed many of such owners would turn their dogs into the streets, to the tender mercies of the dog-catchers or to the pangs of starvation. It seems to me that the fair advocate makes an inconsistent argument on this point, for if the dogs were loved so dearly, they would not be turned out of doors for the sake of a dollar; and if it is pleaded that the owners could not afford to pay the dollar, the same plea serves to prove that they could not afford to feed and house a dog.

It is hardly to be assumed that a license law, which has been found necessary in England and America, has not at its foundation some necessity for the public good. It is necessary first of all to restrict the multiplication of curs, else they would soon overrun the land. The dog in a state of nature meets so many checks and has so many difficulties to overcome in the struggle for existence that he is kept within bounds from natural causes, though under favorable conditions he will even then multiply in certain favored sections where food is abundant and a protecting habitat is afforded, beyond the increase of any other animal.

In domestication, were it not for the destruction which the public has found necessary to visit on him and the checks put upon his multiplication, the dog would soon be as great a pest as are rabbits in Australia.

The tax in Connecticut is subjected to severe strictures by the kind lady. I think that if she will consider that the proceeds of the dog tax are largely set aside to reimburse farmers for the loss of sheep destroyed by sheep-killing dogs, she will admit that it is not entirely unjust. All sheep-growing sections are afflicted with one of the greatest banes of the industry, namely, the sheep-killing dog. In making the plea for the dog, some consideration should be given to the rights of man. Supposing that the 91,500 dogs said to be killed in New York in 1898 were alive to-day, many of them homeless vagrant dogs, polluting the streets and food exposed on the sidewalks. Supposing further that the thousands of dogs destroyed in previous years were allowed to live their vagrant lives. What then? New York to-day might be good enough for the dogs to live in, but it would not be good enough for man. And yet, to him who journeys through New York's highways and byways, there is no apparent dearth of dogs, for there, as here in Philadelphia, they are in plenty and far beyond the number which is for the interest of the public if we consider the matter of decency and proper sanitation and the good health of the people as matters of paramount importance.

In New York as in all other great cities there are thousands of poor people who find difficulty in obtaining food for existence, and yet the millions of dollars worth of food consumed by the dogs is never considered as being of any moment in the life of the poor people. The purchase of the cheaper meats for dog food makes competition for them, and the demand establishes the price. The poor people have to compete and make up the difference in price from this competition.

In Constantinople, where a man is fined for injuring a dog and where it is said they are not allowed to be killed, the dog is not preserved from any humane impulse concerning him. In that city, where the great sewer systems of Anglo-Saxon civilization have no existence, the dog serves the purpose of a scavenger, and is valued for that purpose. We have a remotely similar case in the United States, where in many sections the turkey buzzard is protected by law on account of his services as a scavenger, and it is against the law to injure or kill one. The dog of Constantinople and the turkey buzzard of America are esteemed for precisely the same reason, so that it is hardly a parallel case to refer to those dogs as being pertinent to an argument bearing on dogs in America.

The fair advocate quotes the folowing: "A speaker at a recent meeting in London said that the exchecquer receipts showed that the dog licenses produced in the year 1895-96 over £500,000, and added: 'Where shall we find another class of taxpayers who contribute so largely to the revenue and receive so little in return?'"

In reply, where is there another class of owners which owns animals which destroy so much property of others? In many sections of the United States thousands of sheep have been destroyed, and in some sections sheep growing has been abandoned on account of the depredations of sheep-killing dogs.

Many owners are too poor to feed their own families properly, and they leave their dogs to such predatory means of livelihood as the neighborhood affords.

Many owners keep dogs that are vicious, and while such dogs may love their owners and may even fight for them on occasion, there is little merit in such dogs' love if on the other hand they bite their owners' neighbors.

This leaves out of account the intolerable nuisance of dogs in a great city, where in barking all night they may and do bring discomfort to a whole neighborhood, or the offensiveness of dogs kept in large apartment houses; nor is it necessary to touch upon the fallacy of the argument which attaches great worth to a dog because he is a guardian to the family; for in a big city like New York, where law and order reign, there is no need of the dog as a guardian. And many dogs will run away on proper occasion when there is danger in sight; and the devotion and love which they have for their masters to-day is the same love that they will transfer to a new master to-morrow; and many dogs will manifest a devotion whose commencement is in a nice piece of steak or a flattering pat on the head.

Now I like a dog as well as any one, but I do not believe that the dog's best place in the esteem of the public can be secured by reviling the public and lauding the dog. It is better to start with the fair understanding that the public has some rights in the matter, and that the dog has some objectionable traits. It may be a great, a very great, hardship on an owner to pay a license to keep a dog, but it is not so great a hardship as it is for a poor peddler to pay a license for the privilege of making a living, to say nothing of hack drivers, pilots, etc., who have to do the same thing. There is much in the way of our own kind which needs humanitarian attention; and there is much in the lives of many dogs which is better in the way of food and home than there is in that of many of the poor in the great cities. The life of the dog is not all somber. The life of all organic beings is not all joy.

LUCIUS A. CHILDRESS.

Championship Field Trial.

THE annual championship field trial will be held at West Point, Miss., during the week commencing Jan. 29, 1900. Entries close on Jan. 1. In addition to the regular purse of the entry fees, there will be the Duryea Cup, awarded to the winner, making the prize the most valuable one ever competed for at any championship trial.

EDWARD DEXTER, Pres.
W. B. STAFFORD, Sec'y.

My New Deer Dog.

HE was given to me. As a general rule a donation of dog should be treated with great caution and more or less diplomacy exercised toward the dog donator. In this case, however, the donor was a friend of long standing. In fact he stood 6ft. 1in. in his socks, had been a companion of my boyhood and was apparently to be trusted. He was much addicted to hunting, and his now matronly better half used to score points on him by spreading around the story of his preparations in the way of luggage for his wedding trip. His baggage, she said, consisted of one heavy trunk containing one shirt, two double-barrel shotguns, one hunting coat (very dirty), one pump gun, one pair overalls (badly dilapidated), two take-down rifles, one pair spike-nailed shoes, several hundred assorted cartridges and one pair socks. This seems to me a little exaggerated. His wife said it was not at all like her idea of a masculine trousseau.

But we seem to be getting away from the dog—and he was a dog. Any one could have told that at second glance. He was highly bred, too, but what his breeding actually was seemed more difficult to determine. The cocker part of it was evidently a bench show gold medal, and the Gordon setter part was also something expensive. His head and tail proved the cocker hypothesis, and his hair and color the Gordon; but the rest of his breeding was somewhat misty. Probably bull terrier with a dash of dachshund would account for some of it—but this is immaterial.

He was given to me as a young dog of great promise—and he certainly was. In his dumb way he was ready to promise anything, but he seemed forgetful. Upon starting him down a brushy canon in quest of the wary buck, he would rush ahead of my steady old deer dog, full of importance and excitement, his head up, with pug nose erect in such a manner as to convey the idea that a whole flock of old bucks was lying a few yards away and he alone knew it. He would dash off in this way for at least 60ft., and then stop as if an idea had suddenly struck him. After sniffing the air for a second or two he would turn and come tearing back to me with an all-satisfied look, as if there were nothing to expect in that quarter, after which he would sociably sit down beside me for a while and hunt fleas. A short rest would be followed by a sally in another direction, and the same performance gone through, altogether making such a noise that an elk crashing through the brush would not have attracted one's attention. His affection for me was something touching. Nothing could drive him away, and I think his failure to prospect any distance into the brush was due to his fear that something might happen to me. He would sit down beside me at times, wag his short tail, scratch, pant and gurgle till in sheer desperation I would draw a bead on him and only refrain from pulling the trigger because he was so confoundedly comical. Every time he sat down it was in some new way. He was not particular what part of him sat. He seemed to be absent-minded, and would occasionally attempt to sit on his head.

My friend said that he promised to be a good deer dog, but in the several times I took him out he never once remembered that promise. The only time he ran a deer was in a fit of abstraction. He saw a yearling doe running, and took a cross cut after it, but the moment he got a scent he promptly drew off and returned to my side to renew his acrobatic exercises. I tried the camera on him, but no one plate could grasp enough of his idiosyncrasies to be more than a dismal failure, and a composite print looked like a fake.

This reminds me of another dog. Some friends of mine were camping in a beautiful redwood grove near a railroad station along a wagon road extending up a mountain. Among other things, they were possessed of an antiquated barouche, an old horse and a dog. The breed of the dog was just or'nary small yaller, but he was bright as a new dollar. The old horse would be attached to the antiquated barouche by "the man with the whoa" at the nearest ranch and left standing in the road for the use of the ladies, generally unhitched. This old horse had a bad habit of falling asleep in harness, and the wag of the party lamented the fact that a mistake had been made in his sex, as he was evidently intended for a nightmare. One day some of the folks were going to catch a train, and as usual were behind time. They ran from the camp, rushed to the carriage and jumped on the steps. This wild charge aroused the horse rather suddenly from his peaceful slumber, and he started off with a jump, throwing those already on the steps into the dusty road, startled but unhurt.

He was really frightened, and the shrieks of whoa were misunderstood, for he tore up the road with the speed of his youth, the yaller dorg after him. The party changed their minds about catching the train, and started out to catch the horse. They tramped that road till long after dark, but found nothing, not even a trace or a buckle—not even the dog. The search being resumed the next morning, with outside assistance, they came to an old unused side road up the mountain with a dilapidated bridge across it. The day before they had scorned the idea of a horse and carriage being able to cross this bridge, but this morning they concluded to look that way in desperation. What was their amazement after a few moments' walk to find the cabriolet standing in the old road, the horse unharnessed and tied to a tree, and the dog watching him with a supremely self-satisfied smile. They said they knew the dog had sense enough not to bring the horse back over such a rickety old bridge, but they failed to see why he did not lead him back along a side trail. Probably he did not like leaving the carriage behind. These facts are absolutely true as far as known, but it strikes me they gave the dog credit for a little too much, because the knot in the rope by which the horse was tied was not the kind the dog could tie, and he was a pretty smart dog, too.

But to resume. After trying in vain to give the cocker-Gordon-bull-terrier-dachshund to several personal enemies and wishing to spare my friends, I took him to town and turned him loose, hoping somebody would find him and have better success in discovering good qualities than I did. I am lying in wait with a gun for my friend, the donor.

Brunswick Fox Trials.

THE eleventh annual field trial of fox hounds will be held at Barre, Mass., Oct. 17-20. The Derby, open to all fox hounds whelped on or after Jan. 1, 1898, will be run on Tuesday, Oct. 17. Entries will close at 10 P. M., Oct. 16. The entry fee is $2. The All-Age Stake will be run on Wednesday, Thursday and Friday, Oct. 18, 19, 20, and is open to all fox hounds. Entries close at 10 P. M., Oct. 17. The entry fee is $3.

The trials will be judged by Messrs. Eugene Brooks, J. H. Van Dorn, C. J. Prouty and Bradford S. Turpin.

All fox hunters are invited to be present and enter their hounds. Shooting at foxes driven by hounds entered in the trials will not be permitted, but those sportsmen who desire to hunt in New England style will be allowed to do so on grounds distant from those selected for the trials. BRADFORD S. TURPIN, Sec'y.

Yachting.

The America Cup.

Columbia and Shamrock.

THE contest now on for the possession of the America Cup is remarkable, as compared with all previous matches, for the many surprises and contradictions which it presents. To say nothing of the many professional writers, expert and otherwise, the opinions of recognized experts among designers, sailing masters and practical amateur yachtsmen as to dimensions, merits of design, probabilities of success under different conditions, and actual positions and performances in the races differ so greatly as to indicate that all are equally at sea. It is doubtful whether so much has ever been written concerning any previous race, and it is certain that there has never been so large a proportion of the criticism, description and comments that is incorrect, misleading or entirely false.

The conditions of news-gathering have never been so unfavorable as at the present time. Until very recent years the fleet of Cup defenders has been visible while under construction, and even when exact dimensions have been concealed it has been possible for writers and yachtsmen to see the yachts while building, and to study them in such a way as to arrive at some intelligent and sensible conclusions. After the yachts were launched they were docked at intervals during the season, and even the Cup challengers were docked publicly some time before the races. In most cases the yachts were hauled out on marine railways (many of them were docked on the old Screw Docks on South street, New York), where they could be seen readily from all sides. As the result of the consequent inspection, description and discussion, a fairly accurate knowledge of the characteristics of each yacht was current before the date of the races. When the races came off, the representatives of the leading papers were carried on the committee steamer, where they were in the best possible position for viewing the yachts, and where they knew in advance the various details of the day's work, the causes of delays and postponements, the courses as finally decided on, and such other points as are absolutely indispensable to a thorough understanding of the race from the start.

At the present time the dimensions and details of design of each yacht are guarded with the utmost secrecy, and the yachts themselves are as far as possible hidden from view. The fact that no one can confidently convict them by presenting the true figures is taken advantage of by many dishonest and unscrupulous writers to present dimensions and even alleged designs which are false in every way and which lead to serious miscomprehensions on the part of those who are unwary or credulous enough to put faith in them. While some actual facts are published, they are so mixed in with errors and falsehoods that it is impossible to distinguish them. As it is to-day, any paper which wishes to make a pretense of publishing the news of the Cup yachts during their construction must either organize a very costly and perfect detective system or must resort to bold and audacious fakes.

When the time comes for launching it is possible to see a certain part of the hull, even of the underwater body, but only for a moment, and under the most disadvantageous conditions. The topsides are, of course, revealed and free even to the camera after the yacht is fairly launched, but the bottom remains a mystery up to the last days preceding the races. When, of necessity, the yachts are finally docked, the work, owing to their great draft, can be done only in two or three places; if at New York, at the Erie Basin Drydocks and in the Brooklyn Navy Yard. It is practically impossible to exclude the public from either place, and though all cameras are rigidly prohibited at the private docks and to a certain extent in the Navy Yard, the ever alert photographers have managed to secure many and some very good pictures.

The view of the yachts, however, as seen in a large drydock, is most unsatisfactory and deceptive. In both docks only those immediately connected with the yachts or the docks were allowed below, and the many thousands who journeyed to Brooklyn came away either disappointed or mistaken. In each case the yacht, Columbia or Shamrock, lay well down in a deep, narrow dock, her deck below the level of the surrounding ground. The topsides, the sheer and the keel contour were plainly visible, but very little more of the form. As soon as possible after the docks were dry the yachts were surrounded with paint stages, which interfered greatly with the view, but even before the staging was in place it was impossible to see anything of the true form of the bilge and midship section below water. It was amusing to hear the opinions of men who really are experts, as they described and criticised the bilge, deadrise and hollow of one boat, and compared them with the same parts of the other, sometimes illustrating their opinions by sketches of the two sections. After looking at the two for hours, studying as far as possible the form of each as compared with the previous work and known methods of each designer, and then listening to the diametrically opposite opinions of men who should be capable of describing and criticising the points of a model, we are firmly of the opinion that even the best judges have been completely deceived in their opinions as to the true form of each yacht and the value of each of her special features as compared with those of the other. As to ourselves, we frankly confess we are still in the dark as to the real points of difference in the midship sections of Columbia and Shamrock, as well as to the respective displacements, though it seems that Shamrock is materially greater. Taking the upper portions of the hulls, as seen fairly well from the dock wall, and better when the yachts are afloat, that of Columbia speaks for itself, as to the admirable combination of length, power and clean form. As to Shamrock, whose whole upper body has been freely criticised as hard, blunt, unfair and amateurish, we are willing to trust more to what we really know of Mr. Fife's work for the past twenty years in numerous successful yachts than to the impression thus received. It is evident even from Shamrock's performance thus far that the great difference ascribed by many of the more expert critics to her as compared with that of Columbia does not really exist. The fact seems to be that even the most expert critics are not yet educated up to a point where they can fairly estimate the points of design, actual or relative, of a modern 90-footer, when confronted with these great machines for the first time, and under unfavorable conditions; and that their opinions are not to be accepted as conclusive.

When it comes to the actual races, while the club extends the courtesy of its members' steamer to the representatives of the principal papers, they are no longer carried on the committee boat, the one place from which it is possible to view the race to advantage with a thorough knowledge of all the conditions. The view from any large steamer, however well handled, is most unsatisfactory as a basis for an accurate and critical report. Even when the vessel herself is well berthed in the big fleet, which is sometimes impossible, it often happens that the crowd on board is too great to admit of free movement, and at an important point of the race, such as the start and turn, one may be caught on the wrong side of the ship, with a fine view of tugs, steamers and steam yachts, but far from the two racers. So far as the average spectator is concerned, there are many steamers which give a good general view of the race from start to finish, except when some other boat intervenes at times; but when it comes to watching every move of the yachts for five or six hours, without missing a detail of the handling and maneuvering, and from a position in which the relation of the two can be fairly estimated, the best of the steamers are very unsatisfactory. In many cases the daily papers employ their own tugs, but these, of course, are kept well within the guard lines, and from their low decks but a limited view is possible at a distance of several miles, even though they are fast enough to make the most of their opportunities. From any outside boat, whether tug or big steamer, it is difficult to catch and read the course signals so as to know at the start where the yachts are going, and it is almost impossible to tell the distance, much less the time, at the line. It is, of course, impossible to carry on any one boat the vast army of reporters, photographers, pigeon fanciers, telegraphers, cinematescopists, viatagraphers and others engaged in the gathering of news, but if it is desired that these great races shall be adequately and faithfully reported both for the information of the many here and abroad who are unable to see them, and as a matter of history, some provision should be made as in former years to carry a limited number of reporters on the committee boat, where they can know what is to be done and see what actually is done.

One of the many surprises of the week, and a most disagreeable one, came with a record of "three straight" on Saturday night. Some have confidently predicted, as in former years, "three straight races" for Columbia; a few have ventured to forecast the same for Shamrock; but no one went so far as to predict the disappointing reality of "three straight" flukes for the first week, three October days with hardly the shadow of a breeze. Tuesday, Thursday and Saturday the result was the same—the two yachts went out in as perfect condition as was ever known in any race, the great fleet of torpedo boats, revenue cutters, ocean steamers, Sound and river boats, tugs, steam yachts and even a few sailing yachts, followed over the long course from the city to the lightship, rolled around all day, and came in at night tired and disappointed with the same story of "No race."

The work of the three days is not of sufficient importance to call for a long detailed story, but it may be better summarized in comparatively few words. In one sense it was most satisfactory, as it was in a measure so indecisive that each side was able to take unlimited consolation from the superior performance of its favorite boat. While there were some situations so plain that it is hard to understand how they can be denied, there were times without number when it was a matter of honest doubt as to which yacht was doing the better work and which was ahead. There are so many uncertainties and possibilities in the problem as it now stands that it would be safer and perhaps wiser to reserve all positive opinions and conclusions for another week, or until one or two races have been sailed; but even at the risk of having to revise our opinions, we shall venture to set down several conclusions.

The present defender of the America Cup may fairly be taken as the one great standard in yachting the world over; she represents the result of the experience of many successful designers and owners in previous international battles, notably of the late Edward Burgess and General Paine; and more directly the wonderful work of Mr. Herreshoff in the production of Vigilant and Defender, and of Mr. Iselin in the general management of the Cup defense in these yachts. In her now unquestioned superiority over Defender, Columbia represents the best that America is capable of, the result of nearly half a century of international supremacy in yachting and of twenty years of most marvelous progress and evolution. In type she is a semi-fin, as adopted by common consent by both nations; in design and construction she is, detail by detail, an improvement on Defender. Her canvas was made by the Herreshoffs, as was that of Defender, and it has been considered to represent the best American practice. Her crew is composed of precisely the same material, prepared in the same way, as in Defender, the Deer Isle fishermen, trained to yacht work by a season of hard drill. The management of the yacht is directly in the hands of her managing owner, Mr. Iselin, assisted by Mr. N. G. Herreshoff, as was the case in Vigilant and Defender; certainly a combination that it would be hard to equal from the ranks of American yachtsmen. Her skipper, though of Scotch birth, has grown up in this country, making a place for himself by hard work and skillful sailing at the top of his profession. Whatever may be said of the handling of Columbia, for which he is only in part responsible, no one has questioned his skill as skipper of Minerva, Gloriana, Wasp, Vigilant and Colonia in many seasons of hard racing.

In comparing the two boats it may be said of Shamrock that she has decidedly the better sails throughout. Mr. Ratsey's work is as good to the boat as it is beautiful to look at. Both boats have been well handled; the weather has been of that trying sort when the best of skippers may differ as to what sail to set or what course to take at any particular time, the only test of each man's skill being the final success or failure of his maneuver. Columbia has been sailed much as her predecessors, carefully and skillfully; with light and shifting winds and calm spots on either hand, she has taken the usual chances, and sometimes has been caught becalmed, but on the whole her work has been good. Shamrock has been much better sailed than any English yacht seen here for some years; the odd combination on board of her seems to work remarkably well; she has been sailed steadily from the start, as carefully as small yachts, making the most of every change in the wind and with sheets carefully and skillfully handled. The steering, the sail setting and the trimming have all been well done. While she is far ahead of her predecessors in these matters, the maneuvering has been a great surprise to American and Canadian yachtsmen. Twice in particular she has broken tacks and left Columbia after catching and leading her, and she has indulged in some vagaries of canvasing, as in starting down wind with a baby jibtopsail, the other yacht carrying a ballooner, that are extraordinary to the American mind.

Taking the actual work of the two, there has been a great deal of drifting, in which no comparison was possible; a great deal of rank fluking, one lying becalmed while the other held a nice breeze; and some reaching of an indecisive sort. What sailing there has been under even conditions has been with booms squared or dead to windward, in all cases with a very light wind, and with more or less roll to the sea. Off the wind the two are very even; it will take more trials in a long steady run under proper canvas to show which is the faster. The one point most plainly in evidence after the three days is the superiority of Shamrock to windward in a light breeze and smooth water or a moderate roll of sea. At this game she can leave Columbia, slowly it is true, but so steadily and surely that it is hard even for those who wish to do so to deny it. The result off the wind is so nearly even and on the wind is so clearly in Shamrock's favor that it seems certain she will win in a fair windward and leeward race in which they can cover the course in five or even five and one-half hours.

After being told with more or less authority during the last few months what Shamrock is and is not, the partial trials thus far are confusing to the experts and amusing to others. It was natural to assume that she was of practically 90ft. l.w.l.; any yacht designed for the Cup to-day naturally would be. The measurer's tape, applied under the watchful eyes of Mr. Herreshoff and Mr. H. F. Lippitt, showed her to be 89ft. 8in. The master mind which can predict a winner on the basis of a difference in the fourth decimal place in a coefficient appears to have been wrong in this case by over 2ft. The hull, which has been so roundly criticised, with its unfair bow, hard blunt lines, lack of length when heeled, and heavy quarters, is somehow capable of being driven as fast in light winds as the longer and fairer form of Columbia. There has been no question among experts that the rig is all wrong; the sail plan shows the long baseline and the short perpendicular which has on this side been proved inferior, especially in very light weather, to the lofty and narrow rig; and with the mast far aft, the forestay brought outboard to the stemhead, as in the old cutters, an excessive area of head triangle and a particularly larger staysail, it has been asserted that Shamrock could not do good work to windward, though she might reach. Thus far there has been no reaching to speak of, but she has done clean good windward work alongside a yacht of known quality.

The experts who followed the yacht day after day on every trial under sail were agreed on several points. It was conceded that she was fast on a reach, but off the wind she was particularly slow and sluggish for a 90-footer, and at all times she sucked after her a huge quarter wave that held her back. In the running thus far she is at least the equal of Columbia, while the quarter wave apparently pushed quite as much as it pulled.

The story of the loan, as it was reported, of the noted English skipper, Ben Parker, by the Emperor of Germany to Sir Thomas Lipton has been told, retold and officially contradicted throughout the season, and at last partly forgotten. Somehow or other, Capt. Parker turned up in New York on Sept. 30, slipping in unobserved while all the town was busy over Admiral Dewey, and he has been on the yacht ever since, acting in conjunction with Captains Hogarth and Wringe. The exact details of the management of the yacht are unknown. Sir Thomas Lipton does not sail in her, but follows on Erin. Mr. Fife, who was to be in charge as representing the owner, was unwell on Thursday and Friday while the yacht was in the dock, and on Saturday was compelled to take to his bed at the Fifth Avenue Hotel, where he has since been confined by a severe attack of inflammatory rheumatism. He has not only been unable to take any part in the races, but has been in great pain, his feet and legs being badly swollen. It is improbable that he will be able to leave his bed for some time. In his absence, Mr. Cornell has taken his place on the yacht. The two captains, Hogarth and Wringe, are in joint command, dividing the duties and authority between them, and Capt. Parker is aiding them. The combination is a curious one, but it appears to work well thus far.

The measurement of the two yachts took place on Monday, Oct. 2, both being measured at the Navy Yard. Shamrock was towed to the yard early in the morning, and on the arrival of Mr. Hyslop, about 8:30, the representatives of the two tossed a coin for first turn, Columbia winning. She was then afloat in the new drydock, and her crew set to work to strip her of all

COLUMBIA IN DRY DOCK NO. 3, BROOKLYN NAVY YARD.

movables. It was nearly noon before the measurement was completed, the spars being first measured, and the sail area calculated, after which the waterline was measured, all the work being done under the inspection of Mr. Herreshoff, representing Columbia, and Mr. Connell, representing Shamrock. The waterline measurement was taken with all hands on board, including Messrs. Iselin, Duncan, Thorne, Woodbury Kane, Herbert Leeds and Capt. Barr and Mate Allen. Lem Miller, who has sailed so long in other ships as mate under Capt. Barr, was also on board, being shipped for the races. The measurement of the waterline, completed at noon, showed only 89ft. 4in., so the crew was sent to the St. Michaels for more lead, 1,700lbs. being shipped aft. A new measurement was taken, giving a waterline of 89.66ft. This so delayed operations that it was after 1 o'clock before Columbia left the dock, Shamrock immediately taking her place. Mr. H. F. Lippitt, as the representative of the New York Y. C., joined Messrs. Herreshoff and Connell in watching the measurement. The final results were as follows:

	Columbia. Feet.	Shamrock. Feet.
Length on the load waterline	89.66	87.69
Length from the after end of the main boom to the forward point of measurement	181.62	189.13
Length from the fore side of the mast to the forward point of measurement	73.35	79.46
Length of spinaker pole	73.35	79.46
Length of gaff	64.95	67.64
Length of topmast	64.50	58.06
80 per cent. of topmast	51.60	46.45
Height from the upper side of the main boom to the topsail halyard block	134.75	128.28
Square root of the sail area	114.61	116.15
Sailing length	102.135	101.92

It has been taken for granted from the first that both yachts would show just as little as possible under the limit of 90ft. l.w.l., and as Shamrock had undoubtedly the larger sail area it was assumed that she would allow time to Columbia. To the surprise of all hands, Shamrock showed 2ft. 3½in. under 90ft., and actually receives time, though but six seconds, from Columbia. Her sail area is greater by 355sq.ft. After the measurements were taken the two towed down to the Hook for the night.

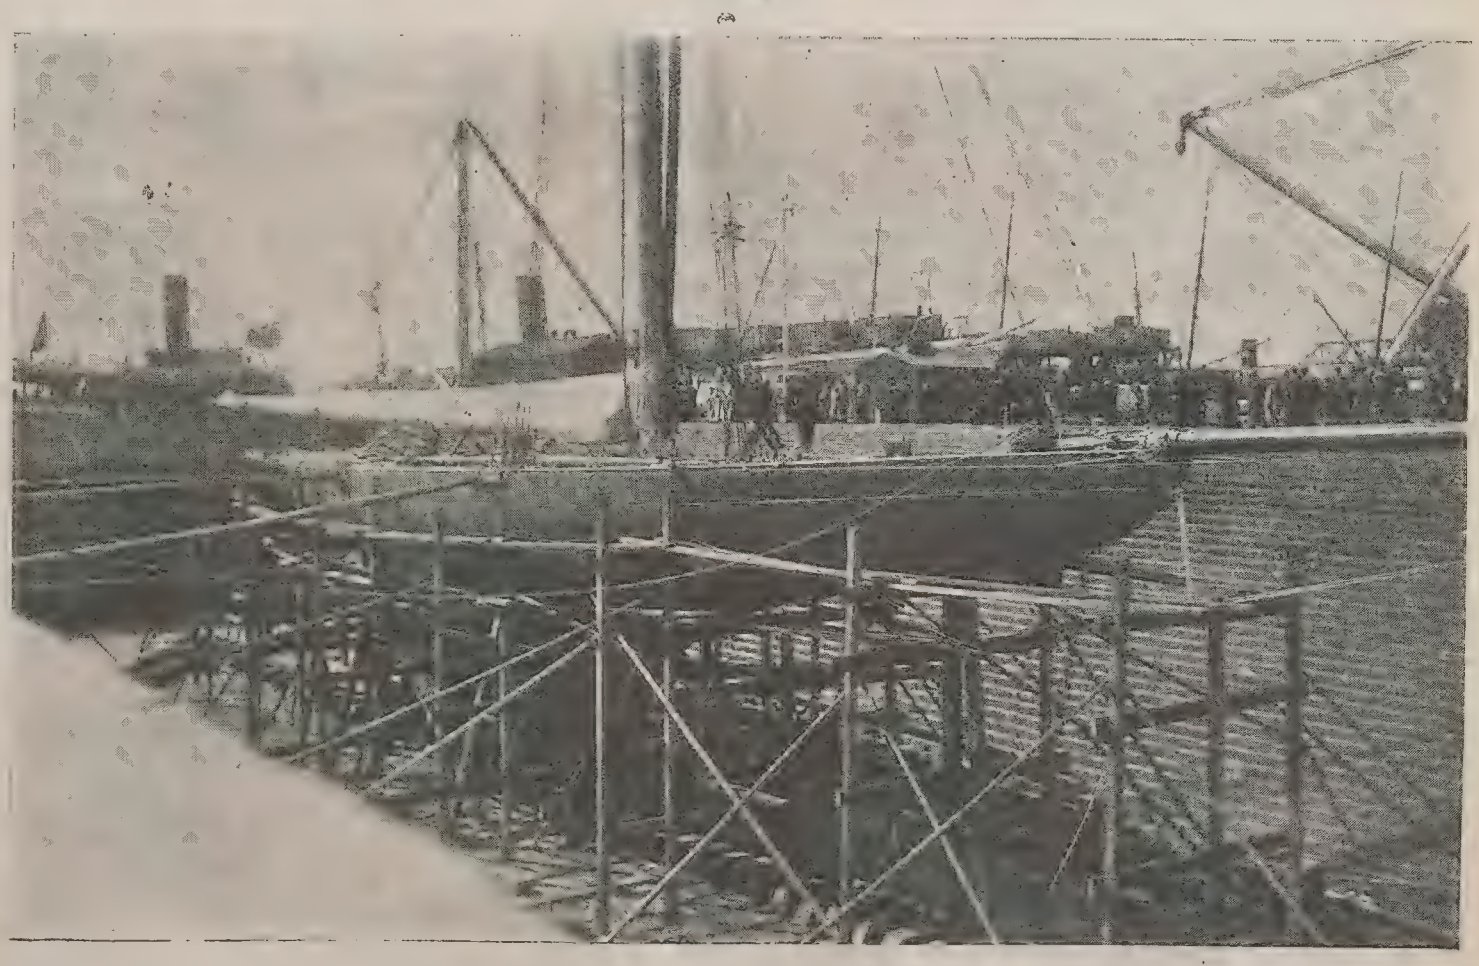
First Race—Windward and Leeward.

FIRST DAY—TUESDAY, OCT. 3.

A sharp, keen nor'wester blew all day Monday, chilling the many spectators about the dock where the yachts were measured, but on Tuesday the temperature was higher and the weather much milder, the sun shining brightly. The wind was N.E., and blowing over a dozen miles an hour in the early morning, but falling toward noon. The whole of the Upper Bay was filled with vessels between 9 and 10 o'clock, everything which could carry passengers being under way, from the big coasting steamers La Grand Duchess, Ponce, Miami and Jefferson, down to small tugs and steam yachts. The steam fleet was out in full force, the new yachts Niagara, Josephine II., Aloha, Aileen II., Corsair III., Sapphire III., Eugenia II., Aphrodite, Kanawha II. and many older ones. Torpedo boats dashed about through the fleet, and the new revenue cutters were out also on patrol duty. With a good ebb tide the big fleet steamed out of the Narrows and down the Swash, or the East, channel, reaching the Sandy Hook Lightship a little before 11 o'clock. The racing yachts came out with club topsails set, the committee tug Luckenback anchored off the Lightship, and the torpedo boats and revenue cutters, Capt. R. D. Evans being on the bridge of the cutter Manning, began to jostle the crowd away from the line. The pilots as a rule endeavored to give all the necessary room to the racers, and though it was necessary to warn some more than once there was as clear a space for the start as any one could ask.

The course signals read S.S.W., and the markboat was sent off with the float and ball. A second tug, showing two red balls on her stay, was ready as a pilot boat for the yachts, the steel booms rendering the compasses almost useless. The first gun fired at 11:15, with the preliminary at 11:10. There was no quick work for the line, the start being slow and tame; Shamrock led over the line at 11:15:37, with Columbia following at 11:16:20, of 43 seconds astern. Columbia made an American start, breaking out her balloon jibtopsail and spinaker at the line. Shamrock prepared for a down-wind start by setting a small jibtopsail, and though her spinaker boom was ready to port the sail was not hoisted. If she was looking for a luffing match she did not find it, but to the surprise of all the spectators she ran along slowly without spinaker or balloon jibtopsail, though both sails were drawing on Columbia. Shamrock lufted out a little, and Columbia ran up on her port side. At 11:20 Shamrock broke out her spinaker, following which Columbia lowered her working headsails to give a full chance to the two balloon sails. It was twelve minutes after the start before Shamrock hauled down her small jibtopsail and set her ballooner in its place, Columbia meanwhile having caught her. The wind was light at the start, some ten knots, and falling all the time, the yachts holding their headway, but moving slowly. Columbia ran evenly with Shamrock for a little while, but under the same canvas the green boat drew ahead until she had opened a clear lead. The wind was variable and fluky, and the sailing was no test of the boats. Shamrock managed to get over a quarter of a mile ahead by dint of slow gains, but a little after noon, when off Seabright, Columbia caught a stray bit of breeze from S.W., her spinaker quickly came in, her boom jibed to port, her staysail was broken out, headsheets were trimmed, and she reached inshore and around Shamrock, the latter still holding a very light northerly breeze, until she was as much ahead as she had been astern. Shamrock caught the new breeze several minutes later and also took in her spinaker and jibed over, setting her staysail, though both still held to the balloon jibtopsails. The westerly breeze was very light and fluky, and about 12:30 Shamrock was tempted into trying to run, with her spinaker to starboard, but this did not pay, and the sail was soon stowed. They worked out to the mark, about three miles offshore, near Deal Beach, Columbia gaining steadily, until she turned at 1:37:57, with a lead of 2m. 1s., Shamrock's time being 1:39:58. In addition, Columbia had made up the 43s. that she was astern at the line.

The wind was now nearly down the course, light, but fairly true and steady, and the beat home promised to be exciting and instructive. They came on port tack around the mark, but Columbia soon came about. Then followed a series of very short tacks, forced by Shamrock. While she gained very little through mere speed in tacking, she was working out all the time and footing well, so that when they gave up the very short tacks and settled down to straight sailing she was soon gaining inch by inch on Columbia. For nearly forty minutes they held on, tacking together at times, with the wind about the same for both, and at the end of this time Shamrock was clearly on Columbia's weather and the leading boat, having made up a full two minutes. At 2:20 she made a most extraordinary maneuver. Columbia was standing inshore, where the chances were best of finding more of a breeze, which threatened to drop out where they were. Shamrock, now on Columbia's weather and on the same tack, came about and left Columbia going to the eastward offshore. With a little shift of wind to help her and to head her rival, Columbia screwed well out on this tack, and when Shamrock came back to the inshore tack again she was in Columbia's wake and a long distance astern.



The advantage was now with Columbia, and though it began to be doubtful whether they could finish in time she made the most of it. The two were skating on thin ice, hunting here and there on the chance of finding a streak of wind and avoiding the many calm spots, and luck counted for more than judgment. Columbia had the luck for a time, her casts inshore paying well, but she tried it once too often and was hung up hard and fast in a calm spot, while Shamrock caught a bit of wind a little further out and sailed along to windward at a good speed.

The wind had now fallen so light and ran in such streaks that the race had lost all interest, especially as the time limit was rapidly running out and the yachts had covered barely half of the home leg. The two worked in under the Jersey beach, moving slowly and failing to find the breeze they looked for. Columbia after dropping far astern picked up again, and when the race was called off by the committee at 4:45 she was but a little distance from the leader. Both lowered their headsails and passed their hawsers to the tugs. The attendant fleet started home as fast as steam could carry it, many of the boats racing all the way in.

There was a great diversity of opinion as to the merits of the two boats and of the handling. When Columbia gained on Shamrock on the beat in Capt. Barr was all right, as big a man as Admiral Dewey, but when she was caught later on in the calm streak he was, in the opinion of some patriots, a worse man than Aguinaldo. Granting that the whole day was very much of a fluke, it still remains that the honors were very even off the wind, while Shamrock did some very fine work on the wind within the first half hour or so or turning. It may be said of this trial, as of the two which followed, that in every previous Cup race—unless possibly in 1895—under the same conditions of light fluky weather the American yacht, while no nearer to covering the course within the limit, would still have been several miles ahead of the British yacht.

SECOND DAY—THURSDAY, OCT. 5.

Both the yachts lay at anchor inside Sandy Hook on Wednesday, Columbia's crew, under the direction of Mr. Iselin and Capt. Barr, being busy bending another mainsail and a new club topsail. Nothing special was done on Shamrock, though all her gear was carefully overhauled. The start was called for 11 A. M. on Thursday, at which time the wind was still very light, but N.W. by W., so the signals were set for a leeward course, S.E. by E. The start was an easy one, Columbia leading over the line at 11:00:53, with Shamrock at 11:01:05; both with balloon jibtopsails set and spinaker booms to port, Shamrock breaking out her spinaker on the line and Columbia about a minute later. Columbia gained from the start, and opened up a clear lead, which

SHAMROCK IN ERIE BASIN DRY DOCK.
From photo copyrighted by J. C. Hemment.

she gradually increased, both moving very slowly. Finally Shamrock began to luff, Columbia accepting the challenge. The wind fell and left them drifting for a time, Columbia being once caught aback and turned fairly around until she was heading home. This occurred at 2:20, and a little later the wind went round to S.E., still very light, and the pair trimmed in for a beat out to the mark. At the start Columbia was still ahead and to windward, having the advantage of position. A beat of an hour followed, in smooth water, and with a very light but fairly steady wind. At the end of this time Shamrock was so far ahead that Columbia, coming up on port tack, was compelled to go about under her lee bow. Just after this, there being no prospect whatever of finishing in time, even if they could turn the outer mark, they both gave up and started home at about 3:45.

THIRD DAY—SATURDAY, OCT. 7.

On Friday the weather changed, a moderate gale sweeping up the coast and bringing rain with a strong N.E. wind. It was so rough in the Horseshoe that Columbia was towed up to Bay Ridge early in the morning, though Shamrock rode out the blow in safety. Saturday was clear and bright, however, with a fifteeen-knot breeze from N.N.E. in the early morning, but by 11 o'clock it had fallen to twelve knots and was still decreasing. Again it was necessary to lay the course to leeward, S.S.W., the same as on Tuesday. The two yachts set club topsails shortly before 11 o'clock, Shamrock's being smaller than that previously carried, but as the wind was plainly falling, she lowered it at 10:55 and set her large club instead. The gun was fired at 11:20, Columbia going over with a lead of 17s. at 11:21:02. As on the first day, while Columbia broke out her balloon jibtopsail at the start, Shamrock crossed the line with her baby jibtopsail set, looking for a luff that never came. With her spinaker boom down to starboard, but no sail set, Shamrock luffed out across Columbia's stern, but the latter, with her ballooner drawing, also broke her spinaker and drew ahead. Columbia still had her jib set, but the balloon jibtopsail was doing its work, while Shamrock carried her jib, staysail and baby jibtopsail. At 11:34 Shamrock shifted her working staysail for a ballooner, and then took in her small jib topsail and replaced it with a ballooner. The spinaker was not broken out on Columbia until 11:40, Shamrock's following. For the first time in an international yacht race the British yacht has essayed to set her spinaker in stops; to-day the upper stops were too heavy and failed to break out, so that it was necessary to lower the sail until a man on the crosstrees could reach and cut the stops.

There was a heavier roll to the sea than on either preceding day, but the yachts seemed to feel it about equally. Shamrock gradually drew ahead, and just before 1 o'clock jibed over, Columbia following. Shamrock had held close in toward the Jersey beach, much further from a straight line than Columbia's course. She set her working headsails when still far from the mark, hurting the draft of her ballooner, still the most useful sail. As they neared the mark Columbia improved her position, but Shamrock was clear ahead. She made a very wide turn, however, while Columbia, beautifully handled, cut in between her and the buoy. The times were: Shamrock, 1:36:25; Columbia, 1:36:39. There was but 9s. between them, showing a gain of 26s. in fifteen miles of slow running.

The windward work began with Columbia in a poor position, taking Shamrock's back wind. They started home on starboard tack and held it for a couple of minutes, Columbia being first about. Shamrock did not follow for another minute, and she was no sooner on port than Columbia went on starboard. Five minutes of quick short tacks put Shamrock well out on Columbia's weather bow and in an excellent position, which she continued to improve, working steadily away until after about 45m. she had a lead of about half a mile.

The wind was falling very light and running in streaks and patches, as on Tuesday, so that it was evidently Shamrock's play to stick close to Columbia, risking no flukes, and to keep constantly between her and the lightship, while the indications were that the wind would shift further to the eastward or offshore. So far from doing this, Shamrock deliberately left Columbia, broke tacks and went fluke hunting inshore, with the result that Columbia picked up a little of the promised easterly breeze and was soon the leading boat. After thus losing her place, Shamrock did all that she could to regain it, and finally came up so near to Columbia that, as they both lay well inshore near Seabright, the shadow of Shamrock's big club topsail was visible for half an hour on Columbia's mainsail or headsails. They were now hardly more than drifting, and it was evident that the race could not finish in time. When it was called off at 4:30 the two were so nearly even that it was a matter of doubt which was ahead. Columbia was a little to windward, with Shamrock on her lee bow, and with the odds in her favor when the difference in time of starting and allowance is considered. As in the first race, the latter part was a matter of luck which showed nothing more than that this challenger is strong where all others have been weak—in very light weather. In the running there was little to choose, but in the windward work, as long as the wind held true the advantage was all with Shamrock.

So far as is now known, the dimensions, especially the extra beam and draft, the added displacement and more powerful form of Shamrock, with a lower center of effort and center of gravity of rig, a lower center of gravity of ballast and probably more ballast, promise to make her a very dangerous boat under lower sails or a reefed mainsail; and at the same time it has been proved that she is at least as fast as Columbia in very light weather. The strong point of Columbia is probably in good working breezes when she can carry her club topsail comfortably, at which times her lessened displacement and longer and finer lines will make it possible to drive her at a higher speed than the shorter, broader and coarser boat. At the same time it must be remembered that the many strong criticisms of Shamrock's underwater body are more than offset by her work in the three trials; if her design were as defective as it has been declared to be, it is hardly possible that she could hold Columbia under any conditions.

The work of the guard fleet has thus far been most successful, there having been no interference whatever with either yacht. A number of vessels have been warned off the course, some of them under circumstances which have led to formal complaints being lodged against them by the officials, on the strength of which it is threatened that the licenses of their pilots will be revoked. It is rather amusing that among the small number of steam yachts which have been warned off the course by the guard fleet are White Ladye, Mr. J. L. Johnston, and Erin, Sir Thomas Lipton. The attendant fleet has divided each day, part going down the Jersey beach to the westward of the racers and part keeping out to sea. Each division has been distant from one to two miles from the yachts, except at the start and turn, and with a continuance of the present arrangements it seems probable that all danger of crowding or interference of any kind will be avoided. The fleet is a very large one, but being so scattered as compared with previous years, one does not easily realize its vast proportions. Apropos of the oft-repeated suggestion of going to Newport to avoid crowding, all the regular passenger steamers that ply about Narrangansett Bay and to Block Island and Nantucket are on the course off Sandy Hook, gathering in the dollars, while some quite small steamers have come from the Delaware River, bearing out our argument that it is impossible to avoid the steamer fleet as long as men come from a distance to see the races and are willing to pay good prices. The attendance from distant points—Montreal, Toronto, Chicago, New Brunswick, Toledo, Cleveland and other Western and Southern cities—is very large, and the interest is increasing rather than the reverse as the close matching of the yachts is disclosed.

On Saturday evening Mr. Iselin went to New Rochelle, leaving Columbia in the Horseshoe, near Shamrock. Sir Thomas Lipton and his friends remained on board Erin, in company with the racers. On Sunday afternoon the representatives of the two clubs met at the New York Y. C. house to consider a proposition from Sir Thomas Lipton to sail the races every day after Tuesday. Owing to contracts and arrangements already made for Tuesday and Thursday, it was finally decided to adhere to the present plan of alternate days until after Thursday, when a race will be sailed on each week day unless either party objects. The following was drawn up, to be inserted in the conditions of the races:

The foregoing agreement [the condition of the challenge] is further modified by mutual consent as follows:

Strike out the clause beginning "the first race shall be sailed on Tuesday, Oct. 5, 1899," and substitute the following: "The races shall be sailed on the following dates until the series be completed, viz.: Oct. 10, 1899; Oct. 12, and on each following day except Sunday; provided, however, that immediately on the conclusion of the race of Oct. 12 and of each subsequent race the regatta committee shall inquire of each contestant whether he is willing to start the next day, and should either contestant reply in the negative one day shall intervene before starting the next race. Sunday shall not count as such intervening day.

New York, Oct. 9, 1899.

On behalf of New York Y. C.: Lewis Cass Ledyard, vice-commodore; J. V. S. Oddie, secretary; F. W. J. Hurst, treasurer; Edward M. Brown, H. F. Lippitt.

On behalf of the Royal Ulster Y. C.: R. G. Harmon-Crawford, vice-commodore, R. U. Y. C.; H. M. McGildowny, R. U. Y. C.

If it is agreed after finish of a race to sail next day, the code letter L will be flown on the committee steamer; but if otherwise, the letter M.

On Sunday Sir Thomas Lipton was a guest of Col. Butler Ames on the old America, sailing about the Lower Bay. The day was cloudy, with a fresh N.E. breeze and rain at night, continuing through Monday. Columbia's crew unbent her mainsail, and both it and her club topsail were recut.

Tuesday, Oct. 10—3 P. M.—A dense fog closed in on Monday evening, and held up to noon on Tuesday, with no wind. A small fleet of steamers went out to the Lightship, and at 11:15 the committee boat set the signal, "Race off." The fleet steamed in to the port of the Hook, where the two yachts, with their tenders, were lying. There was no preparation on either for a race. A meeting was held on board the flagship, at which Sir Thomas Lipton requested that a race be ordered for Wednesday, but the regatta committee declined to accept the proposal, so the next trial will be on Thursday, Oct. 12.

A Puget Sound House-Boat.

THE illustration is from a photograph of the only house-boat on Puget Sound, a body of water peculiarly adapted to house-boating. There are houses built upon rafts of no pretensions of navigability, and floating "shacks" of all kinds used by the fishermen in the rivers, harbors and inlets, but this is the only vessel of the kind capable of navigating the waters of the Sound at all times of the year in almost any kind of weather. It was built during the winter of 1896-7 by H. L. Merrill, city clerk at Fairhaven, Wash., and C. S. Rice, of the same city. The hull is 38ft. long, 10ft. beam amidships, depth 3½ft., and the roof of the house rises about 3ft. above the deck, allowing 6ft. 2in. standing room inside. The hull is flat bottomed with a skeg running aft from amidships. The frame is of 2 by 8in. timbers, 2ft. apart, double planking on bottom and sides, making it stiff and tight. The house is 27ft. long, conforming to the shape of the hull, with double walls of cedar siding on the outside, and matched ⅜ cedar on the inside. The house is partitioned into four rooms—kitchen, dining room, bunk room and toilet, the three main rooms being 8 by 10. Four swinging bunks and two couches running the full length of the dining room afford sleeping accomodations for six people. There is a range and sink in the kitchen, water tank, ice box and all the comforts and conveniences of a modern home. A small pipe conducts the rain water from the roof into the water tank. The boat draws only 8in. of water. It can be towed on tide with a small boat for short distances, can be sailed before the wind, but when on a cruise it is generally taken in tow by the small passenger steamers running to various points on the Sound, and the expense of moving is thus merely nominal. The summer months are generally spent among the islands, and in the fall it is taken to the flats.

It furnishes an ideal home for the duck shooter, as it can be stationed convenient to the shooting grounds, and is easily moved from place to place. There is probably no place in the United States where there is such a variety of scenery and sport as on Puget Sound, and the house-boat is an institution in every way adapted to the highest enjoyment of it.

FAIRHAVEN, Wash., Sept. 21.

NIAGARA, A PUGET SOUND HOUSE-BOAT.

Canoeing.

The A. C. A. Executive Committee.

COM. MACKENDRICK has named Saturday, Oct. 28, as the date of the annual meeting of the executive committee of the American Canoe Association, the meeting to be held at the Toronto C. C. house, Toronto. Messrs. C. B. Vaux and H. M. Dater have been appointed an auditing committee for the report of the secretary-treasurer. Messrs. D. B. Goodsell, of Yonkers; Herbert Begg, of Toronto, and R. Easton Burns, of Kingston, have been appointed as regatta committee, the latter as chairman.

GALT, Oct. 4.—*Editor Forest and Stream:* Having had the privilege of moving at the executive committee meeting, held in Buffalo in 1898, a resolution recommending the regatta committee to hold the races of the Association on Tuesday, Wednesday and Thursday of the last week of the annual meet, which met the approval of the executive committee, and believing that the incidents of 1899 have emphasized the advantage of holding the principal races during those days, I propose to offer the following addition to the by-laws:

"That Chap. IX.—duties of regatta committee—be amended in the second paragraph by inserting after No. 6 the following: 'No. 7—The races required by those by-laws to be held at an annual meet shall be called on Tuesday, Wednesday and Thursday of the last week of the annual meet.'"

J. N. MACKENDRICK.

American Canoe Association.

Proposals for Membership.—Associates: Miss Florence Presbrey and Miss Clara Presbrey, canoe Izan, Taunton C. C., Taunton, Mass.; Mrs. S. Gardner Raymond, Mrs. Wm. H. Samson, Mrs. Bernhard Lierching, Irondequoit C. C., Rochester, N. Y.

NOTICE TO SUBSCRIBERS.

The address label on the wrapper shows the date of the close of the term for which the subscription is paid. The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Take inventory of the good things in this issue of Forest and Stream. Recall what a fund was given last week. Count on what is to come next week Was there ever in all the world a more abundant weekly store of sportsmen's reading?

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Trapshooting.

If you want your shoot to be announced here send in notice like the following:

Fixtures.

Oct. 11-12.—Reading, Pa.—Live-bird and target tournament of the Independent Gun Club.
Oct. 11-12.—Paris, Ky.—Hill Top Gun Club's two-day tournament. John L. Bosley, Sec'y.
Oct. 11-12.—Newark, N. J.—On Smith Brothers' grounds; two days' tournament of the New Jersey State League.
Oct. 12-14.—Louisville, Ky.—Tournament under the auspices of the Kentucky Gun Club. Emile Pragoff, Sec'y.
Oct. 13.—Batavia, N. Y.—E C cup target championship contest between Mr. W. R. Crosby, holder, and Mr. R. O. Heikes, challenger. Match begins at 3 o'clock.
Oct. 16-19.—Du Pont Park, St. Louis, Mo.—Fall tournament; three days at targets; one day at live birds; $300 to $500 added money. J. A. Corry, Manager.
Oct. 17-19.—Circleville, O.—Fall tournament of the Pickaway Rod and Gun Club. G. R. Haswell, Sec'y.
Oct. 17-19.—Baltimore, Md.—Sixth annual fall tournament of the Baltimore Shooting Association. J. R. Malone, Manager.
Oct. 18.—Lyndhurst, N. J.—Handicap at 25 live birds, $10 entrance; also sweepstakes.
Oct. 21.—Wissinoming, Pa.—Philadelphia Trapshooters' League.
Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $750 added. W. R. Elliston, Sec'y.
Oct. 25-26.—Rochester, N. Y.—Eighth annual fall tournament of the Rochester Rod and Gun Club.
Oct. 26.—Mt. Kisco, N. Y.—Fall tournament of Mt. Kisco Gun Club. Open to all. Cash and merchandise prizes. R. W. Gorham, Sec'y.
Oct. 31-Nov. 3.—Cincinnati, O.—Tournament of the Cincinnati Gun Club; two days at live birds; two days at targets. Arthur Gambell, Sec'y.
Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.
Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.
Watson's Park.—Burnside Crossing, Ill.—Medal contest the first and third Fridays of each month.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.
May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. E. S. Rice, Pres.
June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.
June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.
June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.
June —.—Tournament of Ohio Trap-Shooters' League, first week in June. J. C. Porterfield, Sec'y.

DRIVERS AND TWISTERS.

The seventh annual fall tournament given by the Baltimore Shooting Association, Oct. 17, 18 and 19, has two days at targets and one at live birds. The shooters will be handicapped by distance as follows: Amateurs, 14yds.; semi-experts, 16yds.; experts, 18yds. Two sets of traps, Sergeant system, will be used. All target events are known traps, unknown angles. Manufacturers' agents may shoot for targets only. Four moneys—40, 30, 20 and 10 per cent.—will govern the division of the moneys in target events. Shells shipped care of Alford Sporting Goods Co., 212 East Baltimore street, will be delivered on the grounds. Shooting commences at 10 o'clock. There are twelve target events on the first two days respectively, two at 10, six at 15, and four at 20 targets. Entrance based on 10 cents per target; $100 added each day. On the third day there are three live-bird events on the programme—the Baltimore introductory, 7 birds, $7, and the Suburban sweepstakes, 10 birds, $10, three moneys each event, 50, 30 and 20 per cent., high guns, 30yds.; the Pimilco handicap, at 30 birds, $20, handicaps 25 to 33yds., two moneys, 60 and 40 per cent., class shooting. Birds are included in the entrance in each event. The tournament will be under the management of Messrs. H. T. Ducker, James R. Malone and J. C. Hicks.

In the race home from the yacht race on Tuesday, Oct. 3, there was rather a critical moment for some of the shooting experts when the steamboat Monmouth ran into the steamboat Onteora. In the party were Messrs. U. M. C. Thomas and C. M. Landon, of the U. M. C. Co.; Mr. A. R. Berry, assistant secretary of the Smokeless Powder and Ammunition Co., London, and Mr Edward Banks, secretary of the American E C and Schultze Powder Co. Messrs. Landon and Banks were on the forward part of the main deck when the collision occurred. The whole port side ahead of the paddle wheel was shattered or splintered, and the bow of the boat was borne under water so far that Mr. Banks was suddenly more than waist deep in water and would have been swept overboard by the rush of water had it not been for the help of a nearby stanchion, to which he clung. He had pocketfuls of water and a wet camera, all of which were trifles compared with the saving of the affable and accomplished gentleman. Messrs. Thomas and Berry were watching the race so enthusiastically that they paid no heed to the collision.

The eighth annual fall tournament of the Rochester Rod and Gun Club, Oct. 25 and 26, Rochester, N. Y., has a similar programme each day, namely, ten events, 140 targets in all, with a total entrance of $14. Targets included in all events at 2 cents each. Five per cent. of the purses will be deducted for average money, to be divided each day 40, 30, 20 and 10 per cent. For general average the club gives $7 to first, $5 to second and $3 to third. No one barred from the sweepstake events. Manufacturers' agents will not be allowed to shoot for average moneys. Shooting begins at 9:30 each day. Lunch served on the grounds. Take Park avenue cars. The committee is as follows: Messrs. John F. Norton, R. C. Kerchner, Geo. Borst, J. L. Weller, A. H. Mosher and F. E. McCord.

A Cincinnati correspondent writes us as follows: "The scheduled event for the Fleischman-Peabody cup the first Wednesday in November will necessarily be postponed one week on account of the tournament. Last Wednesday's (Oct. 4) contest the standing of the leaders was in their five best scores—75 birds: Frank See 68, Gambell 68, A. C. Dick 67, Schuler 67, R. M. Burton 65, Hugheey 65, W. H. Little 65, Lindsley 64, H. Burton 64; and there's many a slip 'twixt, &c. Schuler has ordered a very fine medal to take the place of the cup now being shot for, the first contest to take place in December."

Mr. W. R. Colville, of the Du Pont Powder Co., while in New York last week visited the Interstate Park grounds, near Jamaica, L. I., in company with Capt. J. A. H. Dressel. He expressed himself as being highly pleased with them in every particular. They now are entirely cleared of the crops and seeded down, presenting a beautifully level appearance. They could not serve the intended purpose better if made to order. The architect's plans for the casino we learn are well advanced toward completion.

In the contest for the Review cup, at Kansas City, on Oct. 3, between Messrs. J. A. R. Elliott and W. R. Crosby, the latter won by the score of 98 to 97. On the following day they contested for the Republic cup, which Elliott won by the score of 100 to 91, Crosby losing 2 dead out. All the details are set forth with painstaking care by Mr. Litzke under the caption "Arkansas and the South."

The portrait of Capt. John Philip Sousa, "The March King," published in our columns this week, is from a photograph which we received through the courtesy of Mr. H. S. Humphrey, Indianapolis, Ind., who has attained a high degree of skill with the camera. It shows the great leader at the traps at a time when he was a guest of the Limited Gun Club.

Mr. S. R. Berry, assistant secretary of the Smokeless Powder and Ammunition Co., London, England, sailed on the Teutonic on Wednesday of last week, after a short visit in New York. He regretted that he could not remain longer to witness the yacht races. During his short stay he made many friends, who wished him bon voyage and a return to Yankeeland again.

Mr. H. B. Nicholson, secretary of the C. L. R. & G. C., Crown Point, Ind., writes us as follows: "The Cedar Lake Rod and Gun Club have named Oct. 28 and 29 as the days of their next tournament, the same to be held on the club grounds at Paisley (Cedar Lake), Ind. Programmes can be had by writing the secretary."

We profoundly regret the death of John Plankinton, Jr., of Milwaukee, Wis., who passed away recently from an acute attack of typhoid fever. He was less than twenty-one years old when he passed away, and had a large circle of friends who grieve for one who had so many noble qualities and bright prospects in life.

Wet, cloudy and dismal weather, with a bad light, were the conditions which governed the contest for the championship of New Jersey, of which the E C cup is emblematic, at Lyndhurst, N. J., on October 6, between Messrs. Harold Money and C. W. Feigenspan. The former won by the score of 46 to 43.

Dr. A. A. Webber, the champion pistol and expert trap shot, has been wearing goggles as a result of the accident which injured his eye at the Hell Gate Gun Club's shoot. For a time there was danger that the eye might not be saved, but it is a pleasure to relate that such danger is all past.

Mr. B. H. Norton, of the Hazard Powder Co., under date of Oct. 6, writes us as follows: "Mr. Edw. S. Lentilhon's nephew had his new Remington gun stolen. Two hundred dollar grade, No. 100,197, hammerless, ejector. Will you kindly mention same in your paper and it may help to recover it?"

In the club shoot of the East Side Gun Club, Newark, at 25 targets, Geo. Piercy was high gun on a score of 21. In the sweepstake events, Mr. L. H. Schortemeier cut out the work for the competition.

Mr. R. W. Gorham, secretary of the Mount Kisco (N. Y.) Gun Club, informs us that his club's fall tournament, open to all, will be held on Oct. 26, and that there will be merchandise and cash prizes.

Mr. H. W. Levi, of the Garden City Gun Club, won the Chicago Sportsmen's trophy in the contest for it at Watson's Park, Oct. 7, the manner of it being all set forth in "Western Traps" this week.

CAPT. JOHN PHILLIP SOUSA.

On Oct. 18 there will be a 25-live-bird handicap at Morfey's shooting grounds, Lyndhurst, N. J. The entrance will be $10. Sweeps will also be shot at the pleasure of the contestants.

Mr. R. S. Waddell, of Cincinnati, O., and Mr. E. D. Fulford, of Utica, N. Y., were among the distinguished men who were in evidence in the gun colony last week.

The shooting season of the Crescent Athletic Club opened last Saturday. In the October cup event Mr. L. Rhett scored 25, the limit, with a handicap of 6.

The Garfield Gun Club, Chicago, has begun its series of live-bird shoots, two each month, fourteen in all, closing in May next.

BERNARD WATERS.

WESTERN TRAPS.

Chicago Sportsmen's Trophy.

CHICAGO, Ill., Oct. 7.—The fourteen entries for the Chicago Sportsmen's trophy contest, second of the series, yesterday, found fine weather and birds which were soft marks. This is really the poorest shooting month at pigeons of the year, as the birds are moulting now and do not fly well.

Nearly everybody went straight in the first trials of the 15-bird race, only two men—Dicks and Parker—falling back of 15, the former with 12 and the latter with 13. The shoot-off was the main thing and turned out an unexpected winner, H. W. Levi, of Garden City Club, who by means of his handicap shot out such old-timers as Geo. Roll, Joe Barto, Eddie Steck, J. H. Amberg, W. B. Leffingwell, etc. At the 15 hole, or third frame of 5s in the ties, Dr. Shaw lost a bird, and this left only six men in—Elias, Amberg, Roll, Barto, Levi and Young. The end of the next frame saw only three left in—Roll, Levi and Young—Elias having dropped out on his last bird in this string. Of the remaining three Roll had no bird allowance, Levi had needed his extra tie bird three times and Young had used his extra bird twice. In the following frame Roll lost his second bird and Young lost his first two. This left the race for Levi if he could kill straight after his missing his second bird. Levi pluckily killed on out straight and won the handsome badge. Roll and Young divided the money on second honors. Roll won high average badge for the second time. Scores:

Geo Roll, 30, 0	121221111221112	—15

Birds for Belle Meade.

Mr. Robert E. Cox, of this city, who is to provide the birds for the big Belle Meade shoot, writes me asking me to come over and look at his lot, as he has nearly 10,000 now in stock and is very proud of their quality. I hear Belle Meade orders fully 10,000 birds, and they will be a good sort.

E. HOUGH.

480 CAXTON BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, Oct. 7.—The following scores were made on our grounds to-day. The weather was ideal for shooting, but unfortunately a farmer chose to-day to burn an old straw stack a short distance to windward, and a heavy fog of smoke drifted across the traps all afternoon. Notwithstanding the smoke, R. Kuss won A medal with a perfect score—25 straight—while W. Northcott was a close follower, winning B medal on a score of 24. C medal was won by Brabrook on a score of 17.

Jack Fanning, of Gold Dust fame, paid us a visit and solved the smoke problem to the extent of 21 out of 25. Dr. C. Shaw, a brother of our Dr. Shaw, was also a visitor from Woodhull, Ill. This closes the season of target shooting, and on Saturday we begin on a series of live-pigeon shoots. The series will consist of fourteen shoots, two each month until May. The scores:

Twenty-third trophy shoot, 25 targets:

Kuss	1111111111111111111111111—25
Richards	1100011111111111111011111—21

The shoots will be held on the second and fourth Saturdays of each month.

Trophy shoots to begin at 1 o'clock and no entries permitted after 3 o'clock.

A shooter must participate in at least eight shoots to be eligible to win a prize. Eight high scores to count only.

Trophy events to be 10 live pigeons. An entrance fee of $2 will be charged (birds extra), and the money, if twenty-five entries or under, divided 50, 30 and 20 per cent.; if over twenty-five entries, 40, 30, 20 and 10 per cent., and the club to add $5 to each purse. Members will be placed on a handicap of distance only, 25 to 31yds., sliding handicap, to be rearranged after each shoot. Pigeons trapped in trophy events at 15 cents each.

All members are requested to note the fact that no entries in trophy events will be received after 3 o'clock.

DR. J. W. MEEK, Sec'y.

Eureka Gun Club.

Chicago, Oct. 7.—In the trophy shoot, No. 2, Cunnyngham won in Class A, Dr. Miller won in Class B, J. L. Jones won in Class C and J. G. Lovell won in Class D.

Event No. 3 was the Mussey cup. J. G. Lovell (4) tied A. W. Adams (2), each scoring 24. In the shoot-off at 10 targets Adams broke 9 to Lovell's 6.

The team race, six men on a side, 20 targets, resulted as follows: Steck 15, Adams 17, Miller 17, Walters 16, Sundermeier 8, Dunbar 9; total 82.

Cunnyngham 18, Antoine 15, Bennett 15, Jones 15, Borroff 18, Lovell 14; total 92.

Trap Around Reading.

PHŒNIXVILLE, Pa., Oct. 6.—Stephens to-day won the gold medal at the second monthly medal shoot of the Phœnix Gun Club, of this place. Stephens and Buckwalter both shot from scratch, and each scored 24. In the shoot-off at 5 targets Stephens broke 5, while Buckwalter could only get 2. The shooting was over the magautrap, 25 targets per man. Score:

Medal shoot, handicap: Stephens, scratch, 24; Buckwalter, scratch, 24; Holman, 4, 21; Dotterer, 5, 20; Phlet, 6, 20; Hodge, 5; Ennis, 6, 18; Edwards, 6, 18; Miller, 7, 18; Harris, 9, 15; Erb, 10, 14; Tracy, 12, 12; Farley, 15, 9.

Cumbola, Pa., Oct. 4.—John Thomas to-day defeated Patrick Brennan, of St. Clair, in a live-bird match for a $20 purse. Brennan killed 2, while Thomas killed 3. Each man shot at 5 live birds, one trap.

Lancaster, Pa., Oct. 5.—W. C. Grube, of this city, to-day defeated E. F. Smith, of Fairville, in a 10-live-bird match for $15 a side on the shooting grounds at McGrann's Park. Grube killed 8 to Smith's 7. As soon as the match was completed Smith promptly challenged Grube to shoot another match at any number of birds for any sum. Grube at once accepted and proposed to shoot it at once at 20 live birds each, for $25 a side. This time Smith won by the score of 18 to 17 for Grube, although Grube had hard luck by having 3 drop dead out of bounds. The two then decided to shoot another match Oct. 12 at 25 live birds.

Royersford, Pa., Oct. 7.—Buckwalter to-day won the Corrigan medal by breaking 21 out of 25 targets at the monthly shoot of the Twin City Gun Club, of this place. The score: Buckwalter 21, Miller 19, Johnson 15, Poinsett 14, Corothers 7, Emmers 3.

The Twin City Gun Club have decided to hold a target shoot Oct. 21 for a fine $250 gun.

West Chester, Pa., Oct. 7.—The challenge cup of the West Chester Gun Club was to-day won by Hoopes, a new shooter. The scores are very low. Hoopes and Sellers tied on 17. In the shoot-off Hoopes won, breaking 6 to Sellers' 5. Score:

Twenty-five targets per man: Hoopes 17, Ford 15, Gill 15, Hoar 16, Howard 16, Sellers 17.

Elliott-Crosby Matches—Review Cup.

KANSAS CITY, Mo., Oct. 3.—The first of a series of two matches between these two well-known experts was shot at Exposition Park to-day and resulted in a win for the Farmer Boy after a close and stubborn contest, which the final score shows was won by 1 bird. That each of the contestants was in the best of form is evidenced by the great score each put up, the aggregate showing Crosby 98, Elliott 97. The local man maintained the precedent he has so often established of losing his first bird, and though Crosby shortly afterward lost his 3d, he was never able to take the lead, as he lost his 13th and 85th, the latter costing him the race. Crosby, after missing his 3d, ran 57 straight, at which juncture his 61st fell dead out of bounds, after which he killed out. Crosby's best runs were 57 and 38, the latter remaining unfinished, while Elliott made the best run of the day—71. Both shooters used the first barrel with great precision, and the second was largely used for safety.

The birds were a very good lot, mostly blue of color, and as a rule good flyers. The weather conditions were good, though the light wind which blew right quarterly across the traps did not aid the birds materially.

Mr. Jno. J. Hallowell, of the U. M. C. Co., acted in the capacity of referee, Mr. W. V. Rieger was trap puller and Mr. James Whitfield, of the Kansas City Star, was official scorer. Through the courtesy of the latter we are able to give the flight of the birds.

Republic Cup.

Oct. 4.—To-day Messrs. J. A. R. Elliott and W. R. Crosby met again in a pigeon contest, though this time the possession of the Republic cup was at issue. This brought about a most remarkable contest, and resulted in Elliott retaining possession of the cup, as he put up a perfect score, running his 100 birds straight without a skip. Notwithstanding Elliott's great performance, Crosby also gave a good account of himself and actually missed but 1 bird, though the score only credits him with a total of 97. Two of his birds fell dead out of bounds.

In accomplishing his feat of to-day Elliott established a new record, as this is the first 100 straight birds which have ever been killed with a repeating gun, though it has twice before been accomplished in matches.

In November, '92, Mr. E. D. Fulford, in a match with J. L. Brewer, scored 100 straight. In July, '94, Elliott also succeeded in duplicating this feat. Fulford's score was made under Hurlingham rules and Elliott's under American S. A. rules. Each used double-barreled guns on these occasions.

Thus by his score of to-day Elliott is the only man in the trap-shooting world who has ever made such a score twice. Both of these feats were made on the same grounds, as his contest with Dr. Carver also took place at Exposition Park.

The prevailing conditions were not favorable to the birds, as a light drizzling rain fell, but that again made the light bad, so while the birds were not as fast as yesterday, the shooters had the light and a bad background to contend with. Crosby's best run was 48 straight, as he too ran straight up to the 49th round, but thenceforward dropped 1 in each string of 25.

Mr. Chris S. Gottlieb acted as referee, J. W. Bramhall as trap puller and Mr. James Whitfield as official scorer.

Trap score type—Copyright, 1899, by Forest and Stream Pub. Co.

Crosby used a Baker gun, E C powder in a Leader shell. Elliott used a Winchester repeater, Leader shell and Hazard powder.

St. Louis Tournament.

The programme for this has not come to hand yet, but Manager Corray writes me that there will be $225 added money, which, as I understand, will be added in the target event. The idea is to have two days' target shooting, with ten events, mostly 15 targets, and add $10 in each event, while the additional $25 will constitutue an average fund. The last day will be given over to live-bird shooting, and the chief event will be 25 birds, in which a valuable cup will be put up for competition. This should make quite an interesting programme and one that should draw more than its share of patronage, especially as it should catch some of the Western shooters en route to Belle Meade. This is to be a three-day affair in place of four, as originally announced.

PAUL R. LITZKE.

Trap at Baltimore.

BALTIMORE, Oct. 6.—On Saturday, Sept. 30, the Baltimore Shooting Association held their first contest for the Pentz pin, a handsome pearl scarf pin presented to the association by Uncle Jake Pentz, of Shooting and Fishing. Ten birds were shot at by each contest, and the scores were: Dixon, 28yds., 10; Fox, 30yds., 10; Collins, 28yds., 10; Malone, Dupont, Coa, Hood and West killed 9 each; Judge, 5; Hicks missed his 8th bird and withdrew. A miss-and-out match followed and was won by Hicks and Fox, who divided the money on the fifteenth round.

Considerable interest is taken in a match in which Malone and Fox on one side and Hicks and Ducker on the other will shoot a race at 100 live birds per man for $250 a side. A forfeit of $50 has been posted by each side and the time for the race will probably be the last week in October at the Baltimore Shooting Association grounds.

On Tuesday, Oct. 3, at the Baltimore Shooting Association grounds, Ansley H. Fox and J. Mowell Hawkins shot a match at 25 live birds for $25 a side. Fox won, score being 23 to 22 in his favor. Immediately after this race, Fox was challenged by Dixon to shoot a similar race with the exception that Dixon was to stand at 28yds. and Fox at 30. The race was shot at once. Fox won, killing 25 straight to Dixon's 23. Fox killed his last 45 birds straight. Capt. Robinson, of the Baltimore baseball club, then shot a 10-bird race with Brodie, of the same club, Robinson winning—8 to 7.

On Wednesday, Oct. 4, at the Monumental Shooting Park, the third contest was held for the American Shot and Lead Co.'s live-bird handicap medal. This shoot was won by Hawkins, who killed 15 straight in the race and then won the shoot-off with Hicks by killing 5 to Hicks' 4. Hawkins shot from a 29yd. mark, while Hicks shot from a 30. There were sixteen other contestants for the medal. This medal must be won three times to become the personal property of the winner. Hicks, Fox and Hawkins have each won it once.

HAMMERLESS.

IN NEW JERSEY.

East Side Gun Club

Newark, Oct. 5.—The club shoot at 25 targets, handicap, was the main event of the day. Targets were thrown hard and a stiff wind in the latter part of the day and a stiff inblowing wind did not make them any easier later in the day. The scores follow:

Championship of New Jersey.

Oct. 6.—The contest for the E C cup, emblematic of the championship of New Jersey, had most unpleasant weather conditions. There was a slow, persistent rain falling most of the day. There was a raw atmosphere and a dark, bad light. Messrs. Harold Money, the holder, and C. W. Feigenspan, the challenger, were the contestants. The former won by the score of 46 to 43. On the first 25 he broke 24 to Fiegenspan's 23, and on the last 25 he broke 22 to his opponent's 20. Mr. Arthur Bunn was referee. Mr. W. R. Hobart was judge for Mr. Feigenspan, while Mr. T. Morfey was judge for Harold Money, Capt. A. W. Money pulled the traps. The targets were not thrown hard. The scores:

Buffalo Audubon Gun Club.

BUFFALO, N. Y., Oct. 7.—To-day there was a contest between eleven men of the Cleveleand Gun Club and eleven men of the Buffalo Audubon Gun Club, whose guests the former were. The conditions were 100 targets, shot in a series of 20-target events. This resulted in a victory for the visiting sportsmen, as also did the first race, shot in Cleveland.

Before the contest the visitors were entertained by the Audubon Club's committee, which met them at the boat with a tally-ho at 7:30 A. M. They were driven to The Lincoln for breakfast, after which they were treated to a drive through the parks, arriving at the grounds at 11 A. M. The match was then shot, when all lunched at Audubon Park Hotel. Afterward several target events were shot, the visitors again showing their superiority with the gun.

The fourth event was at 7 live birds.

After the shoot the party was banqueted at the Ellicott Club, when several of the visitors returned home. C. F. Lambert, of the Haverhill Gun Club, of Lynn, Mass., was present at the shoot.

Event No 2 was the club badge shoot. H. D. Kirkover, E. C. Burkhardt and H. C. B. tied for Class A Badge, Kirkover winning in the shoot-off. E. Reinecke won Class B. There were no contestants in Class C. The annual field day and merchandise shoot of the club will take place on the grounds on Thursday, beginning at 9:30 A. M. The manager of the grounds is contemplating a three-day (midwinter) tourney, to be held in January. Date and particulars will be announced later. The scores follow:

Cleveland Gun Club.

Pawling Rod and Gun Club.

THE tournament of the Pawling Rod and Gun Club, Oct. 6 and 7, was unfortunate in respect to weather on Friday, the first day, for there was rain and dark clouds and a bad light—so much so that a number of New York shooters who intended to be present abandoned the purpose and did not go at all. This club has been unfortunate in its tournaments of the present year, but it has leaders in its membership who pluckily continue the good work.

To us the programme seemed a bit high as to entrance moneys, there being twelve events on the first day calling for 210 targets, on a basis of 10 cents a target, or a total entrance of $21. On the second day the total entrance was $19, or $40 for the two days. However, all who were present enjoyed themselves thoroughly.

Mr. Otis Arnold acted most efficiently as cashier, assisted by Mr. Ross Chapman. Mr. Mort Haines was referee, and the Captain, Mr. Horatio Nelson, was squad hustler.

Friday, First Day, Oct. 6.

There were nine contestants all told on this day. The weather was wet and raw. The targets were far from easy to negotiate. No. 6 had $5 added and No. 12 had $10 added. No. 9 was the merchandise handicap. Ten events were shot in addition to the regular programme. The scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	15	15	20	15	15	20	15	15	20	15	20	25
Egbert	8	11	14	11	10	15	11	7	13	12	13	18

Nelson	12	11	14	10	11	15	13	6	12	13	13	19
Van Allen	..	..	..	11	14	18	14	11	16	..	..	..
Holmes	..	..	..	10	11	9	11	9	10	11	..	19
Fink	..	..	..	..	..	..	..	..	..	7	5	0	0

Saturday, Second Day, Oct. 7.

The weather was clear and bright, with a strong, fluky wind blowing betimes, which made the targets fly irregularly. Eight events besides those of the programme were shot. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10		15									
Van Allen	8	8	14	14	17	11	12	18	9	13	11	24

Bison Gun Club.

BUFFALO, N. Y., Oct. 5.—The contest for the Clinton Bidwell challenge trophy to-day resulted in a win by Stacy, who defeated E. C. B. in this match.

C. S. B. has challenged Stacy for the cup and the match will be held on Oct. 19.

The score in the 25-live-bird match was a tie, each killing 22 birds. E. C. B. lost his first bird in the shoot-off, which was a miss-and-out. The day's scores:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	10	15	15	25	Targets:	10	15	15	25
Ed Saul	8	8	13	20	E C B	..	13	14	22
Stacy	7	11	14	21	O'Brian	..	13	12	21
Foxse	8	12	13	21	Dettron	..	14	13	20
U C H	4	..	12	20	Bauman	..	10	11	19

R. O. B. MULES, Sec'y.

John F. Weiler Gun Club.

ALLENTOWN, Pa., Oct. 3.—At 25 targets to-day the following scores were made: E. Ulmer 7, H. Erdman 5, O. Engleman 11, L. Straub 8, O. Acker 15, F. D. Lauer 21, J. W. Binner 11, O. Griesemer 13, C. H. Desh 8, C. Kramlish 18, J. Market 4, A. Griesemer 11, L. Straub 15.

At 10 live birds the scores were: O. Engleman 5, E. Ulmer 8, A. Acker 7, C. Leiberman 6, J. Flickriger 6, L. Straub 7, J. W. Binner 10, O. Griesemer 8.

At 5 live birds the scores were: L. Straub 2, O. Griesemer 4, O. Acker 1, A. Weiler 3. Again at 5 live birds the scores were: L. Straub 5, A. Grieseman 3, O. Acker 2, A. Weiler 1, E. Ulmer 3, H. L. Minnich 1.

PUBLISHERS' DEPARTMENT.

Many readers will be interested in the fact advertised in another column that the estate of Herbert of Muckross is soon to be sold at auction. Perhaps no estate in all the world is better known than this, which includes practically the entire points of scenic attraction at the world-famed Lakes of Killarney, and this sale must therefore be of great interest to the thousands of American tourists who visit Killarney each year. It has been known for some time that the estate was to be sold, and it had been reported that a syndicate of rich Americans had combined to take it and so save the beautiful place. It has also been said that Sir Thomas Lipton had bought it privately. It now appears that neither of these was true and the estate is to be sold by auction.—*Adv.*

The crisp October air and the yellowing foliage reminds us that the ducking season will soon be here. It is time, therefore, for each man to begin to look over his outfit and see what he needs for the late autumn and winter shooting. In these days no man can kill ducks without decoys, and good decoys at that, and it is said that among the best of these are the Sibley decoys, advertised in another calumn.—*Adv.*

The capture of a 33lb. striped bass on a 7oz. Leonard rod is something that ought to have a fuller notice than mere mention in William Mills' Sons' advertisement. Such a feat, we take, is quite unexampled and must have filled the heart of the successful angler with varied emotions, of which pride and joy were the last. Only those who are familiar with the fighting qualities of the striped bass can realize what this contest must have been.—*Adv.*

The new catalogue of the Marlin Fire Arms Co., dated Sept 18, 1899, is something of a departure from the usual form of such catalogues and an improvement. The colored cover shows a man standing over two pointing setters and is very effective. The catalogue is divided into three sections referring (1) to details of the weapons manufactured by the Marlin Fire Arms Co., (2) information in regard to the arms and ammunition used in them, and (3) hints for those who use these weapons. Whether one proposes to purchase a Marlin or not, the book is useful and interesting. It will be sent on application to any one sending two stamps for postage.—*Adv.*

FORESTS AND FOREST FIRES.

THE damage wrought by forest fires, though it is known to be great, is very hard to measure, or even to estimate. Yet in statistics brought together by the Division of Forestry at Washington we have some hint of the loss that these fires cause to the country. The records indicate that the direct loss from this source is not less than $20,000,000; but to this must be added the still greater loss that is only to be guessed at in the injury from diminution of the water supply, the burning of the soil, the killing of the young trees and the loss of gain which the young forest would make year after year, which last may amount to several hundred board feet per acre each year. It may be possible with continued investigation to reach a closer estimate of this total loss, but already it may be assumed that the average yearly loss from forest fires in the United States is probably more than $50,000,000. The matter is one of such great interest to the people at large, and above all to those inhabiting States or Territories possessing great forests, that it is worthy of the closest attention.

In a recent article in the National Geographic Magazine Mr. Gifford Pinchot has most interestingly discussed the effect of forest fires, not as agents of destruction, but as modifiers of the composition of the forest and of its mode of life. In this relation the forest fire has been little studied, and information concerning it is to be found only in the forest itself, sometimes on the surface and at others buried far beneath the soil. All the forests that we know, or have any record of, have been themselves the successors of others which at intervals have been burned down, and from whose ashes others have arisen. Often in the forests of to-day we can find traces of fires which took place a hundred years ago, and sometimes still further back.

It has long been believed, and is now fairly well established, that a very large portion of the treeless area of North America has been kept bare of timber by fire, and the readiness with which trees grow and seed themselves on the prairies when these grass lands are protected from fire is good evidence in favor of this belief. The oak openings and the so-called fire glades in timbered regions are due to the same causes.

The different sorts of trees found in a forest have different powers of resistance to fire. These resisting qualities are of two principal kinds, the one adapted to protecting the individual tree solely through its own powers of resistance, the other to provide for the continuance of the species without regard to the single tree.

Examples of the first sort are found in the Western larch—the extremely thick bark of which is almost fireproof, and is so good a non-conductor that it protects the living tissues of the tree, even against fires hot enough to scorch the trunk fifty or seventy-five feet above the ground—and in the big trees of California, whose bark is a perfect protection against fire. The longleaf pine has in addition to its thick bark another means of protection. The very young trees commonly grow amid thick grass and during the first four or five years of their life reach a height of but four or five inches. But while the stem during this time makes little growth, the long needles shoot up and bend over so as to reach the ground in a circle about the stem. This barrier of green needles burns only with difficulty, and besides this it shades out the grass about the stem, and so furnishes a double fire resisting shield about the young tree.

The second method of protection against fire, which has to do with the continued propagation of the species even after the individual trees have been destroyed, is exemplified by the lodge-pole pine, a species of wide distribution in the Rocky Mountains. This thin-barked tree is readily destroyed by fire; but nevertheless it is gaining ground through this very agency of destruction, and replacing over great areas the thick-barked species like the red fir and the Western larch. For several years after they are matured the lodge-pole pine hoards up the ripe seeds in its cones; and as fire seldom burns down the trees, merely killing them and leaving them to fall when their roots have decayed, the cones are not burned, but remain uninjured to distribute their seeds, from which a new growth of trees springs up, in an increased ratio to the remainder of the forest.

The distribution of the red fir, which is the most valuable commercial tree of Washington, is governed so far as we know at present by the action of fire. Other trees, like the hemlock and the white cedar, have been destroyed and their place has been taken by the red fir.

All this, of course, does not imply that these costly fires which constantly devastate the West are desirable, but the study of the general effect of fire on the forest is most interesting, and is likely to be of the highest economic value.

SPORT AND DRESS.

THE development of sport has had a tremendous influence upon dress and the tendency has been in the direction of the rational and convenient. Yachting, lawn tennis, wheeling, golf, each in turn has encouraged the simple and useful in pattern; and it were difficult to determine whether man or woman had gained the more, the one with his knickerbockers and the other with her shortened skirts. Both have renewed their youth with their short clothes.

The requirements of fashion with respect to clothing are hardly less rigorous in sport than in respect to the uniforming of employees, or than those social rules which "call in" the straw hat in autumn or formulate the etiquette of everyday dress. And there is excellent reason in this. The special wheeling suit, for instance, is demanded and is the fashion, because it is the one style best adapted to the purpose; with it the management and propulsion of the wheel are accomplished with less exertion and fatigue than when the rider is clad in his ordinary cumbersome clothing. Nor is any caprice of fashion likely to bring into use in the realm of outdoor sports garments which interfere with comfort and convenience. The dudes of fashion may suffer tortures if they must to be in style, but when it comes to sport considerations of utility control.

The sportsman's wear bought in the gun stores and the fishing tackle shops is an evolution of experience in the field and on the stream. From the cap and the shooting coat with its many pockets to the wading trousers and the waterproof shoes, in material, pattern and make, each article is the product of common sense as applied to equipment for a particular purpose. The well-dressed sportsman is the one who is clothed in the garments most convenient for the pursuit of shooting or fishing. Fashion determines here, as in other fields, but the fashion is one which grows out of approval of those forms which have been adopted only because contributing to comfort.

The clothes do not make the sportsman, but they do add to his satisfaction in the field, so soon, at least, as the painful newness has worn off. The older the shooting suit, with its many signs of wear as so many evidences of long experience, the more grateful it is. Indeed, only when the freshness has been dulled with the service of years and weathered with the sun and the rain and mud and sleet and hail and snow and crock and smudge and smoke and stain and grease and grime, when the garment has become in fact "the old hunting coat" and is invested with the reminiscences and associations of the years, does the muse compel to verse in its praise. We have had poems on the old hunting coat; did any one ever dream of apostrophizing the new?

There are those—you meet such men now and then—who entertain the common notion that the hunting coat makes the sportsman; but while they rig themselves out in the most approved dress, and parade the field as perfect paragons of the latest thing in style, they show themselves perhaps only shams and duffers as sportsmen and shots. The costume serves to intensify their verdancy. A greenhorn in "correct styles" is several shades greener than a greenhorn in an ordinary everyday suit of clothes.

To dress correctly, or as nearly to the correct thing as opportunity affords, is to begin right, but after all it is the beginning only. Not until one has outworn sundry suits of hunting toggery shall he have acquired that fund of field lore and the wisdom of the woods which cause the rest of the camp-fire company to grow still and give attentive ear when he begins to talk.

There is ease and freedom in the old suit. Bring it out from its long concealment; put it on for these glorious autumn days and revert to the old-clothes stage of real living in the field.

A CONNECTICUT ST. GEORGE.

THE world dearly loves to be humbugged, if only the delusion has to do with snakes. There is the old belief, for instance, concerning the deadly character of the flat-headed adder of New England. The New York Herald had a highly sensational story the other day from Danbury, Conn., relating the heroic adventure of the adder, as described by a Dr. Allan P. McDonald. The report describes the occurrence as "an encounter with a venomous snake in one of the busiest streets of the city." It appears that as Dr. McDonald was driving past one of the Danbury hat factories he discovered a "large snake coiled upon a window sill ready to strike." Shouting to several people who were approaching, he warned them of their danger and soon had the street cleared for action. Approaching the snake, he discovered that it was a flat-headed adder, "one of the most venomous snakes of this neighborhood, and now almost extinct except in the mountains." The physician studied the serpent's movements for several minutes, and was convinced that it was lying in wait for a victim. The snake in turn noticed the physician when he was within several feet of the window, and its raised head followed his every motion, but it did not have the snake sense to know that the man, too, was out for a victim. The Doctor summoned a posse of laborers and posted them along the curb; then repairing to a neighboring foundry he armed himself with a hefty iron pipe and "began the battle." The spectators looked on, spellbound with terror, and nobody daring to volunteer to assist the physician when the deadly nature of the snake became known. Again and again the doughty Danbury St. George advanced to the attack, and again and again "the dangerous motions of the snake" caused him to retreat. As the iron pipe descended for the final blow the snake sprang toward it and the affrighted man's arm quailed so that the stroke fell short. But "before the snake could glide near enough to reach" the devoted Doctor its back was broken with a quick blow, and the viper was dispatched, whereupon the spectators applauded lustily and Danbury breathed freely once more. The snake measured 2ft. in length and was half as large around as a mans wrist. When we remember that the flat-headed adder of New England is a non-venomous snake and not nearly so dangerous to human kind as are the pugnacious bantams Dr. Jones writes of, we might be inclined to ridicule the Danbury incident and to belittle Dr. McDonald's feat. It is pitiful indeed that at this age and in a community of schools a professioinal man should show himself so ignorant in such a simple thing. On the other hand, we might not perhaps reasonably require of a Danbury physician that he should be so far in advance of the communty in which he lives as to encounter with equanimity a 2ft. harmless snake in the street. Moreover, if Dr. McDonald actually believed himself engaged in desperate conflict with a deadly serpent his conduct under the circumstances had just as much of the heroic in its as if the reptile had been a rattler.

The guide registering system of Maine was designed in part to insure that sportsmen would be provided with guides who were safe companions in the woods. Now that a Maine visiting sportsman has been killed by his registered guide in mistake for a deer, it is manifest that the license does not work altogether in the way anticipated. The fact is that no system ever has been devised or ever can be, short of absolute prohibition of the use of a gun, to restrain the trigger-finger of the fatuous shooter who will not wait to make sure of what he is shooting at. There may be deer galore in Maine woods; but there are deer hunters galore there too; and the degree of hunting caution demanded is correspondingly higher to-day than ever before. In a deer country thickly populated with human beings there is always the possibility if not the probability that a moving object is a human being; and if it is of a dun color that it is a man in a hunting suit instead of a deer in the blue. One expedient for reducing the peril of Maine hunting is to make provision that the guide shall leave his own rifle at home. That would with some parties cut the armament in two and lessen the danger of fatality by one-half.

The Sportsman Tourist.

A Communication of the Jungle Lodge.

(Not from any one Samoan, nor in any one day spent far afield in the mountain whither the chance of the rod and gun called me, did I learn these arcana of the wildwood. Here a little and there a little, in forest camp or by brink of mountain streams, from one and from another of my wild companions, I grew to learn the mysteries of the jungle. The scenic setting is my own; the English is also mine; yet I have essayed to render as faithfully as I could the words that were told me. For the facts I am indebted to my faithful companions of many a forest day, to Laulu and to Tanoa, and to the graceful young Talolo, who led me through many woodland paths.)

We are the brethren here of the forest and of the stream. Under waving branches and at the brink of mountain brooks we have learned the arcana of the wildwood. We need no sword of tilers, for the woodland paths are free to all who choose their secluded ways. We are free of nature's secret work; we are the lodge of the wilderness duly constituted. Therefore this of all others is the place to report the communication of the lodge of the jungle.

The place of meeting is well set. The officers and the fellows of the craft are coming. Far in the eastern sweep of the mystery of the broad South Sea is the sunrise; in its distant riddle of the west is the sunset; behind us the dark and northern stretch of ocean; before us awaiting our further effort is the trackless jungle of the mountain. Over sharp blocks of basalt, spewed long ago from the peaks when Samoa was yet ablaze with volcanoes, the narrow path leads on the knife-edge of the mountain spurs. On either hand the cool depths of green and humid shade of sharply carved valleys hide the dashing streams, whose roar resounds through the air now as a bold outburst of sound, again as the merest chatter and faintest murmur from the homes of the fishes. Here a giant banyan covers half an acre with its spreading expanse of monster branches, each borne up by supporting trunks, which enter the soil and become new trees themselves. In its vistas and arcades grows the rich grass which makes a master's carpet of velvety turf. In the inmost tabernacle rises the massive heart trunk of the colony of growth, a trunk flanked and buttressed by planes and slabs of timber standing on edge from the parent trunk. The rocky path swings aside to lead the brethren of the craft to rest and refreshment under its grateful shade. From untrodden depths of the waste of woods a tiny stream babbles into hearing and forms a wee pool, where the fishes leap. The lodge is set beneath the tree, and by the laughing mountain brook. Its obligation is a simple one, and easy to remember and to fulfill; brethren of the wilderness shall take with them from the mother lodge of all the world not so much as a single one of its living creatures, to be sold to uninitiate men. All else they may snare and take for their own sport, with net and spear, and rod and gun, and any gin they please. The one watchword in every tongue of man and beast and bird is the ancient word "good hunting."

The brethren gather to the opening of the lodge. From the sea a small party is toiling upward, glad to rest beneath the banyan. In the party are Samoans, to whom the jungle is home. Just as soon as they have left the roads of Apia and the marks of foreign settlement, the death and taming of the wildwood, they have hung about their necks fragrant garlands of the flowers of the frangipanni and the moso'oi, the rich ylang-ylang. Every bare head is girt with a leaf of the wild ginger, the 'avapui, and its spicy fragrance hangs in the air. Behind each ear is tucked away a brilliant blossom of the hibiscus, with its flaming red. Thus the brethren of the jungle lodge prepare themselves for the communication. With them is one white face, a Papalangi, one free of the wilderness from the snows of the north to the liana tangle of the equator. Apia is left behind; with it is left behind the cares of a world that knows not the woodland life—we are free brethren of the wilderness in the mother lodge of the world. At the banyan shade we find the lodge room swept and garnished, awaiting our rest from labor. Its smooth carpet is hemmed in by a wall of lush herbs, which are good for the creatures of the wilderness, good for food, good for scent, good to look upon. Burdens are laid aside, weary limbs stretch out for repose upon the turf. Thirsty lips seek the pool where fishes play. Here is a sign to test the brother of the wilderness. Watch him drink and then you will know if he be indeed a brother under the one obligation. He does not bend down to the water; he seeks no leaf to carry the fluid to his parched lips. The true brother stands at the margin, and cupping his hand scoops the stream up to his lips, sending it flying through the air in a sparkling curve, until it vanishes in his mouth; it is an old sign; it was honored when the world was young. The initiates of the wilderness recognize the sign of brotherhood. When doughty Col. Gideon wanted brave men for a forlorn hope he set them at the stream to drink, and because he wanted brave and wholesome souls he chose the brethren of the wilderness, who established themselves as free of the craft by the way they slaked their thirst. It is in the Bible for all to read; it is clear only to those who work the wood degrees.

While the brethren rest another brother comes that way. His bare feet make no sound upon the stony path; his body sets no crackling bush agog. Silent in the hum of nature the brother makes his way down from the mountain heights which we are soon to tread. Without a note of warning he stands within the lodge, prepared to labor with his brethren in the mother lodge between the valley and the mountain top. He proves his right to labor with the brethren. Were he to meet them on the open beach he would give a cheery greeting of "Talofa, ali'i," love to you, and he would be answered, "Talofa lava," love indeed. But in the jungle with his brethren he gives the true and ancient hailing sign as he stands at the edge of the master's carpet and listens to the rippling of the water, which he may not touch until he has established his brotherhood. "Ua sao le vao," he cries, "free is the wildwood." And the brethren recognize his claim to brotherhood, and every brother for himself gives back the ancient accepted answer, "Ta fia ola," "there let me live." That is all there is of ritual, as simple as nature herself, but a pretty idea of savage folk, is it not?

What food there is is spread upon clean leaves, and then is shared to all alike, the brethren of the jungle seating themselves in order on cushions of the great leaves of the mountain palm, whose trunks grow in shapely columns from the rocky soil. When food is dispatched, even to the last item of dripping joints of sugar cane and the spicy stems of succulent herbs, which await the plucking on every side at the edge of the shade of the spreading boughs of the banyan, then cigarettes are made of the sun-cured leaves of the native tobacco, wrapped in the soft, dried leaf of the banana, and fire is made in jungle fashion—by the brisk rubbing of dry sticks. When the pungent wreaths of blue smoke begin to float in the breathless atmosphere the craft recount the tales of the wood and stream.

While the talk passes idly from one to another and all is still save the hum of liquid island speech, the younger brethren of the forest shyly glide upon the sight, the serving brethren of the lodge. In the pool, where the babbling stream is hemmed between great rocks and forms a quiet backwater, the gaily colored fish come to the shining surface and blow tiny bubbles, that slowly float down stream until, caught in the flow of the brook, they break at the sheeny edge, where the water flows over the containing wall of rock, or, seized in some gentle eddy, float backward to the brink and join the other bubbles, which mark the breath of other fishes. Or as the dancing insects flit above the watery surface, the more adventurous fishes leap in quick pursuit, and falling back with a flash of color and a gentle splash, mark the placid surface with concentric rings of ripples. At the edge, where the grasses and other herbs dip their leaf tips in the pool, the dusky crayfish dart from rock to rock, dun flashes in the spots of sunlight, never daring far from the protection of the stones.

Overhead there is cooing of the most frequent bird of these tropical forests, the manutangi, the bird that cries, the friend and pet of every Samoan woodsman, never killed by any chance of hunting, but often taken to hang at home in the thatched huts for the pleasure of the people, to delight them with its cooing from the glint of dawn until the set of sun. More rarely is heard the note of the lupe, the South Sea Island pigeon. It may be in the very summit of the banyan itself, but its note sounds always far away and faint upon the listening ear, such a tone as though some skillful drummer far away were beating the long roll on a deep-toned drum. To hunt it in the old days before the gun was known was in itself the highest secret of the craft; to know its habits and its secret lurking places, to watch the whole night through and to lure its daybreak flight to the waiting nets, where none but the surest eye and cunning hand could intercept it as it dashed across the view. The sly rail dodges with a quick hop and skip into sight upon the green turf of the jungle lodge, and dodges back again in shy surprise. Time and time again it runs further and further into open sight; it gains confidence in the idle men, and by little and little makes its way with little side steps and halts and eager runs until it comes to the remnant of the meal and satisfies its hunger with a constant accompaniment of little chirps and fluttering of its stunted wings. If there chance to be a gap in the green ceiling of the banyan branches overhead the watchful eye may now and then spy the lofty passage of the giant tropic bird, the tava'e, the swiftest in flight of all feathered folk, thinking nothing in its sweep from sea to sea of scaling the mountain summit jutting into the upper air. This mighty courser of the sea and sky is in high regard with this island people; he has the gift of the fair wind for the course of their canoes; by prayer as he passes overhead they may obtain the favoring breezes.

The turf bends and sways as though the winds, unseen and unfelt, were reaching down into this silent shade. Every movement of the spears of grass betrays the noiseless gliding of the lizards, which chase along the moist soil and on the trunks of the banyan in pursuit of their insect food. The eye may catch them in their quick passage, but that is more than the most agile hand may accomplish. Always close to the reclining men, they are swift to elude the most cautious movement for their capture. Just out of reach they rest on some bending stalk of grass, 6in. of dark blue length, gleaming and watchful eyes, darting tongues, a wire spring for agility when they take fright at any untoward movement. In the forest tales in the jungle lodge this blue lizard, the pili, is credited with the ancestry of the chiefly stock. He married in the beginning of time the fair daughter of the King of Manu'a, and bred the chiefs of the several islands; the very race of kings derives its power from this early lizard god. Even in the incandescent crater of Kilauea on Hawaii, thousands of miles away across the summer sea, it is fabled that Pili came from his Samoan home to wed with the goddess of the living fire, with Pele, who sits in the flame of the Halema'uma'u, surrounded by her sisters, the Hioakas. More agile still is a tiny gecko lizard, the mo'o, scarcely as long as the smallest finger of a man, red and brown glints of quivering movement as they glide in and out of vision, and adventure dizzy leaps from the tree trunks to the thick grass beyond. Still closer companions of the waiting men are the threadlike leeches of this soggy soil. It keeps one busy plucking them from the flesh, as they measure their crawling over the body, stretching inch by inch as the common measuring worms progress. The Samoans have the idea that the leech is one of the risks of the forest; that they do no harm to the skin, but if a man sleeps out of nights he will wake in the morning to find the leeches at his eyes, where they hang for two days at a time, blinding the sufferer, yet not to be removed except at the risk of destroying the sight.

This jungle woodcraft takes note of other forest things—things that are never really seen, but are always a dread evil to be watched against. In the deepest valleys are cannibal slaves who have run away from the plantations, black savages from the wilder islands kidnapped by the white men and set to forced and irksome toil. Winning by some lucky stroke their freedom, they form camps in the bush and issue by stealth to maraud the plantations of their peaceful neighbors, and to kill a man for food if they can catch him unawares. Samoans, when they go to the forest, have no liking for these "mea 'uli." the "black things," as they call them, but rather supreme dread of their dangerous attacks.

Nor are runaway wild men the only thing to dread. The mountains are full of malevolent spirits, the "aitu," fierce natures ready to wound and destroy mankind. Chief of these is Nifoloa, who has a set of long tusks, with which he bites the courage of the bravest and sends them pining home to die, and without avail of medicine. There is Nafanua, who lurks beside the paths, and hiding behind a tree thrusts his spear into the back of the passing hunter; he feels a sharp twinge of pain, and he goes home to bid his friends good-by and die beyond the hope of cure. There is So'oalo, the ghost of a chief who died a century ago, a great netter of pigeons in his day when he worked the woodland degrees, but now his malice intervenes to drive away the pigeon before the hunter at dawn. Another to be dreaded is a lady ghost; she appears in the guise of the fairest of maidens, and only to the bravest of the young chiefs, who straightway sicken and die for love of her.

But the period of rest and refreshment has gone by; the work of the wood remains; it is time for the lodge to rise, and the brethren to resume their operative tasks. Those who are bound inland gird themselves to essay the mountain trail; the other wayfarer sets his face down hill and seaward. The communication of the jungle lodge is closed; the last words are the simple ritual of the savage woods, "ua sao le vao," "the wildwood is free," and back floats through the dreamy air the accepted reply, "ta fia ola," "there let me live."

Llewella Pierce Churchill.

In the Aroostook Country.

I had been looking foward to the time when I would be able to leave the engrossing and perplexing office duties, city noises and dusty streets for the pure air and quiet and stillness of the woods, lakes and springs at the headwaters of the Aroostook River, in Maine. Aroostook county, which is larger in area than the States of Connecticut and Rhode Island combined, is an ideal country for moose, deer, trout, togue and salmon; and owing to the better protection of game in Maine than in Canada, deer and moose are becoming more plentiful. The reader can form some idea of their numbers when I say that I have seen as many as twenty-one deer in the water at once. I also saw three moose, a cow, a calf and a spike bull feeding in the river together.

I hear and read the many glowing reports from New Brunswick and other parts of eastern Canada; but to a person who wishes to make a two or three weeks' trip and who wishes to avoid red tape, expensive licenses, custom houses, their duties and necessary bondsmen, and the obvious delays, I think the average sportsman would be much better satisfied with a trip up the Aroostook. A person can leave by fast express train from New York city at 3 P. M., travel with the most improved degree of comfort all the way to the northern end of the Bangor & Aroostook Railroad, and inside of twenty-four hours cast his flies in the salmon pool on the Aroostook. The river from Oxbow up is beautiful; the shores are not mountainous, but are hilly and sloping, and the stream runs rapidly. Its waters are cold, and as the river bottoms are rock or gravel the waters are clear. A succession of rapid-running streams from ponds and lakes make the river that drains 400 square miles of forest. This vast region extends in a westerly direction from the Canadian border to Chandler and Churchill lakes and in a northely direction from the East Branch of Penobscot to the Allagash Mountains.

Our trip up the Aroostook was one of unalloyed pleasure. The weather was pleasant, the scenery was very fine, and moose and deer could quite frequently be seen feeding on the shores, or reaching down under the still water for lilypad roots, which the moose seem to be particularly fond of. These large roots resemble banana stems, from which the small lily vines grow, and I have heard old woodsmen say they had seen deer eat the big roots as well as the small vines and leaves that grow from them. After two hours' canoeing we reached one of William Atkins' camps, where we had supper. We found Mr. Atkins everything that could be desired, as host and sportsman. His camps, of which he has about twenty, located on fourteen different lakes, ponds and streams, accommodate in all about thirty persons. When we were there there were four ladies and sixteen gentlemen sportsmen, and some of the ladies could cast a fly in excellent style. On the evening of our first day there, while the guide was getting fire and the supper things ready, I made a cast of a scarlet ibis and a brown hackle and took one salmon and twelve trout. We made it a rule not to keep any more fish from the water than we needed to eat, as we had no ice—and I have never seen really good hunting or fishing where it was customary to use cracked ice. On this occasion we took sufficient fish to make our supper that evening and breakfast in the morning, as we wished to make an early start up the river. After supper we sat around a log fire, talked of hunting and fishing incidents of the past and made plans for the following day. Receding further back from the fire as the heat increased, my hunting companion, Frank House, remarked that an Indian had said, "White man make big fire and freeze to death; Indian make small fire, keep warm all the time."

We were up at daybreak, had breakfast and made an early start, paddling leisurely up the still water, stopping occasionally to look at deer or moose feeding on the river bottoms. We reached the home camps at Millnockett Lake before sundown, and after exchanging greetings with Mr. and Mrs. Atkins, we feasted on venison tenderloin and retired for the night.

The log camp to which I was assigned was furnished with a spring bed, hair mattress and roughly built stone fireplace, and had a general air of comfort. We found log camps located at Beaver Ponds, Island Pond, Moose Pond, Chandler Brook, Millimigassett Lake, Munsangum Lake and Sewell Deadwater.

Our first trip was made over a good trail to Beaver Ponds, where we arrived at noon on Sunday, and after lunch we paddled our canoe through this beautiful sheet of water, which is about one mile long and half a mile wide, with nine islands, of from a half acre to five acres

in size, wooded, and all forming one of the prettiest ponds in Maine. We only saw five deer during our tour through the islands, and they were all does, and we retired to our cabin, had supper and retired to a bed of fresh boughs, surpassing in exquisite perfume any of the artificial odors yet devised by the skill of mankind.

Monday morning I commenced the hunt and was determined to get a fine head or not to shoot at deer at all. The day was clear and warm, and excepting that the woods were very dry, from a continued warm term, nothing but a little rain could be desired. Deer seemed very plenty; they were everywhere, and we had seen sixteen before noon; but all of them were does or fawns or very small bucks. While there is an abundance of deer to be seen in the water feeding, it is not so easy to find a large buck with a good head. The old bucks are very shy and keep well up on the hardwood ridges and are very hard to approach near enough to get a good shot; they are continually on the alert. I was pretty tired and returned to the log cabin to rest and lunch. The invigorating air soon stimulates one, and the charm of woods life is found in its freedom and vigorous open-air life man leads when hunting or fishing. After a camp-made meal of good biscuit, fried bacon and hot coffee, we were refreshed and ready to continue our hunt. As I was removing the stains of our midday meal I saw a large deer step out of some brush, and stalking up to within 100yds. or so, fired at him as he stood facing me with his head up in that graceful pose that is natural to a buck deer. The bullet, that was shot from a Savage repeating rifle, entered where the neck joins the shoulder, breaking the second rib about the middle and tearing his lungs in shreds. The killing power of this small-bore nitro powder rifle is terrific. When we dressed him we found his body was a mass of blood. Although I have killed thirty-five or forty deer, I never shot one with such terrible effect. This was the largest deer I have ever killed, or that I had ever seen. I shot one at Harvey Bonney's camps in the Adirondacks that weighed 204lbs.; but we believe this one to be larger. Two men were unable to lift him, and as he fell in fallen timber we had to drag him about twenty paces, so we could dress him, after which we prepared the head for the taxidermist. It is one of the most perfect symmetry, with twelve points, six on each side, with points exactly alike in form and feature, with the curves of both antlers precisely alike. He had shed the red coat, except a few long hairs, and the hair of the gray coat was short and fine and made a very desirable specimen. I was naturally well pleased with the success. We had venison tenderloin fried for supper. The frying-pan comes so handy in the woods that almost anything that requires cooking is generally fried. Sometimes we would get a suitable fire and get a green wet twig and make the branches into a fork to broil fish or venison; but I rarely have found the change of cooking worth the extra trouble, and a wood fire is not generally suitable for broiling.

After supper we sat around the fire a while and then retired to our bed of boughs, well satisfiged with the success of our day's sport. We were up early the following morning, carried all the venison we could over the trail to the home camps at Millnockett Lake, and hung the remainder pretty high up for safety, and returned the following day for the parts we had left. It is no easy task to carry a big fat deer, even when quartered, over a rough trail through the woods. We concluded to fish and make photographs of moose and deer for a few days, which we did. The weather then became cloudy, and we went out and hunted for partridges. They were not very plentiful, but while the dry season made it hard to approach deer in the woods, the noise we made traveling in the dry leaves and twigs caused the birds to move about and made it easy to find them, from their rustling the leaves. One can hear a very little sound in the stillness of the woods. On our return home from partridge shooting we met a young miss and her father, who with two guides had been hunting and fishing. The young lady said she had shot a large deer, and held in her hand a very large owl she had shot about an hour before we met them. We had all the venison we required, and it was easy to get all the fish we wished. We had been shooting partridges for several days. The weather had not cleared off bright enough for getting photographs. It was too early to kill moose legally, and we were a little undecided what to do, when presently I heard a loon, and looking overhead I saw it flying high up in the air. Shooting loons is a tough proposition, but I decided to try for them. I had noticed they generally went near the sheltered shores, so I hunted around after them quite a little and shot several times, saw the bullets make the spray and even the feathers fly; but the result was a total failure to kill any. The clouds cleared away again and we tried for more photographs again. It seemed easy to get them; but the good results are difficult. The shaking of a camera in the canoe or on the shore may spoil them; the focus may be wrong; ofttimes the distance is too great; or the sun may not be right. However, I succeeded in getting eight good photographs of deer and four of moose. We noticed some fox sign on a trail, and hunted them for some time; but these sly creatures are hard to approach in the woods and our efforts to find them resulted in failure.

We had now spent twelve days at the headwaters of the Aroostook. I had got one handsome trophy, and my wish was to get bear or fox on my way down the river.

VOYAGEURS IN THE AROOSTOOK.
Photo by Wm. Simpson.

We made a speedy start after breakfast and went down stream, stopping long enough to get six nice trout, frying-pan size. I saw a large osprey flying, and after shooting four times I succeeded in breaking his wing with a ball from my rifle. It was a very large specimen, and I sent it to the taxidermist, which with a handsome 5lb. brook trout made quite a list, and which I expect will be added to others I have already in my home.

Brother sportsmen, there is a lot of benefit from a few weeks spent in the mountains in recreation; and it is some satisfaction to have a few trophies, fairly hunted, to call up the memories of these pleasant trips. I know of no better woodsman in Maine, or hunting companion, than Frank House or George Cole. They are good natured, good company, patient and tireless, obliging and thoughtful. I have hunted, fished, trailed and camped with them, and if you wish to know a man clear through and through, camp with him in the woods for two weeks. One of the chief attractions of these mountains and wooded ridges is the true democratic mode of life. Here every man stands for what he really is, and here the doctrine of simplicity and truth is common practice.

WILLIAM SIMPSON.

NEW YORK.

NOTICE.

THE New York Clearing House has adopted new regulations governing the collection of checks and drafts on banks outside of the city. This entails a collection expense on those who receive such checks. Our patrons are requested, therefore, in making their remittances to send postal or express money order, postage stamps, or check or draft on a New York city bank or other New York current funds.

Summer Sounds.

LAY SPRINGS, Ala., lies on the eastern slope of Lookout Mountain. From its situation it rather resembles an inverted punch bowl dropped between two well foliaged ridges. On this bowl a merry company of campers gathered during the last days of July. The first sight of the tents from a hill through a long shaded vista was cheering; and then to be soon about stretching another tent all one's own, and for rain or shine, for burned cornbread and spilled water in the fire, or for delicious hoe cakes and grilled bacon—this gave a zestful first impression.

Before the initiatory supper was done a few of the more cheerfully disposed stars came out and blinked between swift rolling clouds until the dishes were washed and stowed away. Then, after having groped through that dark, laurel-hung, dangerous looking path to the chalybeate spring and returned, it began to rain; slowly, monotonously, as though raining for an effect of lonesomeness. This was heightened as I sat in the dim rays of my little photographic lamp, shining but from one side, and not a sound except the screaming scheech owl from the dell below and the slow patter on the canvas.

It is very good to wake up in the woods. This is usually very early, and proceeds from the first notes of the birds. Here it is at this season the cardinal whose flutings open the chorus. His is the reveille call, and he enjoys the distinction as though a paid piper of the king. Once or twice I heard at least four males in envious emulation. The summer tanager has closed his singing season, but can soon be heard in scolding monosyllables; then the wood pewee utters his salutation; the preacher vireo begins his continuous prosing sermon of the day, and I fall back on my cot awhile when the chickadee drops into his long-noted plaintive sighing.

After breakfast Ring and I go for squirrels in the ridges. The long walk through odorous woods, fresh and still, broken, perhaps, by a sight of the shy day flower (*Commelina virginica*), the rich downy foxglove or the Indian pipe, thrusting its ghost-like presence upon me in some of the deeper shadows—this is always the greater pleasure. If a squirrel or two can be bagged it helps my prospects for dinner, for all kinds of primitive and delightful exchanges obtain in our little community and a young squirrel from me to my pleasant friends next door means fried chicken, baked apple and home-made light-bread for my board. This is literal, indeed, for my dining table consists of two stakes driven into the ground near the fire and a board laid across.

When I give presents of apple sauce or rice cakes, hydrangea leaves, like the vine leaf of Continental al fresco dinners, make admirable substitutes for china and delft ware.

To cook one's supper at nightfall and see the stars come out; to get out of butter and scour the neighborhood in search of some; to buy roasting ears and then have your money threateningly returned to you because of mountain hospitality; to have it rain before the dinner fire is made and wet all the wood in the country—are not such pleasures worth three times the price of board at a respectable hotel or at the deceiving farmhouse where lodgers are held in durance to the tyranny of "fresh eggs and Jersey butter"? I cannot refrain from some further mention of my adopted companion, ever faithful Ring. A cross between pointer and bulldog, he combined both the elements of affection and persistence. Soon divining my affinity for dogs he left his old master entirely and professed unqualified and constant allegiance to me. Not demonstrative or fawning, it was touching to see his reverent devotion as he followed me all day and lay at my tent door all night.

But such elemental virtue as prevailed in our colony could not last always. It is one of the sad facts of existence that no spot of the world is free from the evils which haunt humanity. It is said that gossip sometimes came into our camp and even sat about the fires under the heavens, but she was restless and nervous in the open air and would soon hurry back to the chimney corners of civilization. Then again, eatable things placed in our cold storage boxes at the spring began to mysteriously disappear. Our camp "nigger" was laid under grave suspicion, and a young squirrel which had been treasured through a meal or so being taken at last brought down condign punishment on his head. He was expelled, but, like the cat,

" came back" and hung around the scene of his depredations all day. That night lights were put out promptly and a guard placed in various heavy shadows awaiting the return of the bandit. It gave a queer sensation to be suddenly halted as one forgetfully poked around in the dark.

At daybreak next morning he was captured after a spirited chase, in which the dogs gleefully joined. A grave council followed, our captive being tied to the stake after the best Indian models. He whimpered and moaned so effectivelly that the ladies pleaded with us stern warriors not to shoot, hang or burn him. Being persuaded, the last we heard of the redoubtable 'Lias was the spatter of his bare feet through the spring branch on the road to the nearest town.

EDGAR MAGNESS.

ALABAMA.

An Adventure with Smugglers in Alaska.

AWAY up north on the Pacific coast, where the Portland Canal separates the cold, green, mountainous shore of British Columbia from our own interesting Territory of Alaska, is a sheet of water about fifteen miles in width, and protected either by mainland or islands at all points save from the south. This is Dixon Entrance.

On the British shore is the little town and Hudson's Bay Company post of Fort Simpson. On the American side, just east of Cape Fox, there still remains on a small island the old log buildings of Fort Tongas, one of the first garrisons occupied by our troops after the purchase of this valuable country from Russia in 1867. Facing the ocean on this same bit of land is the deserted Indian village of the Tongas tribe, with its motley line of grotesquely carved and painted totem poles, typical of all Siwash (Indian) villages along the coast. When a Siwash wishes to proclaim himself a delate tyee (very big man), he erects before the door of his shack one of these totems, generally his own design, that often costs the sum of $600, or its equivalent in blankets and skins.

This entire settlement is now installed at Ketchikan, about sixty miles to the north, and the old fort is kept up and used (under the pretext of a trading store) as a place where cultus (bad) whisky can be bought at exorbitant prices by the Siwashes, in defiance of the law and the revenue cutters. There is always a demand for this article, I am sorry to say, by both white and red men in this section, and the officers are not sufficient in numbers to successfully cope with the smugglers. Only words of praise can be said for the efficiency of the former, who have much more territory than they can effectually cover, and it is with them also this narrative has to do.

The events below occurred last fall, while three of us were voyaging from Port Essington, at the mouth of the Skeena River, British Columbia, to Ketchikan, Alaska, a distance of nearly 150 miles. It was no doubt foolhardy to undertake such a journey with no chart and little knowledge of the coast, but we were really forced into so doing. Contrary to expectations, it was found on arriving from the interior, where we had been many months prospecting, that it would be impossible to reach our destination by steamer without going south to Victoria, which meant "hyiu" money.

Necessity caused us to select the proposition demanding the least outlay, so we invested in a 32ft. skiff, rigged with a mast and sails and two pairs of long sweep oars. It was not bought on account of a sound bottom or graceful lines, but because she was the only one for sale. After the purchase, some one calmly volunteered the fact that the salmon fishermen had already condemned her as being too water-soaked and rotten for safety. Loaded with a month's provisions, we started north, and on the morning of the fourth day pulled away from Simpson, having come a distance of perhaps sixty miles.

Rain was falling softly, and signs of storm were in the air, but we had decided to make a run for it, and only when too late to turn back did we realize our mistake. Fifteen miles across the surface of uneasy water, an indistinct mass of blue marked the mountains on the American shore, and a long pull it looked to Mr. Attwood, better known as the Major, and to the writer, each of whom labored with a heavy oar. As the wind increased, the taunting waves frequently pelted us with spray; and Bill, our partner, who hailed from Montana, and who was more at home on a horse, sat serious and resolute at the helm, for it was his initial experience on the briny, and proved a rather heroic one. Later in the day, when an exceptionally heavy sea combed over and threw him from his seat to the bottom of the boat, together with a half-barrel of water, he jocosely remarked, "You may call this fun, fellers, but give me the hurricane deck of a bronco!"

It is unnecessary to give in detail this day's trip, which might well make a story of itself, but I can truthfully say that it was an experience none of us care to repeat. After five hours' battling with the elements we heard the pounding of mighty breakers on the Alaskan shore, and through the fog and blinding sheets of rain could just discern high ledges besieged by mountains of white, angry billows. From that moment, none of us expected to make a landing or save our outfit, but merely pulled away with a firm resolve to put up a good fight when the time came to swim.

Fortune favored us, however, and wind and sea both aided our little craft to safely round the point of a small inland some distance off shore, where we found a quiet harbor nestling under the high cliffs. Only a long ground swell was felt, and much fatigued, now that safety was assured, we rested on our oars, while gust after gust of driven rain tore through the hemlocks behind us. In the shelter close at hand, kittiwakes and herring gulls loudly clamored a welcome, and a flock of Siwash ducks eyed us with suspicion and distrust from a distance. Truly it was a wild and eventful introduction to Alaskan soil.

The island was a small affair, very rocky and densely wooded, and with much undergrowth. Our tent was pitched some way from the water, at the head of a deep cut or fissure in the ledges, which formed a natural giant stairway to the landing where we beached our boat. Only food and necessary articles were removed to the camp, but fortunately the Winchesters had been brought up to clean and dry. From water-proof dunnage bags we obtained dry clothing, and with the dying embers of our camp-fire we fell asleep, only to be awakened a few hours later by the sound of voices close at hand.

The storm had ceased, and by listening intently we found that the persons—for there were a number of them—were commenting on our tent, so we hailed them in a friendly way, only to receive a surly response. Then one of them, evidently a Swede, asked in none too polite a tone who we were and what we were doing. This was explained, together with how we got there, and where we were bound, and finished by asking them to come up to the tent. After a short consultation among themselves, of which we caught but an occasional oath, the men charged us with being "infernal revenue officers, laying for smugglers," whereupon we naturally deducted that they were themselves engaged in that shady occupation.

We, of course, protested our innocent intentions, which had no other effect than to call forth a volley of curses and threats. Bill's wrath, which had been steadily rising, was now at danger point, and in true hot-headed Western style he told them plainly to "get out" and that "right smart," or he would open up with both six-shooters, which he always wore, as he said, out of respect for the good old days. At this sound of definite trouble we followed his example and threw ourselves at full length on the ground, while Major and myself hastily pumped a cartridge into the barrel of our repeaters, and lifting the wall of the tent, peered out into the darkness.

Whether "Old Montana" would have made good his words, I was most anxious to see; but as he hesitated, I remember thinking at the time that he was waiting for them to fire the first shot. We could not see his face, for his head and shoulders were outside of the door as he lay, still wrangling with the quarrelsome marauders, who, as near as we could place them, were clustered at the bottom of the ravine. Of a sudden a shot rang out, but so unexpectedly that it left me uncertain whether or not they were the first to fire. At any rate, it was a signal for a general fusillade, the effects of which may still be seen in the canvas of my little wall tent, and durin which we missed out hot-headed partner, Bill. Our volley, apparently, failing to injure any one, for which my friend and I were very grateful, nevertheless caused them to beat a hurried retreat; and the air was filled with vile language only too common in such uncivilized country. We listened to their wild scramblings down the rocky fissure to the beach, urged on by the whip-like reports of Bill's revolvers, and finally heard them rowing away up the coast.

Soon after lighting the lantern, our aggressive companion returned, fairly bubbling over with joy and satisfaction at this little brush, and cooly informed us that he had "sure winged one of the varmints" as they unceremoniously tumbled into their boat. We talked the little engagement over from all sides, and came to the conclusion that we should see more of them again, which luckily proved to the contrary, although through them we were soon put to much annoyance. Our rest during the remainder of the night was naturally more or less broken, for we were on the qui vive lest they return and resume the attack.

Next morning, while rustling wood for our early meal, Major discovered a whisky cache of four kegs and many bottles, which our midnight visitors had evidently come to secure. His shout brought us to the spot, and while reviewing the night's adventure a white steam vessel came in sight flying the Stars and Stripes, the first banner of our country we had seen since our departure into the interior, nine months before. Although none of us had ever seen a Pacific Coast revenue cutter, this was easily recognized as one, and it was with much interest that we watched her heave to, a short distance above us, and saw two boats put off a few moments later, full of men, and headed in our direction.

Hastening to the beach, we hailed them. They laid their course directly for us, and as the foremost boat grounded, the officer in charge, dressed in a fatigue coat, leaped ashore. Without giving us a chance to speak, he peremptorily ordered us to stay by the boats, and taking several marines, made straight for our camp, which was investigated with careful scrutiny. Then we saw them disappear in the direction of the cache. Shortly the officer returned, and with a serious countenance placed us under arrest for violating Uncle Sam's whisky law.

The whole thing had been done with such dispatch and abruptness that it fairly struck us dumb with amazement. Bill, whose tranquillity nothing seemed to phase, was first to recover, and while a number of tars were occupied in transporting the liquor from its hiding place to the boats, he told the officer all about ourselves and the trip, as well as the adventure of the previous night. I also produced a letter of introduction which I happened to have upon me from the management of the Hudson's Bay Fur Company at Montreal to the officers of its posts throughout the Northwest, thinking it would convince the commander that we were perfectly respectable, and might lend weight to our story as well. It must be owned, however, that our appearance belied us.

We pressed him to run across the Entrance to Simpson, where we told him our recent friends could prove that we had embarked the previous morning without a particle of liquor aboard. Or, I told him that if we were taken to Ketchikan, where my brother was, or if he was given time to come down to Mary Island (the headquarters of the customs service), we could be identified, to all of which he apparently turned a deaf ear. We were not very apprehensive, however, for we could see that the man was at least partially convinced of the truth of our statements by the questions which he occasionally asked.

Bill treated the entire proceedings as a huge joke, and kept up a running fire of small talk with the sailors in the boats, some remarks of which I remember as being exceptionally funny and full of dry wit. All this tended to brighten a situation that might prove in the end to be a serious matter—in fact, the officer plainly told us that he was afraid we would have to accompany him to Sitka.

He treated us now, however, with the utmost courtesy, and after loading the confiscated spirits, he allowed us to pack our dunnage away in our little skiff, which was rowed with us to the ship and hoisted upon the deck by the starboard davits. At that time Major called the attention of several officers to the fact that it would have been impossible to have brought that load of spirits over in our boat during yesterday's storm; and one of them said that that was precisely the trouble, for they didn't believe we crossed the Entrance at all in that rough weather—which showed that a few of them at least thought we were telling untruths in regard to the whole matter.

We breakfasted in the cabin, and were then permitted on deck, although I noticed one or more of the self-appointed guardians stayed with us continually. The vessel steamed slowly by Tongas Island, rounded Cape Fox and proceeded northward to Mary Island, where we were told, after some delay, that the ship would go at once to Ketchikan, it being on the way to Sitka, and the officer was to use his own discretion as to whether or not we should be released.

An hour and a half's hard steaming brought us in sight of the little white hamlet so typical of the Alaskan coast. Here, after much trouble, for the tide was running swiftly, we secured a berth at the steamer's wharf. During this operation we had been taken below, and a little later there were ushered in to us, not only my brother, but two friends from Massachusetts, whom I never expected to find in that out-of-the-way portion of the globe; and after a surprised and hearty greeting, for my arrival was entirely unexpected, we told our story. Starting with the trip across British Columbia, by pack train, we hastily sketched the canoe voyage down the Skeena River to Port Essington, and our subsequent journey up the coast to where we were captured in the false position of smugglgers.

All three helped in telling the narrative, and when it was finished the officer quietly told us that (just as we had already surmised among ourselves) four men in an open boat, one of whom was wounded in the leg, had informed them that morning off Fort Tongas about being attacked by a party of smugglers on that island, and also that if they went at once to the spot they would find both lawbreakers and whisky together, which is a condition that is necessary in order to arrest and convict parties that follow this illegal business.

The one in charge then told us that he had believed our story from the first; and he actually apologized for the necessity of coming to Ketchikan to prove our statements. We parted the best of friends, and during our stay in that neighborhood found them to be royal good fellows. Afterward we spent many pleasant evenings together, when the good ship Rush was in port, and the real offenders, who had long been under suspicion, were finally obliged to leave the country, though never receiving the just deserts they so richly merited.

F. E. TAYLOR.

Another Reverie of a Bachelor.

LYING on a bed of hemlock under the little A tent, you draw the blanket closer and listen to the raindrops pattering on the canvas a few inches above. What ecstacy of comfort beneath that blanket, what sweet memories live in the music of the raindrops of rainy nights long ago, when you slept on the couch in the garret over at "Cousin Jim's house," after all day "hauling to mill" or hunting rabbits in a drizzling rain. You had a warm supper by the kitchen stove, and you and Cousin Jim ran up the steep garret steps, undressed in no time and were under four heavy comforts, lulled by the music of falling raindrops blended with the thump of larger drippings from among the leaves of the old elm tree whose branches partly sheltered the low roof. Was ever eiderdown more gracious than those four old home-made quilts? Was ever music more sublime or soul more thrilled?

You think of long tramps when on the chase, in later days, and of the lullaby of the raindrops on shanty roof or tent fly, while the last flickering embers of the campfire were being quenched, and ensued darkness and chilly blast without; but within was warmth and comfort between the blanket and the hemlock—comfort within while cold and discomfort are so near, without, that one must guard the comfort as if it sought to steal away and admit the chill and dampness. Aye, the nearer these, the more marked the contrast—the sensation of present security from them. For all things, joy and sadness, good and bad, even wet and dry, are by contrast.

> Minstrel touched zithern chord, in days of old,
> And kings were pleased—brave knights more valiant grew;
> Fair goddesses and mighty gods did list
> In former days the lyre.
> The piper's note, o'er dell and highland moor,
> Wafts, to cause lassies' hearts, in joy or pain,
> To quicker bound or only throb and sigh.
> Toiling peasant on Alsatia's slope
> Looks out o'er valley broad with shaded eye
> To see whence cometh note of shepherd's flute,
> Salmanca's light guitar—Italia's harp—
> Woos maid with moonlit face—speeds dancers gay.
> Mingled with cannon roar, is martial strain,
> And legions march to death, nor count it loss!

And as the world grows older come yet grander strains, thrilling alike the souls of yeoman and lords, yet will there not ever be gentler sound than the pelting of the raindrops, now more steady and strong upon the canvas as we awake from our first dream, draw the blanket now close over our ears and settle again for sweeter repose than comes to any but nature's child, in thankfulness that pain comes so near, while happiness, partitioned off by but the thin texture of the canvas, is yet securely ours.

MISSISSIPPI.

A Second Edition of the October Brief.

AN unexpected demand has exhausted the first edition of the October Game Laws in Brief and Woodcraft Magazine. A second edition is now preparing and will be ready in a few days.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

"Boyhood Days in Florida."

II.—The Last Stage of the Journey.

From the town of Sanford a primitive, rickety, narrow-gauge railroad ran to the eastern shore of Lake Jessup, ten miles away, and it was over this road that the next stage of my journey was to lead me.

Long before train time I was down at the edpot waiting impatiently for the moments to pass. Around the platform the usual contingent of loafing darkies were scattered. Some of the more energetic were assisting the freight agent in loading the cars; others were whittling; but the larger part, in the negro fashion, were merely basking like alligators in the sunshine. The train that was to convey me to Lake Jessup was a mixed one, consisting of about ten box cars, several flat cars and a combination baggage and passenger coach. The engine, a wheezy, topheavy piece of machinery with a smokestack built on the balloon plan, was getting up steam in the yard above. It soon moved down, emitting groans and squeaks as it came, and was coupled to the train. I was at a loss at first to understand why the engine was coupled to the train "head on," but we had not traveled far before the wisdom of this policy became plain. There was no need of a cowcatcher in front. We could never have overtaken a cow, but there was the greatest danger of a cow overtaking us from behind.

But at last came the familiar "All aboard." The tiny bell on the engine rang vigorously; there was the sound of escaping steam, followed by a series of jerks and jolts that threatened disaster to long-necked passengers, and we were off. And such a ride. If an accident had happened no one would have recognized it. If we had been on the ties themselves the journey could not have been rougher. Continued shrieks from the engine, the hiss of escaping steam, and the constant banging of the cars was enough to make one believe that the devil himself was at the throttle. And when we slowed down for stations, as we did on several occasions, the passengers barely escaped serious attacks of nervous prostration. A series of sudden bumps and jolts forewarned us that a station was at hand, and then we just held our breath and seized the arms of our seats, not daring to guess what the next moment might have in store for us. And so through the thick pine woods, over swamps, and past stations with their groups of idle, curious darkies, we bumped and jolted until at last the waters of Lake Jessup lay spread out before us. And oh, the relief to escape from that dangerous prison! to breathe that soft, clear air, to hear the swish of the water along the shore and the wind in the trees, and to view with my own eyes that mysterious land whose charms and beauties I had pictured so often! At the wharf near by lay the steamer that was to carry me to the other shore of the lake, a distance of about eight miles. Up on the pilot house I read her name, "Seminole," a name that to my boyish fancy appeared most thoroughly in keeping with the place and surroundings. She was a small single screw boat and from appearances had evidently seen hard usage. Just at present her crew were busy unloading a cargo of oranges to be taken back to Sanford on the return trip of the train. Making my way on board, I watched the men at their work, listened eagerly for any news I might chance to gather of the place to which I was bound, and chafed at the delay in the departure of the boat. Occasionally the sight of a flock of ducks set my heart beating fast, or the vision of a huge heron or fish hawk filled me with excitement. Some coots, too, playing in the neighboring marsh, came in for their share of attention, and it seemed as though I could never wait for the time to come when I should get my gun out of the trunk and start on my campaign of destruction. Wouldn't my friends at home be envious when I told them how thick and varied the game was down here, and wouldn't I make jealous my big brother for whom I had tramped many a weary mile, carrying, and at that time glad of the privilege of carrying, his bags of woodchucks and squirrels? But no more of that for me. In my own eyes I had already become myself a mighty hunter, and I pictured how, on my return to my New England home, I would call in the assistance of my younger friends to do for me the "dirty work," which I proposed to do no longer. And wouldn't I make their eyes sticks out with stories of my hunting experiences in that far-away paradise? In my boyish eyes I was already a hero among my old friends, whom I pictured gathered around me in groups listening breathlessly to my tales of adventure and fairly tumbling over each other in their eagerness to do my bidding. Such are ever the dreams of youth.

But the boat was now ready to start. Weird noises were issuing from the dark recesses of the engine room, and I peeped cautiously inside. But the knowledge that we had begun to move overcame even my curiosity to watch the working of the engine, and I hastened to the front of the boat to catch the first glimpse of the new country, now so near at hand. The lake was just rough enough to give a comfortable motion to the boat, and the wash of the water against her bow was one of the sweetest sounds I had listened to for many a day. The lake itself seemed alive with ducks, and my excitement was rapidly growing to fever heat. But just now my main interest was centering on the shore that we were approaching. The huge bony cypresses, rich with their burden of hanging moss, and the tall, graceful palmettos stretched away along the edge of the lake as far as the eye could reach, hiding behind them all that mysterious region in which I was soon to revel to my heart's content. At length the Lake Jessup landing came into view, a long, uneven and bedraggled looking wharf running out about 100yds. from the shore. The boat drew nearer and my eager eye soon detected white faces among the group that were awaiting our arrival. Among these no doubt was the man who was to pilot me to my new home. I watched them closely as the boat was being made secure to the wharf. As I stepped across the gangplank a jovial looking fellow made his way up to me and greeted me most cordially. He proved to be Gus Nelson, the boss of the orange grove on which I was to make my headquarters, and one of the finest fellows, as I afterward learned, that ever lived. We strolled up the long wharf until we reached the store at the further end. A typical country store it proved to be, combining a postoffice, store and general waiting room. Barrels and boxes and rubbish of all kinds lay scattered about everywhere, and the single glass showcase was so besmeared with grease and dirt that it was almost impossible to tell just what it concealed beneath it. But in spite of these unattractive surroundings, we managed to enjoy a lunch of crackers and cheese and fruit, and then we were ready to start on the last stage of our journey.

In front of the store a heavy wagon was waiting. The baggage was placed aboard. Gus took the reins and the horses started. Seated beside my new friend, I remained for a time in silence; but gradually all the boyish questions that were burning within me began to make their way out. My companion was generous. At times he could scarcely conceal his mirth, but he was always civil, and to me information from such a trustworthy source was little less than inspired. Once his good nature got the best of him. A huge buzzard drifted lazily over our heads, and to my eyes he appeared about the size of an ostrich. In my excitement I almost fell out of the wagon, and then, being utterly ignorant of the characteristics of this scavenger, I ventured some remark about the fine shooting those birds must furnish. That was too much for my friend, and he broke into a hearty laugh. He tried to explain to me that people never shot buzzards; but that served only to lower the people in my estimation. Inwardly I made up my mind that these natives didn't appreciate their advantages anyway, and it was some little time before I became convinced myself that buzzards were not exactly the kind of game I was after.

Our road wound through a rich hammock of cypress and palmetto trees, the former covered with dense moss. On the ground was a dense undergrowth of palms and shrubs and vines intermingled in wild confusion and presenting an almost impenetrable barrier to the foot of man. The delicious odor of the wild orange and magnolia, mingled with that of numerous wild flowers, filled the air with a rich fragrance. Bright plumaged birds flitted about among the vines and trees, while the natural stillness of the woods was constantly broken by the chatter of a squirrel, the rapping of a woodpecker or the harsh cry of a hawk circling far above our heads. My dreams were at last being realized. This land must be all that I had pictured it. Even the fountain of youth seemed a possibility in such surroundings. From the swamp our road led us up onto a stretch of higher pine land, a sandy soil free from the rich vegetation of the hammocks. Then we plunged into another swamp, to emerge at last in fairly open country, with orange groves on both sides of us. The large grove on my left, my companion explained, was the one on which I was to be located. Through the tops of the rich green trees I could detect the roof of the packing house, from which the musical notes of a darky's song floated out to us. A short ride brought us to the further end of the grove, and there, nestling deep in among the fragrant and shapely orange trees, I spied the "Lodge," my future home.

A. E. Stearns.

A Trip on a Bait Fisherman to the Magdalen Islands.

We were bowling along the high and rocky coast of Nova Scotia. The sails were taking every advantage of the strong east wind, that sang a wild song in our rigging and dashed spray flakes in our faces. The white, choppy sea was hemmed in by a narrowed horizon of clouds, save to leeward, where the black coast loomed more or less distinctly, as bay receded or promontory advanced. The Frances E. Conrad was doing her prettiest, for her captain and namesake was at the wheel. Our little crew of four were on the alert, especially Louis, who was developing dinner in the galley. As the guest of the captain, I was going through the usual experience of a sea novice, admiring, wondering and repressing a still somewhat rueful stomach. It was the end of April, but an ulster was very comfortable, especially when the sun's warmth was intercepted by a thick cloud.

After dinner the wind increased, the clouds gathered in heavier masses, and the sea tumbled higher and whiter. About 5 we headed for shore, making Shoal Bay in a driving fog about dark. The bay is long and narrow, but the water is deep. Conrad knew the place well, and we swept along fearlessly between the high spectral shores. Two rivers have their estuaries at the head of the bay. We bore up for the East River, but in the darkness kept too close to the point, coming to an unexpected standstill on a mussel bank, where the quickly falling tide left the Frances in a very ungraceful attitude. Not until the second tide did we slip off, and glad enough was I to get out of the scuppers.

We rafted a freight of lumber down the river from the saw mill, and with quite a deck load set sail in the early morning. We touched at Crow Harbor and thence to Port Mulgrave, where, with the gathering fleet of fishermen, we were detained a week by head winds and an ice-blocked gulf. These ice breezes were cold and chilling; besides, the sun was unable to pierce the dark gray canopy of clouds. However, I had a little shooting, exploring and some excitement in being lost on Cape Porcupine; and with baseball, reading and visiting the other vessels, the week slipped by.

Saturday morning I was aroused by an unusual stir on deck. The sun was streaming down the companionway, men were shouting, blocks were creaking and everything betokened a welcome move. Hurrying on deck, I found an animated scene. Sails were flashing up into the bright sunlight and anchors reappearing from the dark depths below, encouraged by the weird but untranscribable shouts and songs of the sailors. It is a merry race to see who will get away first. In a few minutes the narrow strait is thronged with the slowly moving fleet. The wind is light, but dead astern, and every scrap of canvas has been spread. Wing and wing we creep along. Now the Frances is forging ahead with quite a puff, and we shout laughing good-bys to the Souvenir and Katy E., becalmed a few rods away. But presently our sheets are loosely flapping, and Conrad is chafing as the fickle breeze leaves us to strike up a lively flirtation with our rivals. Only a big grampus has been steadily progressing, heedless of wind or tide.

By noon the wind was quite steady. Five vessels remained in our company, the others having kept nearer the Cape Breton coast. We had met occasional ice pans, but toward evening they became quite numerous and the lookout had to be very alert and the helmsman prompt. Sometimes the Frances had her black sides scraped by these little white orphans of winter. At dark we were on the edge of the pack, where we stayed all night. In the morning I was awakened by a heavy thump against an ice pan. The fog was dreadfully thick, but the sun soon ate it up. At 10 we entered the pack that touched the horizon. Progress through the winding passages was necessarily slow. Flocks of brant and duck were making their spring migrations, and a seal bobbed up from the water now and then. The sun filled the ice pans with a white blaze, and the schooner's four-knot gait was just right for a proper appreciation of the scene, to say nothing of the satisfaction of leading the fleet.

By and by the channel came to an end, and the sky suggesting a speedy termination of the fine weather we returned. As we passed the Souvenir and Katy E., Capt. Leslie, of the former, sang out that they were going to harbor in the pack. But we steered for Souris, P. E. I., where, anchored outside the breakwater, the gale gave me a very miserable Sunday. Monday noon we set sail, but the wind was very light and by sunset we had made only twenty-three miles. The pack ice had drifted away. The next day the sea was almost as motionless as the sky, and the occasional ice pans suggested the scattered cirrus in the fathomless depths overhead. The stars slipped into their places in the trembling ether, and their wavering reflections looked at us from the dark waters that crooningly laved the vessel's sides. Louis and Bridle were playing a vigorous duet on fiddle and bread pan near the galley, with Larry on the fok'sle, swallowing doughnuts. Conrad was playing some homesick melodies on the little organ in the cabin, and Lynds was at the wheel. As for me, I was permitting the mystic beauty of sky and sea to fill and overflow my mind, albeit with a doughnut in each hand. Ah, me! the stupendous and the trivial Louis would cook the bread pan heaping full of doughnuts, but

> Like the snowdrops in the river—
> A moment seen, then gone forever,

Larry took them in somewhat as a whale does animalculæ. Bridle added the zest of a gourmand. Conrad and I could do our share, but when we went for a second supply the pan contained nothing but our own disappointed reflections.

Thursday morning we reached Grindstone Island. It was good fun landing. The great billows went rolling in to dwindle to a fringe of foam far up the beach. On the boat swept, up and down on the long swells with a spasmodic uncertain progression as we neared the shore. Suddenly the boat scrapes the bottom and we scramble overboard and drag her beyond the reach of a pursuing giant. We delivered some freight here, and also at South Beach, and then sailed for Amherst Harbor. The channel is narrow, with shoals on either side, and only vessels with a light draft can use the passage. Conrad followed the maneuvers of a vessel ahead, and we entered safely with just one scrape to startle us a little. About eight vessels were at anchor, though sometimes double that number resort to the islands.

Saturday morning a great flotilla left the harbor; some distance in the lead a big seine boat skimmed easily along, urged by the power of ten muscular rowers, and in its wake came the fleet of whale boats, manned by the hardy French-Canadian inhabitants of the islands. Presently the lookout in the seine boat sights a school of herring, and the long graceful boat fairly flies over the water. There is some quick maneuvering as the fish are headed off, and the Frenchmen, trimming their sails and bending to their oars, swoop down to the seine like a flock of hungry gulls. The herring are dipped from the seine with a huge dip net and dumped into the boats, which hold from twenty to thirty-five barrels. Just awash they creep back to the waiting vessels, and soon four of them are ranged alongside the Frances, and in a few minutes the deck is knee deep with the slippery, squirming fish, the men in their oilskins ploughing right through the mass. From the fore shrouds I gazed at the novel scene. Part of the deck is reserved for salting; the herring are thrown into a small inclosure, mixed with salt and there shoveled down the hatchway, where they lie in bulk, as they are to be used to bait lobster traps.

To get aft I had to perform some original gymnastic feats, especially dangerous over the yawning hatchway with a brisk fusillade of herring coming over both bulwarks. Conrad was having a big palaver in the cabin with the Frenchmen, bargaining over the price, which they usually take in provisions and merchandise. After that was settled Louis' resources were taxed to the utmost to appease their appetites.

It would take too much space to recount my pleasant rambles in the quaint little town or about the wildly picturesque islands. Great flocks of brant and duck were seen every day, and Bird Rock is a notorious resort for gannets, puffins and auks, sometimes literally covering the rocky protuberance. Sea trout are plenty, and ducks, teal, plover and yellowlegs furnish in their season good sport and plenty of it. Indeed, any one who delights in the wild grouping of land and sea (and in the Magdalens it is sometimes rather uncouth) would find the islands a delightful place for a summer outing. There are no hotels, but the people are polite and hospitable, the accommodations are clean and the food very good. Amherst Island is the best for camp life, for insects are numerous and rapacious on the other islands, although mosquitoes are comparatively few. The lack of harbors makes yachting rather too risky, but the yacht could be safely anchored in Amherst Harbor, and cruising from island to island accomplished in whale boats.

One evening I returned from a trip to the interior, and found that the Frances had left the harbor to take in the balance of her cargo. She was anchored under the lee of a high cliff. No boat coming ashore, I put up at a cosy boarding house. The next day the wind had increased to half a gale. I climbed the hill, and crawling to the edge looked down on the Frances, riding comfortably in the shelter of the cliff. The Souvenir was also there. But the next day the wind came from the opposite direction and so strong that it was hard work crawling to the edge of the sandy bluff. Lying flat I looked down on the vessels, wildly tossing and pitching and straining at their anchors. The half-mile between their sterns and the

shore seemed but a span, thinking of what would happen should those hawsers snap. They didn't. But in the storm of 1873 thirty-one American mackerel schooners were driven ashore and became total wrecks. The shore that had at first been their their protection became, when the wind suddenly changed, a fearful and fatal danger.

The herring have been very plentiful, 1,500 barrels being sometimes taken at one catch. The Frances, full to the hatches, took advantage of a good breeze and sailed on Sunday. We had to lay to for three hours during the night in a short but violent wind, but in the morning we were beating into Aspy Bay. A thick curtain of fog enveloped the land, but it soon disappeared, and a beautiful scene was disclosed. The high and thickly wooded shore stretched away on either hand, terminating on the right in towering Cape North. The forest, dressed in the fresh green of spring, was lit up by a dazzling sun. A scrap of fog still lingered along shore, but presently it vanished and the picture took a new interest by the discovery of a large barque headed for shore, to which it was dangerously near. The lifting of the fog had apparently averted a wreck, for she immediately came about. She passed close to us, but we saw no one on deck except the man at the wheel and a dog. The dog, with his paws on the rail, barked loudly at us, but the man did not answer our hail.

During the next week I became a staunch admirer of Cape Breton scenery. From Cape North to West Point, P. E. I., via Canso and thence to Boston, is quite a cruise but I have only space for a slight description of a lobster factory. A small sloop comes up the harbor and makes fast to the wharf. Her skipper climbs ashore and I learn that he has 3,000 lobsters on board. The manager buys them and they are piled on the wharf and kept wet and alive. It is a gigantic pile of clawing crustaceans. They are boiled by hundreds in immense caldrons, thence hoisted upstairs to the packing room, where they shed their shells for the last time. Forty or fifty people—men, women and young folks—were at work transferring the meat from the shells to the cans, about four lobsters filling one can. Everything was very cleanly.

Ah, but the cook house! Can I ever forget it or its kind matron? To appreciate this picture as we did, it is necessary to have lived as we did. To ease Louis' work Conrad and I had taken our meals in the forecastle. This on a sixty-six-ton schooner is not very commodious. It is low and rather dingy; besides, there is the peculiar compound odor found on ships, and especially fishermen. Conrad's supplies were liberal, and of the best, but, of course, there was not much variety. Moreover, the butter and sugar had given out, and we had been using molasses as a substitute for several days. But the cook house was large and airy and well lighted, and if we could see all the studs and planking, wasn't the floor as clean as a table and not a mote of dust visible? There was a table and about a dozen chairs, the big range and the cooking utensils. The stove glistened and the pots and kettles bubbled and sang, and when the oven door was opened an odor came forth fit to make the gods hungry.

The long table was hardly big enough to hold its delicious burden. Such fish I have never tasted elsewhere. The meats and biscuits and jam were superlative; perchance it was their environment of corned beef and bread and molasses. We had to refuse an invitation to play baseball and stayed contentedly in our rocking chairs until it was time to return to the Frances—that is, bed time.

One more picture: A dense fog, so thick that we cannot see the length of the schooner, with horns and conches blowing all round us on the smothered vessels. Not a breath of wind, but the ocean laboring in such a tremendous swell that all hands excepting Larry are seasick. Up, up, up, the Frances seems to climb to heaven, only to slump with sickening motion to the depths below, while spars are creaking and sails flapping in a weird uproar. In a certain sense seasickness is the only thing in which I can hold my own on board ship, and I smile to see Conrad and Bridle in a similar state. But the wind comes, the fog lifts, the hard granite coast of Whitehaven is plainly visible, and blessed sight, the welcome form of a cook house, that Conrad says is almost as good as the one I have just described.

HALE HOWARD RICHARDSON.

The Horn Snake Cycle.

NEW YORK, Oct. 13.—*Editor Forest and Stream:* In various parts of this country workers in the field commonly believe and talk of a snake which stings with a sting in its tail. It is called in western Massachusetts the stinging adder, in the Catskills the horn snake, from the tip of its tail being coated with a horny covering. Truthful men tell of having seen and killed this snake, others equally truthful of having seen the snake sting through the leg of an old-fashioned leg boot, or strike so hard with its sting as to stick fast in and hang from a scythe snath.

Thus the evidence for the existence of such a snake is very considerable in amount, goes into particulars, is clean cut and comes from truth loving, intelligent people without an end to gain by lying, who are not romancers by nature and who are telling of what they honestly believe.

If such a snake does not exist, this furnishes a very curious case of human delusion.

Of course there is the imaginary "hoop snake," but I have never known any but very unintelligent people believe in that, while intelligent people believe in the stinging adder.

I should, however, like to be allowed to inquire through your columns if any of your readers has ever seen a snake that stings with a sting in its tail, or has ever known of anybody to be stung by one. ELIOT NORTON.

Homing Pigeon Registry.

WE have many notices of carrier pigeons gone astray or killed. Th owners of such birds may be reached by communicating with the homing pigeon registers, which are: C. E. Twombley, 32 Hawley street, Boston; or Chas. H. Jones, 10 South Broad street, Philadelphia, Pa.

Autumn Breezes.

SOMEWHERE near the beginning of Caius Julius Cæsar's "De Bello Gallico" occurs the statement, in indirect discourse, that to those whom they wish especially to punish for their cussedness the gods are accustomed to grant thirty days of grace, in order that, collection being forced, men may suffer the more from the put-off-ed-ness of the penalty. To the truth of the assertion I can testify as I write from a cot and am forced to admit that there is no fool like an old fool. None the less, my horse is more to blame than I, as my narrative will prove.

As a matter of fact, there are some men who have not sense enough to grow old. Every FOREST AND STREAM bears evidence of the fact. I am one of the guilty. Why! Some of us, year after year, will welcome the first violet of spring and follow a rabbit's track in the light December snow with the zest and pleasure that we had when

"All the world was green
And every bird a swan, lad,
And every lass a queen."

So when the crisp, bracing breezes of September dispelled the sultry heat I found the temptation to go to the lake irresistible.

The mountains were just beginning to change the dull green of summer for the red and gold of autumn. In the quiet waters the naked peaks, dotted with snow banks left over from last season, were invested in softer tints. Beyond the water's edge were farms, stubble fields and the hum of the threshing outfit. Hamlets, so far removed that naught but their picturesqueness remained, set in verdure, encircled. Close at hand the tules were brown and amid them the leaping bass gave promise of rare sport. Now, the bass is a queer fish. In June, when the breeding season is on, he goes into deep water; but in autumn he seeks the shallows and the rushes, and I have found in his carnivorous paunch young blackbirds and half grown mud-hens. That he relished birds I did not know until quite recently, but observation has proven to be a very eccentric creature as regards his diet. Trout, too, are fastidious when meal time comes. They will eat young mullet and chubs and minnows and their own fry; but let a carp get half way down the gullet and it is disgorged instanter. In spite of arguments to the contrary, I confess that what a hungry trout refuses is not good enough for me. The thousands of acres of destroyed feed and befouled waters tell why the ducks miss us in their migratory flights, and the lake trout are all but exterminated. Carp alone are responsible, and yet carp and thugs and rattlesnakes have their counsel for the defense.

In the rushes it was impossible to cast a fly, but here and there, where an opening gave a few square feet of clear water, I could drop a minnow. Generally the little chap would enjoy his fancied liberty for only a brief moment. Then would come the tug and the reflexive strike, so different from the gentle twist of the wrist to which the trout fisher is accustomed. I lost many fish from striking too gently, but when a good sized bass was hooked fairly he combined all the work and pleasure that I wanted in bringing him out from the rushes to the side of the boat. Boys in neighboring boats, by the use of angleworms, caught large messes of small catfish. The flesh of our imported "bullhead" is very insipid. I would not take one home as a gift. Lengthening shadows, red-splashed mountains and the chill of evening called a halt, but not a retreat. It was the opening, and not the closing, of my season.

Visiting the river a few mornings later, I found that while it was altogether too late for trout fishing with flies, minnows were as seductive for the 2-pounders as they had been with the bass. Never have I so enjoyed the autumn angling. Yet it was only preliminary to the bringing out of the gun, for our duck and snipe season opened on Sept. 15.

As an experiment the change of opening from Oct. 1 to the present date is a lamentable failure. The spring was very late, and young teal and mallards were scarcely able to fly. In many cases pot shots were taken at broods floating on still ponds and the survivors would rise, circle and drop back into the same spot. It is not exaggeration to say that hundreds of young ducks were clubbed to death on the opening day. On Salt Lake, but not on Utah Lake, I am happy to say, a great amount of shooting was done on the 14th, and I have not heard of any arrests being made. The ducks killed were those that had bred and summered in this vicinity. There has been no severe weather to bring the south-bound flight. With the limicolæ the case was entirely different. Never have we enjoyed better sport with jacksnipe, plovers and curlews.

Out one morning long before daylight and up into the heart of the mountains in quest of grouse! Ah! This is the sport that turns the dial back a score of years and makes one thrill with the exuberance of youth. As I rode through the cañon amid the rustling leaves, the wild hops and the purpling grapes, where the sounds were those of the woodchopper and the creaking drags, I let my horse walk and fell into a morning dream.

Somewhere in the Connecticut Valley, where the shadows of Holyoke fall athwart its old walls and Mount Tom stands like a sentinel on the opposite shore of the beautiful river, is a famous female seminary. It was old when Vassar and Smith and Wellesley were unthought of. Now, the young ladies in this far-famed institution were all of them exceedingly pious and learned, well fitted to become schoolmarms and ministers' wives, but under the stringency of the then existing regulations it became necessary for them to have relations of the masculine persuasion in order that they might enjoy the society that they craved. So it came to pass that a majority of the juniors and seniors at Williams and Amherst, and many of the theologians at more remote Andover (all being young men of proven integrity), had cousins at Miss Lyon's noted school. This made possible botanical trips in the spring, chestnut parties in the fall and sleigh rides—oh, such sleigh rides, when the snows of New England drifted above the old rail fences. That such sleigh rides were sometimes taken surreptitiously but added zest to the endeavor.

It was with an Amherst man and our mutual cousins that I made a trip northward in those halcyon October days to Northampton and Amherst and North Amherst, with its white church, mill pond and comfortable farm houses, to Mount Toby, one of the three guardians of the middle valley. It was nature in her autumn loveliness rather than the companionship of the hour that made it a red letter day in a varied life. Chestnuts in gold vied with maples in scarlet to panoply the old mountain. As we climbed we saw beneath the valley and its hamlets, its stately rows of graceful elms in the sere and yellow leaf. As we rested our eyes peered in every copse for the rare Hurtford fern, the blue-fringed gentian and the carpeting of wintergreen. We listened to the whirr of dusky partridge, to the subdued echos from the farms below, to the faint song of coming winter in the half-bared boughs. But when we reached the summit and looked down upon the mighty ox-bow, on the brown and gold of mown and harvested fields, on the lazy smoke from ancient chimneys, and on a score of white, heaven-pointing spires, it seemed as though Olympus had been reached. Then kind Mother Nature touched my eyes and I loved her, and since then she and I have been very, very close friends.

Of all this was I reminded as I went into the core of the Wasatch, and, reaching the summit, saw to the west the valley, rivaling in its beauty the Connecticut Valley of long ago, and to the east billow upon billow of pine-clad mountain chain. The shooting was unusually poor. Only one little ruffed grouse came to my bag. As we descended, however, we found plenty of squirrels gathering acorns in the oak brush.

At 2 o'clock we came back to the mouth of the cañon and I proposed an hour's skirmish through the wheat stubble. For a half hour we rode, seeing nothing to blaze at, and I became quite careless. Suddenly, from our very feet, came a whirr, and a bevy of sharp-tailed grouse sailed majestically around us. There was no time to dismount, so I dropped my reins on my colt's neck, leaned over and let drive. My horse whirled as the grouse dropped. I dropped also, and unfortunately I have been obliged to keep down every since. However, I hope to get out again by the time the ducks and geese drop in. Until then, vale. SHOSHONE.

In the Alaskan Sheep Country.

HAVING recently returned from an extended trip through southwestern Alaska, I am frequently questioned as to the hunting and fishing, and some of my experiences may interest others. I am convinced that this region in many respects is the best hunting and fishing ground on the American continent—that is, the southwestern coast, including the islands and the immense territory tributary to Cook's Inlet, all of which has a splendid climate, tempered by the warm Japanese current. The interior, or over the coast range, is colder and does not afford so good hunting, although there is a vast unexplored region between the lower Yukon on the north and Cook's Inlet on the south, which hunters who have been far up the Sushetna River say contains large herds of caribou. But for moose, mountain sheep and bear, the Cook's Inlet region is the place. Deer are more plentiful on the islands south of Sitka, keeping away from the mainland on account of the large wolves, which do not take to water and are not found on the islands.

Water fowl of all kinds are seen between Sitka and Cook's Inlet, especially in Prince William's Sound and along the mouth of the Copper River, the latter of which has formed an immense delta many miles in extent, where thousands of wild geese, ducks, swan, snipe and plover come every season to hatch their young in the swamps and marshes back from the beach. Many specimens of ducks that are never seen in Eastern waters are among them. The parrot duck, more commonly known as the sea parrot, seems to be most plentiful, and is a very handsome bird. I shot several before I discovered that for eating the common black crow was preferable.

Birds of the grouse family are common and some of them are similar to the Eastern partridge. At Kodiak Island, back from the coast, I saw flocks of fifty or a hundred having so little fear a true sportsman could hardly have the heart to kill them. These are sometimes called "fool hens," but are really ptarmigan.

Mountain trout are very plentiful and are caught in the large streams near the coast and inland lakes, weighing as high as 12lbs.; but what are called brook trout are small and look somewhat like and are about as gamy as the common chub in Eastern brooks. This I attributed to the extreme icy coldness of the water. They might be rightly styled "fool trout," as after fishing faithfully for two hours in a stream at the head of Cook's Inlet where a beaver dam had checked the current, making a large, clear pool, and in which were countless numbers of these trout, trying all kinds of fly hooks and the most tempting morsels of moose meat (no angle worms in Alaska), in despair I fastened a piece of red flannel on the hook, which they grabbed voraciously.

For sea fishing no other waters in the world offer such inducements either for sport or commercial purposes. I found great pleasure in trolling for sea bass around the small islands close to the shore. They weigh from 1 to 5lbs. and look very much like our fresh water rock bass, and are very gamy.

In trolling one never knows what he is going to catch, as it is not at all unusual to get a halibut, shark or large salmon. This in most cases means the loss of your spoon, and in one instance it came very near meaning the loss of the irrepressible small boy on our boat. He insisted that his fond parent should let him hold the fish line while we were anchored in Yakatut Bay. He succeeded in hooking a whopper of some kind and in entangling his legs to such an extent that I think he would surely have been drawn overboard but for the fact that he possessed a good pair of lungs and knew how to use them, bringing reinforcements, and with the aid of a knife the line was severed, releasing the unknown and saving the boy.

Other species of fish are found in abundance all along the Alaska coast, such as codfish, herring, mackerel, salmon, halibut and shallfish of every description except oysters; but, as is well known, this is the great breeding ground and home of the salmon, the canning of which is at present the largest industry in Alaska. Salmon commence to run about the middle of May, going up the streams to spawn about June 15. The first run is the red mon, halibut and shellfish of every description except mon, then the humpback; lastly the silver salmon.

Some think the red salmon is the best, which is not so,

The pink or silver salmon are much fatter and are finer in flavor than the red. The humpback and dog salmon the natives will not eat, but thousands of cases are packed every year by irresponsible packers, and in order to deceive the public herring oil is put in the cans. It is generally supposed that cleanliness is observed in the canneries, which is quite true, but I would advise lovers of canned salmon to keep out of a canning factory when in operation; otherwise the unsavory odor and vision of dirty looking Chinamen will return at the sight of a salmon can.

The common whale is plentiful along the coast from Sitka westward, but I saw more in Prince William Sound than in any other place. The sperm whales, so much hunted for commercial purposes, have all been driven north to the Bering Sea and Arctic Ocean. It is not an uncommon sight in these waters to see the black whale attacked by the thrashers. These are about 25ft. long and very powerful. They will come straight up out of the water 15 or 20ft. and let their whole weight drop on the back of the whale, in this way often killing them.

Fur bearing animals, such as the sea otter, sable, black and silver-gray fox, are getting very scarce in Alaska, and in fact all over the world. The native Indians can no longer make a living by trapping. Raising foxes on some of the smaller Aleutian islands is quite an industry and is very profitable. The fur bearing seal are seldom found south of the Pribilof islands, in Bering Sea.

The spotted or hair seals are plentiful everywhere. The skins are cheap. The Indians use them for moccasins, caps and mittens. When they wish to be especially gay they sport a vest made from these skins. I bought two of them from a Siwash squaw at $1 each, but never having found a disinfectant powerful enough to take away the smell of fish oil, I have not worn them regularly as yet. Recently I did put one of them on to exhibit to a small circle of friends. The room being rather warm, the circle suddenly expanded and then disappeared entirely. The buttons, however, were much admired; they were nothing more nor less than the seals' teeth ingeniously fastened in true Indian style and were in as much demand as if they were made of brass and on the jacket of a real Santiago hero.

But to return to hunting. Cook's Inlet is the place for big game, and Sunrise City, at the head of Turnagain Arm, which is the northern extremity of Cook's Inlet, is the best place to stop, so far as pleasant surroundings and accommodations are concerned; and this is the center for big game hunting, such as moose, caribou, mountain sheep and bear.

While crossing Turnagain Arm this summer in a small steamer we were accidentally stranded—that is, we were obliged to wait for flood tide, which, by the way, runs from 30 to 40ft. high, as when the tide goes out of the arm it looks like mud flats. It was late in the evening, but light enough for us to discover two moose in a little opening near the shore. There were six of us on the boat, and all hungry for moose. We found on board a small Marlin rifle and a Colts revolver. With this equipment we paddled ashore and after some reconnoitering Nate White and myself were detailed to skirmish ahead, but cautioned particularly not to create a stampede of moose in the direction of our unarmed reinforcements. We crept up reasonably close, one on either side of a rise of ground, until we got sight of one of the moose again, and then opened a fusillade. The moose trotted leisurely almost directly toward my friend White, although badly crippled. He would have escaped into the thick spruces but for a bullet from White's revolver which struck him back of the shoulder. He proved to be a monster bull moose and required the united forces of all hands to drag him down grade to the beach with a rope about his neck. In the meantime the other one had disappeared in the growing darkness. I saved the scalp, and the head is now being mounted.

I also brought out three other heads and scalps unmounted, one the record moose head of the world as to size, beauty and massivness, spreading 73½in., with thirty points on the blades; width of blades, not taking in the points, 19½in.; weight of horns and skull without the scalp, 105lbs. This, together with the others, I am now having mounted.

While I was at Sunrise City the Indians brought in several moose calves, having killed the mother moose. The calves lived only a few days, having nothing but condensed milk. To me it seemed outrageous that this should be allowed, even in Alaska.

I had quite an experience while at Sunrise City hunting mountain sheep. We saw them first early in the morning near the summit of a mountain range, which in places was covered with snow and in other places with a kind of frost grass and moss. The same Mr. White who figured in the moose hunt, and who had hunted mountain sheep for four or five years, said he was going after them, and asked me to accompany him. I shall never forget that day. From Sunrise City we went straight across country to the foot of the mountain through dense timber, over old logs, ridges and across gullies until my sporting blood had nearly lost its fever, but on going up a little rise or foothill we caught sight of the sheep again, and this spurred me on.

They were at least three miles away; but three miles steeper than a roof, under the burning sun of a hot day in July, across banks of dazzling snow that blinded one's eyes and produced a pain that was almost unbearable, was worse than an endless road on a level stretch. By going not to exceed 50ft. at a time, part of the way on hands and knees, and then resting, we managed to reach the top of the mountain at noon, only to find that the sheep had disappeared.

Going along the ridge a couple of miles and examining carefully the patches of snow, we at last found that they were headed north. We followed this faint trail about five miles until the mountain ended abruptly, necessitating a halt on our part, but not so with the sheep. I told White we would surely find them about a thousand feet below with their necks broken if there was any way of our getting down there, but this not being his first experience, he was inclined to scan the country below.

Let me confess that just here I lost interest in mountain sheep, forgot I was tired and forgot everything, in fact, I was so enraptured with the magnificent scenery that presented itself from this point. Cook's Inlet and Turnagain Arm lay apparently at our feet 5,000ft. below. To the north and east hundreds, and I might say thousands, of snow-capped peaks rose against the sky—peaks and mountain ranges without names, in between numberless valleys unexplored, and here and there huge glaciers wedged in mountain passes. To the westward beyond Cook's Inlet as far as the eye could reach a long stretch of green timber, interseprsed with little open natural parks, extending up and back to the snowy range of mountains, which was studded by two volcanic peaks—Ilami and Redoubt—puffing forth now and then little volumes of smoke, all making a combination of scenery so grand and magnificent that everything I had seen before sank into insignificance in comparison.

So much for scenery. We finally discovered the sheep about 2,000ft. below us to the left in what appeared to be a glacier basin, which had an entrance on the north side, and I would have staked my last dollar that no living thing without wings could get out of it except through this entrance. By making a long detour we finally entered this natural corral in high spirits, satisfied that the most difficult game to capture known was at our mercy. Even White was chuckling in his sleeve at the march we had stolen on them. We approached cautiously. We had just come within easy gunshot when the sheep spied us. Instead of circling about and coming down the cañon, as we confidently supposed they must do, I am obliged to say in strict adherence to truth that those sheep simply took wings and went up what appeared to be a perpendicular wall of mountain rock 2,000ft. high. Both of us were too astonished to shoot until they were far out of range. I felt that they deserved their freedom, having never before witnessed such an incomprehensible sight, and I shall never hereafter discredit any story regarding these mountain climbers.

Crestfallen, disheartened and disgusted we started back toward Sunrise City. I always thought going down a mountain was easy, but I believe it was more tiresome in that instance than going up. To shorten the distance I proposed to my friend White that we slide down across a bank of snow about 200ft. wide that stretched out before us, but not being as tired and reckless as myself, he preferred going around. With the gun under my arm, the barrel firmly gripped in my hands, and the breech settled in the snow to serve as a sort of rudder and brake, I cut loose. I am not going to do that again, either. That mode of transit, though rapid, has disadvantages. Go around at all hazards. Somehow I shipped my rudder at the first send-off, but not until it had swung me entirely around and I found myself going like greased lightning keel first, with the gun far in the rear. I clutched wildly at the snow, but it was of no avail. Everything was going my way. I finally landed in a clump of bushes about ten seconds ahead of the gun, sustaining no serious injury except my wounded feelings, which attested the fact that snow can become quite hot under certain conditions.

Before proceeding any further I registered a solemn vow never to be inveigled into hunting the innocent mountain sheep again in Alaska. F. H. Russell.

Natural History.

Collecting Menagerie Animals.

I.—From Parrots to Rhinoceroses.

Previous to 1860 nearly the whole importation of wild animals into the United States arrived at Salem, Mass. Up to that date almost the entire trade with South America and the West Coast of Africa was carried on by vessels hailing from that port, and strange to relate, the collector of the port and his immediate assistants handled the animal branch. Residing in Boston about that time, I frequently made short trips to Salem hunting living zoological specimens. One of my favorite modes of procedure was to arrive in the town during the night, and early the next morning pass through the various alleys and back ways of the municipality, when I would be able to hear the sounds made by the various specimens of the parrot family, which had been brought home by the crews as presents for their relatives and friends. The location was mentally marked, and after breakfast a call was made at the front door, when I generally succeeded in making a purchase. Of course I soon became well acquainted with the collector, from whom I purchased specimens of all the larger kinds of beasts and birds.

Gradually the trade drifted to Boston, when I made it my business to make the acquaintance of all the shipping masters in the port, and I soon made it to their interest to introduce me to all the captains and mates bound for ports where they would be likely to pick up wild animals, birds and reptiles. On the day of sailing I would be on board and make myself acquainted with the sailors, from whom I generally got my supply of parrots. I had a contract with a dealer in New York, who took all that I could get, allowing me $1 per head commission. So it is easy to figure that whenever a vessel arrived with each sailor bringing one or two parrots my commission amounted to quite a sum.

Another source of supply was the different sailor boarding houses; but I am sorry to say that this was not a very satisfactory branch, as a greater portion of the birds had been educated to use the vilest kind of phrases. I well remember running across one, whose cage was set behind the bar of a noted resort, which used the most complete collection of oaths that can possibly be imagined. I wrote to my customer about him, and he replied that he would not have the bird at any price. A short time subsequently I was surprised at the receipt of the following telegram: "Express blackguard parrot immediately." I did so, and some time afterward going to New York I wished to know what had become of the bird. The dealer burst out laughing, and said: "One morning a young gentleman came into my store and said that he lived with two maiden aunts who had become affected with the parrot mania, and he wished to purchase one which could swear like a trooper, as he detested the birds, and wished to cure his relatives of their maniacal desire. I telegraphed you, and on the arrival of the bird it was turned over to him at a good round price. A few days subsequently he stepped in and said that he thought the bird was a fraud, as it had never spoken a word since its arrival. I requested him to have a little patience until it became accustomed to its surroundings. About a week after he made his appearance with the bird and his face wreathed in smiles. It seems that during the morning one of the aunts had addressed some endearing terms to her pet, and in return received a volume of phrases such as are heard generally in places similar to the one in which it had long resided. The result was a near approach to a fainting fit, and the instant banishment of the culprit. The young man insisted on my sharing a bottle of champagne with him, and ordered decapitation for the naughty offender."

The New York dealer once wrote to know if I could get him any live wood ducks. I immediately began to visit Faneuil Hall market, to see if I could find any carcasses on sale among the poultry dealers. After several visits I ran against a quantity of bodies at one of the stalls, and tried to arrange with the dealer to secure me some living specimens, but could get no satisfaction out of him, as he evidently thought that I wished by some means or other to interfere with his business in that line, as his was the only stand in the market which kept that species of duck on sale. Fortunately one morning in passing I saw them unpacking a barrel of the carcasses, which bore a label of the American Express Company. During the day I called at the office and was informed that the birds came from Burr Oak Station, on the Michigan Southern Railroad, and were consigned to a clerk in the post office, who sold them to the dealer. On interviewing the clerk he told me that the birds were netted by his brother and proffered to write immediately and ascertain if he would be willing to keep them alive until I could reach him, so as to properly crate and ship them. A short time subsequently I was notified that it was too late to do anything that season, as the flight was about over; but during the next fall there would be no difficulty in supplying me. I immediately wrote to New York and received an order for the entire catch. Whereupon I closed upon that basis, and the next fall, on notification of the close of the catch, I made the trip to Burr Oak and found 300 pairs awaiting my arrival. The netter's house was situated on a wooded knoll, around which ran a creek, on the banks of which were three nesting beds, all being in full view of the house, so that the owner could sit at a window and see whenever the ducks were feeding up to the nets. For my especial gratification he removed the bait from two of the beds, thus forcing the ducks to frequent the remaining one, so as to insure a good catch, and one afternoon during my stay I was so fortunate as to catch forty-six black ducks at one pull. I arrived in New York without a loss, and the wood ducks were all shipped to Europe, where they were distributed among the various fanciers and zoological gardens. Consequently to-day they can be procured from thence with less difficulty than in this country. At present I have a price list of the Jardin d'Acclimatation, Paris, in which 100 pairs are quoted at 35 francs per pair.

As time progressed, I found my trade again shifting from Boston to New York, where a majority of my customers were located, thus forcing me into direct competition with them. After due consideration, I determined to go abroad, and picked out South Africa as my destination, trusting to secure specimens which would be new to the home market, as I had met with but few beasts and birds hailing from that region. I had to wait for some time before I could hear of a vessel bound for that region, but finally hit on one loading flour at Long Wharf, Boston. I secured passage for Port Elizabeth, Algoa Bay, and was promptly on board on the morning appointed for sailing. I found the mate in trouble, and hurrying to get away from the wharf without the captain, who resided on Cape Cod, and in driving to the railway station had been upset and unfortunately broken his leg. This was during the Civil War, when sailors' wages ran high, and every man before the mast had received two months' pay in advance, consequently the officer was anxious to haul out and anchor in order to prevent desertions. Just as the tug made fast to us, and the mate was superintending the casting off of our lines, an express wagon drove out on the wharf and a party on it sang out, "Pass down the line!" It was immediately done, and made fast around a seaman's chest, and the party used it hand over hand to get on board. The driver of the wagon called out: "Captain, I hope you will have a quick trip." Casting his eyes aloft and taking a survey of the vessel's rigging he answered, "I'll make the old sugar box sail if there's any sail in her." And he did make her sail, for he made the voyage out to Algoa Bay in fifty-one days. He had always been in the Mediterranean fruit trade, consequently was a driver, and it was a most fortunate thing for the owners that he had been selected to fill the position of the crippled master.

Immediately after my arrival I began to look around for natural history specimens, and soon found out that the sole source of supply was from farmers, who brought them into the morning market, where they were sold at auction by the market master. As my line of business was something new in the community, it was soon noised that a crazy Yankee had arrived, who was willing to purchase all kinds of *feræ naturæ*. Consequently I was able to pick up a number of specimens at what I considered fair prices, but they were nearly all hay eaters, particularly the various species of antelopes peculiar to that region, which had been captured while young and kept as pets. Among them was a pair of bush bucks, the only ones that I ever secured during all my South African tours.

I returned by the same vessel which had carried me out, and on my arrival in New York disposed of my entire stock to the dealer for whom I had formerly purchased parrots. A few days after the sale I was hastily summoned to the store, and found that a pair of baboons had been sold, the purchaser of which wished collars and chains put on them. In making the attempt one keeper was severely bitten and another had nearly all his clothing torn off him. I had experienced trouble in caging them for shipment; but succeeded in mastering them without any serious mishap. They had not forgotten the lesson, and I surprised the purchaser by passing my hands into the cages and affixing the collars and chains. If he was surprised I was much more so

when I saw him pay $1,000 for the two animals. I was convinced that I had parted with my collection for far too little money, and I was still further enlightened on the subject some ten days afterward, when the dealer smilingly showed me a communication from the zoological gardens of Antwerp offering him 2,500 francs for the pair of bush bucks.

I watched anxiously for the sailing of another vessel for South Africa, and finally secured passage in one bound for Cape Town. On my arrival there I found that little or nothing could be done in my line in that vicinity, and I was puzzled where to go next, when I fortunately made the acquaintance of a Yankee skipper who sailed a small vessel up and down the East Coast. He persuaded me to take passage with him for Durban, Natal, which port he represented as being a good one for my business. On my arrival there I found a pair of cheetahs on sale, which I immediately purchased, and a short time afterward managed to get three lions. I remained about six months and secured a very good collection, and then sailed for home, where I arrived with scarcely a loss, and profiting by my former experience received much better prices than on my first venture.

While preparing for my next rip I received orders for two hippopotami, or rhinoceroses if the hippopotami could not be obtained. In order to gain time, I took steamer for England, and on my arrival in London visited the establishments of the various dealers in wild animals, for the purpose of procuring either hippotami or rhinoceroses, but I learned nothing until the morning I was to leave for Southanmpton to catch the steamer for Cape Town. Happening in at Jamrack's, he informed that he had just received a letter from his son in Calcutta, who would return in a sailing vessel via the Cape of Good Hope. Then he read a list of the stock he intended bringing with him, and among them were two rhinoceroses. Of course I had not informed him that they were the very animals I wanted, and simply remarked, "If it were not for the vile roads in my country I would like to purchase the rhinoceroses, but they were so heavy that it would be almost impossible to wagon them." He immediately said, "Let me sell them to you."

"How much would you have the nerve to ask me for them?"

"I'll furnish the two for £600."

I immediately accepted the offer, and he frankly acknowledged that if he had suspected that I really wished to purchase the animals he would have named a much higher price for them. They arrived in New York in good order, and singular to relate, years after, when in charge of the zoological gardens of Philadelphia, I assisted in making a trade with a showman for one of the same animals, and to-day Pete the rhinoceros is one of the leading features in that famous collection.

FRANK J. THOMPSON.

My Little Bantams.

THE world is constantly reminded that it is not value, quantity or even usefulness of a thing that enables it to secure attention which becomes the synonym for pleasure. Little things possess attractiveness which on cultivation and acquaintance may give as great reward of pleasure as that experienced by lovers of fine horses or short-horns, or by the autocrat who marshals his hosts at will. It is all the same.

Pleasure, being merely a gratfication of the senses under the will, makes the sources of enjoyment as variable as tastes and inclinations of individuals. The Frenchman with his army of well-drilled fleas, no doubt feels quite as much pleasurable pride and holds as large a measure of military glory as any duplicated Napoleon or second Alexander. And it would seem among the possibilities that education in this line may be carried far enough to enable cadet canary birds to experience as much pleasure in witnessing their insurgent brothers tumble over on touching off the field pieces, as is attributed to Gen. Otis on seeing his explosive shells mow down the Filipinos.

Birds are remarkably bright, and receive instruction readily. They have no difficulty in making their wants known, and some can be taught to articulate and apparently to understand the meaning of words in human language. It is quite evident that all domestic fowls and quadrupeds understand the meaning of much of the language addressed to them by their attendants. Birds, however, more than beasts, possess the faculty to speak the human language and to understand that spoken.

Some years since an amusing incident occurred with an unsophisticated squirrel hunter who was not aware that birds in this neighborhood sometimes talk. While he was in the act of drawing a bead upon a crow the bird cried out, "Don't shoot me, damn you!" He lowered his gun, and in breathless agitation reached the nearest house, saying, "I came very near shooting the devil down in the woods, but he said 'Don't shoot me, damn you,' and I got out of that locality as quick as could." The bird was a favorite of the neighborhood and had been taught to say these words for his own protection.

When birds are compared and measured by commendable faculties, no species has greater claims than the one on which was conferred the honor of illustrating the goodness, mercy and solicitude of Divinity for the Wayward City.

The hen is not only a model of careful anxieties, love and protection, but is by nature exceedingly intelligent. She recounts her young, and when one is missing she calls aloud and searches for the lost. She is so partial to her own that she detects and resists with unerring sagacity additions and substitutions to her family. How her little brain accomplishes so many wonderful manifestations of superior intelligence is as much a mystery as the phenomenon miracle that perpetuates her species.

Some years since the writer had two blue blood game hens hatching the same day. The hens were sisters—iridescent black. Their chicks were alike, all black, with a white downy spot on the breast. The first hen taken off the nest had five young, while the other hen, still on the nest, had six. The doubtful undertaking was to kidnap the chicks of the mother still on the nest and have the hen taken off adopt the six incubated by her sister. A chick from under hen No. 2 was quietly and unnoticed placed with those of the hen having five. In a few minutes the mother became disturbed in mind, raised her feathers and walked around, passing her head close to the chicks, showing as a hen only can that things were not satisfactory. In another minute she picked up a chick and killed it at one dash and outcry of anger.

In the evening she was placed in a box and three additional chicks with her own were put under her for the night. In the morning when taken out with eight young she became furious and killed two and badly injured the third before the massacre was stopped. Those killed and injured were no doubt chicks belonging to the other hen, although the closest observation could reveal no difference in the two broods.

Not long since a neighbor brought in six motherless bantam chicks a day or two old to place with a bantam hen having a like number of the same age. The mother accepted five of the strangers colored as her own, but the white one she stubbornly refused to admit to association

THE BANTAM MOTHER.

with her family, and made it necessary to keep it out of sight to save its life. In this instance the objections must have been founded on "color line," as it is not likely the mother reasoned abstractly far enough to anticipate unpleasant gossip from its adoption. There seems to be good reason to believe that while birds are all partial to nice and fashionable plumage, they alike detest any deviation from standard colors. In the fall of 1880, while waiting for wood ducks on the border of a pond, thousands of starling came in yelling and screaming and acting in the air with as little sense as an infuriated mob of human beings. They thundered around the pond for some time before the cause of the disturbance was ascertained. They were after a white starling, which they seemed determined to kill. The persecuted bird not likely had committeed any offense, but like humans they mobbed it altogether on account of color.

Hens are not all in the same degree of exclusiveness; but enough so to maintain and enforce hereditary and constitutional requirements, being in favor of educating and taking care of their own to the exclusion of all others.

A hen is a hen, regardless of size. The brain, with its activities and power, bears no relation to the magnitude of

COL. DEWEY.

the birds. A bantam mother is just as much a typical mother as one of ther larger sisters. Bantams are hereditary pets and wonderfully pleasant schoolmasters; and if any one desires to lengthen out his days, obtain information and amusement combined, and feels assured he will not become muddled in trying to solve the problem of matter and mind in the order of evolution, let him attempt to rear a few bantams and he will be satisfied with the reward and quite certain he has not discovered the philosopher's stone.

The bantam mother shown in our illustration with a brood of ten little chicks is just off the nest. The hen weighs 8oz. and the young ½oz. each. Three weeks ago these bright little fellows were nothing but eggs; now each is an intelligent being. See! One picks up a crumb too large to swallow and starts off on a run, fearing a brother or sister might come in for a share of it. The mother says she has found a good morsel; instantly all make a rush for the prize. She sees the shadow of a pigeon's wing and says "Hawk." They instantly drop down and lie motionless until told the danger is over. How did selfishness find its way into the egg? Who taught the mother's language? It is astonishing that so small amount of brain only a few days old should be able to carry on so many amusing pranks bearing no relation to experience or observation.

Bantams are not reared without much care and unremitting attention. They are little gluttons, and at the mother's bidding gladly eat anything they are able to swallow, making their infancy fraught with many perils. It is for this reason better to take them from the hen as soon as off the nest and restrict them to soft diet for several weeks. Early this summer nine youngsters were taken from the mother and placed in a small back yard full of bushes, vines and other undergrowth. While we were fixing them in their new location a lady, seeing what was being done, volunteered the prophetic statement, "You are having all your trouble for nothing; the rats will take every one of them in little or no time." The reply she received was: "Here is a cat that will attend to that matter." The lady smiled, saying: "Doctor, you know a cat is the most treacherous animal ever made, and will eat up every one of the little ones before you know it." This compelled a response that "Cats were very much like women—good ones are very good and bad ones are very bad."

There was abundant reason for confidence in the cat. Last summer—1898—he guarded most faithfully a brood of young bantams and a covey of young quail at the same time in this inclosure, until they were full grown, without the loss of a bird.

Assisted by Tommy nine young bantam orphans were placed in a sunny spot with water and food near by; and naturally enough a voice came from an old doctor saying: "Now, Pussy, don't you hurt these little baby chicks, but watch the rats; they will kill them if you are not watchful." Of course the cat made no response of approval except to purr and rub his sides against his master's legs more vigorously.

It was, however, felt that all was right; and on return after an absence of several hours, Puss was found on duty and manifestly much gratified that he had already captured a rat. From this time on every rodent that entered the back yard in daytime and could not give the countersign became a prisoner after the administration order. And it is a matter of record that in two weeks six large rats came to an untimely as well as timely end in attempting to molest the guardian's charge; and the family of little orphans remained free from disease or accident untile matured all right.

It bacame quite instructive to witness the interest the cat really showed in various ways for the welfare and protection of his subjects. When the chickens were being fed he would take a position at the proper distance from the plate on which the bantams received their food, looking as sleepy and indifferent as possible; but what was passing in his mind, however, can be surmised only by following actions. When the bantams received a fresh supply of food the English sparrows would gather in and sit around on the bushes, awaiting a favorable opportunity, English-like—to "Jack Spratt the platter." Quite often a hungry one would crowd in among the chicks to share their meal. This was what the cat was waiting for. At the right time he would leap upon the group and pick up the sparrow, and walking off a short distance would take a lunch. He never made a mistake nor accidentally injured any of the pets, although the performance was almost a daily occurrence.

There are several varieties of bantams. The illustrations here given were taken from the partridge game, probably the most hardy, pugnacious and pompous variety ever produced in this section of the United States. Notwithstanding the warlike propensities of the males, they are undoubtedly the most thoroughly domesticated, gentle and affectionate of all the birds known. The males usually weigh about 1lb. and the females 8 to 10oz. at maturity.

The warlike disposition or love for battle being hereditary, it is distributed to members of the same brood in various degrees of intensity. Some of the males devote themselves entirely to war, while others are more for peace and domestice quiet. And like the pugnacity of human and other animals, that of the bantam manifests itself at the earliest periods of existence. Some young bantams only a few days old will take the position and go through all the bodily motions of a gamecock in battle, if one simply places a hand before them in a menacing manner.

With a brood in the spring of 1898 there was one that manifested an unusual degree of pugnacity at a very early age. This trait increased with growth, and at maturity made him so fearless and full of fight that he received the sobriquet of Col. Dewey. He is now a beautiful bird of two summers, weighing only 1lb. Though small, he feels as large and expansive as a coming empire, with a bearing so highly military and self important that an eclipsing shadow is cast over the polished manners of successful and well paid United States admirals.

But with all his desire to subjugate he has never shown any disposition to kill or destroy liberties of others in kind of his own.

His disposition to fight, however, regardless of law, constitution or acts of Congress, has given him great notoriety, and he is known all over the city as the bird with the ultimatum for war. He knows no arbitration or peace commission, golden rule or right of discoverey; but insists that pedestrians on the streets are semi-barbarous insurgents, incapable of self-government, and "must be killed or captured," and with these he combats, ending each engagement with crows of immense conquest and slaughter.

His bravery is as sound as a gold standard dollar and is not tainted in the slightest degree with heroism which prefers warlike assaults upon defenseless women and children to those of a responding battery. Still, it is evident that his bearing is particularly pompous and imperialistic when he can start peaceble females on the run sufficiently to bring out those high notes of despair heard on the appearance of a mouse.

Various attempts have been made to bring about friendly relations between the Colonel and his monstrous 16lb. cousin; but all negotiations so far have failed. In the meantime the Colonel has given his friends to understand he is an American Bird, independent and opposed to foreign alliance; that he needs no protection nor alien assistance, and like Admiral Sampson, home production can lay out anything that carries a foreign name.

A battle is expected—a battle of 1 6to 1—an honest victory, with the weapons furnished by nature, as no stock is taken in the priestly assertion that "God is always on the side of the longest guns and strongest powder."

N. E. JONES, M. D.

In a South American Forest.

FROM a letter written by a young friend of mine, Mr. Samuel M. Klages, who has been for the last year and a half in the wilds of Venezuela, collecting natural history specimens, I select the following extracts, which I believe will be interesting to readers of FOREST AND STREAM. The letter is written from Suapure, in the valley of the Caura. F. J. CHAPMAN.

"This place is in striking contrast with the neighborhood of Ciudad Bolivar. There the soil is arid, and low woods—and little of that—are to be found. The hills are particularly barren, being little else but piles of stones, sand and boulders, supporting a rank growth of weeds and sand-loving maré and chaparral trees. Birds are, as I found, few in species (we took 95 or 100 kinds only) and not at all striking in appearance or typically tropical, except the few kinds of parrots and parroquets, and some water birds. The mammals were scarcer in proportion than the birds; the only families found to be represented are the *felidæ*, the opossum, rats, rabbits and sloths. With insects it was the same way. There were a few of the gorgeous things peculiar to the torrid zone, but the great mass of the species were small and dull in hue.

"Here the face of the country, the vegetation and the animals are almost totally different. The little house we live in for the present is situated on a steep hillside overlooking the beautiful, mirror-like Caura River and the magnificent forest on the other side. Fifteen or twenty miles west is the beginning of a mighty chain of mountains, the peaks of which reach high above the clouds. These mountains—and indeed the whole country—are clothed with a truly tropical forest, the grandeur and luxuriance of which are indescribable. The trees grow so close together that there is a continual struggle to reach the light and live. Consequently the soil being of marvelous fertility, we have not only a forest of thick trees, but the latter are extremely tall. Between the trees the ground is occupied with much vegetation of smaller size and adapted to the shade. Countless varieties of plants, some of them of great beauty, make the sylvan depths a veritable paradise. Palms, giant ferns and many plants with large dark-green, shining leaves, vie with each other to excite the admiration of the beholder of these marvels of God's creation. From dizzy heights, from the branching-out place of low palms, from the rough bark of trees—everywhere that a foothold offers—hang orchids, many of rare loveliness, and many of amazing size.

"Nor is this forest a place replete with vegetable life alone. The ear informs one of the presence of innumerable birds. One species whistles a bar of three notes in the most entrancing silvery tones, and loud enough to be heard a quarter of a mile. The vast arches of these forests resound with the songs of this species; but it was a long while before I learned to detect the whereabouts of the mysterious whistler. It sits perfectly still, except for a jerking of head and tail while whistling at great heights, and being of a dull gray color and little larger than a robin, one is apt to find himself completely baffled in the effort to discover the bird, although it repeats its cry very frequently. Quite startling is the booming, hoarse scream of the great blue and scarlet macaw, as it wings its way above the tops of the Titanic trees or perches far aloft on some fruit-bearing branch. It is a good gun that will kill these big parrots at such heights.

"Occasionally the woods are made to re-echo with a sound which is the most hideous ever heard in South America. Indeed, in volume and horribleness of tone it excels the roar of lions, as I have heard them roar in menageries, far beyond comparison. The sound can be heard distinctly for miles. This is produced by the howling monkey, an animal with long, gaunt limbs; ugly, bristling, reddish-brown hair; a large skull, and jaws furnished with sharp, canine teeth. I have a skin of this animal hanging over my head drying, and the skull is close by on a drying cage. The vocal organs of this creature are really wonderful. The larynx alone is as large as a man's fist, and in the throat, placed so as to catch, reverberate and intensify the noise formed in the larynx, is a great cavernous formation of bone, nearly spherical in form, and having an opening large enough to admit three fingers at a time. The size of this bone is about the same as that of the larynx. The noise he makes is about like that made by boys in the States with a 'devil's fiddle' at a country wedding. Imagine a dozen or fourteen strokes of the 'bow' and then a wind-up consisting of a prolonged hollow roar, such as the howl of a whirlwind were it confined in a great cavern. The specimen at hand was espied as it was clambering along the topmost boughs of a gigantic tree, whose branches interlocked with those of the surrounding trees. Manifestly the animal was alarmed, for it ran from limb to limb, edging toward some dense foliage, and I made haste to prevent its escape; but the No. 10 gun belched forth three times before the big, heavy beast let go and crashed through the branches to the ground.

"Butterflies of gorgeous and strange appearance, and a great many kinds, flit about in the forest and hover along the banks of the little streams. There is an ox-cart road which runs through miles of the richest part of the neighboring forest, and it is my great delight to wander along this path with Ed, now shooting a new and strange or beautiful bird, and anon catching a butterfly of rare loveliness or oddity. Every day in the woods means the acquisition of some new species and new and interesting facts. The people here are not uncivilized, as I had expected, although the preponderance of the population are Indians. About the only industries are the raising of sugar cane and the manufacture of rum and sugar."

American Woods.

Part VIII. of Romeyn B. Hough's series of "American Woods" has been issued and is ready for delivery. It is a continuation of the species of the Pacific Slope, and among the interesting woods represented in it are those of the California fan palm (*Washingtonia filamentosa*) and the mission cactus (*Opuntia tuna*), which are objects of special interest to all interested in woods.

Birds and Agriculture.

GLOUCESTER.—*Editor Forest and Stream:* I note your editorial referring to birds as seed and insect destroyers in aid of agriculture.

I am sorry to state that I cannot agree with your conclusions. In my observations of birds I have failed to find any proof that they are beneficial to agriculture. Thus far I have refrained from publishing my views for fear that it would lessen protection. Birds should be protected for sentimental reasons, and the time is not distant when this idea will prevail.

Scientists fall into many errors when reporting the food of birds.

While farming in Maine I had 10,000 head of cabbage destroyed by the green worm, the larva of the cabbage butterfly. A large flock of robins lived on the chrysalids for many days, but enough were left to start business the next spring, and I lost my cabbage as before. That fall the ichneumon fly that now keeps the cabbage in check made its appearance. Nearly every chrysalid contained the larva of the fly. The robins were now destroying my allies, but if a scientist had killed and examined robins he would have found the cases of the chrysalids, and would have published to the world how many thousand chrysalids a robin would destroy in a season. Then he would have figured the eggs that would have been deposited had there been no robin, and the result would have surprised the natives, while the whole thing would have been a farce.

As to weeds: Nature provides seeds for the birds, and enough more to enable every kind of weed to occupy every nook and corner of the earth.

Any weed would take possession of the world in spite of birds if it was not crowded out by stronger plants or by cultivation.

Turn out to common a grass field and weeds will crowd out the grass; shrubs will crowd out the weeds and forest trees will crowd out the shrubs. Birds do not keep weeds in check, but instead help the increase by scattering undigested seed. M. A. WALTON.

Eagle and Child.

Editor Forest and Stream:

I find in one of my newspapers this: "An incident which recalls the wild stories of Switzerland and Tyrol occurred last week near Mansfield, Conn. A very large eagle swooped down upon a party of children, fastened its talons in the clothing of an infant and actually succeeded in carrying the child some distance, when it alighted, apparently for the purpose of securing a better hold. The other children followed and attacked the bird, finally beating it off after several of their number had been badly scratched and torn by its beak and claws."

Anything in that? AZTEC.

Game Bag and Gun.

Sport with a Friend.

"HELLO, old man."

"Al, how are you?"

"Fine as ever" (giving my hand a wrench), "and just crazy to go gunning. Got a few days off and thought I'd drop over to see if you didn't want to take a trip with me. If you don't want to go"——

"If I don't want to go! That's good. Thought you knew me better than to make such talk as that."

"Well, how the deuce did I know but you'd changed some in a year? But where can I get a gun?"

"Bother the gun; I'll look after that."

"And shells?"

"Plenty of shells. Plenty of everything except game. You'll find little enough of that."

"Well, never mind the game. We can have a good time without it. Parade the fixings, now, and we're ready."

It was but a small job to "parade the fixings," and twenty minutes after my friend had so unexpectedly bounced in upon me, when I thought him forty miles away, we were off for the woods, guns on our shoulders.

Our first objective is a swampy corner, adjoining a big strip of pine on the opposite side of the river. Entering this after a brisk walk, we separate to cover as much ground as possible, for we have no dog. A few years ago many a bird had fallen to our guns in this same corner. But now how changed. In those few years the breechloader has been busily at work, leaving a broad wake of death behind it. Foot after foot is passed over without raising a single bird. At length we find three near the upper end of the cover, but they separate and fly wildly, no one can tell where.

It is useless to try to follow them, so we make for a woodcock run near by. One ought to have a dog to hunt such a cover as this; but we have none, so in we plunge ourselves, Al on the right, I on the left, moving slowly, as before. Slowly? Well, I rather guess! The idea of a man hurrying in a place like this! A network of stems and twining vines in all directions, thick canopy of foliage overhead, and little boggy spots, soft as pudding, waiting for you at every step. Just as you get knee-deep in one of these, or are worming your way through en extra thick clump, your hat coming off and your barrels caught in a regular Japanese puzzle of stems and branches, whizz! up goes a bird, and you might as well be handcuffed as for getting a shot.

Between us, we probably flush a dozen birds in moving the length of the thicket, but without firing a shot until we near the upper end, when, warned by a sharp "Look out!" from Al, I see one coming and bring it down. This raises our courage so that we determine to try the thing over again, Al declaring he shall do some firing this time if he has to go wholly by sound.

Sure enough, we hardly go ten steps after turning, when I hear him let go. I begin to get excited and make the wildest kind of a snap at the next one that rises on my side. Over toward Al she goes unharmed, and he salutes her. A moment later, and bang! again. "I don't expect to get 'em, but I'll make a few clearings in this beastly run," I hear him mutter. He has my brother's heavy fox gun, loaded 4½dr., 1⅜oz. With this charge it always reminded me of Mark Twain's "Old Allen" revolver: "If you didnt' get what you fired at, you generally brought something else." This hadn't proved the case with my friend thus far, however, if a big swath of alder tops at each shot be excepted.

But down toward the lower end of the patch Al scores a kill. Then, as we step out in the open, a bird rises, affording the first clear shot. I fire too quick and tear a big hole in the air behind her; but Al's shot brings her down. We now have two and one respectively, and under the circumstances we decide that we don't care for any more.

Taking an old road leading off through the pines toward the river, we move leisurely along it, keeping a sharp eye out for "drummers," which are often found here crossing the road. None are seen to-day, but presently we hear a gray squirrel barking not far ahead. Al creeps up and gives him a stiff charge of 6's, which stops his chatter but doesn't bring him down. When I reach Al he is standing under a small clump of pines among which we both plainly saw him disappear.

"It's a regular pudding," said Al; "step around there and scare him out and I'll soon have him in with my long-bills." And as I move around to the opposite side of the clump he stands ready for him when he comes out. But the fellow doesn't seem in a hurry to come out. Several minutes I smash noisily back and forth in the underbrush. Still no squirrel. Evidently he is on to the game, and, still keeping on opposite sides of the clump, we move slowly round it, once, twice, half a dozen times, straining our eyes into the thick tops in a vain effort to discover his hiding place. It begins to look as though that if there was any "pudding" in the scrape it belonged to the squirrel.

Not to go into details; this squirrel proves to be one of the kind that knows a good thing when he has it, and no amount of pounding and clubbing those trees, supplemented by half a dozen shots that tear great holes up through the branches, is sufficient to drive him out. After fully half an hour of this sort of thing, we are forced to go off beaten, and the last letter I got from Al he wanted to know if I "supposed that squirrel had come out of those pines yet?"

It is now near noon, and as we have brought no lunch we conclude to go home for dinner. A bridge spans the river near by, and crossing this we push down the other side of the river. Paying our respects to a bushy patch that lies in our way, I bring down another long-bill, while Al knocks over an old drummer that has been hanging around the spot for years, after which we set off at a double-quick for home, reaching there in time for dinner.

After dinner we strike out in an opposite direction. But I think my readers will agree with me that this story is already too lengthy, and the account of our afternoon experiences, if this escapes its deserts and doesn't pick up in the waste basket, had better be reserved for a future number. TEMPLAR.

CORNISH, Me.

Capturing a Buck on Foot.

A JOLLY party of men were drawing in the last load of hay from the deerfield on the Moore place, at Chilson Lake, Ticonderoga, the other day, when a good story was told my the pitcher, old Amasa Hall, one of the Hall boys, famous in this locality fifty years ago for their success in hunting and skill as lumbermen and river drivers. Alanson Moore was on the load, and the two hands engaged in "raking after" were his brother Herbert and the writer, one of their summer guests, who was trying to hurry up the haying, so that the boys would have more time for fishing with him. Both the Moore boys are well-known sportsmen, 'Lanson caring for hunting and trapping, while his brother seems to prefer the pursuit of the wily black bass in his lair down among the mossy rocks in the clear waters of the lake. The writer having observed that he had seen a fine buck crossing the road the day before, the talk drifted to hunting subjects, and Alanson said: "Amasa, tell how you caught a deer on foot once, and beat a hound running."

"Well," said that worthy, resting for a moment on his pitchfork handle, "it was this way: I was out one day by the mills on Chilson Hill, and saw a fine buck cross the road on the dead run. He was headed right over Bear Mountain, and somehow the crazy idea struck me that I could catch him. I was a pretty good runner in those days, and once made a half a mile on a track in two minutes and five seconds. Well, the buck kept along the ridge for a while, and finally got near Andrew Stowell's big sugar orchard. There I met a fellow neighbor with a gun, and said to him, 'Let me take that rifle and I'll get the deer.' He ripped out something like 'I don't allow no man to shoot my gun; I'll kill him myself.' With that he too started on a dead run, gun in hand; but, Land o' Massy, it wasn't no kind of use for him to try with me, for I just run right away from him, and I'll bet I went down that old mountain 20ft. at a jump.

"The buck kept giving me a pretty good chase, but I knew the ground, and felt sure that he was headed for a big tamarack swamp over by Put's Creek.

"Finally some one came along and told Anson Moore, the boy's father, you know, that I was having a time of it after a deer on foot all by myself, and he, like a kind neighbor, put out his old hound on the track to help me. Well, the dog finally got along my way, but I soon ran ahead of him, because I hunted by sight, and was catching a glimpse of the game every few minutes. I ran by sight and the dog by scent, and he would sometimes lose the track for a few minutes altogether.

"Finally I saw that the deer was getting 'tuckered out,' and that gave me more ambition. It seemed to me that if I could run that deer down alone there wouldn't be much more left to live for.

"As I said, the buck began to weaken a little, and finally I headed him off, and drove him straight into a big swamp, where he got stuck in the mud up to his shoulders. He was an ugly fellow, and had big horns, but by clambering out on some old logs I got him by the horns and held him fast. I hadn't even a jack-knife with me, and couldn't do anything but just hang on like grim death, hoping that some one would follow the dog. Finally the hound came along, and he tried to tackle the buck, but I kicked him off and sent him home

howling. Finally Anse Moore came along and shot the deer. I then cut his throat and had my buck.

"It isn't much of a story after all, but of course I had to run like the very devil to keep in sight of that critter. Probably I was about half crazy at the time. If I had my rifle I could have killed the animal during the first fifteen minutes of the run."

Thus saying, the old veteran of the Civil War straightened himself proudly up, and driving his long pitchfork into a large haycock lifted it bodily from the ground and sent the fragrant mass aloft, nearly covering Alanson, who was afraid of the "pizen ivy" found in some portions of the hay. The loader, as soon as he recovered from the shock, retorted, "Yes, the Halls were all great men, and there is a little story about their feats in the lumber woods that mustn't be forgotten. One day an uncle of mine cut down an awfully big pine tree, and after sawing off the largest log handed his son, a big fellow, his dinner pail and told him to eat and remain sitting on that log until he got his team to snake it out of the woods, because the Halls had said that they would have that log of timber if it took them a month, day and night. The boy ate his dinner, and when his father came for the timber was still obediently sitting upon the log. Judge the old man's surprise when he went to hitch on and found that all that was left of the beautiful pine log was the shell. It was in the spring, during peeling time, and the Halls had probably hitched on to the timber while the boy was dozing over his good luncheon, and had dragged it clean out of its shell without his noticing what was going on."

"Well," said Amasa, "our folks did know a few tricks about lumbering. That deer story is all right, and happened just as I told it." PETER FLINT.

Out with the Muzzleloader.

A GOOD friend of mine, without any apparent intention of doing me an injury, recently loaned me a muzzleloading shotgun with a Londan brand on it and a look about it that was purely businesslike. And to bring the old days back from the veil of memory and show an enthusiastic young M. Chill some vivid touches of the ancient times, the dingy old weapon was filched out of a dark corner of the garret, carefully wrapped with sundry newspapers, and one gray, misty morning last week the young boy and the old boy in the mettlesome fashion we have of doing things carried the gun up beyond the massive walls of Cornell and proceeded to "load up." Perhaps you have forgotten what a delicate, sometimes prolonged, task that is interspersed with those punctilious little details which develop cold fingers and a hot temper when the frost is on the meadow. But in this instance there was a delightsome rattle of shot in the greasy leather pouch, and the fantastically figured powder flask coaxed sunny days of the long ago into the foreground; and the old brown cap box was fished out of the right-hand vest pocket, two percussion caps adroitly abstracted therefrom, and after jarring the powder into the nipples fully, just as the fashion of old was, the caps were affixed to their places, a final look given to see that everything was at the "safety notch," and the walk resumed.

This was not intended as a shooting trip, a foraging excursion, but rather a sort of loafing jaunt, a raid on nature's wealth, with the old gun and its creaking paraphernalia as company. Incidentally Master Louis and papa, too, perhaps, entertained the vague notion of getting enough red squirrels for an evening stew. When we had fairly hidden ourselves in the first piece of woods the sun thrashed itself out of a swirling mass of clouds and permitted its radiance to fall here and there athwart the interlacing tree tops, inviting Reddy to come out and have a chew of the toothsome beechnut. Presently a clamorous squeaking of the sly rodent's vocal apparatus heralded his nearby presence, and then a moment later the muzzleloader spoke twice in a very sharp tone of voice, but the saucy little chap only guffawed derisively, flirted his silken brush, swung himself with heroic daring into a neighboring tree top and disappeared. Comforting ourselves with the reflection that we didn't care much for squirrel stew anyhow, we loafed around in the city of low-spoken inhabitants for some time without another wild voice to disturb our thoughts.

Moving further along we came to some sparse second growth timber, where nature's early autumn brush had already painted the foliage into many colors. Here is the charm of the primrose, the delicate tracing of canary yellow, the deeper tint of sulphur yellow, with the blending of carmine and yellow into the maroon yellow of society's best favor; and the warth of the reds is everywhere, from the matchless carmine down through the gradations of claret, cherry, crimson, vermilion, to the entrancing carnation. The elegance of the greens is no longer in one shade. Flashes of brilliant green are interlarded with splashes of beautiful olive and Quaker green, the modest but ever restful sage and tea green, with variations from all these, which make them unapproachable in the domain of artificial still-life color effects. And we feast our eyes upon wild confusions of orange brown, coffee, amber, seal, japan and Vandyke brown, upon the umbers and siennas, upon the cold, frigid tracings of blue in many tints, until the University clock, just beyong the rang of gently sloping hills, reminds us of the luncheon hour. Then out on the faded moss, under the deep blue of the sky and the glow of the sunshine, we ate our sandwiches and rested—and were boys together. Later on the big boy—just for a day—taught the little boy how to shoot, how to know the hang of a gun, how to carry it, how to respect it, and how to fear it. As the afternoon advanced and the homeward walk proceeded another brave but unavailing attempt to bag a squirrel was made. Failing this, we watched the graceful convolutions of a brigade of crows as it swept by in mid air, speaking a language characteristic of these shrewd, machinating wearers of faultless black. Far in advance, on easy, soaring wing, sped a great hawk, with his Machiavelian cast of countenance plainly outlined against the vast azure canvas above. Loafing some more, breathing afresh the pur, dry air of the high hill country and growing apace in newness of life, we at length slid down into the snarl of city traffic and the turmoil of ungrateful commercialism.

We had a day of rich, full breath afield, out in God's own country, where the sunshine is untaxed, and where the throbbing of nature's heart may be heard and sensed in all its wondrous charm. And the tousled old muzzleloader made the glad experience seem somewhat akin to that of the far-off days when we were all younger.

But it was the writer's first home-coming from a tramp afield for more than a decade when a winsome, sweet-faced, dark-eyed little woman of gracious presence and a lovely spirit of domesticity, failed to welcome his return. On the shadowing hillside a green grave and the voices which tenderly whisper in the swaying elm above it tell why. M. CHILL.

ITHACA, N. Y.

New Hampshire Game.

Editor Forest and Stream:

The statement of Mr. A. B. F. Kinney, of Worcester (in a recent number of FOREST AND STREAM), regarding Massachusetts game, is applicable to nearly all parts of New England.

For something over twenty-five years I have hunted a great deal over this section of New Hampshire. In some seasons I would average four days out of every week. In those days it was easier to start from forty to fifty grouse than to find five or six now. For a number of years after I began hunting systematically the birds apparently held their own, with the exception of now and then a season when woodticks killed off the young ones. I owned at the time the only trained dog in the town, and did not know of one in any of the adjoining towns. None of my neighbors made any pretense of wign shooting. I could leave a number of woodcock in certain covers, knowing that no one else would be likely to disturb them, and it was the same with the grouse. Unfortunately, this state o fthings changed. Some of my neighbors found that they could occasionally kill a grouse or woodcock on the wing, and they kept at work, and kept improving. Twenty years ago I could not have named any one else in this section whom I thought could kill one grouse out of six that they shot at on the wing. To-day there is hardly a man or boy about here who owns a gun who is not more or less some sort of a wing shot, and many of them are quite expert.

As Mr. Kinney says, "There are just as good covers to-day as twenty years ago." In this region I think there are more good grouse grounds. Old growth timber has been cut and the ground grown up with birch and small pine and such growth. The covers are all that could be desired, with the exception that they hold no birds, or at best only a few.

Mr. Kinney asks, "Why this scarcity of birds?" and answers, "To-day better brush shots, better firearms, better dogs," and last (but by no means least) he names the market shooter. Mr. Kinney is correct in his statement, but I think he should give the first place to the market shooter. The latter is certainly entitled to it; he surely has earned it, as an exterminator of all kinds of game, whether feathered or furred, in all parts of the country. Some twenty years since a neighbor of Mr. Kinney's was at my house about the middle of October. We hunted three days, and in that time killed more grouse than we would be likely to to-day in a month of hunting. Looking over the miles and miles of good looking grounds we could see from the hills my visitor remarked, "You do not half hunt this region; you ought to kill 500 grouse every fall. I could."

There is one thing the incessant hunting of the grouse in this section has done. It has made what birds are left very much wilder and better able to look out for themselves. Formerly our birds would give a dog a chance to work up to them. To-day nearly all get up the instant they hear anything coming. They are very much like deer which have been continually still-hunted for a number of years.

As for woodcock, we never depended on them as much as on grouse. Still in times past I could find quite a number of local birds in a number of covers I knew of. To-day I occasionally find one and sometimes two in such places. Some seasons we get some flight birds, but they are rather uncertain.

Various plans are being proposed to better protect what birds are left. Limiiting the number of birds to a gun I do not think would work. A few might regard such a law; the majority would not, or only to the extent of never telling of having exceeded the limit. Shortening the season would to some extent be a benefit; yet under such a condition the market shooter would put in every day, all day and part of the nights if possible, and would kill as he does now—ten times as many birds as the average sportsman. A close time might work if it was made to last for a generation. A close season for a few years would be about as beneficial as has been the closing for a few years of certain New Hampshire trout brooks.

Mr. Kinney says that some men say there are as many birds as there were twenty years ago. I hear such things said in this section, and invariably those who say so are market shooters. Perhaps those who make the above statements believe what they say. Probably they do not. It is evident that they do not want any more restrictions. Such statements remind me of what I heard about the deer in northern New Hampshire.

At one time deer hunting was allowed, I think, all through the winter. At any rate parties would go up the east branch of the Pemmigewasset River after a heavy crust had formed, and kill a great many deer. These deer were openly shipped to any market, I was told. I know of one house in that region where they claimed to have had seventy-five deer hanging in the barn at one time; also of thirty-two being hauled out of the woods by one party, all of the killing being done by crust hunting. When I was first in the above region it was some years after such proceeding had been stopped, and I heard two men talking about it. An old fellow said: "I don't see no good in these game laws; deer ain't half as thick as they were when we could kill them when we wanted to." I asked him how he knew, and if he still went up the branch every winter looking for yards, as he formerly did. He said: "No, I haven't been up there since they stopped us from killing, but I know they ain't so thick."

Of the numerous plans for game protection, it looks to me as though the FOREST AND STREAM'S platform plank to stop at all time the sale of game would be of more practical benefit than anything suggested. There will be more or less opposition to such a measure whenever it is tried to be passed. The market shooter does not want it. The dealer does not, and neither does the man who never uses a gun, the latter saying that if he cannot buy what game he wants there might as well not be any.

It looks to me as though the point to be settled regarding the sale of game is who is to be considered.

First.—The men who hunt for sport, who have taken pains to learn to shoot, who are the promoters and backers of the game protective associations, who are satisfied to go out now and then during the season, and who are satisfied with a few birds (few of this class are able to make big bags).

Second.—The men who shoot for the market, who want to be out every day and all day, who want every bird in every cover they hunt through, and who usually stick to it until they get the last one. The dealer who cares only for the profit in handling game, and who prefers a snared grouse to one shot. The man who is too lazy to hunt and prefers the easier and surer method of buying what he wants.

One side have had their way for a long time, and the results are reported from all parts of the countryq. Why not give the other side a trial?

C. M. STARK.

DUNBARTON, N. H., Oct. 12.

The Megantic Preserve.

BOSTON, Oct. 14.—The Megantic Club preserve seems to be giving excellent results as a hunting resort this fall, as well as it did as a fishing resort through the season. Mr. C. H. Fairbanks has just returned from his annual trip to that "happy hunting ground," where, with Mrs. Fairbanks, he spent a delightful vacation. He killed two buck deer and Mrs. Fairbanks shot a handsome doe. One of the bucks taken by Mr. Fairbanks was a record breaker, weighing, when dressed, 263lbs. He had a beautiful set of antlers, one with five prongs and the other with six. They saw other deer in good numbers, and might have taken them, but two were all Mr. Fairbanks cared to kill. Their hunting was principally done at Chain of Ponds. On their way out a beautiful little fawn appeared beside the road and looked inquisitively at the team. Mrs. Fairbanks talked to it for perhaps a minute before it started back, and even then its curiosity got the advantage of its fear, and it stopped. Mr. and Mrs. Fairbanks went back and it stood again within a few feet of the road and allowed them to talk to it. They both say that they could not have shot that little fellow, and Mrs. Fairbanks was almost sorry that she shot the larger one. Dr. Gordon is also out from the Megantic preserve, and brings a buck the next in record to that of Mr. Fairbanks; dressed weight, 233lbs. A Montreal taxidermist pronounces the head one of the best he has ever mounted. Dr. W. G. Kendall, of Boston, also brings out from the same preserve two bucks.

Partridge shooting at the Megantic preserve is excellent. Mr. Fairbanks says that he got all he wanted, at least a dozen. One hunter had over a hundred at his cabin at one time, belonging to himself and a couple of sportsmen. Mr. L. Dana Chapman, secretary and treasurer of the club, has been sure all the season that partridge shooting was to be good, and members speak in terms of delight concerning the sport of that kind they have had. One of the guests has also killed a big bear, and bear meat has been on the bill of fare at the club camps. Mr. Fairbanks, after getting his deer, was ready for bear hunting, but was not successful in that direction.

There are glowing accounts of big game in the Moosehead Lake region, Maine. Mr. Calvin Astin, Brighton; George C. Moore, North Chelmsford; Harry B. Moore, Brookline, Mass., and George Greeley, Bangor, Me., have been at Seboomok for a week's hunting. They had fair success. Mr. Bateman, of Boston, has returned from a hunting trip to the Megantic preserve. He had great success, getting two handsome buck deer. He could easily have taken others, had he desired. Partridge shooting he found to be excellent.

Oct. 14.—Another terrible hunting tragedy must be recorded. Specials to the daily papers from Bangor, Me., tell of the accidental shooting of John B. Dumond, of Boston. Mr. Dumond was well and very favorably known in political circles. He had been a member of the Boston Common Council, and later a representative to the General Court from Suffolk county. Here he had made himself famous as the author of the Dumond liquor law. With a party of legislative friends—Senator C. H. Irmes, of Boston, and Representative C. H. Krebs, of Boston—he was at William Wood's camps at Messer Pond, 28 miles from Grindstone Station. This time the press dispatches say it was a registered guide who did the shooting—William Hobbs. The party separated in hunting deer. Hobbs mistook Dumond's fawn-colored hunting coat for a deer and fired, with fatal results. Mr. Dumond lived only half an hour after the shooting—not long enough to get him out of the woods. He was especially fond of shooting and fond of camp life; fond of accompanying his friends into the woods. A shadow of gloom has fallen over Boston sportsmen to-day. Where is the safety, if a registered guide is to shoot down a sportsman mistaken for a deer. Alas for the color of the hunting coat! What shall we wear? Oh! Every registered guide and everybody who goes into the woods with a gun should religiously mind the FOREST AND STREAM'S admonition: "Never shoot till you are absolutely sure of what you are shooting at!"

Then I would add, on my own responsibility: Keep whisky out of the woods. SPECIAL.

Nearly Every Number Since the First.

PITTSFIELD, Mass., Oct. 9, 1899.—I inclose $8 for two years' subscription to FOREST AND STREAM. This will complete my file of FOREST AND STREAM, including nearly every number since the paper was first published. CHAS. D. BUTLER.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Wildfowl.

Stockton, Md., Oct. 10.—Since my last writing I have received no less than fifty letters inquiring about land for sale down here. So to save myself from endless writing, I will say there are no farms here on the bay for sale. Back in the country quite a number can be found, and very cheap; but away from the water I consider them dear at any price. There is an island here for sale, but it has no advantages over the main land, and is just as far from the gunning grounds. Many have tried to live there, but all give it up as a dismal, lonely failure.

Already a few ducks are in the bay, sea coot, sleepy coot and shell ducks, also a few bunches of geese. There appear to be less black ducks on the marshes than usual; they must have hatched badly or they have been killed off; however, many will come down from the North later on. There has been no shooting on the bay yet; nearly all wait for election day, and then open the season on shelducks. No one here shoots either coot or south southerly ducks, not even the colored population. There is an odor about them while cooking that hangs to the stove, the house, the dishes and even the table long after the offending fowl has been safely covered with earth, for I have never seen cats or dogs hungry enough to eat these fishy, oily, high-smelling birds. There is an unusually heavy crop of grass on the shoals, and I look to see a great season with the wildfowl. Last season was a banner one—more ducks and better shooting than for many years. The prospects are that this year will be even better, for the grass is much thicker this year, and every spot seems to be covered.

I have been busy getting my boats in order, and patching up and painting decoys. There is something about the mending and painting of stool ducks that makes me linger over the task far longer than the work really calls for. Here is one all full of shot. Poor Mr. —— tried to pot a redhead; this was all he got. That goose decoy with a broken neck. My! what a shot that was—70yds. at least. The old gander, with his 14lbs. of flesh and fat, dropped like a plummet on the stool, smashing its neck like a match stick. And so it goes, shot marks, broken bills, chipped sides, lost heads—each and every one has its own memory. I have one decoy with the top of its head gone. I covered it up with paint and let the old head stand. S. did that. How we all laughed! "Gentlemen," said he, "that is drinks on me; here, help yourselves; I am out." Little we thought then that in three short months he would indeed be out—out of all our lives and the lives of nearer and dearer ones. A true sportsman, kind and considerate, with a pleasant word for all, he has passed out into the great beyond, with its unknown limits that we too must explore. I wonder can he see me here with this broken decoy? Does he know I have left this splintered head in his remembrance? Who can say? O. D. Foulks.

Rhode Island Game.

Providence, R. I., Oct. 6.—*Editor Forest and Stream:* Taking into account the technicalities of the law, the open season on game in this State began on Monday, but as the law is interpreted Sunday was the opening. In other words, though Sunday hunting is made punishable on the law book by fine, nevertheless the first instance of prosecution for the offense since the days of witches has yet to come before the bar of justice. Sunday, Oct. 1, dawned an ideal autumn day, crisp, sharp, frosty, with just enough tingle in the bracing atmosphere to make the sportsman's blood rush wildly through his veins as he climbed out of the wagon and stretched his cramped limbs in the first weak rays of the morning sun, preparatory to a day's tramp over the meadows and hillsides behind the dogs.

In the quail he was disappointed. The heavy snows of last winter worked such havoc among the ranks of the cheery little whistlers as they will not recover from in several seasons to come.

Partridges seemed fairly plentiful. Indeed, this king of the American game birds appears to hold its own in spite of all that can be brought to bear against him. In the heaviest winter snows, when all else is hidden under the glistening white mantle, he roosts in the tops of the trees and pecks a livelihood from the leaf buds.

When the little Bob White drops before the swarms of gunners that infest the woodland, the lordly ruffed grouse springs into the air with a whirr and shoots off like a 13in. shell, so that none but the experienced sportsman may expect to pull him down with an ounce of lead. Of course, at this time there are some chicken partridges that are not very strong of wing, but if we place against these the dogs, rank and headstrong from months of inactivity, and the hunter who has probably not held a gun to his shoulder for ten months, the scales will not be far from even.

Rabbits are as yet not to be counted. The underbrush too thick to shoot them, and their flesh is worthless until snow flies.

The squirrels are quite plentiful, probably owing to the fact that this is an unusually good year for chestnuts; but squirrel shooting is no sport until the leaves are off, except an occasional chance shot at one as he skips along a fence or swears at the hunter from his perch in a lofty tree. Taking all into consideration, the season that opened six days ago looks remarkably bright, and from now until New Year's Day the farmer would do well to keep his choice stock away from any suspicious looking bit of woodland that may shelter a man with a gun.

Striped Bass Plentiful.

A large number of striped bass have been recently seen in the sluiceway of Kelley's bridge, at Warren, R. I., at slack water. Schools of the fish, some of which would tip the scales at 10lbs. or more, lazily swam back and forth in the tideway for a half hour at the turn of both the ebb and flood tides. They refused all kinds of bait temptingly offered them. These fish have probably been as plentiful in numbers hereabouts as ever, but are much smaller than formerly.

The largest striped bass ever caught in those waters of which there is any record was taken by the late James Bishop, of the Barrington bridge, forty years ago, and weighed 54lbs. Moses T. Child, who has caught more of this kind and other kinds of fish than any other living angler of this vicinity, caught one on the same tide at Kelley's bridge, near by, which weighed 46lbs. Mr. Child, when a youth, while fishing at Kelley's bridge in the early morning, surrounded by a dozen large bass scattered on the grass by the roadside, was accosted by Daniel Webster, who was riding along the road en route from Providence to Newport. Mr. Webster, who was an enthusiastic angler, was so captivated by the beauty of the fish that he made an appointment with the youthful angler to have bait and a line in readiness for him on his return the following morning. Young Child was the only one who kept the appointment, though Mr. Webster subsequently sent an apology, but, as Mr. Child says, no compensation for the bait.

While gunning in the wilds of Exeter Sunday morning R. J. Sherman discovered and shot a fine deer. On several occasions its presence in the woods has been reported by different persons. The animal is a large doe which tips the scales at 122lbs. A deer is rarely found in the Rhode Island woods, and the news of its capture brought many people to view the specimen. R. J. Sherman is a hunter of great skill. Up to date he has shot four foxes this season. W. H. M.

Canadian Notes.

The weather during the last week or ten days of the fishing season was quite favorable to trout, but very unfavorable to anglers. An unusual amount of rain fell, and the streams were so high that very few fish were raised. The slaughter of trout upon their spawning grounds was, happily, very small indeed. No less than a dozen poachers were recently caught red-handed netting trout in the lakes about Murray Bay and St. Alexis, on the north shore of the St. Lawrence. All were prosecuted, pleaded guilty and were fined. Proceedings are also to be taken against a number of people accused of netting salmon in the Saguenay district, where extra guardians have been posted by the Government. The Hon. Mr. Parent is sparing no pains to provide adequate protection of Quebec's fish and game, and proceedings are about being instituted against people said to have been concerned in the illegal slaughter of moose in the Temiscouata country. Rev. Dr. Rainsford has brought to the notice of the Government the wholesale slaughter of moose and caribou in the Metapedia valley, and measures are being taken to prevent a repetition of such destruction.

Deer are reported exceedingly plentiful this season, on the south of the St. Lawrence particularly. Moose and caribout are plentiful in Pontiac, the Lake St. John country, the Metapedia, Temiscouata, the Saguenay and Lake St. John districts.

Senator Edmunds is hunting in "the Gardens" of Charlevoix, and Chas. Wolcott and Henry Cabot, of Boston, in Gaspé. Mr. Chas. Miller and party, of New York, killed three moose and several deer in Pontiac. Mr. Johnson, of Bridgeport, has secured both a moose and a caribou on the Triton tract, in the Lake St. John district, and several fine heads of large game have recently been brought out of the Tourille tract, in the same district. E. T. D. Chambers.

Cuban Quail Fields.

Havana, Cuba, Oct. 3.—*Editor Forest and Stream:* As a large immigration from the North is expected to come here with the snipe this winter, those of them with shooting propensities and who may be readers of Forest and Stream may be interested in game news in anticipation of their coming

I wrote you some time since that in the month of October the law is off here for quail, and from then to March 1. But the quail, or a large proportion of them, are too small to shoot in October, and I with other friends of law and order—at least of the laws of nature in reproduction—have made some efforts to modify the game law so as to protect the quail in October, and as compensation to the sportsmen extend the shooting season to April 1, because quail do not commence to pair off until that date.

These recommendations are taking their course through the red tape methods of Spanish legislation still in practice here, so that no definite action has been reached, and the shooting season is now open here, and already about 200 licenses have been granted to sportsmen to carry and use their breechloading shotguns and rifles, at $6 each, American money.

Well, this indicates some progress in common sense, because formerly we were charged $8.50 gold for the right to carry a gun and $8.50 more to shoot with it; total $17 per annum, or during the open season ostensibly. But this does not in reality prevent many from shooting on one pretext or another through the whole year, both quail and deer.

It is something wonderful the disrespect that these people have for laws, and it will require one or more generations to change them in this.

Although I myself hold the baby quail in respect, I went into the country with my gun and dog to see for myself if the extremely dry summer has advanced the broods in their development. I raised, i. e., got up, five broods in all, and in one only were the young birds half grown, and in the other four broods they were about the size of sparrows, which circumstance confirms all my previous observations in other years. I shall not go out again until November, although I know that 200 guns will be sacrificing the broods by killing the parent birds during October.

The cattle farms in the near vicinity of Havana are gradually becoming repopulated with cattle, and the high grass of our intertropical climate is being browsed down to the favorable conditions for quail and snipe, so that I am anticipating an enjoyable outing during the season now opening, and of which I will write you later.

The snipe (*Gallinago wilsoni*) do not visit us until you have had a sharp frost up North, when they usually come down in considerable numbers, and in wet seasons when the ground is soft in parts of nearly every farm. they become widely distributed; but this year of unusual drought they will find so few soft soils in which to feed that I anticipate they will continue on to the swamps on our south coast, but few tarrying within reach of our city sports. However, as we are now having showers nearly every afternoon, if they continue we may find some feeding grounds nearer to us sufficiently soft for them. I hear that deer are increasing in numbers in Cuba and furnish good sport for those who prefer this game; but as the Cubans hunt in parties and are excitable, I consider quail shooting a safer sport. Also we have wild guinea fowls, and I last winter several times brought in four to six in a days' sport.

In any case permission from the owners of the farms is required and is not easy to get unless he is an acquaintance of the shooter, although many of them are lying waste for want of capital to rebuild the necessary domiciles and cattle and implements for reconstruction. It will require time to heal the deep and destructive financial and social wounds this island has suffered, and much longer because of the suspicions and race antagonisms and social and political habits and customs so difficult to eradicate and substitute modern usages and ideas in their place. Dr. Erastus Wilson.

CHICAGO AND THE WEST.

News from Jackson's Hole.

Chicago, Ill., Oct. 7.—Game is more abundant in the region adjacent to Jackson's Hole, Wyo., according to all available reports, than has been the case for several years, and recent returns seem to verify this assertion. Several parties have been in, and among these I note one from New York, one from Philadelphia and two from Chicago.

The Thompson party, of New York, was heard of by gentlemen from this city a couple of weeks back. They had forty horses and a big outfit of guides, etc., and were bound on a big trip. They were then going in, and I can not say what luck they had.

Messrs. H. O. Wilbur and E. A. Selliez, of Philadelphia, earlier mentioned as westbound, returned to this city this week, and they report a grand time. Each man killed two fine elk and both were very much content. Mr. Wilbur killed one seven-point elk, and on the very next day got an eight-point bull, a beauty. Mr. Selliez got one curious specimen, an elk with nine points on one side of the head, but with the other split down and spoiled. To match this, he later killed a fine symmetrical six-point head and was willing to call it square. Both these gentlemen purposed a quail hunt somewhere in the West, but I do not know at this writing just what they concluded to do, though I think they returned to their native city after a brief stop here.

Mr. L. M. Hamline, of this city, some weeks ago started for a trip through the Yellowstone Park, taking only one guide. He returned to the country south of the Park and was spoken by other men of a Chicago party two weeks ago. At that time he had killed one elk and two antelope and was not ready to come home.

By all odds the best hunt made in the Jackson's Hole country this fall, and probably the best ever made in that country by non-residents, is that this week completed by a party of Illinois gentlemen—Mr. Harry W. Loveday, State game warden of Illinois; Mr. C. B. Dicks and Mr. Sam Simon, of Chicago, and Mr. Jas. R. B. Van Cleave, of Springfield, Ill. These gentlemen were gone just forty days from Chicago, and they had a grand time. They had a good outfit, four guides and a cook and a couple of dozen horses. The party was led by Jim Simpson. They killed eight elk, ten antelope, two deer, three mountain lions, three mountain sheep and one grizzly bear, the latter, however, only a cub, and caught in a trap. They had a dog which treed the lions. Mr. Loveday is credited with the best elk head, a magnificent specimen, but each man got a good head. All this plunder will be brought on to Chicago as soon as it can be got out by the guides, and the well-known Chicago taxidermist, Fred Kaempfer, will mount the whole aggregation of heads, certainly a notable collection. All the guides in that country said that this much game had never been killed by any one party in that region on one trip.

I talked with the Chicago men over the arms they used on this hunt, and am told that the .30-30 "did not seem so good as the .30-40." "You have got to be more particular where you hit an animal with the .30-30," said Mr. Dicks. Mr. Loveday shot a .40-65, and this gun seems to have "stopped an animal, wherever it was hit."

Waning of the Marsh.

Chicago, Ill., Oct. 14.—Prowling around among the gun stores this week to see who is going hunting and what luck everybody is having, I noticed two very contradictory circumstances. The ammunition trade was never better, and a great many parties are going out shooting; but upon the other hand, there does not seem to be very much game coming home with the shooters. A few years ago it was quite possible to take a run out from Chicago and come back in a couple of days with a decent bag of birds, but nowadays not one shooter out of a dozen has half the old luck.

I was talking with Abe Kleinman the other day—and everybody knows Abe Kleinman to be one of the old-timers among the Chicago game shooters. Abe was busy pushing wads into shells, and as usual he was mad. "Shooting? No," he said; "nobody gets any shooting any more. You fellows are all the time hollering about protecting the game, but there ain't any game left to protect in this country any more. If you want to have any game, you'd better stop the ditches on the marshes. If you dry up all the marshes you can't expect to have ducks or snipe. The way things are going now it won't be long before the whole Kankakee marsh is dry as a bone, and you can't get any shooting down there now, only once in a long while."

Some one remarked that out near Hyde Lake, just south of Chicago, there were a few jacks being killed, but this gave Abe no pleasure. "Yes, put that in the paper," he said. "There ain't more'n about 400 shooters out there every day now. We ought to have a few more."

What Mr. Kleinman says, and he is really an authority on game supply, too, has a great deal of significance. Our marshes in this part of the West are all being re-

claimed, and of course this means that they are ceasing to hold their former stock of game. In the gradual adjustment of things, I can see that the sport of the upland has for some time been gradually growing in proportion to the sport of the marsh. Ten years ago in this city, or shortly after I first went to work on the FOREST AND STREAM here, nearly everybody went duck shooting and did not care so much for grouse or quail. Now, as I have often said of late, I think one sees less preparation for wildfowl shooting and more parties outfitting for upland shooting. Some game will linger for a long time around the cultivated regions, though of course the ducks, geese and snipe are bound to go when the country settles up. The Bob White quail is going to be the salvation of the Western shooter. This bird is more abundant this year than ever all over lower and middle Illinois, and more and more our shooters are going in for quail shooting. I rather look to see more men own bird dogs the next few years than have for several years past, and I believe this fact to be due not merely to the prevalence of easier times.

Parties and Their Luck.

Among Chicago parties who have been disgusted with the poor sport left in this part of the country and who have gone far away to get some shooting, is the De Golyer-Cook party, several gentlemen of this city and of Michigan, who were at one time owners of the famous De Golyer marsh, on the Kankakee, where they had a fine club house and about the best mallard shooting on the river. A wealthy Chicago pork and beef packer bought their marsh, drained it and ruined it years ago, and since then the gentlemen have been going up to North Dakota, usually to Dawson. Last year Dawson was no good, as the water was too low, but this year Mr. E. C. Cook sends back word that the lakes have all filled up and the ducks are there. This is the same party who were sued some time ago by Dakota farmers for setting some stacks on fire through a prairie fire which they were alleged to have set out by accident. The suit cost them over a thousand dollars, and I am not sure it is ended yet, though these shooters seem not afraid to go back to the same grounds again.

Mr. A. D. Curtis, of Menominee, Mich., asks me where he can get good duck and goose shooting in South Dakota. I understand that there is good stage of water in the lakes near Preston, S. D., and would advise a trial of that point, or of Waubay, or, say, Webster, all of which points are said to be good now, though I have no more direct personal information about them.

A number of members of the Poygan Gun Club, of the Lake Poygan marshes, of Wisconsin, have left Chicago for a stay at this prolific shooting ground. This club is mostly made up of Chicago shooters. The sport there is at times very good indeed.

From Horicon marsh and the Diana Club, of that region, I hear that there has been some little duck shooting and some very fine sport on snipe.

About as good a bag as I learn of made near home this fall is that picked up by Billy Cutler and H. Levi, of this city, who returned a few days ago with seventy-two snipe and twenty-four teal. They shot near Lockport, Ill., hunting the spring marshes back of that town.

Mr. C. C. Hess, of this city, reports some snipe, but nothing startling, in near Lorenzo, on the Kankakee marsh, reached by the Santa Fe railway.

Fox Lake, Wis.—and by no means let this be confused with Fox Lake, Ill.—keeps up its records as a sporting region. The town fisherman, Dick Hoover, this week on one day caught thirty-five pickerel, four bass and a pike. One pickerel weighed 12lbs., three weighed 10lbs. each and others were good fair fish. Squirrels are now ripe at Fox Lake, and this little corner is worth pasting in one's memory for a quiet, decent little trip one of these fall days.

Around Lake Minnetonka, Minn., a few snipe are now coming in, though of course a shooter would hardly expect to find very many in so thickly settled a part of the country. Near the Narrows there is a bit of ground where one may get a few birds now and then, and at scattered places all around this great inland sea one may find a wisp here and there. Squirrel shooters are out around Minnetonka also, and are having a little sport. No ducks to speak of are reported from the neighborhood of St. Paul, Minneapolis, but some snipe are in on the Minnesota river bottoms.

Dakota Chicken Law.

I hear that North Dakota shooters, or some of them, are dissatisfied with the dates of the chicken law, which closes Oct. 1. They think that is too soon to end the season, and indeed if one wants good fun with grouse October will offer it better than September, provided one can find the birds on any proper sort of cover. The August date seems to many too early, and I believe that two months, beginning with Sept. 1, would see less birds killed than the present season of forty days. That is to say, it would do so provided that everybody observed the opening day and there were no sooners in the land. That state of affairs, however, is something that never did exist in any chicken country.

The Far West.

Mr. A. C. Smith, of the Chicago Fly-Casting Club, came into my office the other day and asked what I thought about a trip out into Colorado at this season of the year, in the neighborhood of the North Park. He was afraid of being snowed in, but I told him that he could have no pleasanter experience than that, for the mountains are more delightful in winter than at any other time, in some regards. We talked over outfits, and I gave him the tip to get some Gold Seal leather-top rubbers and plenty of German lumbering socks, and also to take in with him a pair of snowshoes for each man of the party. I am inclined to think that he and his friend will just about do this, too, and I am sure I envy them their luck.

Mr. Itha H. Bellows, president of the Chicago Fly-Casting Club, is a sort of combination sportsman. He can cast a fly further than anybody in town, and is now claiming to have killed the biggest bear that ever was seen in the mountains. Mr. Bellows was out in Colorado this fall, in this same North Park region, and was hunting in company with two local hunters, when they saw this bear. Mr. Bellows won the first shot, but only broke a foreleg, and this started the bear up in a rage, but only in time to receive the other two bullets in the back. The bear then slid or rolled down hill, and was shot into by all three again, and when reached by the party was quite dead. It had slid down over very rough country, and it took the men a long time to get the skin up hill. Mr. Bellows brought home the skin, which is indeed very large. It was a black bear, however.

Speaking of angling and bear hunting, reminds me of a little incident which happened to a party of Chicago fishers who were up in Wisconsin, near Mercer, some few years ago, among the party being Billy Burroughs and A. C. Smith. Coming back to their camp one day they found a tent smashed in and saw that a bear had been fooling around there. None too happy at this discovery, they none the less went to bed and slept all night. About daybreak they heard a sort of scratching noise on the tent, and Mr. Burroughs slipped out of the tent with a shotgun in his hand. He was a bit surprised to see a big black bear standing up alongside the tent and softly scraping his paw down along the side, as if puzzling how to get into the place. Mr. Burroughs was afraid to shoot at the bear with the shotgun, but stepped back and got a rifle and came out again. The bear had obligingly stopped at the edge of the wood, a few yards away, and Mr. Burroughs promptly killed him.

Speaking of Western regions, I am reminded by a late newspaper item of the regular Indian-settler-game butchery war which comes up every year around the Wyoming region visited by the Indians from the Snake reservation. At these particular times Uncle Sam can use a good many regulars in his business, and it was proposed to remove the garrison from Fort Washakie. The citizens around Lander and other Wyoming points have protested and have secured a promise that the troops shall stay. They say that if the soldiers go the Indians will leave in a body and butcher game in numbers even greater than before. There is a little border war pretty near due out in that neck of woods between the whites and the Indians over this very game question.

The Great Father.

By the way, speaking of Indians, government and that, it was something of an occurrence, methinks, from an Indian point of view, when President McKinley this week received a party of Chippewa Indians at Aitkin, Minn., in the course of his Western trip. To the Indian the Great Father is a far-off and mysterious being. I wonder what they thought when they were told that the Great Father had come out there to see them? Probably that the Great Father was a little bit crowded for time, for a man in his high position as chief of all the peoples. The head man in an Indian tribe doesn't have to hustle quite so hard.

Wet Warden.

Game Warden G. E. Ratto, who works in the dark and bloody ground around Calumet Lake, at the southern edge of Chicago, has some rather exciting times with the law breakers he meets there. These men are usually foreigners—Polacks, Sclaxs, Bohemians and God knows what, with names ending in 'itski, 'owski and 'onski. One of these men was out shooting the other morning before sunrise, which is against the law. This man's name was Schranski, and he knew no law. He shot a few times and incidentally shot a fisherman, who was also breaking the law by using a net. Warden Ratto attempted to restore peace by arresting Schranski, but the latter fled and stood off the warden with a gun when chased from his boat into shallow water. Ratto called for help and was assisted by his deputy aid, and the two took in Mr. Schranski, who was very much annoyed at finding this was not the land of the free he had supposed it to be. Mr. Schranski had shot nothing of consequence—only one mud hen and the fisherman above mentioned.

Quail in His Dooryard.

A friend of mine writing from upper Indiana has occasion to make the following remarks regarding the quail crop in his immediate vicinity: "Quail are abundant. While dictating this letter I looked out of my window, and on the green lawn I saw three full-grown birds scurrying through one of my flower beds. In a potato patch back of my house a week or two ago a full covey was seen, and even the old back cat and the mother cat each lugged one into the kitchen, knowing that their mistress was sick and needed a bird; but I think I was more inclined to obey the law than to be humane, for the birds were uninjured and I let them both fly away. One of the boys came in from our yard a day or two ago and said that in a bunch of willows near the fence for over a week there had been at least thirty quail. So you see we have them right around us, and you cannot help but have a good bag when you come up for the promised shoot in November."

"In Possession."

I wish some one would tell me what "In possession" means. We see that term used a great deal and very elastically, in game law matters. I recently saw in a Colorado newspaper an item to the effect that a rancher of Routt county has several elk in possessiion, and that he has paid taxes on them as so much live stock. He thinks he needs no further title to their retention and classifies them just as he does his cows and horses. Yet in the Colorado statute there is a specific clause stating that the State retains all title to the game and fish in the State, and that no title, right or interest therein can be acquired by private party. This doctrine that the State owns the game is one of the foremost tenets of the Minnesota law also, and is coming into recognition as one of the sanest of protective measures. It is sustained by many decisions.

An odd instance of this same old question came up last week in this same State of Minnesota. I see no special reason why the facts should not be known, though it is true that I was a guest at the banquet where these facts first came into prominence. This was at the Minneapolis Club luncheon given in the afternoon to the Congressional party on its return to Minneapolis from the Minnesota trip. The menu was good in its way, and the second course brought to each guest a nicely cooked brook trout, about 10in. long. This was the first week in October. The Minnesota law says: "No person shall * * * have in possession or under control for any purpose whatever * * * any variety of trout between the 1st day of September and the 1st day of May following." According to this it would surely seem that in serving to the honorable members of Congress of the United States an illegal fish, and that in the good old protection State of Minnesota, the mother of them all in good game laws, some one had indeed blundered.

On the morning following the Minneapolis episode this matter came up for discussion among some of us on the train during the ride to Chicago. Mr. Bishop, of Ludington, Mich., said that the trout were all of the same size, and no doubt came from some hatchery, either the State hatchery or some private ponds. In the latter case, thought Mr. Bishop, it would be perfectly legal to kill these fish at any time of the year, as they were not any longer animal *feræ naturæ*, but were reduced to possession and to a domestic state as much as poultry or cattle. Mr. Bishop declared it was good law which thus gave title to the individual, and said that no law could take this title away from him.

The main opponent to Mr. Bishop in this argument was Hon. C. F. Cockran, of Missouri, who went into the matter so clearly and fully that I am sure I wish I had space to reproduce all he said. It was the best little argument on both sides that I ever heard on this question. Mr. Cockran cited a very important case which involved much this same idea of the title of the State following property with police powers. He said he was once engaged with five other lawyers to give a decision in a Kansas case, where a brewery was closed up under that State law, it being claimed that this was confiscation of property and illegal, because the product was not sold in that State. None the less it was on trial decided that the State could hold that it was against public policy—against the good of the public—to allow the manufacture to continue. Mr. Cockran said that the State—any State—could surely stop the sale of fish or game as against any possible private title, simply on these same grounds—those of its being contrary to public policy. The State could be judge whether the food supply of the State—its fish and game—would not be endangered by acts which offered it for sale the year round. "You can eat that privately raised fish on your own table, perhaps," said Mr. Cockran, "but you cannot sell it, for there you run into the realm of the State's authority. The State is to be the judge whether it will have any portion of its food supply sold, and at what time, and in what method. No private title can stand against this supervisory power, and this statement I can show you to be upheld by many good decisions. The State is the judge of the emergency as to whether its food supply is endangered."

Mr. Bishop was not convinced, but was staggered, and I am sure was in the wrong of this, as both he and Mr. Cockran would all the more readily admit had they perhaps had occasion to go into the matter of game laws more fully than their experience had ever asked of them, though both were lawyers of good practice. I was surprised to see with what earnestness Mr. Cockran went into this thing—just as though he had studied up on some game law case, which really he had never done at all. It was simply a good elucidation of the principles of law, by which he arrived at the same conclusions as have been reached in many game law suits of which he never heard. According to his view, the men of Minneapolis had no right to serve trout to the Congressmen, even in their eagerness to give them the best of the land. It would appear as though a special dispensation would be in order. I may state that about everybody went away with his trout in possession, though for my own part I never cared to eat October brook trout; anyhow not while I have a copy of the Brief in my valise.

YOUR magazine is becoming more entertaining with every number, and one who does not enjoy it and look forward to the next with anticipated pleasure surely has no element of the sportsman in his makeup. W. A. B.

Maine Partridges.

PARTRIDGES are reported scarcer in some parts of Maine this year. Mr. M. Hardy writes from Brewer: "In spite of what the papers say, partridges in this part of the State are extremely scarce. Up to Sept. 15 I was in the woods with my son on a canoe trip for fifteen days. We traveled 150 miles by canoe and half as far on foot. In all this time we saw a single partridge, and that was one flying across the lake. Neither did we see a single sign of one, nor where any of the campers had picked one. We met a good many campers, but no one had seen a single partridge. Near Bangor I have known of one man killing seven in a day, but the average is not one for a day's work. It has not been the market-hunter, nor the snarer, which has caused this, nor is there any snaring in this whole region, as very few have been killed for market, as it does not pay.

North Carolina Quail.

WINDSOR, N. C., Oct. 12.—Quail are plentiful this season, owing, no doubt, to the dry weather in hatching time. A great many of them are small, however, for the season, and will not be large enough to afford good sport for some time. I should say about Nov. 15.

A good many turkeys, but deer are very scarce.

A. S. R.

DILLSBORO, N. C., Oct. 12.—There never were so many birds as this season has shown in this section. The bird law ends Oct. 15 and goes into effect March 15. Parties desiring to hunt would have to bring their own dogs. Will be pleased to furnish information to parties wishing it.

R. H. JARRET & SONS.

Sea and River Fishing.

A Plea for the Single Hook.

IT may be hard in a way, but nevertheless it is true that as we leave boyhood's days behind us, with the changing scenes of life, and the results of added experience, the simple foods once appealing so strongly lose their power of pleasing. The liking for the sweets seems to fade away, and after the years have gone we learn to enjoy the very things that in youth we could not have appreciated. If rheumatism or gout gives us no twinges, a canvasback cooked to the turn, a glass of Burgundy rightly warmed, a Camambert just soft enough, and an appropriate salad most certainly have their charm beyond the well-done beefsteak, potaties and pie that satisfy the schoolboy. Yet perhaps there exists a marked difference in the appetitie of the two ages.

Then it was quantity; now it is quality. In a great measure, then, will this apply to our fishing experiences. I doubt much if the thrill of keenest pleasure is to-day more marked even in the handling of delicate rod, reed and tackle than came when, with the pole cut and fashioned by the jack-knife, heavy, stiff, hard to wield; the line a cheap affair; the hooks durable, but not dainty; no reel at all; a mass of squirming worms that served as bait, we captured a very hungry fish and success was ours in the landing high on the bank, behind us.

To-day, in order to awaken this same thrilling, we must make the fight and capture as hard as possible. Our skill is put against the strength, activity and sharp tricks of the game fish. So it appears to me—and I hope and believe to many of my fellow anglers—that the pleasure is keenest when we try not for numbers captured in any manner possible, but for the delicacy of capture, that alone can come when the chances are taken with light gear. Information obtained from several dealers in tackle shows that this tendency is already a marked one. True, indeed, the shops are filled with a host of cunning devices—imitations of live baits, with sets of hooks (generally three in number); bunches of hooks, and a sharpened, pin-like blade to pierce the living minnow and hold it securely; spoons, with a cluster of hooks, each covered beautifully with brilliant feathers, but all appearing somewhat like an ornament of tiny sword points. Each and every one of these when taken makes it an almost impossible thing for the fish to escape, or even holding him so securely in so many places that when the net lifts him from the water then indeed it becomes a task to disentangle from meshes the points of the hooks; and delay becomes a feature. On the other hand, with the simple single hook, we gain in time, and on a good ground obtain more fish. But above all this, which some may call inconvenience alone, comes the intense satisfaction of being better fishermen, and of a contest in which much finer skill is required.

Personally, I even like to use the single gut hook, as with it the excitement of the moment is enhanced. The single hook, the small fly, the light rod and reel and line, certainly give fair fighting.

Men who are honest sportsmen care alone for the excitement. They never kill more fish than they can make use of. The largest number of fish, after being taken, are thrown back. Is it not a shame and a sin to see a large catch of beautiful fish caught by any method and landed hastily, a simple trial of obtaining numbers, so many that they cannot be used, carelessly thrown away to lie and rot, doing tremendous harm to the fishing at that place and reflecting no credit on the fisherman? Even the guides think ill of this sort of procedure. Often have I had my guide strike the net against the side of the boat or make a dart at a good fighting fish in order to stir him up a bit into action; and I have had him release the fish as soon as he had been landed.

The years to come that may be granted to me in which I may be able to do my share of fishing, the more money I hope to expend, will be spent in obtaining the best, simplest and lightest tackle for all fishing, as sharper and keener are the joys of fair battling.

When in the deep woods, where fish as food is a necessary thing, it is wise and best to have different and plenty of appliances in case fish do not bite well.

The lad counts his hour as a happy one when the large string taken shows his playmates that he has done better work than they; but the tired-out man of the world appreciates the skill that enables him to outgeneral the fish in the scientific handling of dainty tackle. To him the woods mean rest; the air the new life; the beauty of the shading tints of green, the maiesty of the golden sunsets, the clear skies, the changing clouds, the quick-running waters of the mountain stream, all—all give an ever-changing picture that brings sweet peace and comfort; while in the activity of exertion comes physical tiring that in sweeter sleep gives back a building up of the vital forces and enables him again to devote himself with renewed zeal to his life's work. As the years pass that turn to gray the hairs or make an easier task of counting the few that may be left, they bring also the knowledge that truth and right are the qualities that appeal the more strongly. So let us in our woodland life ring true and be the true fisher, giving a better chance of escape to the gamy life, battling for liberty. To be the man who is right, who never wantonly kills, one who despises the tricks and the unsportsmanlike resources of the pot-fisher, the man who reaps his reward in the simple knowledge that he has given fair play, and that when victory is his, he has deserved it honestly.

Let each and every one of us, true lovers of nature and of sport, make capture harder for us and a chance for liberty greater than for the fish.

F. M. JOHNSON.

St. Andrew's Tarpon and Sharks.

Editor Forest and Stream:

For a number of years past I, with a party, have made annual trips to St. Andrew's Bay, Fla., to fish for tarpon, and while our party has not taken the fish in such numbers as reported from some other points along the Gulf, the sport has been satisfying, and in none of our trips have we returned without taking more or less of the silver king.

This year we went about the middle of July and met with about our average success. Rev. J. S. Foster, one of the party, had an experience new to all of us. He had hooked a tarpon, about 6ft. long, and after playing the fish to the point of exhaustion had brought it to within 20ft. of his boat, when a shark 12 or 14ft. long appeared upon the scene and proceeded to cut the tarpon in two near the dorsal fin, and not satisfied with this perfrormance, took a large mouthful out of the remaining portion, thus leaving Mr. Foster to land only the head and a badly mutilated portion of his catch.

This was the first occurrence of the kind happening to any of our party in all the years fished here. The sharks seemed to be more numerous and larger this year than I have ever observed them before.

The youngest member of the party, Frank Berry, aged thirteen, succeeded in hooking a handsome specimen of the tarpon and after a struggle of near an hour, and although the little fellow was frequently off his seat and on his knees in the bottom of the boat, he pluckily stuck to his task and succeeded in bringing his fish to gaff. His father and some others of the party hovered near by, but did not interfere, as every one was anxious that Frank should have the undivided honor of the achievement. The fish measured nearly 6ft.

The smaller fish, such as Spanish mackerel, bluefish, channel bass, sea trout and cavalli, are abundant in the bay and may be taken in great numbers by those who do not care to tackle the larger game.

After a couple of weeks of uninterrupted and healthful sport the party returned with complexions a little mutilated by the sun and water, but full of pleasant memories and a determination to try it again next summer.

After a month at home I concluded to try it again, and returned about Sept. 1., in company with Sidney Lucas, of Nashville. We fished one day in North Bay, had several tarpon strikes which resulted in loss of hooks and broken tackle, so we went to our usual place, Red Fish Point, opposite the town of St. Andrews.

Here we found the tarpon in great numbers and continually rising and showing their dorsal fins and silver sides, but they did not seem eager to take our live mullets, and the first day only gave us two or three strikes each. The strikes we had did not come with the dash that hunger would give, but rather a listless, indifferent sort of nibbling. On the second day I succeeded in hooking a large one, and found it to be one of the most active and vigorouos that had ever fallen to my rod.

After playing him for an hour and having him thoroughly exhausted, the boatman started for the shore, some half mile away, where I wanted to land the fish without injury for the purpose of mounting. Everything was going nicely, the fish towing along easily, the water becoming shallow as we approached the beach, when of a sudden the fish made a turn and dash for the deep water, taking out in spite of my efforts 70 or 80yds. of line, and making two leaps in the air equal to those made when first hooked.

I told the boatman the fish had his second wind and we would have to go over the fight again; then we saw a large shark attempting to get hold of the tarpon. Their heads were not far apart, and they whirled over once or twice, when the shark dropped back toward the tail of the tarpon and succeeded in taking out a piece from the belly that would have weighed 12 or 15lbs.

Meantime the boatman was making every effort to reach the scene, but got there only in time to drive off the shark. We took the mutilated fish aboard the boat, and after reaching the shore I opened the fish to ascertain upon what the tarpon were feeding, and found the stomach well packed with a small fish, the local name of which is "fat-back," and which I learned are used in making sardines at some points on the Gulf coast.

On careful observation I found that there were vast schools of these little fish where the tarpon were showing themselves, and that the porpoises, sharks, tarpon, mackerel, cavalli and indeed all the predaceous fish were apparently rounding them up and devouring them by wholesale. My efforts to take another tarpon only resulted in hooking seven sharks in succession, of an average weight of about 100lbs. each, which used me up so thoroughly that I abandoned the sport and went ashore.

One of the sharks furnished me a degree of malicious satisfaction, as he came up so easily and was managed with so little effort. I took it to be a small one, but found it to be the largest one of the lot and hooked in the stomach, with that organ partly pulled through the mouth, turning him inside out.

The shark is very swift and strong and makes a continuous pull, going to the bottom when possible, making it hard work to handle them.

One day after our noonday lunch on the beach, and as we were about entering our boats, my boatman called my attention to a rattlesnake about 60yds. out in the bay, but my inexperienced vision failed to locate the reptile. However, on reaching the point in the boat we found a rattlesnake about 2ft. long, head straight up a couple of inches high and the rattles erect. The snake appeared to me to be somewhat distended with air along the length of the body and was swimming easily on top of the water. A blow from an oar soon disposed of it. I learned from my sailor that they often cross the bay from one side to the other, and this was verified by Capt. Ware, an old sailor and resident of St. Andrews. This was all new and curious to me, and may be so to some of your readers.

D. B. CLIFFE.

FRANKLIN, Tenn., Oct. 13.

ANGLING NOTES.

Striped Bass at West Island.

LAST year I happened to meet Mr. John Manning, of Troy and Saratoga, on the train as he was returning home from the West Island Club, Buzzard's Bay, and he showed me a photograph of the record striped bass for the season at his club, which he had the good fortune to land. This year I again met him on his way to the club early in July, but he thought he was going rather too early for big fish. I did not happen to see him after his return until Oct. 6, when, on my way to New York, I found him on the train, the place where we usually exchange fishing gossip, and he told me that the fishing at West Island was unusually early, and that the fish struck in without the previous notice that they generally give by appearing at Gloucester, Newport or elsewhere before they came to the island. He equaled his catch of last year by catching a striped bass of 40lbs., and eight in one day that weighed 109lbs., and eight another day that weighed 100lbs.; but his largest fish was not the record fish, as two bass weighing 55 and 56lbs., respectively, were caught at the club in one day. He says that the best bass fishing at the club is usually in August, but this year they were surprised by the appearance of the fish—and big ones—in July, apparently coming in from the sea.

Striped Bass in the Mohawk.

It may not be generally known that salt-water striped bass are caught in the Mohawk River, but such is—or was—the case a few years ago. I confess that when Judge Yates, of Schenectady, told me of catching striped bass in the river near the city where he lives I was puzzled for a moment, for certainly no fish, not even flying fish, can surmount the falls at Cohoes, and a salt-water fish must pass over or around the falls to make their presence known in the Mohawk at Schenectady. Small striped bass have long been known in the Hudson, and they reach the Mohawk through the locks of the Erie Canal. When talking to Mr. Manning of his fishing at West Island, I was reminded of the striped bass in the Mohawk, and now ask a question that it has never occurred to me to ask before: Has any one seen any evidence that the striped bass in the Mohawk develop ova or spawn in the fresh water? While it is a simple matter for the small bass to work their way up through the locks, it is a question if they return to the sea by the same route. To be sure, the falls route is generally open (it was not the past summer), and they may go back that way; but the question is: Have any been caught above the falls with developed eggs?

A Doe on a Gaff Hook.

Charles Clements, of Lake George, was out in his boat fishing on Saturday, Oct. 7 (at least he was in Dunham's Bay on his way to the open lake for the purpose of fishing), when he saw a deer swimming across the bay, and rowing after it he caught the animal in the neck with a gaff hook and subsequently killed it. The details of the killing I do not know, and do not wish to know. I saw the deer this morning (a yearling doe), and I saw where the gaff hook had entered the neck, and I could imagine the rest of the tragedy, if I could persuade my imaginative work in that direction, but I will not. It is all right, I suppose, to gaff a swimming doe and kill it if a man likes that sort of thing, for the law does not forbid the use of gaff hooks for holding deer to be killed, and this particular unfortunate was swimming across Dunham's Bay in the open season for killing deer. I have shot deer ahead of dogs (but never swimming in the water), and have shot them by jack light, and now, as I look back upon the jack light episode, I think I must have been ripe for any crime; but to-day, with more gray hairs in my head than any other color, I doubt if I would kill a deer if it would stand still within shooting distance and I had a loaded rifle in my hand; so I question if I am competent to say anything about the ethics of deer shooting or deer killing; not that I object to deer shooting as a sport, though I have now no desire to engage in it myself, but it does seem to me rather horrible to gaff a young doe swimming in the water and then butcher it. There is no question but what I am clearly in the wrong in having any such feelings in this matter of a swimming doe and a gaff hook, for I heard two men say this morning that Clements was a lucky man. The elements of my composition appear to be such that if I had heard that the deer, after being gaffed in the neck, had kicked Clements out of the boat and escaped herself I think I would not have been curious enough to inquire whether Clements got ashore or not.

I was trout fishing in Canada in September, and one morning a bull caribou dumped himself into the lake where I was fishing, as they usually dump themselves into the water when they take a swim, and proceeded to cross. We paddled after it to get a nearer view, and my guide said if we had an axe we could kill it. I never told him so, but if we had had a dozen axes in the canoe we would not have killed the caribou, although we would have been very glad of the meat, as we were out of pork and bacon. Now, to show the eternal fitness of things, some

friends came in from the club house that very afternoon and camped, and the next day they sent us a hindquarter of caribou that had been properly shot and decently killed. So we were possessed of a clear, clean conscience, so far as murdering caribou in the water was concerned, and we had meat in our larder.

Output of Fish in New York.

The Fisheries, Game and Forest Commission of New York report that for the year ending Sept. 30, 1899, the hatcheries of the State have turned out 150,290,370 fish of various kinds. This is something over 38,000,000 less than were hatched the year previous. Of the various species of trout the number is about the same each year; for, except lake trout, the stock fish are under control, and their eggs can be secured. The decrease is divided chiefly among herrings, lobsters, smelt, ciscoes and tomcods, the eggs of which can be secured only when the fish put in an appearance for the hatchery men to capture at spawning times. The pike-perch output last season was greater than ever before, twice as many eggs being secured as in the year previous. The smelt catch was almost a failure, because the fish did not enter the streams. The shad output was 14,313,800, the whitefish 27,675,000. These fish being perhaps the most important of the commercial fishes of the State, it is gratifying that the number hatched was so large. It is a serious disappointment when fish are not obtainable to furnish eggs for hatching, but it is something which the Commission cannot control.

Salmon in Cayuga Lake.

Mr. H. A. Surface, of Cornell University, has sent me the first of a series of papers he has prepared on the subject of "Fishes Found in the Cayuga Lake Basin," which is in the nautre of an introduction to the series, and my attention is at once called to a paragraph or two from which I quote in part to ask a question:

"In migrating fishes mainly follow the larger waterways, although Dr. Evermann, the ichthyologist of the United States Fish Commission, one of America's ablest scientists, has recently written us that he considers canals, especially when of long standing, nearly as serviceable as natural waterways in aiding the spontaneous distribution of fishes."

That is quoted chiefly to again call attention to the fact that the building of the Erie Canal brought the black bass to the Hudson River and into waters of the middle and eastern parts of the State, and the bass availed themselves of this means of distribution as soon as the canal was built.

To continue the quotation: "It is only by availing ourselves of the principles governing the natural habits, conditions and requirements of fishes that we can hope for any degree of success in the artificial propagation or introduction of desired species, or the extermination of those that are known to be obnoxious.

"As an application of these principles let us inquire why certain kinds of fishes are not here? The salmon has been here, and as far as this region is concerned has become exterminated, and cannot return, owing to the Baldwinsville dam without a fishway."

From personal conversations with Mr. Surface, I assume that his papers will be devoted more particularly to fishes at present found in the Cayuga Lake Basin, and fishes that have become extinct will receive but passing notice, as is the case of the salmon which I have quoted; but I desire to ask that he will in some subsequent paper make known all that he has been able to learn about salmon once inhabiting Cayuga Lake, and I assure him that it will be of interest even in this day. There are now on file in Albany plans for a fishway in the dam at Baldwinsville, the plans having been prepared by Mr. Rogers, of the Rogers Fishway. It was clearly the intention that a fishway should be built in the Baldwinsville dam, and only two years ago I thought I discovered that there was money available for this purpose, but upon consulting with the State Engineer I found that not only had the apparent surplus been used but more money had been required to complete the dam without considering the construction of the proposed fishway.

"Salmon Preservation."

Under this heading, Land and Water, London, reviews at considerable length in its last issue the report of the Inspectors of Fisheries for England and Wales for 1898, with tables showing the number of boxes of salmon sold at Billingsgate Market from 1889 to 1898. These tables show a great fluctuattion in the annual supply, but in this year the falling off has been about one-half. Commenting upon this Land and Water says: "This is very serious, indeed; and worse is behind, for the Inspectors of Fisheries, instead of making any suggestions for a cure, seem to us to go out of their way to sneer at the methods of artificial breeding that we hoped would become as popular in England as they have in the United States. This is what they have to say in condemnation of the methods that have certainly succeeded most remarkably in the United States:

"'In connection with this subject we may here call attention to the increasing expenditure which, it would appear from the returns of Boards of Conservators, is being incurred in the artificial hatching of salmonidæ, both migratory and non-migratory. Where artificial breeding is restored to for the purpose of introducing a new strain, or for restocking waters which have become depleted or which have not hitherto contained a particular species, no exception can be taken to the practice, provided, of course, the necessary precautions are taken against the introduction of undesirable varieties, and provided, also, that the expenditure is not incommensurate with the results that may be reasonably anticipated. But where the intention is to keep up the breeding stock by means of artificial hatching, rather than by affording facilities for the access of fish to their spawning bed, by restricting overfishing, and generally by protecting the breeding fish and their progeny, we have the gravest doubts as to the wisdom of such a policy. On this point we are constantly met by a reference to the system which is alleged to be adopted with such success in other countries, and particularly in Canada and the United States of America, and to the results attributed to artificial fishculture there. We propose at a future date to go more fully into this question as a whole, but pressure of work forbids our attempting to do so on the present occasion.'

"In support of this view in regard to salmon they make extracts from Canadian and United States official publications, and we cannot help thinking that it would have been far better to have left the subject entirely alone than to have treated it in the inadequate manner they have. Their opinions against relying on the artificial rearing of young salmon have already been largely quoted; consequently we feel bound to reproduce the evidence on which they appear to rely, and we cannot help believing that it will be thought very inadequate as against the salmon, especially after Mr. Morton Frewen has made us acquainted with the grand results achieved in the United States by means of artificial hatching and rearing of fish, especially of salmon. The first quotation is from Prof. Prince, Canadian Commissioner of Fisheries, who says:

"'No greater error can be given currency than that which by some authorities has been urged as at once safe and satisfactory, viz., the removal of all protective and preservative restrictions, close seasons and the like, and the extension of artificial fishculture. Experience in various countries has proved the truth of the opposite view, and has shown that fishculture must be regarded as a supplement to fishery laws. With strict and proper fishery regulations there is no more valuable or beneficial adjunct than an efficiently conducted scheme of artificial propagation.'

"But our inspectors are not satisfied with their chosen extract, and proceed to criticise it in the following manner:

"'In the first part of the above expression of opinion we most fully concur; but the concluding portion seems to us to be subject to some modification. It is obvious that any "scheme of artificial propagation," to be beneficial, should be efficiently conducted; but the questions of the degree of efficiency requisite to secure beneficial results, and of the expense at which such results can be obtained, are essential to an accurate determination of the value of artificial propagation, of the extent to which it should be relied upon, and of the purposes to which it should be applied. These are questions which we must reserve for future consideration. But in the meantime we desire to refer to the extreme caution which should be exercised in the introduction of new varieties of fish and to the possible abuse of artificial propagation when applied to this object. In last year's report Mr. Freyer called particular attention to the mischief which has resulted from the indiscriminate introduction of carp into American waters. During a recent vacation in Canada and the United States, Mr. Freyer devoted some time to an investigation of various questions connecetd with fish hatching, and among other evidence and expressions of opinion on the part of authorities entitled to speak on the subject, his attention was called to the second report (for the year 1895-96) of the Commissioners of Fisheries, Game and Forests of the State of New York, in which reference is made incidentally to the injury caused by the undue multiplication of carp, and more particularly to the increase of black bass, a fish whose introduction into English waters has been very frequently advocated.'

"Then they proceed to quote several pages written by Hon. A. N. Cheney, from 'The Black Bass and Their Distribution in the Waters of the State of New York.'

"These remarks are very interesting, but they have no relation whatever to salmon culture; although they prove that much injury has been done to fisheries by the introduction of black bass, there is not a single word of refutation of the array of facts in favor of artificial salmon rearing that Mr. Morton Frewen lately paraded in the Nineteenth Century Magazine, and which have also appeared in Land and Water four weeks ago."

It is quite true that nothing which is said in "Black Bass and Their Distribution" can have any bearing upon salmon centers, and why the article is quoted in this connection I do not even now fully understand, nor do I know just what use is made of it in the report of the British fishing inspectors. I never have written a line that could be used to bolster the theory that artificial fish propagation was unnecessary to keep up our supply of food fishes. That artificial propagation has restored our fisheries when practically exhausted we have only to point to the restocking of the Atlantic coast rivers with shad, the Great Lakes with whitefish and the Pacific coast streams with salmon.

It is also true that at one time a national Commissioner of Fisheries hoped to make fish so plentiful by artificial means in the waters of this country that prohibitive or restrictive laws would be unnecessary; but that such laws are necessary in connection with artificial culture we have only to examine for proof the statutes of the different States, which provide a closed season for our fresh-water fishes during the spawning seasons. Fishculture and fish protection are both necesary to keep up the supply of fresh-water fishes, and there is no good reason that I can see why they should not harmonize. Why there should be the slightest objection to a method of fishculture that hatches over 90 per cent. of the eggs of the salmon, as against only 2 per cent. of impregnated salmon eggs by actual count when deposited naturally by the fish, I do not understand. Without adequate protection of breeding salmon when they are in the shallow water selected for their spawning beds artificial propagation would be of no avail, but this is so self-evident that it needs no defense from any pen, and the dream that fishculture might eventually supplant all protective laws was but the desire of an enthusiast to furnish cheap food at all seasons, and I doubt if any of the salmon family entered into this scheme even in his mind.

Land and Water states that "One hundred hen fish of 20lbs. each will supply 2,000,000 eggs, but only about 10 per cent. of these eggs hatch out, whereas by artificial means 90 per cent. hatch out."

The 10 per cent. figures are probably estimated, and are much too high, for in the work of rescuing salmon eggs naturally deposited in the York and Dartmouth rivers in Canada it was found by actual count that but 2 per cent. of the eggs were impregnated.

On the Ristigouche River it requires 210 days to hatch salmon eggs in the water of the hatchery, which is probably colder than the river water for a longer period; but say that 2 per cent. of impregnated eggs are buried in gravel of the spawning beds for five months, and for thirty days after hatching the fry are practically anchored to the bottom with a large umbellical sac, will one-half of 1 per cent. of the original eggs hatch and become fry that "swim up" and feed through the mouth? From 95 to 98 per cent. of eggs taken artificially are hatched, and the fry are not turned out until the sac is absorbed and they feed through the mouth. So with fry. On one hand by natural processes there is probably a fraction of 1 per cent. to begin the struggle of life, and on the other by artificial methods about 90 per cent. In this country, however, it is not the policy to plant fry when the fish can be reared to fingerlings (eight months old) or yearlings. In Maine at the U. S. Fish Commission's salmon stations, 87 per cent. of fry have been reared in ponds to two years of age. Last month I planted a carload of fingerling salmon from Maine, two days and two nights on the journey practically without the loss of a fish. To show that salmon fry will stock a river in which they were previously unknown we have only to refer to the Hudson. The fish were established, but dams and falls cut them off from their natural breeding grounds in the headwaters.

For sixteen years I have planted salmon fry or older fish for the United States Fish Commission, or the Fisheries, Game and Forest Commission, or both, and what I believe to be necessary to create a salmon river or preserve the salmon in a river are artificial propagation, protection, restrictions as to netting, and removal of natural and artificial obstructions between the sea and the headwaters where salmon naturally spawn. Omit any one of these things and the work will prove to be a failure. Propagate and protect, regulate and remove, and salmon can be preserved; but what a Herculean task it is to do all these things, and do them well.

On this side of the ocean no salmon river is guarded more carefully than the Ristigouche, but one year when I was fishing there one of the guardians was seized and bound while the poachers drifted through several pools. Of course the guardian was in league with the poachers. Another time the pools directly under the lodge of a lessee were drifted by poachers while the lessee slept; but things are better now under new management. Of the four things I have mentioned as necessary for the preservation of salmon the least difficult is to propagate and plant the fish; all the others will require constant and hard fighting to accomplish. Every dam and fall that salmon cannot pass over will need a fishway over it, and every owner of a dam will contend that a water power is of far greater consequence than all the food fish in the stream.

Really I do not know which is the more difficult to enforce—netting regulations in the lower part of a stream or spawning bed murder in the upper part; but both ends of the stream will have to be watched night and day without ceasing.

In the issue of Land and Water from which I have quoted is a paragraph about shooting a salmon. It says that a sportsman (mark the term, for I do not use it, and wish it distinctly understood that I am quoting it from the English writer who furnishes the information) was patrolling a beat at the mouth of a salmon river on the lookout for a hare. Fish were running up stream with a rise in the river. As he rounded a bend, with his chokebore at full cock, his eye caught a break in the surface of the river, "and with the strong instinct of the sportsman upon him he let drive and hit a magnificent salmon of about 30lbs., which was running at the time. The fish commenced floundering about, when another well-directed shot found its liver and turned it over on its side." The fish was got ashore and "divided among some workmen." Now, had it been a poor devil of a workman that had slaughtered a magnificent salmon running up to spawn, because the instinct of the pot-hunter was strong in the workman, he would have been hauled up and fined; but being a "sportsman" the act is paraded in the newspapers as something to be proud of, when really the man should have been ashamed of his wanton act, and if he had got what he deserved it would have been a fine, with quite a different newspaper notice.

Salmon Fishing Wisdom.

"'A salmon does not take the fly as a trout does, and never rises to one while it is passing up or down stream,' says an experienced angler, for this kind of fish. 'It is only while the salmon is lying at rest in pools, the reposing water at the foot of some rapid, or the silent starting place of such a rapid, that it will respond to the fisherman's cast. Salmon may be moving along by the thousand in the deep stretches of a stream that extends perhaps for a mile between rapids, but the angler might drop his flies above them for a month without being rewarded by a single rise.

"'The pool is the place to whip, and the time early morning and late afternoon. If the epicurean denizen of the pool is so inclined there is sport ahead for the angler. He drops his fly lightly on the water, and then the salmon in the humor will rise to it and seize it at once."

Thus the sporting department of a newspaper gives instruction in the art of salmon fishing. If I were to continue the advice in the same vein I would suggest that if the salmon fly does not drop lightly on the water the first time the angler should have another trial, for if the water is thick and the fly is tied on a 2-0 hook you cannot always drop it like thistledown, and there may be a decided plunk first off, and the fisherman should not be declared out on account of the plunk if he previously announces that he intends the fly to fall lightly.

Then, too, if for any reason a fisherman should whip one of those reposing pools at any other time than early morning or late afternoon, which he might do if he had a good excuse, and should hook a salmon, he should tail it and put it back in the water. This fishing by rule is tough, but once embarked on a sporting life, the rules must be observed by the rule fisherman or he will run up against something not provided for in the canon. It is like playing a system; you must stick to it or you will lose, although you may lose any way. When a fisherman gets out his book of instructions, as it were, on the art of fishing, and how and when to do it by hard and fast rules, I am apt to think of old George Holland in the play of "Rosedale" at Wallack's old theater, with his book of instructions on dancing, which he studied during the figures of the dance, with the result that he was never in the right place at the right moment, and his instructions were always about four minutes late for each figure. Rules in fishing are good up to a certain point, and then the angler would better depend upon himself and study the conditions as he finds them.

A. N. Cheney.

Introduced Trout in New Zealand.

Even some of the most successful examples of acclimatization have their drawbacks. We have heard much of the wonderful growth of trout, and various species of *Salmonidæ* in the rivers of New Zealand, where they have flourished to a degree almost unknown in their own country. I now hear whispers that this innovation is not so advantageous as its promoters would wish us to believe. The trout have flourished exceedingly in New Zealand. They have almost rivaled salmon in size, and have even been mistaken for them; their great progress depending upon the abundance of food they have in their new location, feeding upon the smaller fishes, chiefly, I believe, those belonging to the genus *Galaxias*, the native Kokopu. These, it is now said, the trout are exterminating. If this occurs, and they lose their ample supply of food, they may be expected not to flourish to the same extent; and I hear suggestions that it may be necessary to introduce and to acclimatize minnows in order to feed the trout.—W. B. Tegetmeier in London Field.

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Do Trout Find Their Way to Water?

I HAVE read many articles on this subject and will not dispute that a large percentage do, but not all, by any means.

Many readers of FOREST AND STREAM who visit the Adirondacks each season have noticed how dry the brooks are this year. The largest are very low and the smaller ones in most instances are completely dry.

Where are the trout? Have they found their way to the lakes and rivers? Some have, and a great many have not. Those that have escaped the drought have the larger fish to contend with. Do pickerel catch trout? I have often examined the stomach of pickerel, but have never found a brook trout among its contents, and should like very much to know if any readers have, for it has been a long argument among my friends.

One brook I took particular notice of in Washington county, a clear mountain stream running into Lake George. This brook I should say was about four miles long, being fed by many smaller streams, cold and clear, about 3 to 4 ft. deep and affording a splendid place for trout. I have never seen it average less than 3ft. before this past season. Sept. 18 there was no running water and the pools were filled with trout. These pools were from 20 to 30ft. apart, being the deepest places in the brook, and the favorite places for the trout to hide. There were in these pools trout from 4 to 8in. and numberless smaller ones. I watched the brook each day, and the larger fish seemed to disappear. I know positively that no one had fished there, and I came to the conclusion that the water had become so dead that it was impossible for the trout to live, or the water was so shallow they had made a meal for the hungry mink and muskrat.

When I left that section there was only a few inches of water left in these pools, and whether the last few rains were enough to save the remaining small fish I do not know, as I returned Sept. 25.

In my opinion it will take some time to overcome this summer's drought, and the trout fishermen of next season will be somewhat disappointed.

GEO. V. WAKEMAN.

"California Salmon and the Fly."

SAN FRANCISCO, Cal., Oct. 10.—*Editor Forest and Stream:* In your issue of Oct. 7 my communication, under the head of "Pacific Coast Salmon and the Fly," should read (and was written) in the second paragraph as follows, speaking of the fish found in the Navarro River: "The steelhead (*Salmo gairdneri*) is the most common of all. The Quinnat salmon (*Onchorhynchus tschwytscha*), the salmon of California, does appear for a limited time," etc. You will note that your issue makes me say, "The steelhead is the most common of all quinnat salmon." As the steelhead is a trout and the quinnat is a salmon, you will understand that I should like to have the readers' attention called to the error in printing the communication. STEELHEAD.

Black Bass Spawning in North Carolina.

WINDSOR, N. C., Oct. 12.—*Editor Forest and Stream:* I took two black bass in the river here to-day, both of which were found to be full of spawn. This may be usual at this season of the year, but I have caught a great many for twenty-five years, and never noticed the presence of spawn in October. A. S. R.

Reasoning Powers of Dogs.

THE question has been discussed at intervals ever since man began to keep the dog, whether the latter possesses any reasoning powers. The opinion used to be universal, and even quasi-religious, that a dog's cleverness was attributable to instinct only; but of late years there has been a tendency to concede something more to the dog. Having kept dogs all my life, it is to me beyond belief that a man who has kept a pet, or has walked about with his eyes open, or has read or heard trustworthy tales of animals, holds that dogs have only instinct and not reason. I am firmly convinced that they really understand much of what is being said, and also, which is more to the point, have a way of communicating the same to each other.

But dogs not only understand what is being said at the time, but also retain it in their memory for further use.

If I should say in the presence of one of my dogs, "I must wash Lady," and I go and get the tub and have it all ready, there can be found no Lady; or if I should say to my wife, "Give Little Miss those bones from the dinner table," Miss looks at me and makes all sorts of capers, as much as to say, "You are so good," and trots along after the dishes, and sits down with patience until she gets the bones. If I should change any of my dog boxes there is certain to be trouble. They know their own box, and you cannot console them very easily. Only the other day I made a change in this respect. About 11 o'clock at night I was awakened with a misunderstanding in the yard. I found Robbie had ordered the two puppies Ginger and Princess out of his box, which I had given them, and here he was covered up, as he used to be, and the puppies lying on the outside. I cuffed Robbie and put him in his new box, where he has remained since; but he don't speak to his neighbors now, and he was very friendly before I made the change.

A lady of Pomeranian fame, in England, tells a story which is very interesting. She says: Among the many excellent qualities which my Pom Montezuma possesses is gallantry. One afternoon, as I was reading in the dining-room, I heard a crunching sound which puzzled me. Upon looking, I found the dogs eating sugar, and wondered how they obtained it. Not seeming to notice, I watched, and presently saw Monte go toward the sideboard and return with a piece of sugar, which he gave to Niminy-Piminy; a second time he fetched a piece for Bebe; then he got a piece for himself. I thought it time to remove the sugar basin, which the housemaid had put on the plate basket under the sideboard. It is a common practice of his, giving his best bone to Niminy, an exceptionally unselfish action on his part, for is not a bone the dog's tit-bit par excellence?

It is related that a black retriever had several times presented its owner with very handsome puppies. She was, however, so unfortunate once as to have a litter of thirteen of all colors. Her shame at this mistake was shown by her desire to get rid of them. To effect this she began by overlaying them, one after another; but finding this a slow operation, she proceeded to drown them. She was seen by her owner and his man carrying one of her pups to a pond in the field, where she deliberately dropped it in the water. Having missed some of the pups, the man raked the pond, and found three more of them. By these means she disposed of the whole litter. She wagged her tail in a satisfied way, seeming pleased that she had by this means wiped out her disgrace. Previously she had been an excellent mother, and has since brought up many satisfactory puppies. REHAM.

Eastern Field Trials Club.

GREENFIELD HILL, Conn., Oct. 12.—*Editor Forest and Stream:* I send you list of entries for All-Age and Subscription stakes. We can safely predict the hottest competition in our club trials this year in the history of our club. The breeding of dogs is of the best. The large entry and the interest shown by the sportsmen in entering dogs in open competition display a disposition in the right line. To give the dogs a chance to enter in competition is good for the breed. What do we know about the great dog that is written up by some stay-at-home? The time is at hand when skill, strength and intelligence must enter into open competition to prove what can be done and which are the better. The Members' Stake starts Nov. 17. Special prizes are donated by several members of the clnb to the first, second, third and fourth winners. The stake will be in the highest degree of sportsmanship good for every lover of competition to see.

The Derby starts Monday, Nov. 20, followed by All-Age and Subscription stakes. Every effort will be shown to make all in attendance to the club's twenty-first annual meeting enjoy the meeting. Newton is on the Western North Carolina Railroad. St. Huberts' Inn will be headquarters, with good accommodations. Saddle horses may be engaged by applying to secretary.

I start for Newton, N. C., next Monday to make necessary arrangements for the meeting.

S. C. BRADLEY.

All-Age Stake.

Ladies' Count—J. Douglas Law's black, white and tan setter dog (Count Gladstone IV.—Dan's Lady).

Paladin—E. H. Osthaus' liver and white pointer dog (Rip Saw—Cricket).

Falmouth Dixie—H. R. Duval's liver and white pointer dog (Rip Saw—Blodwen).

Falmouth Suffolk—H. R. Duval's liver and white pointer dog (Rip Saw—Blodwen).

Falmouth Nassau—H. R. Duval's liver and white pointer dog (Rip Saw—Blodwen).

Macclesfield—C. T. Barney's liver and white pointer dog (Roderick—Rose).

Barber—Miss C. Parsons' black, white and tan setter dog (Antonia—Laskie).

Master Rush—A. J. Clark's liver and white pointer dog (Rush of Lad—Topsey M.).

Sam T.—George Crocker's black, white and tan setter dog (Luke Roy—Betty B.).

Gilt Edge—George Crocker's orange and white setter dog (Count Gladstone IV.—Lillian Russell).

Minnie's Girl—George Crocker's orange and white setter bitch (Antonio—Minnie).

Roderick Dhu—C. L. Shoop's black, white and tan setter dog (Thiers—Queenie).

King's Rod—J. J. Rooney's blue belton setter dog (Kingston—Mark's Ruby).

Bang III.—J. L. Breeze's black and white pointer dog (Rector—Dianah).

Count Danstone—W. J. Baughn's black, white and tan setter dog (Count Gladston IV.—Dan's Lady).

Donoko—H. Parsons' black and white setter dog (Antonio—Laske).

Furlough Mike—Geo. J. Gould's liver and white pointer dog (Duke of Hessen—Furlough Chin).

Albert's Mark—W. Gould Brokaw's black, white and tan setter dog (Antonio—Hooser's Nell).

Roland—Pierre Lorillard Jr.'s black white and tan setter dog (Eugene T.—Lou).

Pink's Boy—Pierre Lorillad Jr.'s black, white and tan setter dog (Gleam's Pink—Bell of Pawling).

Jack—Pierre Lorillard Jr.'s black, white and tan setter dog (Eugene T.—Maud).

Nana—Charlottesville Field Trial Kennels' liver and white pointer bitch (Rip Rap—Toxic).

Ranee—Charloteesville Field Trials Kennels' black and white pointer bitch (Rip Rap—Toxic).

General Gladstone—L. E. Seay's black, white and tan setter dog (Gladstone Boy—Buena Vista).

Lad Jingo—W. P. Austin's liver and white pointer dog (Jingo—Dot's Pearl).

Lady's County Gladstone—G. G. Williamson's black, white and tan setter dog (Count Gladstone IV.—Dan's Lady).

Alix C.—R. E. Rose's (agt.) liver and white pointer dog (Glenbeigh—Saddle Bags).

Dave Earl—Fox & Blythe's black, white and tan setter dog (Count Gladstone IV.— Dan's Lady).

Oakland Drake—H. B. Gilbert's black and white setter dog (Dick Noble—Jennie Stevenson).

Col. R.—H. R. Edwards' black, white and tan setter dog (Harwick—Trap, Jr.).

Uncle B.—H. K. Devereaux's black, white and tan setter dog (Harwick—Dan's Lady).

Jonny Jingo—Geo. E. Gray's liver and white pointer dog (Jingo—Pearl's Dot).

Prime Minister—Avent & Duryea's black, white and tan setter dog (Count Gladstone IV.—Hester Pryme).

Lady Rachel—Avent & Duryea's black, white and tan setter bitch (Count Gladstone IV.—Hester Pryme).

Roysterer—Avent & Duryea's black, white and tan setter dog (Count Gladstone IV.—Hester Pryme).

Joe—Avent & Duryea.

Fred B.—Dr. J. Spencer Brown's black and white pointer dog (Rap—Lady Grace).

Ponce—Luke W. White's (agt.) orange and white pointer dog.

White Line—S. Dillion Ripply's setter dog.

Belle—Wm. Tallman's (agt) liver and white setter bitch (——— —Sunset).

Dick—Wm. Tallman's (agt.) liver and white setter bitch (Dick Noble—Donna).

Donna—Wm. Tallman's (agt.) liver and white setter bitch (Dick Noble—Donna).

Gough—Wm. Tallman's (agt.) liver and white setter dog (——— —Sunset).

Admiral Drake—Wm. Tallman's (agt.) black, white and tan setter dog (Bald Rock—Nellie M.).

Total number of All-Age entries, 43; setters, 29; pointers, 14.

Subscription Stake.—Entries closed Oct. 1; $50 subscription; dog to be named night before running. Subscribers: Edmund H. Osthaus, H. Rieman Duval, Del Monte Kennels, W. J. Baugh, J. B. Bisbee, Pierre Lorillard, Jr., Charlottesville Field Trials Club, Fox & Blythe, Geo. E. Gray, Geo. E. Gray, Avent & Duryea, Avent & Duryea, Avent & Duryea.

The Wrong and Right of Dog License.

BROOKLYN, N. Y., Oct. 11.—*Editor Forest and Stream:* Your valued journal of Oct. 7 contained a most interesting letter upon "The Wrong of Dog License," by Mrs. Sarah K. Bolton, of Cleveland, O.; and again in your issue of Oct. 14 appears a reply to that humane and kindly woman's letter from Lucius A. Childress, of Philadelphia, Pa., all of which makes exceedingly interesting reading to the friends and owners of dogs.

As a lover of dogs and a friend of all dumb animals, permit me to say a few words upon the subject of licensing dogs. In the first place, I desire to state, without any feeling of egotism or boasting, that I have spoken, written and worked for the humane treatment of animals ever since I was old enough to wear trousers, but I must nevertheless protest against the owning of dogs by people who cannot afford to give them enough to eat and a proper home. By the latter is meant, of course, those persons who live in tenement houses or reside in homes of squalor and poverty. If a man is too poor to pay a license of $1 per year (the fee exacted here in New York) for his dog he is hardly able to pay from $6 to $20 per year for the food (medical attention, due to the visits of a veterinary surgeon when the dog is ill) and soup; sulphur to place in his drinking dish, etc. My 60lb. water spaniel costs me about $20 a year—a small dog would cost less and a larger one would cost more—but they all cost money, and if I could not afford to give my four-legged friend and companion enough to eat I certainly would be most inhumane in keeping him, hungry and unhappy. I therefore firmly believe that the dog license law is right and just.

The people who advocate the abolition of the dog license should go to the pound, or "Rest," as it is called, and see the wretched half-starved and diseased dogs that are brought there and put to death quickly and painlessly.

Now, dog catching, like "dog keeping," requires money, and if Bergh's society did not collect a tax upon dogs they would have no funds to carry on the work of collecting and putting to death homeless and diseased dogs which are a menace to the public. I consider it, therefore, a most humane and praiseworthy work, this catching and putting out of existence useless, diseased and hungry dogs, 70 per cent. of which are poor mongrels, of no earthly value to any one and would not be owned by any one but the poor, who cannot afford to give the animals enough to eat.

In conclusion, I would give a word of advice. It is this: If you do not love your dog do not keep him, and if you are too poor to pay a small yearly tax for the privilege of owning a dog do not have one at all. No man ever lived who was fonder of a dog or a horse than I, but I would not keep any animal if I could not afford to give it enough to eat.

G. FOSTER HOWELL.

Connecticut Field Trial Entries.

New Haven, Conn., Oct. 16.—The entres for the Connecticut Field Trials at Hampton, Conn., Oct. 25, are as follows:

Baby—E. B. Clark's black native setter.

Prince S.—Chaplin Kennels' blue belton setter.

Ruby and Dan—Wm. G. Comstock Jr.'s black, white and tan setter.

Doll Gladstone—Wm. G. Comstock Jr.'s black, white and tan setter.

Rowdy Roy—Bassett & Reeves' black, white and tan setter.

Tilda—F. G. Goodridge's black, white and tan setter.

Conquer—Hiram Dawson's black, white and tan setter.

Jack—F. H. Burke's lemon and white setter.

Blade's Ruby—F. M. Chapin's black, white and tan setter.

American Boy—F. M. Chapin's black, white and tan setter.

Joe—W. H. Stoher's orange and white setter.

Bess—O. D. Redfield's black and white setter.

F. M. Chapin's Blade's Ruby and O. D. Redfield's Bess are the only two for the Derby class. To give the sportsmen of Connecticut an opportunity to make every entry possible we have voted to receive entries in both classes up to Oct. 24. A number of entries have been promised and we hope the sportsmen of Connecticut will come forward and show their good dogs and enjoy a pleasant day afield.

John E. Bassett, Sec'y.

The Irish Wolfhound.

Behold this creature's form and state;
Him nature surely did create
That to the world might be exprest
What mien there can be in a beast.
More nobleness of form and mind
Than in the lion we can find;
Yea, this heroic beast does seem
In majesty to rival him.
Yet he vouchsafes to men to show
His service and submission too.
And here we a distinction have:
That brute is fierce—the dog is brave;
He hath himself so well subdued
That hunger cannot make him rude;
And all his manners do confess
That courage dwells with gentleness.
War with the wolf he loves to wage,
And never quits if he engage;
But praise him much, and you may chance
To put him out of countenance;
And, having done a deed so brave,
He looks not sullen, yet looks grave.
No foundling playfellow is he;
His master's guard he wills to be.
Willing for him his blood be spent,
His look is never insolent.
Few men to do such noble deeds have learned,
Nor having done, could look so unconcerned.
—Catherine Phillips (1660).

Points and Flushes.

Entries to the International Field Trial Club's All-Age Stake close on Nov. 1. Forfeit $5, and $5 additional to start. Hon. Secretary, Mr. W. B. Wells, Chatham, Ont.

The Baltimore Sun of recent date contains the following:

"There is a woeful lack of good dogs and many buyers are in the market for broken setters or pointers and find the supply less than the demand. The same conditions existed last year. Because of the scarcity of birds in previous years few dogs were broken. Lots of young and untried ones are on the market, but shooters whose vacations are limited do not want to bother breaking dogs. Owners of broken dogs do not like to lend them, because they may be spoiled, and as shooters know they may as well stay at home as go hunting without good dogs, the sportsmen afield are not likely to be so numerous as they would be if more good dogs were at hand."

Yachting.

The committees of the White Bear Y. C. and the Royal St. Lawrence Y. C. have settled the general conditions for the match of 1900 for the Seawanhaka International Challenge cup, the main points being as follows: The series of three out of five races will take place on Lake St. Louis, beginning on Aug. 3. Instead of the race committee of the defending club, as has always been the case in the past, three judges will be appointed to have charge of the match, as was done this year with the Canada cup. One judge will be appointed by each club, the two choosing a third. The challenge is nominally in the 25ft. class, but a special agreement has been made to the effect that the sail area shall be limited to 500 sq. ft., as in the present 20ft. class; and that there shall be no time allowance. This virtually means that the yachts will be designed without regard to hull dimensions; simply the hull which can be driven fastest by 500 sq. ft. of sail. Some scantling limitations will be adopted, probably a limit of ½in. for planking and ⅝ for deck; the centerboard if of wood may be ballasted only to overcome flotation; if of steel, it may not be over ½in. thick, and if of bronze ⅜in., and may not weigh over 360lbs. The opposing yachts must be named fourteen days before the first race. The complete details will be made public after they have been accepted by the two clubs. The change promises to make some interesting racing and to produce a better type of boat than the latest of the scows.

The dullness of the past week has been enlivened by several bitter personal attacks by different daily papers upon Mr. C. Oliver Iselin, the "managing owner" of Columbia, and his friends who sailed with him; and also by a revival of the discussion of the propriety of having a captain of Scotch birth upon the American yacht. There is no particular reason why any newspaper man should entertain a special affection for Mr. Iselin, or should go to any trouble to defend him, but at the present time he is at least entitled to fair play; and the charges mentioned are most absurd and unfair, and palpably inspired by mere malice.

Mr. Iselin occupies his present position as "managing owner" of Columbia, in which yacht he is said to hold a moneyed interest, though nearly all of her great cost is borne by Com. Morgan, for the reasons that he has proved himself capable of this sort of work, and is so situated that he can give his time to it. When it was necessary to defend the Cup in 1893 against Valkyrie II., Mr. Iselin organized a syndicate to which he contributed at least as much money as any of the other members and contracted with the Herreshoffs for the yacht afterward famous as Vigilant. By common consent of the only parties who had any rights in the matter—the members of the syndicate—he was selected to represent them both in the business part of the enterprise and the actual sailing of the yacht. In him was vested nearly all the responsibility for the working up and sailing of the yacht, and it is a matter of history that he made a brilliant success of the enterprise.

When it became necessary to build a new defender in 1895 to meet the third Valkyrie, and when Com. Morgan assumed the financial responsibility, it was most natural that Mr. Iselin should be at the head as the practical man of the new venture. In this, as in the preceding one, he was no mere figurehead, but a most active and most energetic factor, working hard from the very inception of the idea to the time when Defender sailed up the bay after the last race with an ensign from each spreader as a token of victory. After giving all due credit to the designer and builder of Defender for his individual skill and daring in a novel construction, there is still much to be said for the "managing owner" who backed him up in every possible way.

When the last challenge was received and it was again a case of one new boat for the defense, Mr. Iselin was, by virtue of his experience in this special work and his willingness to undertake it, the best man for the place. He was not selected for his courtesy toward newspaper men, the strict propriety of his language, or his Chesterfieldian manners toward his equals and his inferiors alike; but because he had demonstrated his fitness for the special and difficult task in hand. His reputation as a keen—not to say over-keen—racing man was made twenty-five years ago in the old Mary Emma, when the stirring sport of sandbag racing, with a free fight ashore for the prize after it was won afloat, was still in its glory. Since then he has done what some good sportsmen would not have cared to do in crowding the spirit of the rule through the building of Vigilant to carry a ballast crew; and he has done what most men would not have dared to do in the reckless driving of Vigilant at the imminent risk of her stick, in the final race in 1893.

The uniform success of the American yachts in the defense of the Cup in 1885, 1886, 1887, 1893 and 1895 has been due above all else to the personality of a bold, skillful and intelligent owner, and this Mr. Iselin has proved himself to be; a fitting successor to Gen. Paine. The work on the American boats in all of these years has been done on a plan distinctly different from the English, in which the owner is a mere figurehead, the designer's work is practically ended with the completion of the vessel, and the skipper is in sole and undivided command after the yacht first begins to race. In the Cup defenders from Puritan to Defender, both owner and designer have worked together in the general planning of the yacht, the experimental trials, the trial and the Cup races; and with them in all the racing has been a competent skipper. The exact relations of the three have varied in different cases, but practically they have in every case worked together in harmony on an almost equal footing. With them have been several good amateurs, intimate yachting friends of the owner; not passengers, but men who were there to do anything to help the boat. This combination, strengthened by some good professionals as petty officers and a carefully picked and drilled crew, has worked well in every case from 1885 to the present time; it was all right in Vigilant and Defender when they won, and those who now ridicule and denounce it have offered no proof that it is not perfectly proper and not likely to prove successful in Columbia.

On the other hand, the much lauded combination on the Scotch-English-Irish boat of three skippers working together without owner or designer on board is a novel one, with possibilities of failure that must be apparent to all. To practical yachtsmen it seems in every way less suitable than that of owner, designer and skipper; one important point being that the successful handling of one of these great machines, with hulls and spars of novel materials and the lightest possible construction, is a matter of engineering rather than of true sailorizing; requiring the skill of the designer quite as much as that of the professional skipper and helmsman.

We can see no necessity for the public discussion of Mr. Iselin's personal characteristics and standing as a yachtsman at any time; but after accepting him when victorious in Vigilant and Defender, it is most absurd as well as unjust to condemn him by wholesale because Columbia has not won a race when none has been sailed within the time limit.

There is one detail of the matter which is amusing to the impartial spectator; after practically ignoring the newspapers for years, Mr. Iselin has at last recognized them very fully in giving out a special interview in reply to these attacks, in which he asks for support and encouragement. What he says is in itself sensible and much to the point, but it would have been far more consistent if he had continued to ignore all newspaper comment, hostile or otherwise.

There is a very beautiful sentiment underlying the objection to Capt. Barr and the claim that only "Americans" should be identified with the defense of the America Cup; but the idea will not work in practice at this end of the century. A nation which placidly consents to be ruled by the Irish has little right to object because a naturalized citizen of Scotch birth is employed on an American yacht. The sentiment of complete independence of foreign aid finds its warmest supporters among those prominent in the shipbuilding industry, who will without hesitation buy their designs in England, have the detail drawings made there when it can be done at less expense than in their own offices, and who welcome British shipwrights of all grades from yard superintendents down to platers and riveters, regardless of the alien labor laws. There has never been a time when America was independent of foreign brains and muscle, as witness Henry Eckford, John Ericsson, George Steers and even the founders of the Herreshoff and Iselin families; and there never will be, however great a superiority we may in the future demonstrate over European nations. At the present time the treasurer of the New York Yacht Club, and probably the ablest it has ever had, is an Englishman; while the fleet captain was born in Ireland. The late J. R. Busk, owner of Mischief when she defended the Cup in 1881, was an Englishman by birth, and we believe always retained his nationality.

If Capt. Barr had been selected on account of his nationality or through favoritism, the case would be different; but he has won his present high position through sheer merit. He came to New York fifteen years ago as a boy in the forecastle of a small cutter; brought up to fishing and yacht sailing and with limited opportunities for acquiring an education. With nothing to help him but his own industry and perseverance, and no frends save those he has made by faithful service under one employer after another, he has worked up from the command of the little Shona to Minerva, Barbara, Wasp, Navahoe, Vigilant and Colonia and last Columbia. His standing in his profession to-day is higher than that of any of the men of his age who started with far greater initial advantages. Why he was selected by Mr. Iselin in preference to some of the older men is a matter of which we have no knowledge; but it is one in which his nationality is not concerned. He is now an American citizen, his home and his future are in this country, he is in many ways of a higher type of manhood than many of foreign birth who occupy important legislative and executive positions, and the attacks upon him on account of his nationality are inconsistent with the acceptance of the naturalization laws and the existing system of local government in American cities.

Before blowing Mr. Iselin for selecting a forein-born skipper, it should be remembered that he was the first to man an American yacht with a distinctly American crew, an experiment which in Defender involved much extra labor and some risk of failure. In all Cup races prior to 1895 the American yachts have been manned by Scandinavian crews; and it has remained for Mr. Iselin to prove, as he has done, that quite as good raw material may be found in the American fisherman.

The America Cup.

Columbia and Shamrock.

After twelve week-days, in the course of which seven trials have been made, the first race of the Cup series is still in the future. The three failures of the first week have already been recounted, bad enough in truth, but far better than the four of last week. On each of the first three days the spectators were treated to a view of the two yachts under sail, the start of the race, and several hours of mixed sailing and drifting; not what they wanted to see, but still better than nothing. Last week, however, even the slender consolation of a pleasant sail and a view of a start was denied them; the attendant fleet, smaller each day after Tuesday, groped its way slowly and cautiously from New York down the bay to the Sandy Hook Lightship, rolled around in a thick fog bank for an hour or two with whistles blowing on every hand and the siren on the point of the Hook groaning dismally, and at the code signal R all turned and headed for home. Four times was this repeated, with but slight variation of programme.

On the first day, Tuesday, the fog which came up on Monday night was very thick in the morning, with no wind. There was still quite a fleet of yachts and steamers, with all of the guard boats. When they reached the Lightship about 11 o'clock the fog was less dense than up the bay, but still so heavy that neither yacht had left her moorings or even lifted her sail covers. The smoke and steam from the fleet rose vertically or at times tailed off about south, but there was nothing that could be called wind. After the "race postponed" signal was set the fleet steamed slowly in to the point of the Hook, where the yachts and their tenders are moored. This place, by the way, is not the "Horseshoe," which lies some three miles further up inside the Hook, but is the little bight formed by the extreme point of the Hook, opposite the old fort. Here were Shamrock and Columbia, with the tenders Plymouth and St. Michaels, the big derrick barge with Shamrock's spars, and the two tugs. After luncheon the regatta committee met with Sir Thomas Lipton and Mr. Iselin, the two latter being anxious to try again on Wednesday, but the committee would not consent. Later in the day a second meeting was held on board the Corsair, Com. Morgan, Rear-Com. Belmont, H. B. Duryea and Mr. Sharman Crawford being present. It was decided to adhere to the revised programme of the next trial on Thursday and after that a trial every week day. In the course of the afternoon a light S.W. wind came in and the fog lifted; Columbia set her mainsail and a new club topsail, the largest she has, just made for her by Wilson & Silsby. About 4 o'clock she got under way for a short sail to try this canvas. When the fleet reached the Upper Bay the sun was shining brightly and the weather was hot enough for midsummer.

Nothing was done on Wednesday on either boat except that Columbia's crew was still busy with her sails. The weather was the same as on the preceding day, clear and bright in the city after the early morning, but foggy and calm off the Hook. The fog shut in early in the evening, and by Thursday morning was thicker than ever. The fleet, now greatly reduced in numbers, groped its way out to the Lightship, where the two yachts were already under sail. There was no wind, no prospect of any, and the fog was too thick to make it safe to start if there had been; after waiting for nearly an hour, the letter R was sent up at 12:07, and all went home as best they could. The fog was so thick in the Upper Bay that the shores were not visible in passing in the Narrows, and the first

glimpse of sunlight was met just below Governor's Island; over the city the sky was clear.

The fog caused two collisions in the fleet, besides much trouble and delay to vessels on the Hudson and the Sound. The steam yacht Erin has carried many guests each day, they being taken down to her at the Hook on a small steamer from the city. On Thursday morning the steamer Wm. Fletcher had a large party, including Lord Charles Beresford, on board, bound for Sandy Hook, where the Erin was lying. Just off Governor's Island she came in collision with the Thirty-ninth street ferry boat West Brooklyn, the two striking heavily and the Fletcher driving her bows under the guards of the ferry boat. There was some alarm and confusion at first, but the two were separated and towed off, both considerably damaged, Sir Thomas Lipton's guests being transferred to the tug Atwood. Just as the fleet was starting home from the Lightship the steam yacht White Ladye came in collision with the revenue cutter Manning, of the guard fleet, the yacht's bowsprit sweeping away the port rails of the cutter's bridge, her dinghy and davits, and tumbling a rapid-firing gun, a relic of the Viscaya, to the deck. The yacht lost her bowsprit and other parts of her headgear, but no one was hurt and the hulls were uninjured. The responsibility for the collision has not been determined.

Friday brought no change of conditions, the same calm weather and the same fog through the night and morning. This time the fleet steamed direct to the point of the Hook, where the two yachts were lying at their moorings with sail covers on. The regatta committee tug was out at the Lightship until about noon, when it ran in and signaled that the race was again postponed.

Friday night was comparatively clear through the evening, and though the fog shut in after midnight it was less dense than on the previous days. At 9 o'clock there even a light draft of wind from S.E., shifting a little later to S.W., and the oyster sloops and other small craft in the bay were visible with sails filled and good way on. With a bright sun above and weather like summer, there were hopes of a race, and many more people were present on the steamers, a number of the larger boats going down. All went well on the way, a nice little breeze from the southward was coming in, and all hands felt certain of at least a start. When the Lightship was in sight the fog was still pretty thick, the two yachts being dimly visible with mainsail and club topsail set and headsails in stops, but there was no wind. The usual wait followed, and just after noon the signal was set and the fleet started home.

The continued failures have brought serious disappointment to thousands of people who have planned for months to see the series of races. Many from nearby points have arranged to take their vacations during the race week, or to get away on those days set in advance for the races, and they have used up their time during the two weeks with no better result than three half-races. A large number have come from a distance, some from England, Ireland and Scotland and many from the West and Canada. They have spent two weeks in New York, and have paid out a good deal of money in steamboat tickets alone, and yet have had to leave without seeing one race. Saturday marked the limit for a large number. They stayed over from Tuesday to Thursday with every confidence of a break in the weather. On Thursday they decided to risk one more day, and after that, unless they took the steamers on Saturday morning, they again decided to risk a final day and start for home on Sunday. There was quite a large Canadian contingent on the New York Y. C. steamer Republic, which had been faithful through all the seven dreary trials, but they gave up on Saturday, and all left that night. Most of the Royal Ulster party are still here, those officially connected with Shamrock having engaged passage long ago by the Oceanic on Wednesday, Oct. 18. Sir Thomas Lipton, Mr. Ratsey and Mr. Fife, who is still quite ill at his hotel, will, of course, remain indefinitely. It is a curious thing that the majority of those who have from the first planned to see these races will not do so; on the other hand, many who had originally no intention of seeing them have had their interest awakened by the continued delay and incidental discussion of the merits of the boats, and are prepared to take advantage of the first change of weather to run on to New York for at least the concluding races.

The problem of a clear course seems to have been disposed of by the prompt and perhaps arbitrary action of the Government in patrolling the course and preferring charges against all offenders. One of these, the captain of the steamer Glen Island, has already had his license revoked by the Treasury Department, and others will be similarly punished. There has been, apparently, but little deliberate violation of the regulations; though through ignorance or carelessness some yachts and steamboats have broken through the lines. Whether through the fear of punishment or a higher motive, the steamboat men have accommodated themselves to the situation and in most cases kept well within bounds. There has been no time when either yacht was interfered with. Such boats as have broken through the lines have been driven back before they were near the yachts. The lines themselves have been so drawn as to keep the inshore and offshore divisions of the fleet so far apart that they have little effect in breaking or banking the wind. On one or two occasions an unexpected change of course on the part of the yachts has caused the fleet to scurry away in haste, to its own temporary inconvenience, but without harm to the racers. It is probable that through the disorganization of all plans by the long delay and the consequent falling off in attendance, many of the smaller steamers and tugs have given up; and even though a large number of people may turn out for the final race or two, they will find room on a comparatively small number of large steamers such as the Peck, Lowell, Monmouth, Columbia and Republic. All set pans both on the part of the steamboat owners and their patrons, whether individuals or clubs, have been disorganized; and the business is likely to readjust itself on new lines, a certain number of large steamers and some of the medium-sized ones following every day, at lower prices than first arranged.

The prices as first set ranged from $20 to $10, $6, $5 and down to $1 on the smaller steamers, for a single day. For the sum first mentioned, one could boast that he had been on the same steamer as Mr. Marconi, the wireless telegraphy expert. He could send some silly message by wireless telegraphy to friends ashore and have it printed next day with his name in a morning paper, and he might possibly have his photograph taken and similarly be made known to the world.

The steamers charging $5 per trip were practically equal to the higher priced ones so far as viewing the yacht race was concerned, and as a rule they were not overcrowded even on the first days. In some cases these steamers sold series tickets at reduced rates. The steamers which charged $3 were in most cases very much crowded at first. By the middle of last week the steamboat business had gone to pieces and the prices were broken. Many boats after the failure of Thursday sold tickets at reduced rates for Friday and good for Saturday if no race was sailed on the former day; and some continued to carry Thursday's passengers free for the other two days. One of the largest of them, which started at $5 for a single trip, has announced a rate of $3 for the balance of the races.

As a rule the patrons of the steamboats seem to have been fairly treated, though some which have advertised to be at the line in good time have missed several starts. One notable exception is the steamboat Georgeanna, of Philadelphia, chartered to some unknown parties and run as a $2 boat, though some tickets were sold for less money and some were distributed free. The boat, in charge of Alexander Sterck, an alleged licensed captain, left late on the morning of the first race, with a large party on board. As soon as she was clear of her dock different gambling layouts were set up in all parts of the boat and the passengers were invited to play. When the Hook was reached, long after the rest of the fleet had gone to the line, the captain refused to go any further, and ultimately a fight ensued between the deluded passengers who had been first swindled and then robbed, and the gamblers who had possession of the boat. These, it is charged, numbered about sixty, the whole affair being apparently a deliberate scheme of robbery. The ensign was set Union down as a signal of distress by some of the passengers, and they in turn were assaulted by the gamblers in the effort to restore it. Before the boat was inside the Narrows on her return in the afternoon, word was sent to the police, and the captain and some of the alleged gamblers were arrested at the dock. The captain is now under examination, charged with having no license and with being in league with the gamblers.

The New York Y. C. has provided well for its members, the Republic, a large and fast side-wheel steamer, running down every day and carrying members free, while tickets are sold to members for the use of their friends. An orchestra and an excellent luncheon by Maresi have served to divert all hands from the serious side of the question.

The unprecedented vagaries of the weather have broken the proud record held by Marblehead since 1886, when Galatea and Mayflower waited there day after day through the latter part of September for the breeze which never came. The following table, compiled by Mr. Emery, the Weather Bureau expert, shows what might reasonably be expected at this time of year:

OCTOBER, 1889.

From the above it will be seen that the present prolonged period of almost complete calm is abnormal and unprecedented, and that moderate to fresh breezes, largely from N.W., might confidently be expected. At the date of writing, the fog is shutting in thick for the seventh night, with an increase of humidity and no wind, while the reports from all parts of the country give no promise of any change for the next few days.

First Race—Windward and Leeward.

EIGHTH DAY—MONDAY, OCT. 16.

Columbia Wins by 10 Min. 8 Sec.

THE outlook on Sunday evening from the Highlands was promising, a light westerly wind having driven off the fog so that the Scotland Lightship, nearly four miles away, was plainly visible. About New York it was very discouraging. At 10 o'clock the moon was shining brightly in a sky that was apparently cloudless, but the fog was so heavy that the moisture condensed as it touched the trees and fell in great drops like a heavy rain in summer. There was no wind and little promise of any. The morning was worse than ever, save for a light N.E. breeze over the city, the fog was thick, with an excess of moisture that almost amounted to rain, and there were no signs of the sun. The chances of a race seemed so small that few turned out, about sixty being present on the big Republic, with small parties on the Plymouth, Shinnecock, Dolphin, Mount Hope, Grand Republic and a few other steamers, and about fifteen steam yachts.

The yachts left the point of the Hook about 10 o'clock, towing out to the Lightship, where the wind, about S.E., was blowing six or seven miles an hour. The fog still hung over the water, but objects were visible at a distance of a mile or more. The committee boat, with the mark-boat, guideboat and the extra tug, was at the line about 10:20, and the course signal was set at 10:30, the wind then being east, making a windward course. The yachts carried whole mainsails and club topsails, the latter being smaller than in the first trials.

The preliminary signal was given at 10:45, and the preparatory at 10:55. Shamrock came for the line ahead of Columbia, both on starboard tack, the baby jib topsails being set in stops. When the gun fired at 11 Shamrock was near the line, with Columbia just astern of her, both moving slowly. Shamrock crossed first, at 11:01:03, and Columbia, luffing well out on her starboard quarter, went over three seconds later and a short distance astern, with much the better start. The wind had freshened to eight or nine miles an hour, with fairly smooth water, and the conditions were perfectly fair and good of the kind, for a light weather race. The start was a very tame one, in no way exciting, but nevertheless interesting from the clever berthing of Columbia on Shamrock's weather.

Though they moved slowly, Columbia was sailed from the time she crossed the line, going away with sails drawing and a show of life. She began to weather out on Shamrock at once, and as the event proved, had her beaten within five minutes, for the rest of the day it was a procession, and a rather slow and stupid one to the spectators, whose appetites had been whetted by days of disappointment and the favorable showing of Shamrock at different times. To summarize briefly what scarcely deserves to be told in detail, Columbia, well handled throughout, made a steady gain for the whole fifteen miles of windward work, making nearly ten minutes in three hours' sailing, while off the wind she gained a little more. The many tacks and rapid changes of position made it impossible to estimate any very small gain or loss from time to time, but at no time was it certain that Shamrock was holding her own. Her work was of a very different order from that shown on several occasions in the first three days, when she pointed high, footed fast, and fetched well to windward; now she most noticeably failed to point, while she failed to hold on beside Columbia. It was impossible to see who was at the tiller, but she was not sailed as in the first trials. Her trick seemed to be to foot ahead without regard to windward position.

The wind at the start was flawy and headed one and the other in turn, but it was evident that Columbia was climbing out steadily on Shamrock's weather. Shamrock was the first to tack, at 11:15, Columbia at once following, being now on the weather bow instead of where she started on the weather quarter. Shamrock footed ahead very fast, and was soon in the lead in mere distance, but woefully to leeward. At 11:33 she came on starboard tack, but Columbia was about on the instant, and further ahead than on the first tack. They held this leg for twelve minutes, when Shamrock went back to port tack, Columbia following, but before she was fairly about Shamrock was back to starboard. Before Columbia was on starboard Shamrock was back on port, and as Columbia came about again Shamrock went on starboard. This fool business kept up until within seven minutes the pair had made six tacks, Shamrock always leading. Whether or no she gained any in mere quickness in tacking, at the end of the bout Columbia was quite as far ahead as at the start.

Shamrock, after holding one tack nearly five minutes, came on starboard, and Columbia, now nearly lost in the mist and safely ahead, at once went about, determined to keep in the weather berth and between her rival and the mark. The guide tug, running off slowly on the true course, was visible from each yacht as they worked out for short distances on one side or the other of the straight line.

Though too far astern to be in any way affected by Columbia, Shamrock continued to lead in short tacks, but the other invariably came about on the instant. At 12:20 Shamrock stowed her baby jib topsail, but set it again at 12:35, the change apparently having small effect. At 12:27 she again took it in, only to reset it ten minutes later.

They worked on out to the mark with a breeze of never over ten knots and a moderate sea, Columbia showing the same steady gain as at the start. Near the mark she for the first time made a tack on her own initiative. At 1:48:19 she bore away around the mark, lighting sheets and smartly setting her spinaker to port, the balloon jib topsail being also broke out. She was four minutes from the mark on her way home with all kites drawning when Shamrock, on port tack and still bound for the mark, passed close by her; turning at 1:58:06, or 9 min. 47 sec. astern.

Shamrock set her spinaker and balloon jib and fell in for a long stern chase, which was devoid of interest to the spectators, as the real race was over and only a rank fluke or a breakdown could alter the result. The wind held fairly steady and the run in was made with the two so far apart that the rear boat was almost lost in the fog at times. Columbia finished at 3:54:59, being greeted with a salute of hearty whistles from the fleet of about forty steamers, tugs, steam yachts, revenue cutters and torpedo boats. Shamrock finished at 4:05:10, 10 min. 11 sec. after Columbia, the official times being:

	Start.	Turn.	Finish.
Columbia	11 01 06	1 48 19	3 54 54
Shamrock	11 01 03	1 58 06	4 05 10

Shamrock received quite as noisy a salute as Columbia from the entire fleet. After the finish, in addition to the ensign on the jack staff, Corsair sent up the American flag at the fore and main trucks and the fore and main gaff ends, five in all, as she steamed homeward. The two yachts were taken in tow by their tenders, and the first race was at last over.

SECOND RACE—TUESDAY, OCT. 17.

The second race was started promptly at 11 o'clock Tuesday, the boats crossing the line:

Shamrock	11 00 15
Columbia	11 00 17

Shamrock had the weather. Columbia broke out a baby jib topsail as she crossed the line. Shamrock held her lead on the starboard tack for five minutes, when they went about and headed for the southeast. Columbia gained and at 11:24 was leading by 300ft. At this point Shamrock's topmast broke and her club topsail came down with a rush. Columbia put up into the wind to render aid, but not being needed she went over the course, while Shamrock was towed back.

Columbia finished at 2:35:50, or two hours within the limit, her elapsed time being 3 hrs. 35 min. 18 sec., unofficial.

The Chesapeake as a Yachting Ground.

Editor Forest and Stream:

Chesapeake Bay and its tributaries form one of the greatest and most interesting yachting and fishing grounds in America, being well protected from the ocean storms and having so many rivers and inlets in which a boat can find safe anchorage in case of an unusually severe storm. Our Northern friends could spend many a winter there before they could say that the ground was old to them, besides its being so near the Capital and furnishing them almost unlimited social privileges, together with the very best of cruising, all in the same field. The residents along the shores are as a rule well-to-do people, who own boats of some kind or other, and would take pleasure in showing the sights and helping the cruiser to enjoy himself. There are many places of interest to the patriotic American. Among others is Yorktown, to which even our largest steam yachts may go with ease. Then there are the Old Beacon, Homestead, and in Gloucester county several old and picturesque places. In the fall one can enjoy duck hunting to his heart's content; and fish and oysters are here all the year round.

Among the boats used in these waters, most common are the Pequosion canoe, made from three trees; one forming the keel and the other two on the sides to bring them up to the desired height and out to the desired width. The canoe is sharp at both ends, and rigged as a jib and mainsail boat. These craft are good, firm and are safe, stiff and speedy. A few of them are yawl rigged, especially in the larger sizes. They run from 20 to 33ft., though a few are built up to 42ft., with 8 to 8½ft. beam. Then they have what they call the pingie-built sharpie, built of hewn or dug-out logs in any size up to 100 tons. These boats are as a rule slow, but some are very nice cruisers, with very fair lines, and can go almost anywhere they please. The Rev. Thomas Dixon now owns one of them, and I think finds it a very satisfactory cruiser.

To get the full benefit of the waters of the Chesapeake one does not want a boat of over 5 to 6ft. draft, and no one should try to see all in too short a time, or they will not be able to enjoy what would otherwise be in store for them. My motto would be, Do well what you do in pleasure, as well as in business. Hoping that this will be the means of some of my brothers seeing the bright side of life in this weary world of ours, and that they may give those who are not able to go the benefit of their trip through these columns, I await their reports.

H. P. WILDER.

YACHTING NEWS NOTES.

The annual meeting of the Yacht Racing Union of North America was held on Oct. 14 at the Manhattan Hotel, New York, with President L. M. Clark in the chair. The present officers, President L. M. Clark, Secretary F. B. Jones and Treasurer N. D. Lawton, were re-elected for 1900. The question of a measurement rule was discussed at length and it was finally decided to retain the girth rule for the coming year. A committee of five was appointed to revise the racing rules.

Idler, schr., once famous about New York under the ownership of the late S. J. Colgate, but for many years owned in Chicago, has just been sold to A. R. Rumsey, of Cleveland, the head shipping master of the Lake Carriers' Association. Mr. Rumsey, who is now wealthy, was a common sailor on the lakes until recent years.

Norna, schr., N. J. Weaver, is still working her way round the world in spite of various difficulties of a financial nature. She was last reported as at Honolulu the middle of last month, where she was detained on an attachment at the instance of Walter Percival, of Singapore, who advanced $2,500 on a bottomry bond. Her owner, N. J. Weaver, who was once a member of the Atlantic Y. C. for a short time, though never an officer, as claimed, is well known to the police in connection with various doubtful operations. The yacht started on an alleged voyage of scientific research, but she has been in constant trouble at one port or another. No yacht club, we believe, now recognizes Mr. Weaver as a member.

The first official trial of the new model testing tank at the Washington Navy Yard took place on Oct. 7, a model of the new cruiser Denver being tested. The plant includes, besides the tank proper, some very beautiful machinery for making the wooden models. These are about 20ft. long, built up on the "bread-and-butter" plan, of 2in. planks, and hollowed out. The model is cut by machinery from a temporary planked model built from the lines. It has been found that paraffin wax, the material used in Europe for towing models, is not suitable for the warm climate of Washington, so the plant has been adapted to the construction of wooden models.

Canoeing.

A. C. A. Committees.

TORONTO, Ont., Oct. 9.—*Editor Forest and Stream:* Kindly publish in FOREST AND STREAM, the official organ of the Association, the following appointments:

Regatta Committee for 1900.—R. Easton Burns, Kingston, Chairman; Herbert Begg, Toronto, and D. G. Goodsell, Yonkers.

Ladies' Camp Committee.—Henry M. Carpenter, Sing Sing, Chairman; Mrs. Robert G. Baker, Toronto, Northern Division; Mrs. Charles Forebush, Buffalo, Central Division; Mrs. F. S. Huntington, Milwaukee, Western Division; Mrs. C. W. Lansing, Worcester, Mass, Eastern Division; Mrs. C. B. Vaux, New York, Atlantic Division.

Auditors for Board of Governors' Accounts.—Henry M. Dater, New York; C. Bowyer Vaux, New York.

Official Corn Roasters.—L. W. Seavey, New York; J. N. MacKendrick, Galt.

Camp Surgeon.—T. R. Richardson, M. D., Toronto.

W. G. MACKENDRICK, Com.-Elect.

NEW YORK, Oct. 16.—*Editor Forest and Stream:* Kindly publish the following proposed amendments to the Constitution of the American Canoe Association, viz.:

Article III. omit the words "the constitution" and insert instead "Article IX."

Article VII., change the words "Article III." to "Chapter III."

Article XIII., add the words "or member of a committee or board" after the word "officer."

HENRY H. SMYTHE, A. C. A., 1308.

His Wonderful Papa.

Papa went a-fishing
With his pockets full of bait;
He went all by his-lonesome,
And the luck he had was great.

He came home, bringing with him
A string of fish that weighed
Just twenty pounds, he told us,
And a lovely meal they made.

Papa went a-fishing
Upon another day;
And mamma she went with him—
He couldn't say her nay.

They came a-trudging homeward
All tired out at night;
And mamma told us papa
Had never had a bite.

My papa's broken records
Of nearly every kind—
A greater man than he is
It would be hard to find.

He's always doing wonders,
But here's what bothers me:
He never seems to do them
When folks are there to see.

—Chicago Times-Herald.

"I was at Tampa when a negro teamster was instantly killed by an army mule, and it furnished a good illustration of the wonderful memory that a mule has.

"The negro teamster used to pound that mule unmercifully. Instead of using strategy and coaxing his mule into submission, he used to beat it hard enough to kill a horse. Well, for two months the teamster didn't drive that mule. But the mule never forgot him. He never made any attempt to injure his new driver, who knew enough to treat him decently. But one day the old teamster came back. The mule remembered him. He waited with as much docility and patience as an ox until he was harnessed, and then, when the old teamster was off his guard, he let fly with both heels, caught that negro in the pit of the stomach and stretched him out as dead as a hammer. The other teamster was standing right there by him, but that mule didn't make any attempt to kick him. He had just been laying for the fellow who walloped him two months before, and when he had finished him he was satisfied."—Buffalo Horse World.

My friend had a lovely collie, and as he was a farmer he found the dog very useful in many ways, particularly as an errand dog, in which capacity he excelled. His farm was two miles from the railroad depot, and one day he wanted to send a calf off by rail to 'Frisco. So he labeled it, called the dog, and said, "Station, Charlie;" and the dog started off, driving the calf. But when they got half way, the obstinate animal refused to budge, and Charlie, after trying all he knew, trotted back to the farm. Going to the dairy he dipped his tail into a pan of cream, then went back and got in front of the calf, and the result was that he led him in triumph to the station.—Asian.

Rifle Range and Gallery.

Rifle at Shell Mound.

SAN FRANCISCO, Cal., Oct. 9.—Yesterday was the warmest day ever known in October in this vicinity. Shooters at Shell Mound were stripped to their shirts. The temperature was over 90 degrees. The attendance, however, was as full as usual.

Golden Gate Rifle and Pistol Club.—Two ten-shot scores allowed; 25-ring target for rifle at 200yds., standard American for pistol and revolver at 50yds. Scores:

Rifle Class—D. W. McLaughlin, 225, 220; F. E. Mason, 222, 214; Dr. L. O. Rodgers, 221; J. E. Gorman, 220, 202; F. W. Belknap, 219, 209; C. M. Henderson, 201, 201; E. N. Moore, 204; E. Wanne, 189, 178; J. F. Bridges, 174.

Pistol Class—Dr. L. O. Rodgers, 93; J. E. Gorman, 93; J. F. Bridges, 80, 74; E. N. Moore, 79; C. M. Henderson, 78, 74; M. Tompkins, 76, 75; C. Roberts, 71, 71; F. W. Belknap, 64, 63; D. W. McLaughlin, 92, 90.

Monthly medal shoot of the Germania Schuetzen Club—First champion class, J. Utschig 428; second champion class, F. Rust 402; first class, J. Gefken 409; second class, J. F. Bridges 390; third class, J. Beuttler 327; best first shot, E. H. Goetze, 24; best last shot, J. Utschig, 24.

Bushnell Medal—F. P. Schuster 220, J. Utschig 214, D. B. Faktor 213.

Competition for Cash Prizes—E. H. Goetze 74, D. W. McLaughlin 73, Dr. L. O. Rodgers 71, J. Utschig 71, D. B. Faktor 71, F. P. Schuster 70.

The Independent Rifles held their monthly medal shoot with the following result: Lieut. Moenning 39, H. Kuhlke 38, Corp. P. H. Schonig 36, Corp. C. Frederickson 33, H. Gaptgen 34, R. Bither 32, G. Kellenberger 29, C. Iverson 31, H. Marzolf 29, F. H. Lann 24, C. Granz 21, Dr. W. A. Meierdierks 20, F. Wild 16, C. H. Meierdierks 14, H. Felix 14, J. Heinbockel 7. The prizes will be awarded at Saratoga Hall next Saturday evening.

At the monthly bullseye shoot of the Norddeutscher Scheutzen Club the following scores secured the highest prizes: F. P. Schuster 303, August Hohman 423, John DeWitt 686, Otto Lemcke 810, John Gefken 810, John D. Heise 819, Frank Koch 890, Capt. Frank Thode 1,018, D. Salfield 1,199, H. Huber 1,250, D. Schinkel 1,373.

ROEEL.

Trapshooting.

Fixtures.

Oct. 16-19.—Du Pont Park, St. Louis, Mo.—Fall tournament; three days at targets; one day at live birds; $300 to $500 added money. J. A. Corry, Manager.

Oct. 17-19.—Circleville, O.—Fall tournament of the Pickaway Rod and Gun Club. G. R. Haswell, Sec'y.

Oct. 17-19.—Baltimore, Md.—Sixth annual fall tournament of the Baltimore Shooting Association. J. R. Malone, Manager.

Oct. 18.—Lyndhurst, N. J.—Handicap at 25 live birds, $10 entrance; also sweepstakes.

Oct. 21.—Wissinoming, Pa.—Philadelphia Trapshooters' League.

Oct. 23-28.—Nashville, Tenn.—Belle Meade Gun Club's tournament; targets and live birds; $750 added. W. R. Elliston, Sec'y.

Oct. 24—Huntington, Ind.—Erie Gun Club's tournament.

Oct. 24-26.—Montgomery, Ala.—Capital City and Montgomery clubs' tournament.

Oct. 25-26.—Rochester, N. Y.—Eighth annual fall tournament of the Rochester Rod and Gun Club.

Oct. 26.—Mt. Kisco, N. Y.—Fall tournament of Mt. Kisco Gun Club. Open to all. Cash and merchandise prizes. R. W. Gorham, Sec'y.

Oct. 27.—Columbus, O.—Sherman Rod and Gun Club's tournament.

Oct. 28-29.—Paisley, Ind.—Cedar Lake Rod and Gun Club's tournament.

Oct. 30-Nov. 2.—Rockford, Ill.—Rockford Gun Club's tournament.

Oct. 30.—Lebohner's Dexter Park, Brooklyn.—Live-bird shoot, open to all. Four events, at 3, 5, 5 and 7 birds. Geo. C. Lebohner, Station E, Brooklyn.

Oct. 31-Nov. 3.—Cincinnati, O.—Tournament of the Cincinnati Gun Club; two days at live birds; two days at targets. Arthur Gambell, Sec'y.

Nov. 1-4.—San Antonio, Tex.—San Antonio Gun Club's tournament.

Nov. 21-22.—Sioux City, Ia.—Second annual live-bird tournament of the Soo Gun Club; added money in every event. E. R. Chapman, Sec'y.

Dec. 5-8.—St. Thomas, Ont.—Thomas Donley's third international tournament. About $1,500 guaranteed. Targets and live birds.

Brooklyn Gun Club.—Third Saturday of each month, Francotte gun contest. Fourth Saturday of each month, Grand American Handicap free-entry contest.

Watson's Park.—Burnside Crossing, Ill.—Medal contest the first and third Fridays of each month.

1900.

April 2.—New York Vicinity.—Interstate Association's Grand American Handicap. Edward Banks, Sec'y.

May 7.—Chicago, Ill.—Twenty-sixth annual convention and tournament of the Illinois State Sportsmen's Association. W. B. Leffingwell, Sec'y.

June 3-8.—Utica, N. Y.—Forty-second annual tournament of the New York State Association for the Protection of Fish and Game. Henry L. Gates, Sec'y.

June 5-7.—Columbus, O.—Ohio Trap-Shooters' League tournament. J. C. Porterfield, Sec'y.

June 11.—New York Vicinity.—Interstate Associations Grand American Handicap target tournament. Edward Banks, Sec'y.

June 5-7.—Columbus, O.—Tournament of Ohio Trapshooters' League. J. C. Porterfield, Sec'y.

Aug. 28-30.—Arnold's Park, Okoboji Lake, Ia.—Budd-Gilbert tournament.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.
